Dealers up in arms over what they see as return to subsidies

Fleet incentives called threat to franchising

By Richard A. Wright and John Russell

The auto makers say there has been no return to "the bad old days" of fleet subsidies, but franchised new-car dealers around the country are getting steamed up over what they view as subsidies which allow fleet buyers to acquire new cars at prices lower than franchised dealers can.

"Dealers are very concerned about fleet subsidies, which are a threat to the franchise system itself," said George W. Lyles, High Point (N. C.) Chevrolet-Rolls-Royce dealer and president of NADA.

W. L. McColloh, Olds-Cadillac-Honda dealer in Ardmore, Okla., said almost 80 percent of the General Motors dealers in his state endorsed a letter directed to Roger B. Smith and F. James McDonald expressing concern over fleet subsidies.

Ed Mullane, president of the Ford Dealers Alliance, said litigation to stop fleet subsidies and incentives is a possibility and said his group has launched a "moral crusade" against the practice.

Lyles said the fleet programs are stirring wide concern among dealers and that at NADA's recent board meeting in San Francisco it was a key topic of discussion.

All makers are now offering what dealers called "subsidies" and what the makers call "incentive programs."

Spokesmen for the manufacturers said the fleet programs are designed to give fleet buyers the same kind of break that retail customers get in the various sales incentive and rebate programs.

But McCulloh said that as a fleet buyer (for his rental and leasing operation), he can buy cars at a better price than he can as a franchised dealer. "That's not right," he said.

The Oklahoma Automobile Dealers Assn.'s GM line group is not happy about retail incentive programs either, McCulloh said. Nor are dealers in general, according to NADA.

McCulloh said the letter sent to top GM management dealt with a number of issues, the most serious of which were price concessions to fleet buyers and "knee-jerk reactions of the past year in an assortment of sweepstakes, rebates, bonuses and interest reductions."

On fleet subsidy programs, the letter said: "It was unanimously agreed no price should be available below dealer's cost. By such practice, a used-car advantage within the rental and leasing industry is created. This practice was abandoned in 1968 after strong objections from the dealer body."

The dealers did not object only to the temporary fleet-buyer incentives, but also to the retail incentive programs, which they said stimulate sales for a short period, but also have a counter-productive effect.

"Many buyers postpone purchases waiting for the 'other shoe to drop,'" the letter said. "Appreciating the need and effort to stimulate sales, elimination of continued anticipation of better things to come may create more stability in sales promotion."

The Oklahoma dealers said

Surprise at Birmingham

Nissan unveils tiny Micra

Visitors to the International Auto Show in Birmingham, England were surprised to see another new car from Nissan, the fifth in the past year. The car is a sub-subcompact called the Micra. It is 142 inches long on a 90.5-inch wheelbase, weighs only 1,400 pounds and is said to get better than 50 MPG with its one-liter engine. It will go on sale in Europe next spring. Birmingham show story is on Page 3.

breaking news

UAW loses Chevy white-collar vote in Flint

FLINT.—Salaried workers at the Chevrolet Manufacturing Plant here rejected the UAW as their bargaining unit by a vote of 87 to 32. The union has made moves to organize white-collar workers at seven other General Motors plants. Interest in unionization by salaried workers at GM began last spring when workers said they were laid off selectively without regard to seniority. They said they wanted job security and better merit and rating systems.

GM and EPA at odds over 1978-model callback

DETROIT.—The EPA has ordered General Motors to recall and fix some 609,000 of its 1978 vehicles that exceed oxides of nitrogen standards. GM already is recalling 439,000 of that total and disagrees with the EPA on two points. It says cars in the 12 warmer-climate states need not be recalled and it will repair vehicles in the 439,000 group which have

Domestic model total sliced to 271, but more are coming

By John K. Teahen Jr.
Managing Editor

Here-and-there trimming by four of the domestic auto makers reduced the U. S. model count to 271 as the 1983 season got underway. The total is down from 307 at the end of the '82 model year.

There are more to come, in line with the domestic makers' new-found practice of throughout-the-year introductions. The latecomers will add at least 20 models to the current count.

Each of the Big Three has some offerings in the wings. Ford Motor Co. has yet to introduce its '83 Thunderbird, Cougar, Ford Tempo and Mercury Topaz lines. General Motors is preparing its Corvette and the Chevrolet Cavalier and Pontiac 2000 convertibles.

In Chrysler Corp.'s '83 future book are a couple of stretched LeBaron limo types, the LeBaron Town & Country (woody) convertible and the front-wheel-drive New Yorker.

Another factor: Honda is about to start marketing U. S.-built cars.

And there could be more additions if, as last year, the domestic manufacturers decide that some stripped models are needed to combat the consumers' continuing resistance to high prices.

Of the current 271 models, GM has 131, Ford Motor Co. has 79, Chrysler Corp. has 38, American Motors has 16 and Volkswagen has 7 (the VW figure includes only U. S.-built cars).

Final totals for '82 were: GM, 137; Ford Motor, 93; Chrysler Corp., 48; AMC, 23, and VW, 6.

So at this point in the '83 campaign, GM is down 6 models; Ford is down 14; Chrysler is down 10; AMC is down 7, and VW is up one.

American Motors made deep cuts in its AMC lineup, knocking out two Spirits, five Eagles and six Concords. Production of some of those models ended last spring. The overall American Motors total is down by only seven models because it now builds the Renault Alliance, a six-model line.

Chrysler Corp. reduced its total by tightening up its offerings in the LeBaron/Dodge 400, Aries/Reliant, Omni/Horizon and Charger/Turismo lines. Thirteen models were axed, and three were added -- four-door sedans in the new Chrysler E-Class and Dodge 600 series.

Ford Motor's changes were extensive — 18 models added and 32 dropped for a net dip of 14.

There are more Ford EXP and Mercury LN7 selections (trim packages have become separate models), but fewer Escort and Lynx choices. Also, the new Ford LTD and Mercury Marquis models are not as numerous as the Granada and Cougar units they replaced.

At GM, Buick added a number of T-Types and there are new station wagons for the Buick Skyhawk and Oldsmobile Firenza J-cars. But reductions elsewhere — chiefly by Chevrolet — cut GM's model count by six.

The Automotive News new-model analysis includes all models the domestic manufacturers are pricing and/or merchandising individually. It does not include engine options. For example, an Oldsmobile Delta 88 four-door sedan is one model even though it is available with a V-6 gas, a V-8 gas or a V-8 diesel engine.

The 271 models currently on the books consist of 104 four-door sedans, 126 two-doors, 36 four-door wagons and five convertibles. (The two-door total includes hatchbacks, which some

GM cleanup incentive: 10.9 pct. loans on '82s

General Motors kicks off a new far-reaching, 10.9 percent consumer finance program today (Nov. 1). It undercuts those of several competitors.

The new consumer finance program is offered only through GMAC. It runs from Nov. 1 to Dec. 31 and covers all new '82 cars, light-duty trucks and vans (except for LUV pickups, covered separately by $600-$800 rebates and dealer incentives and extended protection plan for diesels).

The GMAC program is available only on retail deals. Fleet and lease sales are excluded.

General Motors had estimated gross stocks of 800,000 cars on Oct. 10, of which nearly 500,000 were '82s. It also had more than 200,000 '82/'83 trucks in gross inventories.

The finance program is available for terms up to 48 months, and offers customers' savings on average of $1,300 up to $2,125, depending on the car and deal.

The program is available through participating dealers, who contribute about 70 percent of their finance reserve. Those amounts are determined by an average based on their GMAC business in September.

The low-interest program is offered in all states except Arkansas, which has a 10 percent rate ceiling.

It will be heavily supported with GMAC network and spot radio, major news weekly magazines, heavy newspaper (including Sunday supplement) and some mention in existing GMAC TV spots.

Individual car divisions will similarly lend strong advertising/merchandising support for the program.

Difficult wage issues delayed until January

Chrysler workers vote down strike

By Marjorie Sorge
Labor Editor

Chrysler Corp. and the UAW will spend the post-Christmas season together trying to negotiate a new contract which will satisfy the company's 43,000 union-represented workers.

Last week, those workers voted to return to the bargaining table after the first of the year, hoping the company's economic picture will be better. The other option was to strike Chrysler at 10 a.m. today (Nov. 1). That proposal was defeated by a vote of 70 percent to 30 percent, or 27,535 to 11,873 votes.

UAW President Douglas A. Fraser said the workers' decision was the "correct" one and that a better agreement could be negotiated in January than the one that was obtained in September. That contract was rejected by a 7-3 vote a few weeks ago.

Thomas W. Miner, Chrysler vice president - industrial relations, said he is "very happy the strike was averted" because "it could have been ruinous for Chrysler."

He said he doubts the company will have any more money available to sweeten the contract in January.

At recent press conferences, Miner said immediate wage increases could be available if savings are made in other areas, such as health-care costs. At the beginning of the last round of bargaining in July, the UAW was asked to consider co-pays and deductibles. That plan was rejected.

Miner said cuts in health care remain a possible source of up-front cash.

"We are willing to consider anything, but we will not lose sight of what our labor costs are going to be at the end of the contract," he said.

• Fraser said the union plans to demand both immediate wage increases and the restoration of cost-of-living adjustments (COLA). The rejected contract provided three lump-sum COLA payments totaling 50 cents (if inflation were 6 percent) during the year-long economic agreement.

COLA will be a major factor in any new agreement and, according to Fraser, the union will not settle in January without COLA payments retroactive to Sept. 14, when the old agreement expired.

"I think the Chrysler workers are entitled to a greater measure of equity, entitled to come closer to parity with Ford and General Motors than they are now," Fraser said.

Chrysler workers currently make about $2.00 an hour, or $100 a week, less than their counterparts at Ford Motor Co. and GM.

The rejected contract gave COLA and tied wage increases to Chrysler's profitability. Fraser indicated new negotiations will begin from scratch.

The old pact was two-fold—a one-year economic agreement and a two-year contract for non-economic issues.

Miner said he thinks the one-year agreement is "out the window" and believes the UAW will ask for a Sept. 14, 1984, expiration date to correspond with contract expiration dates at Ford and GM.

Even without a new agreement, workers will be eligible for profit-sharing, negotiated in 1981. Chrysler is expected to generate enough money in 1982 to begin making profit-sharing payments.

Insiders said the company could pay out about $10 million to the workers in 1982 and more than that in 1983 if the economy cooperates. By 1985, they said the figure could be $50 million or $60 million.

Under the formula, payout from the profit-sharing plan will be calculated by taking profits before taxes, subtracting 10 percent of the company's net worth and dividing 15 percent of the remainder among the workers. The distribution will be made in Chrysler stock or in credits toward either a Canadian-made or U. S.-made Chrysler product.

Payments from the profit-sharing program must be made within 120 days after the company's year-end financial statement is released, usually in February.

According to David Healy, auto analyst for Drexel Burnham Lambert, Chrysler could make more than $300 million in 1982. It has already made $266 million for the first three quarters. Healy forecasted a $58-million profit in the fourth quarter.

Healy pointed out that $239 million of the 1982 profit came from the sale of Chrysler's defense operations. He said the one-time deal will leave about $83 million profit as an accurate indication of how Chrysler is really doing.

High Sierra

A new Ford Sierra is lowered into London's Victoria and Albert Museum, where it is the center of a Boilerhouse Project entitled The Car Program. The exhibit traces development of the Sierra from the first sketches to the finished production car.

U. S. DeLorean firms asking for Chapter 11

By Edward Lapham
Financial Editor

DETROIT. — The fate of the DeLorean sports-car venture hung in the balance last week after DeLorean Motor Co. and Composite Technology Corp., a DeLorean-owned firm, filed petitions seeking protection from creditors under Chapter 11 of the Federal Bankruptcy Code.

In addition to the developments here, several prospective buyers of the enterprise's Belfast assembly plant contacted the London-based receivers of DeLorean Motor Cars, Ltd. (1982), with proposals to keep the plant open and producing cars on a limited basis.

Among the potential investors who contacted the receivers was Consolidated International, Inc., the Columbus (O.) salvage company which loaned DMC nearly $20 million earlier in the year through a technical bulk sale of 1,100 DeLorean cars. That loan allowed DMC to pay $18 million to Bank of America, which had originally financed the inventory.

In the Detroit federal bankruptcy matter, DMC was granted status as debtor-in-possession.

Listed among the top 15 potential unsecured creditors of DMC were Renault, which supplied drivetrain components; the Northern Ireland Department of Commerce; Oppenheimer & Co., which put together one of the financing deals in 1978; Averett, Free & Fischer, Inc., the company's ad agency; Arthur Andersen & Co., DMC's auditor, and a couple of law firms.

One of the law firms, listed as the third largest unsecured creditor, is Kimmerly, Gans and Shaler. The firm is headed by Thomas Kimmerly, a long-time business associate of John Z. DeLorean. He is an officer and director of DMC and has been an officer of many of DeLorean's various corporations since the mid-1970s.

DMC insiders said Kimmerly, with DeLorean and his business associate Roy Nesseth, have been the effective ruling triumvirate of the company for nearly a year.

A former DMC officer, Robert M. Dewey, also is listed. Dewey, who resigned as chief financial

Ford 3rd-quarter loss put at $325 million

By Edward Lapham
Financial Editor

DETROIT. — Ford Motor Co. reported a net loss of $325.4 million ($2.70 a share) for the third quarter ended Sept. 30, a slight improvement over the net loss of $334.5 million ($2.78 a share) lost in the same period last year.

Sales in the period totaled $8.05 billion compared with $8.66 billion last year.

The company said new-model launch costs, a depressed economy and reduced sales contributed to the loss but added that Ford has made "continued progress in achieving operating efficiencies."

Ford said U. S. operations in the third quarter incurred an after-tax loss of $321 million ($2.67 a share), a $60 million year-to-year improvement, while Canadian operations showed a $61 million after-tax loss, a $16 million turnaround.

Overseas operations, without the benefit of a $154 million UK tax credit this year, showed a net profit of $57 million in the 1982 period compared with $123 million in 1981.

The third-quarter deficit brought Ford's nine-month net loss to $422 million ($3.50 a share) on sales of $27.9 billion compared with a net loss of $713.8 million ($5.93 a share) on sales of $29.2 billion in the year-ago January-September period.

Despite the improved operating efficiencies and improved pre-tax results, Ford's financial position continued to erode in the third quarter.

At Sept. 30, the company's balance sheet showed negative net working capital of $1.35 billion compared with negative net working capital of $269.4 million at June 30 and net working capital of $127.6 million one year ago.

During the third quarter, Ford's cash and marketable securities reserve was nearly halved to $1.4 billion from $2.6 billion at June 30. Also in the July-September period, Ford increased its short-term debt by $122.9 million to $2.42 billion and reduced its long-term debt by $68.5 million to $2.34 billion.

At Sept. 30, total stockholders' equity was 27.9 percent of total liability - plus - equity compared with 28.3 percent at June 30 and 32.6 percent one year earlier.

Total Ford worldwide vehicle factory sales in the period declined 7.9 percent to 926,561 from 1,005,980 last year. The year-to-date total was off 3.5 percent to 3,259,586 from 3,376,-739.

Total U. S. and Canada car and truck factory sales in the third quarter dropped 12.7 percent to 474,851 from 543,923 last year and were off 8.5 percent for the nine-month period to 1,715,-888 from 1,874,723.

One bright spot was factory sales of U. S.-built trucks, which were up 10.4 percent in the quarter to 189,684 from 171,831. The nine-month total was up 12.3 percent to 633,097 from 563,-987.

Ford listed depreciation at $295.5 million in the quarter compared with $273.2 million last year. For the first nine months of the year, the depreciation total was $872 million compared with $827.2 million.

Amortization of special tools was listed at $219 million compared with $213.5 million for the quarter and $715.4 million compared with $748.8 million for the first nine months.

But daily selling rate slows a bit

U. S.-car sales up 12 pct. for period

By Jenny L. King
Staff Writer

Sales of domestic new cars averaged 18,609 per selling day in mid-October, off a scant 0.40 percent from the 18,684 rate for the period a year ago. The total for the 10 days was up, however, with nine selling days this year compared with eight days in '81.

Oct. 11-20 domestic sales numbered 167,485, up 12.05 percent from 149,472. Year-to-date sales were 4,562,406 through Oct. 20, down 12.64 percent from 5,222,-715 in 1981.

Comparing total to total, four of the five major U. S. auto makers were up for the mid-month period; on a daily-rate basis, three stayed ahead of their '81 levels. General Motors reported sales of 98,141 units, up 8.77 percent from 90,232 (off 3.32 percent daily rate). Ford Motor Co. was up 15.79 percent, to 40,922 from 35,232 (up 2.92 percent daily rate).

Chrysler Corp. sales ballooned 34.44 percent, to 22,003 from 16,-366 (up 19.50 percent daily rate). Volkswagen of America reported sales of 2,319 U. S.-built Rabbit sedans, down 42.47 percent from 4,031 (down 48.78 percent daily rate), and estimated sales of American Motors passenger cars were 4,100, up 17.14 percent from 3,500 (up 4.11 percent daily rate).

DOMESTIC SALES

	Oct. 11-20 1982	Oct. 11-20, 1981
AMERICAN MOTORS	4,100†	3,500†
Chrysler	5,819	1,102
Imperial	52	57
Plymouth	7,432	8,289
Dodge	8,700	6,918
CHRYSLER CORP.	22,003	16,366
Ford	28,844	25,288
Mercury	8,987	7,995

GENERAL MOTORS	98,141	90,232
VOLKSWAGEN	2,319	4,031
INDUSTRY TOTAL	167,485	149,472

† Estimate; includes Renault Alliance

GM sales accounted for 58.60 percent of the domestic market in mid-October, down from 60.37 percent a year earlier. Ford earned 24.43 percent, up from 23.64 percent. Chrysler climbed to 13.14 percent from 10.95 percent. AMC had 2.45 percent compared with 2.34 percent, and VWoA dropped to 1.38 percent from 2.70 percent.

On a year-to-year basis, 10 of the 14 domestic makes were ahead for the period. Chrysler multiplied its '81 sales by more than five, shooting to 5,819 from 1,102. Dodge was up 25.76 percent, Ford was up 14.06 percent, Mercury was up 12.41 percent and Lincoln was up 50.05 percent.

Among the GM makes, Oldsmobile was up 22.73 percent, Cadillac was up 19.84 percent, Chevrolet was up 6.12 percent, Buick was up 0.47 percent and Pontiac was off 3.07 percent.

Plymouth dropped 10.34 percent, Imperial was down 8.77 percent, VWoA was down 42.47 percent and AMC was up an estimated 17.14 percent.

Imports dominate talk at UK show —until the DeLorean bombshell

By Richard Feast
European Editor

BIRMINGHAM, England. — The single topic of conversation on the first press preview day of the International Auto Show here was imports.

Generals of industry queued up to say their piece. Imports were too high, the Japanese should reduce their shipments rather than hold them at current levels; how Ford is going to source more vehicles from its UK factories, and the lobbying over whether British trade unionists will allow General Motors to import its new S-car from Spain.

That was on Tuesday. There was not a thought for the fate of the DeLorean sports car plant in Belfast, despite the fact that at that very moment the Northern Ireland Office was lowering the final curtain.

It was so widely expected that it was simply a matter of putting the record straight.

But on the second day there was no other topic of conversation than John Z. DeLorean.

Industry executives sat wide-eyed and open-mouthed in disbelief in front of their cornflakes as the radio brought in the shocking news of DeLorean's arrest in Los Angeles.

• There has always been considerable skepticism for the whole DeLorean affair in Europe, but the drug allegations simply floored everyone.

Discussions about imports, about price cuts, about market trends, about new models came to an abrupt halt. The focus of interest was the guy in the West Coast slammer.

The episode stole the spotlight from all those carefully planned new product announcements, which were headed by the world debut of Nissan's Micra supermini. It was the one true surprise of the show itself, as the car had not been unveiled even in Japan at the time.

The vehicle which attracted customers to the show was Ford's new Sierra. It had been shown in Paris already, but as a replacement for the car which has been the UK best seller for the past decade — the Cortina — it was constantly surrounded by crowds.

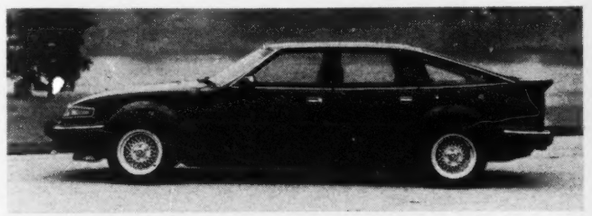
Just across the aisle was the equally new Audi 100 which will go on sale in a few weeks in the UK. It, too, had starred in Paris, but was being shown here at the National Exhibition Center for the first time in the UK.

Paris' other two newcomers were absent. Citroen's BX will not be available in right-hand drive for at least a year, and the Opel Corsa's UK launch is sched-

Continued on Page 28, Col. 3

High-powered Metro

The new MG Metro Turbo has bowed in Europe with a Garrett T3 blower that hypes the 1.3-liter engine to 93 HP. It was first seen at the Birmingham Auto Show.



Rover Vitesse bows

Austin Rover is aiming its new Rover Vitesse directly at the BMW 5-series. Lucas fuel injection is used to power the Rover 3500 to 135 MPH. The Vitesse also debuted at Birmingham.

A new Pony from Hyundai

The latest generation of Korea's Hyundai Pony made its debut at the British auto show at Birmingham. It features new front and rear treatment and a fully revised interior. There is a five-door hatchback in addition to the three-door and four-door sedans. An all-new Hyundai featuring front-drive is expected in the mid-'80s.

Tickford makes a faster Ford

Aston Martin Tickford exhibited this high performance version of the Ford Capri at the British auto show in Birmingham. Tickford says the car is not just a styling exercise and it hopes to offer examples for sale at $24,000 in a few months. In addition to the obvious body changes, the Capri has a 205-HP turbocharged V-6 engine and is capable of more than 140 MPH. It accelerates from zero to 60 in about six seconds.

Compared with $468.2 million loss a year ago

GM logs $129.4 3rd-quarter profit

By Edward Lapham
Financial Editor

DETROIT. — General Motors reported third quarter net income of $129.4 million (41 cents a share) on sales of $14.28 billion. In the same period last year GM reported a net loss of $468.2 million ($1.59 a share) on sales of $13.41 billion.

The year-to-year turnaround was due to improved factory sales plus "continuing success in controlling costs and improving operating efficiencies," GM said.

GM's operating loss in the period was $53.6 million compared with a loss of $959.5 million last year. This year, a tax credit of $151.5 million, plus non-operational income of $175.5 million and non-consolidated earnings from finance and insurance units of $214.7 million offset the operating loss and interest expense of $358.7 million.

The third-quarter results brought GM's nine-month net income to $817.7 million ($2.64 a share) compared with January-September net income of $236.7 million (76 cents a share) last year. Net sales for the first nine months of 1982 were $46.15 million compared with $47.15 million last year.

Depreciation and amortization in the three months ended Sept. 30 was $1.02 billion compared with $943.1 million last year. For the first nine months of the year, the total was $3.55 billion compared with $3.37 billion in 1981.

GM's current ratio (current assets to current liabilities) was 1.1 to 1 at Sept. 30, the same as it was at June 30 but a slight improvement over the 1.0 to 1 ratio at Sept. 30, 1981. It was still only about half of what is generally considered good for a manufacturing company.

• GM said working capital at Sept. 30 totaled $1.53 billion compared with $1.33 billion at June 30, $1.16 billion at Dec. 31, 1981, $431 million one year ago and $4.04 billion at Sept. 30, 1980.

However, a footnote in the GM financial statements lumped into long-term debt $1.589 billion "of short-term obligations which are to be served or refinanced under long-term credit agreements."

That means that technically the $1.589 billion could be considered a short-term liability at Sept. 30 and technically, then GM would have had negative net working capital of $59.1 million, although it did make provisions to roll-over the liability.

Long-term debt, at Sept. 30, including the $1.589 billion, totaled $4.637 billion compared

GM is willing to help UAW 'sell' contracts

By Marjorie Sorge
Labor Editor

General Motors is willing to help the UAW sell future union-company contracts to the membership, according to Alfred S. Warren, GM industrial relations vice president.

Warren said he wants to be able to meet with the union's 300-member GM Council to explain the company's position on new contracts and any other new company proposals that develop during the course of business.

"The next time we sign a contract, why shouldn't I be the one to go and tell them what we signed?" he said. Why should Owen (Bieber, UAW vice president and director of the GM Department) stand up there and take all the gaff? Why shouldn't Al Warren be there too?"

In an interview with Automotive News, Warren said he believes he will have access to the GM Council before the 1984 round of bargaining and that he "can see the day when the GM chairman will go before the council "to explain the company's stand."

Although Warren and Bieber talk daily and meet an average of twice a week, Warren said GM is "still not close enough to the union hierarchy." He said relationships must be built at every level with all company officials knowing all union officials personally.

To accomplish this, Warren is advocating off-site meetings between the GM and UAW labor staffs. He said the two sides need to "sit down and talk about how we are going to do this thing (continue in the cooperative era, doing away with the adversarial role). There is still some old philosophy in my organization and we need to get it out of there."

The UAW, too, has admitted that some of its people are balking at the new cooperative ethic.

• But as the two sides move closer together, there will be changes in the workplace. According to Warren, in the future the workers will determine overtime schedules, who will be laid off, when vacations are taken, how the workplace looks, and how the jobs are laid out. They will also participate more in problem-solving and problem-solving training, and time clocks will be eliminated, he said.

Another big issue in future contracts will be education funds to train workers to handle the new jobs developed by new technology. Warren said GM will continue to support the education of its current employes to do the new jobs and the training of its laid-off workers

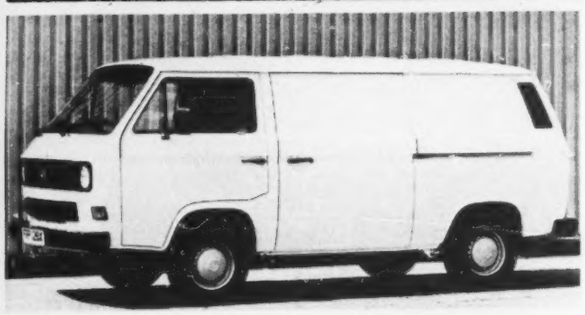
58th year — No. 4939

AUTOMOTIVE NEWS (ISSN 0005-1551) is published weekly except semiweekly the fourth week in April at 965 E. Jefferson Avenue, Detroit, MI 48207. Second-class postage is paid at Detroit, MI and at additional mailing offices. Postmaster: Send address changes to AUTOMOTIVE NEWS, Circulation Department, 740 Rush Street, Chicago, IL 60611.

world news briefs



End of era

Volkswagen's Transporter van (above) bows at the Paris auto show with a 1.9-liter four-cylinder water-cooled gasoline engine. It marks the end of an era for the air-cooled unit which first appeared over 40 years ago. The new engine (with 60 and 78-HP versions) is more powerful, economical and quieter. The engine remains in the rear, but the van has a front-mounted aluminum radiator.

Slowdown at VW

Volkswagen's European factories will close an extra three weeks this fall following a two-week shutdown in September/October. High stocks and a slowdown in orders are the reasons.

Volvo diversifies

Sweden's Volvo group continues its diversification by acquiring a quarter share in the Atlas Copco machinery group for an estimated $110 million.

Daihatsu branches out

Japan's Daihatsu begins local assembly in South Africa and Greece. In South Africa its Charade will be put together by Alfa Romeo at facilities near Pretoria, and be sold through the Alfa Romeo network. In Greece, now a member of the Common Market, Charade assembly is underway in Athens.

Ford moves into diesels

Ford reveals details of the forthcoming diesel version of its Kent gasoline engine at a press conference in London. The 1.6-liter, 54-HP engine will power front-drive Fords starting in 1984.

German output up

Passenger car production in West Germany rose 14 percent to 2,557,600 in the first eight months of this year. Commercial vehicle output declined by 6 percent to 199,100. Domestic demand remains poor and exports are declining.

Renault in red

Renault Industrial Vehicles believes this year's losses may be higher than in 1981 (around $45 million).

Renault 9 ahead of target

Daily production of the Renault 9 worldwide is running at 2,600 compared with the original target of 2,500. Renault claims 3.5 percent of the total European market with exceptional successes in France and Spain.

Czech on sales

New car sales in Czechoslovakia in first-half 1982 were 42,180, down 35 percent from a year earlier. Czech exports (mainly Skodas) topped 52,000, three-fifths of them going to other Comecon countries. Western European exports were led by the UK (5,100), Denmark (4,000) and France (2,000).

Porsche presses on

Porsches are being produced at 100 percent capacity at Neckarsulm and "110 percent" capacity at Zuffenhausen, say company sources. Annual output (August-July by Porsche's account) will approximate 38,500. U. S. demand is strong and the company sees a pickup in its important domestic market.

Jeeps leap in France

Renault, distributing Jeep CJ7s in France since June, reports orders of more than 1,000 by mid-September. It aims for sales of 2,000 a year in a market handling around 6,000 total units.

GM gains ground in European sales

By Richard Feast
European Editor

General Motors has made by far the largest gain in Western European pasenger car sales this year, according to unofficial statistics obtained by AUTOMOTIVE NEWS from industry sources.

At the same time, the biggest losers in the first half of 1982 were the Japanese, although the two are not necessarily related instances.

Despite widespread national differences in sales patterns, half-year sales were almost 5.44 million, up 0.3 percent over the same period a year earlier.

The major drop in the single largest market, West Germany, was countered by an unexpected improvement in France, the second largest market.

Of the other two major markets, Italy rose slightly while the UK showed a small decrease.

Between them, the four countries accounted for three out of four new car sales in Europe.

The improvement in Europe and continued slump in the U. S. makes Europe the highest-volume geographical sector for new car sales in the world.

With so many strong domestic competitors—plus the Japanese—Europe also is the most ruthless market in existence. The absence of serious American competition and the tight leash on which the Japanese are kept in many markets result in stronger rivalry between the resident producers.

Biggest national improvement was in Finland where sales were up more than 15 percent to 65,000. Indeed, all Scandinavian markets showed substantial gains with total sales topping 281,000.

The Spanish market, the fifth largest, picked up slightly after several years of depressed demand. Belgium also was up, but Holland slipped.

The most significant sales drop was in the Republic of Ireland where sales plunged by more than a quarter to fewer than 48,000.

But in sheer numbers, Germany's fall of more than 6 percent to just under 1.25 million was more vital to the overall picture. Its southern neighbors, Switzerland and Austria, were down also.

The economic and political uncertainty in Germany, long regarded as the powerhouse of Europe, affected consumer confidence. Despite a new West German government, many industry executives believe 1982 sales there will be the lowest in many years, perhaps plunging to two million.

The domestic industry has regained some of the ground lost to importers, notably the Japanese, but while it has been exporting strongly in the absence of home demand, the manufacturers' association has identified a reduction in incoming orders.

France's sales were healthy in the first half, although there was a slackening in latter months. More disturbing to the French industry, imports continue to achieve record penetration.

The half-year national statistics give a good indication of company trends.

General Motors' Adam Opel, for instance, improved nearly 18 percent in European-wide sales (which include Vauxhall in the UK), impressive by any standards. The basis of Opel's success is the Ascona/Cavalier version of GM's J-car, launched just over a year ago. The addition of diesel-powered Kadetts, and similar power for Ascona, is another factor.

Opel's small Corsa, recently launched, will improve GM's 9.7 percent market share considerably. Concentrating on the Spanish, French and Italian markets, which favor cars in the Corsa category, Opel talks of a 1983 market share of 11.2 percent.

Others registering sales increases are Fiat and Renault. Fiat's home market demand was good and it made considerable export gains, particularly to Germany and France. Renault was bolstered by the upward trend in France and Spain where it is market leader.

Japanese import sales, down nearly 11 percent, are distorted by numerous national restrictions placed on them. They were unable, for instance, to take advantage of upswings in France (where they are limited to 3 percent), Italy (2,200 units) and Spain (tariffs).

In addition, retaliation by the German manufacturers shaved the Japanese presence there. Numerically Japan's largest European national market is the UK, which registered a small overall drop and has reached a gentlemen's agreement with Japan to limit sales to 11 percent.

There is also a general feeling in Europe that Japan also is responding to trade and political pressures established by countries with industries to protect, and that to some extent Japan is backpedaling on European exports, at least for the time being.

How auto markets changed

	6 Months 1982	Change From 1981
Austria	112,905	− 4.3

Japanese (all)	469,514	−10.7
Total	5,437,260	+ 0.3

Fortunes fade for Japanese auto exports

Is Japan's export steam roller running out of steam?

Returns from the Japan Automobile Manufacturers Assn. (JAMA) for the first half of this year show an uncharacteristic decline in export shipments.

Japanese vehicle makers have been able to counter this partially with increased domestic sales. But from a country responsible for staggering and seemingly endless growth rates during the 1970s, the latest statistics are surprising.

There is little sympathy from European auto makers. The chairman of one European firm gloats: "Tough. They have made the monster. Now they can live with it."

Total Japanese exports (cars, trucks and buses) in the first half (2,891,701 units) represented a decline of 9.5 percent from the same period a year earlier.

In the decade 1971-'81 Japanese exports more than tripled from 1.78 million to 6.05 million. Energy crisis or not, there wasn't a hiccup along the way.

This year Japan's exports are suffering reverses in all geographical areas except the Middle East and Oceania (essentially Australia and New Zealand).

Middle East shipments shot up more than 60 percent to 362,508, making it the third most important area behind North America and Europe. Saudi Arabia (188,874) moved into second place behind the U. S. (1.09 million). Iraq moved into ninth place with 51,137.

Oceania exports increased more than 20 percent to 228,165. Australia (155,277) became the third most important national market and New Zealand (62,166) moved into eighth place.

Many factors affect the Japanese decline in some markets, apart from the worldwide recession. Most obvious are trade sanctions placed on Japan in its two main trade blocs, North America and Europe.

This has resulted in a switch of exports to less developed nations where the reward for greater effort is often less, since economies of many of these nations often are fragile and conflicts are frequent.

Some of Japan's worst export declines this year are in South America and Africa. Curiously, however, even with continued strife in the Middle East, exports there rose.

Export shipments do not tell the whole story of Japan's automotive health, but they do offer a general guide to the country's exporting priorities.

Registrations of new vehicles in Japan in the first half of 1982 rose 3 percent to 2.613 million units. Annual sales topped five million in each of the past three years, and it looks as though 1982 could beat the record 5.154 million of 1979.

Jaguar to delay turbodiesel debut

COVENTRY, England.—Jaguar Cars has delayed the introduction of its turbodiesel for at least a year.

Originally, the car was scheduled to appear next year, but Chairman John Egan said the collapse of the diesel market in the U. S. and the time taken to certify cars prompt the delay.

There is no positive indication of when a diesel Jaguar will appear, although company sources speak in general terms of 1984.

If this is the case, it would suggest the six-cylinder VM diesel will be first seen in the all-new Jaguar XJ40 sedan scheduled for introduction then.

Small cars lead sluggish Japanese market

By John Hartley
Staff Correspondent

TOKYO. — The inconsistent pattern in car sales continues in Japan, with overall vehicle sales down in August by 5 percent compared with the same month in 1981, and level in September.

Cars did better than trucks, as usual, with sales of 140,968 in August (down 4 percent), bouncing back to 249,342 units (up 4.1 percent) in September. The enormous difference between August and September reflects the seasonal pattern in Japan; because of the holiday period, sales are traditionally very low in August.

In car sales, the fluctuations do not hide the trend, which is an increase in sale of cars of up to 1.5 liters and a decrease for larger ones. For example, in August, sales of smaller cars were up 12.5 percent and in September they were up 19.6 percent.

These increases were led by the Toyota Corolla, Nissan Sunny (Sentra) and Mazda Familia (GLC).

Meanwhile, in the 2-liter class, sales were down 11 percent in August and 5 percent in September. Sales of cars with larger engines slumped by 20 percent in August and a massive 43 percent in September. Total volume of these large cars is small, however, at 4,000 units.

In August, Mazda's Familia sold 12,381 units (up 20 percent) against 11,085 Corollas (down 23 percent) and 7,436 Sunnys (up 21 percent). Nissan's Pulsar, Liberta and Langley family did well, with an aggregate of 7,384 sales (up 65 percent), as did the Toyota Tercel/Corsa/Corolla II, at 8,614 sales, up about 150 percent.

• In September, these autos continued to do well in the much bigger market: Sunny, 19,674 sales (up 38 percent); Corolla, 18,242 (down 13 percent; Familia, 15,603 (up 1 percent); Pulsar/Langley/Liberta, 14,035 (up 100 percent), and Tercel/Corsa/Corolla II, 12,223 (up 148 percent).

Both the Pulsar and Tercel ranges are much wider than the old models they replaced, and they are sold through more dealer networks. In addition, of course, they are modern front-wheel-drive autos, whereas the Corolla is now aging in Japanese terms and is due to be rebodied next year.

Mitsubishi's Mirage (Colt), which has been little more than maintaining last year's sales levels, suddenly spurted in September to record sales of 8,346 (up 16 percent), whereas the Lancer, due to be phased out soon, continued to languish with sales down 28 percent at 2,106.

In the 2-liter class, the Nissan Bluebird was the top seller with 7,074 sales (down 21 percent) in August, and 16,497 (down 2.4 percent) in September.

Toyota's Carina and Corona made impressive gains — these models were introduced in the spring, whereas the Bluebird is in its fourth year — with 6,277 (up 12 percent) and 5,776 (up 31 percent) sales, respectively, in August, and 9,400 (up 46 percent) and 9,301 (up 10 percent), respectively, in September.

However, the Mark II (Cressida) beat them both at 11,236 sales (up 16 percent). In August, Toyota introduced a 2-liter six-cylinder engine with four-valve head and a 2.4-liter turbocharged diesel for the Mark II, and the public obviously reacted favorably.

• In August and September, the Big Two, Toyota and Nissan, made real progress — although for the first eight months of this year, only Toyota has increased sales. The smaller makers, meanwhile, have suffered. Most seriously hit is Fuji (Subaru), whose Leone saw sales crash by 50 percent in August to only 1,000 units, and by 22 percent to 2,928 in September. In an attempt to boost sales, Fuji is now introducing turbocharged four-wheel-drive models.

Meanwhile, both Honda and Mitsubishi's new models are faltering as the Japanese economy weakens.

Honda Accord sales were down in August and September 5 percent from the same months last year. The Accord's sister model, the Vigor, gave the company an overall increase in the 2-liter class. The Civic continues to sell at about half the level of a year ago, but the City is not doing as well as expected; in August, it sold 5,830 units, and in September 8,245.

Nevertheless, the relative success of the City has boosted Honda's overall sales total—by 21 percent in August and by 53 percent in September. Now that the City turbo has been launched, Honda hopes sales will exceed 10,000 units.

However, in November it will face competition from the Nissan March one-liter car. Daihatsu is due to launch a turbocharged version of its Charade, as well.

Mitsubishi's Tredia FWD sedan slumped to only 800 sales in August and 1,250 in September, and the Cordia coupe did little better with 1,052 and 1,398, respectively. Both these models were expected to sell more than 4,000 units a month.

Neither has the new Mitsubishi Starion coupe captured the imagination of the Japanese public; sales were around 600 units in each month, against the hoped-for 2,000 units.

Clearly, there will be a major marketing effort to try to redress falling sales by all the manufacturers in the last two months of the year.

GM auction a huge success

General Motors may have found a new way to sell cars.

Its sale at Aptco Auto Auction in Southgate, Mich., the first of its kind for GM, was so successful that some observers predicted GM may never again sell company vehicles the traditional formula discount way to dealers.

The Aptco sale was described by one attendee as "the social event of the year." It drew over 2,500 people, with 500 to 800 dealers bidding on 346 cars and trucks.

"I've never witnessed anything like it here," said Sam Lafata, president of Aptco, who found himself having to use parking spaces from a quarter mile away.

The crowd was so heavy that many dealers did not even have the chance to get to the bidder's circle.

Dealers flew in from as far away as Texas, Omaha and Florida; 80 percent were from outstate.

A mysterious Texan, referred to as "Cowboy," generated the most conversation after buying an estimated 30 vehicles valued at nearly half a million dollars.

Some observers felt he paid "murder" for them, and there was a reference to some of the bidders "waking up out of the ether" afterward to realize what they had actually paid.

But, Lafata said, "everybody left with a smile on their face," with Robert Lund, GM vice president - Sales and Marketing Staff, and other factory officials, undoubtedly among the most elated.

Some of GM's hotter vehicles brought more at auction than they were being retailed for around town; others went for as much as they originally cost.

Diesels were surprisingly strong sellers among the out-of-towners, particularly those from farm and ranching communities where farmers have tax-free diesel pumps on their land to run tractors and machinery.

So, GM ended up earning far more from the auction than it ever would have gotten through its traditional way of selling off stock to dealers.

Some Detroit-area dealers were clearly disgruntled, however. They've generally had first access to company-owned vehicles — and at far lower prices than the auction was fetching.

The big question on everyone's mind as they left was, "When's the next sale?" Judging by the results, it won't be too long.

Money celebrates

Money magazine celebrated its 10th anniversary with a lavish musical review in Chicago, Detroit, Los Angeles and New York.

The company retained professional dancers/singers, with carefully scripted lyrics and choreography that ended up in a humorous tribute to advertisers, as well as the magazine's own strong selling points.

Money's October anniversary issue set a single-issue record with 158 pages of advertising, and $4.1 million in revenues, according to William M. Kelly Jr., publisher.

Traveling musicals, in fact, seemed to be the mode at Time-Life, as Fortune magazine similarly took a special musical presentation to 12 cities around the country.

Written and performed by Weeden, Finkle & Fay, the program was a refresher course — BE-101 How to Succeed — designed to help Fortune's advertisers and guests cope with today's changing business world.

Rochester Ford group

Five Rochester (N.Y.) area Ford dealers formed the Greater Rochester Ford Dealers Advertising Assn.

The five dealers in the new group remain part of the Buffalo District Ford Dealer Advertising Assn. Both accounts are handled by J. Walter Thompson, USA/Pittsford, N. Y.

First program by the new group is an 11-week TV campaign consisting of a 60-second commercial, "Look out Rochester, Here comes Ford."

Panhandle Pontiac group

The Panhandle Pontiac Dealer's Assn. was formed to represent 28 Pontiac dealers in Texas, Oklahoma and New Mexico.

Elmer Brown, Brown Pontiac, Amarillo, Tex., was elected president of the association.

Bedford Advertising, Dallas, was named the agency to handle the $150,000 account. Bedford has six Pontiac dealer groups, 90 dealers nationally.

Promos

Six dealers in the Rochester (Mich.) area held an "Oktoberfest New Car and Truck Sale" early in the month, retailing 209 cars and trucks from it.

The dealers, all located on the same road within a mile of each other, represent competitive makes. They're known as the "Auto Dealers of Rochester Road."

Their hoopla included a grand prize Delta Airlines Dream Vacation for two, six second prizes to Michigan resorts and appearances by a local-area celebrity, among other things.

The promotion was heavily supported by TV and radio and was handled by Unacom Marketing, Southfield, Michigan.

The Pumpkin Patch yielded one person a prize Escort when Baltimore Area Ford Dealers ran their "Great Escort Giveaway Contest."

Some 14 car dealers were involved in the promotion, handled by Jack Brahms Advertising, Baltimore.

Heavy TV included an atmospheric spot, placing Escort in a mysterious foggy setting.

Personnel

Donald B. Effler joined D'Arcy-MacManus & Masius as senior vice president/management supervisor on the Pontiac account. He was previously with McCann-Erickson in Chicago.

William V. Haney was appointed vice president/director of communications at D'Arcy. He had been on the Bendix corporate communications staff.

Ervin J. Lichterman was appointed merchandising manager for Mazda Distributors Great Lakes, Grand Rapids, Mich., distributor of Mazda vehicles. He directs merchandising support for 117 dealers in five states.

John H. Nichols Jr., joined Campbell-Ewald Co. as group senior vice president-account management. He was with Leo Burnett, Chicago, for 17 years.

A senior vice president and four vice presidents are among the personnel promotions at J. Walter Thompson USA/Detroit.

William Jeanes, currently responsible for ad programs on Ford's new model year, became senior vice president.

Elected vice presidents were: **Jeffrey L. Hitch**, Western regional manager on Ford Dealer Advertising; **Thomas E. Healey**, head of the Media/Marketing Information Services Group; **James W. Lambert**, manager of JWT's Advertising Services Department, and **Theodore J. Thompson**, account representative on FDA advertising in Houston.

But more are on the way

Domestic model total cut to 271

Continued from Page 1

makers list as three-door models.)

The final count for '82 was 113 four-doors, 150 two-doors, 40 wagons and four convertibles for a total of 307.

The domestic makers are offering 71 lines of cars this year, up from 68 during the '82 season.

Renault Alliance, Chrysler E-Class and Dodge 600 are new for '83, and there are a number of replacements or name changes.

Ford LTD has succeeded Granada, and Mercury Marquis fills the spot formerly occupied by Cougar (but what used to be the Cougar XR-7 will be called Cougar when the '83 arrives).

At Chrysler Corp., Turismo has taken over for Plymouth TC3 and Charger is the designation for the former Dodge 024. Chrysler was leaning in that direction in the latter stages of the '82 model year.

And at GM, the letters have been dropped from Pontiac T1000 and J2000, leaving just the numbers.

At this time in the '83 season, Buick has the most models with 37, followed by Mercury, 34; Ford, 33; Oldsmobile, 30, and Pontiac, 30. Next in line are Chevrolet, 25; Dodge, 18; Lincoln, 12; Plymouth, 11; AMC, 10; Cadillac, 9; Chrysler, 8; Volkswagen, 7; Renault, 6, and Imperial, 1.

The leaders at the end of the '82 model year were Ford, 41; Mercury, 39; Chevrolet, 34; Buick, 33; Pontiac, 31, and Oldsmobile, 30.

Auto historians reelect Lewis

HARRISBURG, Pa.—David L. Lewis was reelected president of the Society of Automotive Historians at the group's annual meeting here. Lewis is professor of business management at the University of Michigan.

Also reelected were Keith Marvin, Menands, N. Y., an author, editor and free lance writer, vice president; Charles L. Betts Jr., Yardley, Pa., a retired engineer, secretary, and George B. P. Ward Jr., Baltimore, a banker, treasurer.

Elected to the board of directors were Douglas A. Bakken, Dearborn, archivist and director of Ford Archives; Jeffrey I. Godshall, Royal Oak, Mich., automotive designer, artist and author, and Walter M. P. McCall, Windsor, Ont., public relations manager for Chrysler Corp. of Canada.

Chrysler imports up $79 for '83; some Colts cut

DETROIT. — Chrysler Corp. reported that the average-equipped prices of its imported Mitsubishi models have been increased $79, or 1.1 percent for '83.

The boost results from a hike of $280 on the Dodge Challenger and Plymouth Sapporo sport coupes. The Dodge Colt and Plymouth Colt prices are generally unchanged or lower than the '82s.

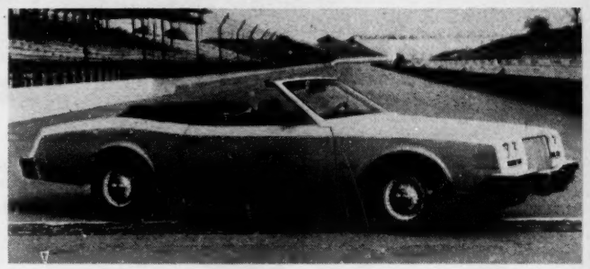
Both Dodge and Plymouth will use the Colt designation for '83. The Plymouth Champ nameplate has been dropped.

The base Colt two-door hatchback stays at $4,995; the Deluxe two-door is $5,720 (down $80), and the Custom two-door is $6,059 (down $63).

The base Colt four-door hatchback is $5,599 (down $111), and the Custom four-door is $6,176 (up $23).

The Sapporo and the Challenger are both priced at $8,323, an increase of $280.

Destination charges have been increased an average of $10 on Chrysler's '83 Mitsubishi models.



Riviera sets pace for '83 Indy

Astride the front straightaway of the Indianapolis Motor Speedway is the 1983 Buick Riviera convertible selected as the Pace Car at the 1983 Indianapolis 500. It is powered by a special 350-HP twin turbocharged Buick V-6 with port fuel injection and digital onboard computer controls from Delco Electronics. The Pace Car will be driven only on the speedway, as the 4.1-liter V-6 does not meet federal emission requirements.

New-car dealers see threat in fleet sales incentives

Continued from Page 1

they were making their views known to GM "in a spirit of partnership, not an atmosphere of acrimony." Mullane's FDA has taken a more adversarial position.

In a speech before the Federation of Auto Dealer Assns. of Canada in Montreal last week, Mullane said the FDA board of directors had voted funds to conduct legal research into the problem of fleet subsidies.

(NADA sued the Big Three auto makers over the issue of fleet subsidies in 1970. The case was decided against the dealers in 1976. In an ironic twist, the Federal Government sued the makers in an antitrust action which went to trial in 1973 because GM and Ford Motor Co. halted fleet subsidies within a day of each other in 1970. The government charged price fixing. It lost.)

Mullane told AUTOMOTIVE NEWS that $4,000 had been appropriated for the legal research.

"We believe the present subsidies and preferential practices such as large discounts, guaranteed depreciation, advertising allowances and the availability of these programs only to large purchasers amount to the establishment of a dual distribution system and violate the sales agreement," Mullane said.

But legal action is not the only weapon in FDA's arsenal, Mullane said. Also under consideration, he said, is a massive national advertising campaign telling the consumer of issues that affect him.

Mullane particularly targeted on used-car prices and the fact that dealers would have a difficult time competing with fleet used-car outlets, since the dealers pay more for those used cars and don't have readily available used-car fleets.

• Mullane began his attack on fleet incentives in August when he charged that dealers were being placed in an uncompetitive position because of the incentives given to large rental and leasing fleets.

Mullane contends that the retail customer feels the pinch of these incentive programs in the used-car value of his tradein.

Rental companies can sell the cars into the used-car market for less because they pay less for the cars and, in turn, create a lower-priced used-car market. This hurts the new-car buyer because it widens the difference between his tradein value and the new-car price.

The cost of these incentive programs has to be built in somewhere, Mullane said, and this is in the retail price of the car.

Frank McCarthy, executive vice president of NADA, said the current fleet subsidies are a greater threat to the franchise system than were those of the '60, because fleet sales account for a greater part of the market now than they did then and because rental and lease companies are now retailing their used cars.

Toyota dealer files $1 million good-faith suit

HOUSTON.—A New Orleans Toyota dealer, Joe Conte Toyota, has filed a million-dollar lawsuit in Federal District Court here against Toyota Motor Co., Ltd.; Toyota Motor Sales U.S.A. and Gulf States Toyota (a distributor) charging violations of the Dealers Day in Court Act and antitrust laws.

The lawsuit also names Jerry H. Pyle, president, and Thomas H. Friedkin, owner of Gulf States.

The dealership charges that the defendants conspired to attempt to require it to build a new facility and that the defendants withheld cars from the dealership in an attempt to force it out of the market.

The dealership's complaint said that during the first six months of 1981, it was supplied with an average of 94.3 cars a month. From September, 1981, through August, 1982, it said, the dealership received 40 new cars a month.

The complaint also charged that defendants provided fleet sale vehicles at a higher ratio than other dealers so that the margin of profit was substantially reduced.

The dealership also complained that it was provided with cars with all accessories already in place, cutting profit potential, and that it was advised that Gulf States Toyota could charge an additional $100 per new vehicle supplied to the plaintiff.

Joe Conte Toyota claimed it was damaged by at least $1 million.

Toyota-Pontiac dual

WESTBROOK, Conn. — Seaview Toyota-Pontiac, Inc., has opened here. Thomas Nashmy is president of the dealership.

High inventories shut 5 plants; 106,060 autos built

Downtime cuts U.S. car production

By Patricia Hoffman
Staff Writer

Downtime at five car plants due to high inventories in the field pulled last week's domestic auto production down 6.64 percent from the previous week's total, and output fell 10.21 percent below the comparable 1981 figure.

The auto makers slated production last week at 106,060 units, a decline from the previous week's 113,598 and down from 118,117 units built in the comparable period last year.

General Motors closed its Doraville and Oklahoma City facilities last week for inventory control. Operations are slated to resume today (Nov. 1).

Also idle last week for inventory adjustment were Ford Motor's Metuchen and San Jose plants, plus Volkswagen of America's Westmoreland facility. Production is scheduled to resume today at Metuchen and San Jose, while Westmoreland is slated to return next Monday (Nov. 8).

GM's Bowling Green plant and Ford's Lorain point remained closed last week for model changeover. Both were idled Oct. 13, and both are scheduled to begin production of 1983 models in December.

Operations resumed last week at GM's Janesville and Lordstown facilities following downtime for inventory control.

GM's Baltimore plant operated six days last week.

Truck production increases as two GM plants return

International Harvester's Ft. Wayne and Springfield facilities were down last week, but the return of two General Motors' points helped boost domestic truck output 9.30 percent from the previous week's total.

The truck makers scheduled 39,200 units last week, up from the previous week's 35,863, and a 17.37 percent gain over the 33,399 units built in the comparable 1981 week.

So far this year, the manufacturers have finished 1,636,282 trucks, up 15.69 percent from 1,414,395 completed in the same period last year.

International Harvester closed its Springfield and Ft. Wayne facilities last Monday for two weeks for inventory control. Operations are slated to resume at both plants Nov. 8.

Volkswagen of America's Westmoreland point remained idle last week. Production of 1982 models ended at the facility on June 28. Startup for 1983 models is slated for December.

The Chevrolet and GMC light-truck line at GM's Flint facility resumed operations last week after being idle one week for inventory control. About 1,500 returned to work.

Also back last week at GM was the GMC (truck and coach) line at the Pontiac plant. The facility closed Oct. 11 due to high inventories in the field. About 2,300 employes returned to work.

Avco to produce diesel engines

HOUSTON. — Avco Corp. has entered into an agreement with Stabilimenti Meccanici VM S.p.A. under which Avco Industrial Engine Operation will produce industrial and automotive diesel engines for the North American market. Production is scheduled to begin in June, 1983.

This production agreement replaces a distribution agreement signed in 1977 under which Avco marketed VM assembled engines, spare parts and accessories in the U. S. and Canada.

The Avco-VM family of diesel engines includes 25 models with a choice of water, air or a patented air/oil cooling system. The engines are used to power electric generators, compressors and pumps, as well as automobiles and trucks.

Canadian output rises as Oshawa, St. Thomas return

Canadian auto production jumped 56.79 percent last week from the previous week's total as operations resumed at General Motors' Oshawa (No. One) facility and Ford Motor's St. Thomas point following downtime to control overstocked inventory.

Last week, the auto makers estimated output at 18,090 units, up substantially from the previous week's 11,538, and up 18.56 percent from 15,258 in the comparable 1981 period.

Truck production was targeted at 9,581 units last week, down 18.25 percent from 11,724 the previous week and down 9.14 percent from 10,545 units built in the comparable week last year.

GM's Oshawa (No. One) car facility, idled Oct. 18, returned last week following inventory adjustment.

Also back last week was Ford's St. Thomas car point which was idled for inventory control Oct. 4.

International Harvester's truck facilities closed last week to adjust overstocked inventories.

The light-duty Chevrolet and GMC truck lines at GM's Oshawa truck point ended second-shift operations last week cutting output to 360 units a day.

American Motors' Brampton car facility was idle for the second week last week due to overstocked inventory.

Honda 'Job One' rolls today at Ohio car plant

Honda will begin building 1983 Accord four-door models at its $250-million auto assembly plant in Marysville, O., today (Nov. 1), but there will be no fanfare to mark the occasion.

A Honda spokesman speculated that plant officials decided against a Job One celebration because of the desire to carefully observe early production in a controlled environment.

Only four-door Accords will be built. Initially, the plant will build about 100 cars per month, and is expected to double that amount by April of next year. Build-up will be slow; by 1984, the plant will be operating at a planned 150,000-car annual rate.

Dealers east of the Mississippi River will begin receiving shipments of cars Dec. 1. Dealers will be allowed to sell only U. S.-built or Japanese-built four-door Accords, rather than a mix, the spokesman said.

Local content at the outset of production will be about 50 percent. That figure gradually will rise. Honda has more than 40 American suppliers.

The automobile plant, located adjacent to Honda's motorcycle assembly plant, is a 900,000-square-foot facility housing stamping, welding, paint, plastic injection and final assembly operations. When it reaches planned capacity, the auto plant will employ an estimated 2,000 workers.

obituaries

Jack W. Mendel

INDIANAPOLIS. — Jack W. Mendel, 58, retired district sales manager for Ford Division in Indianapolis, died Sept. 24. He had also been district sales manager in Philadelphia and Dallas.

Piet Van Doorne

EINDHOVEN, Holland.—Piet Van Doorne, 47, president of DAF Trucks and one of Holland's leading industrial figures, died Oct. 18. Mr. Van Doorne was the second son of the founder of the company, Huub Van Doorne.

Audi readies new streamlined 5000

Audi will introduce this all-new 5000 sedan in the U. S. next May, offering it with choice of five-cylinder gasoline or turbo-diesel or turbo-gasoline engines. Its European counterpart, the Audi 100 (identical except for grille and headlamps), has a drag-coefficient rating of 0.30, lowest of any car sold in the world. In this unofficial photo, the car's grille badge reads "Cerano." Audi said it means nothing and is on the car as "camouflage."

DeLorean faces new pressure as IRS steps up investigation

By Edward Lapham
Financial Editor

Copyright, 1982, Automotive News

The Internal Revenue Service has broadened its investigation of John Z. DeLorean, his sports-car venture and related enterprises to include areas which suggest possible tax fraud, AUTOMOTIVE NEWS has learned.

The result could be a federal grand jury investigation.

Sources close to DeLorean Motor Co. and affiliated ventures said the IRS, which had been conducting fairly routine audits of certain DMC-linked financing arrangements, has intensified its activity in the wake of John DeLorean's arrest in Los Angeles on federal drug charges.

One focus of the investigation is documents relating to the DeLorean Research Limited Partnership, formed in 1978, which raised $18.8 million for R&D work on the sports car.

DeLorean Motor Co., the sole general partner with power of attorney, contributed the sports-car rights to the partnership, while 134 limited partners assembled by Oppenheimer & Co. contributed the cash. Oppenheimer's took $2.25 million in fees.

As previously reported (AUTOMOTIVE NEWS, Sept. 20), the IRS notified the DRLP partners it was auditing returns for deductions taken for the years 1978 and 1979. Subsequently, the IRS decided to also audit partner returns for the years 1980 and 1981 to determine if the deductions qualified as research and development.

Now, however, the IRS apparently has become directly involved in one of the unanswered questions about the DeLorean sports-car venture: What really happened to the money raised by the 134 DRLP investors?

The question has been explored seriously for more than a year, following charges made last October by a former DeLorean employe, Marion Gibson, who gave a large stack of company documents to a British member of Parliament who in turn made some of them public.

• Subsequent to the allegations, Scotland Yard launched a short investigation which cleared John DeLorean of wrongdoing. DeLorean then instituted libel suits against two former employes

'83 sales 'quietly taking off,' spot-check of dealers shows

By Jim Plegue
Staff Writer

Big cars are in, small cars are out. Specialty models and trucks are hot, too.

Factory interest-rate subvention is attracting customers and helping clean up what's left of the '82 inventories.

Buyers are still leery of high prices and steep interest rates but job security is becoming another big fear at car-buying time.

And, oh yes, things are getting better.

Those are the conclusions drawn from an AUTOMOTIVE NEWS survey last week of domestic and import dealers across the country.

As the '83 selling season gets under way, dealers for the most part are optimistic. The '83s may not be "off and running," but at least they're moving.

• General Motors and Ford Motor dealers reported good results from factory interest-rate programs designed to sell '82 models. Several Chrysler Corp. dealers said they wished their factory had a similar program.

"Sales were moving at a decent pace until GM's 10.9 percent financing came out; then we noticed a drastic reduction in floor traffic," said Joe Ventura, president, Baum Boulevard Dodge, Inc., Pittsburgh.

"We're still doing respectable but we're not selling at the rate we should be. Chrysler should come up with something similar to GM's 10.9 (percent financing), something we can use in our advertising instead of the rebates."

Like other Dodge and Chrysler-Plymouth dealers around the country, Ventura said customers are showing plenty of interest in the new E-body cars (Chrysler E Class and Dodge 600).

"We're getting a lot of people in here who are comparing it with the foreign competition," he said. "We're down to one (600) in stock."

At Freed Chrysler-Plymouth, Salt Lake City, sales are "up slightly" from last year, according to Doug Tollstrup, new-car manager. Tollstrup's hot sellers are the Reliant, LeBaron and New Yorker, while the Horizon is sluggish.

• "Our sales of '83s are quietly taking off," said Burt Boeckmann, owner of Galpin Ford, a large dealership in Sepulveda, Calif.

Although the Ford financing incentives have worked, Boeckmann said his "overall volumes have been stagnant. There have been no significant burps. We've been looking at the same numbers every month, though we are running slightly ahead of last year."

Boeckmann's popular models are the high-output Mustang and the Mustang convertible and "from a profit standpoint, the T-Bird has moved well." His slow models are the EXP and the Fairmont.

The new Thunderbird, due in January, will be a success, Boeckmann predicted.

"All day long, people come in and ask us, 'Where's the new T-Bird?' There's more interest

Ford's answer to GM is 10.75 pct. loan rate

By Joseph Bohn
Marketing Editor

Ford Motor Co. lost little time in countering General Motors' low-interest finance program with a new 10.75 APR program of its own.

However, Toyota stuck on more traditional dealer cash incentives in launching a new truck program.

Ford's finance program runs from Nov. 2 to Dec. 31 and covers all new '81 and '82 cars only.

The low-interest financing is available through Ford Motor Credit Co. or any participating financial institution. (GM's 10.9 percent program on '82 models is available only through GMAC.)

The Ford program also offers cash rebates in addition to the low financing on non-base Escort/Lynx, EXP/LN7 models and dealer cash on Continentals.

Customers get 10.75 percent APR on non-base Escort/Lynx models, plus $200 rebates. Those who do not take the low APR offer can get $400 rebates or Ford Care (Car Care at Lincoln-Mercury), but they can't have both. Ford Care is a 24/24 maintenance-warranty program.

The typical savings for a buyer of an '82 Escort would be about $1,200, accoring to Philip E. Benton Jr., Ford vice president - sales operations.

This assumes a prevailing retail finance rate of 17.5 percent and a contract of $6,200 for 48 months. The buyer would save $1,009 on financing costs and $200 on the rebate.

On EXP/LN7, customers get $500 rebates along with the 10.75 percent. Non-finance customers get $1,000 rebates or Ford Care, when they don't take the 10.75 percent.

Ford is offering the extra re-

breaking news

UAW strikes Chrysler Canada

TORONTO.—The UAW called a strike against Chrysler Canada last Friday. The move affects 9,140 hourly and 392 salaried workers at the Chrysler plants in Windsor, Ajax and Etobicoke, Ont. It will also cause 6,000 workers in the U. S. to be laid off beginning today (Nov. 8), according to Gerald Greenwald, Chrysler vice chairman. Chrysler had proposed that the UAW accept the contract recently rejected in the U. S. or that the strike deadline and negotiations be postponed, as was done in the U. S. Both plans were rejected.

International Harvester to sell off assets

CHICAGO.—International Harvester announced tentative agreements to raise $65 to $70 million by selling assets of its truck axle and transmission operation to Dana Corp. and some assets of its aircraft-towing tractor operation to Ingersoll-Rand. Land and buildings in Ft. Wayne, Ind., are not included in the Dana deal, but new preference shares may be. The Ft. Wayne plant is to be phased out. Earlier story on Page 52.

Dingell applies some pressure

DOE decides to publish Mileage Guide after all

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — The 1983 Mileage Guide, the government's annual summary of the fuel economy abilities of the year's new cars, will be published after all.

Robert C. Odle Jr., Department of Energy assistant secretary for Congressional, intergovernmental and public affairs, ordered printing of the guide last week.

Odle had held up printing of the guide pending a review by the department of the value of the guide which, under federal law, must be available to any consumer who might wish one.

Odle was distressed to learn the DOE had nearly one million of the 1982 guides left and had sought to cut production or eliminate the guide altogether as part of a cost move.

That was before Rep. John Dingel, Michigan Democrat and father of the Energy Policy and Conservation Act that mandated production of the guides, got into the act.

Dingell sent Odle two letters recently, demanding to know why the guide wasn't being produced.

In the process, Dingell pointed out that the law clearly states that "booklets, either DOE produced or printed by dealers or manufacturers using the format approved by the EPA, must be available in sufficient quantity for retention by each prospective purchaser" of an automobile or light truck.

Failure to have the guides available can put auto dealers in the position of having to pay a fine of as much as $10,000 for each day they do not have the guide.

The Center for Auto Safety also put on pressure by writing to NADA, telling the association of DOE's recalcitrance in publishing the guide and pointing out the car dealers' subsequent liability exposure.

When told of DOE's decision to now go ahead with printing of the guide, Center director Clarrence Ditlow said, "DOE is doing its best to flaunt the law while consumers and auto dealers suffer. We will see if we can't expose this charade for what it is."

• Traditionally, the DOE has produced 7 million to 10 million copies of the guide each year at a cost of approximately $1 million. These guides were then made available to dealers in packages of 150 to 200. Most years, the guides were all used up, and in 1978 the government even ran out, but last year auto sales plunged sharply and so did demand for the Mileage Guide.

The resulting surplus led Odle to call off production of the second edition of the 1982 Mileage Guide which usually contains numbers for most of the imported vehicles as well as late-introduction domestic models.

It also prompted Odle to review the status of the Mileage Guide which, in turn, led to consideration of three options by the DOE, all aimed at cutting its involvement in the Mileage Guide program.

These were: Printing only enough copies for each auto dealer in the country (approximately 25,000) and making the dealers responsible for extra copies to give to customers; printing only 250,000 copies with 150,000 being sent in packets of 50 to only 3,100 of the largest dealers, and printing

Corolla for sun lovers

American Custom Coachworks, Beverly Hills, Calif., produces the Toyota Corolla as a "Sport" convertible, with power top. The conversion retails for about $6,000 and takes about 15 working days to complete.

Ford, Toyo Kogyo get EPA waiver for small diesel

WASHINGTON. — The EPA has decided to grant Ford Motor Co. and Toyo Kogyo Co., Ltd., a waiver from the 1984 oxides of nitrogen standard so the two companies can market a new small diesel engine to be made by Toyo Kogyo.

Toyo Kogyo produces the Mazda line of automobiles and trucks and is 25 percent owned by Ford.

The new engine, designated "TX1" will be an in-line four-cylinder model displacing approximately 1.8 liters and will be available as an option in Mazda's revamped 626 series and in Ford's Topaz and Tempo models.

The companies had argued the waiver was necessary if the engine was also to comply with diesel particulate standards. As it has in previous waivers granted to other diesel makers, EPA granted the full 1.5 grams-per-mile level permitted under provisions of the Clean Air Act.

Ford and Mazda join General Motors, Mercedes-Benz, Volvo, Peugeot, Volkswagen, Nissan, Isuzu, Renault, BL Cars, Chrysler Corp., BMW and Vehicle Technology, Inc., as recipients of waivers for one or more diesel engine families.

Parts and accessories sales lead gain

Shop business up in September

By Francis J. Gawronski
Service Editor

Although the rate of growth of service and parts business recorded by new-car dealers in September dipped 5 percentage points from the pace registered in August, the volume still managed to post the fourth biggest increase of 1982.

According to the Automotive News Service Index, shop volume in September amounted to 108.8 percent of the business recorded in the shops during the same month a year earlier.

In August, shop business was 113.8 percent of the volume registered in the corresponding month of 1981 for the second biggest gain of 1982.

September also marked the 19th consecutive month that the Service Index has shown an increase over the year-earlier period.

All indicators showed good gains in September, including repair orders written which were on the plus side for the second consecutive month.

September's biggest increase was recorded by sales of all parts and accessories which were up 12.4 percent, followed by gross profit on all labor, parts and accessory sales — the most important indicator from the dealers' viewpoint — up 10.2 percent over the year-ago figure.

Shop parts sales (those used on both customer-paid and warranty work) were up 9.5 percent, while total labor sales — customer paid and warranty — increased 7.5 percent over the figure for the same month in 1981.

Repair orders written increased 2.3 percent over September, 1981. In August, ROs were up 4.1 percent.

Figures used in the Service Index are averages compiled from replies on shop business from a cross-section of the nation's new-car dealers.

For the nine-month period of 1982, dealers' shop volume amounted to 108.0 percent of the business for the corresponding 1981 period.

The leading indicator for the January-September period was shop parts sales, up 12.6 percent, followed by sales of all parts and accessories, up 11.9 percent, while gross profit increased 10.7 percent.

Total labor sales climbed 6.2 percent during the nine-month span, while repair orders written declined 5.3 percent.

Banks cut rates for Springfield sale

SPRINGFIELD, Ill. — The Springfield New Car and Truck Dealers Assn. and two local banks combined in a four-day promotion that resulted in an estimated $1.75 million of business.

The promotion involved automobile loans at 12.5 percent, about three percentage points below the prevailing rate. Springfield Marine Bank and Capitol Bank had people working on Sunday, last day of the promotion, to process loans.

SERVICE INDEX
108.8*

	Sept., '82 vs. Sept., '81	9 mos., '82 vs. 9 mos., '81
Gross Profit on All Labor and P&A Sales	+10.2%	+10.7%
Repair Orders Written	+ 2.3%	− 5.3%
Total Labor Sales (Customer & Warranty)	+ 7.5%	+ 6.2%
Shop Parts Sales (Customer & Warranty)	+ 9.5%	+12.6%
Sales of All Parts and P&A	+12.4%	+11.9%

*—Survey by Automotive News shows that dealers' service and parts business in Sept., 1982, was 108.8 percent of business in Sept., 1981. Service business in the nine months of 1982 was 108.0 percent of business in the corresponding period in 1981.

Alfa Romeo will open Detroit office to peddle technology

By John Russell
New York Staff Writer

ENGLEWOOD CLIFFS, N. J. —Alfa Romeo will be moving ahead to sell technology to U. S. companies in the near future as the Italian auto maker prepares to open an office in Detroit.

The specifics of the project are yet to be completed, according to Luigi Zucchet, president of Alfa Romeo in the U. S., but recruiting is under way for staffing the office and Zucchet agreed that Alfa wants to sell technology.

This would encompass components from all Alfa divisions, including diesels, and is part of the parent company's corporate strategy, he said, since Alfa Romeo is smaller than many auto makers and is seeking to spread development costs.

Zucchet said an example of what it hopes to do is the agreement between Alfa Romeo and Nissan as well as Alfa and Fiat for projects in Italy.

Last summer, it was revealed that Alfa Romeo had been in contact with two leading U. S. component manufacturers on the Alfa modular engine.

Alfa executives in Italy told Automotive News at the time that it was no secret Alfa was interested in working out licensing agreements on both the hardware and software for its modular engine.

Zucchet said this latest move by the company would go beyond the modular engine and include various divisions within the Alfa group.

• Zucchet has headed Alfa in the U. S. since last spring and his primary concern has been turning around the U. S. operation.

During the past five years, sales of Alfa Romeo cars in the U. S. have been on the decline. In 1978 the company sold 6,237 cars in the U. S., but that dwindled to 2,294 in 1981.

Zucchet anticipates finishing 1982 with about the same number of unit sales as last year, without any incentives. To Zucchet, this is a key point since he regards incentives as a destructive policy.

Zucchet views his whole program for the U. S. as reestablishing confidence, both among consumers and the 130 Alfa dealers by demonstrating the corporate commitment to the U. S. market.

As part of his planning, he has moved to develop a consistent advertising program to create a new image of quality for the product. A new advertising agency was appointed, Burston Marstellar, and a strategy was developed to give Alfa a consistent advertising presence. Zucchet also said he has increased the advertising budget, but would not reveal the figure.

A direct-mail campaign has been started in selected markets to invite potential customers to test drive an Alfa Romeo —with a new twist. Alfa rented test tracks in the San Francisco and Los Angeles areas and conducted the test drives there with the area dealers, inviting a limited number of consumers.

Zucchet said the program enables the company to reach consumers interested in sports cars. And that, he said, will be the area of concentration for the future sports cars.

• Zucchet said Alfa has a sports-car image in this country and that is where the company will concentrate its marketing efforts. Alfa attempted to market a sedan in the U. S., but that has been dropped and Zucchet made it plain Alfa would not try it again, although the maker successfully markets sedans in Europe.

New models will be coming to the U. S., but Zucchet declined to say when. He said a complete lineup change is being conducted by the parent company, starting in 1983 and continuing through 1986.

While Zucchet would not reveal the models contemplated for the U. S., Sergio Fonda, general sales manager for the parent company, said last summer that the models would be expected to reach the U. S. in 1984 and that the lineup for the U. S. would be expanded to include a third car designed to compete with the Mazda RX-7 and Datsun 280-ZX.

Zucchet said the company wants a dealer commitment for more trained staff in sales and service. It is part of the overall effort to change Alfa's image in the U. S., Zucchet admitted. Parts and service availability may not have been the best.

He said dealers must get behind the company efforts if they are to succeed, but he made it plain he does not intend to expand the 130-dealer network. Instead, Alfa will try to work with the dealers to upgrade.

Zucchet said he intends to meet with each dealer at least once a year.

He said he thought it was realistic for Alfa to expect to sell 10,000 to 12,000 units a year and he is projecting a 20 percent sales gain in 1983.

Bieber, Majerus and Ephlin are in the running

Three vie to replace Fraser as UAW chief

By Marjorie Sorge
Labor Editor

As the contest for the presidency of the 1.2-million-member UAW comes down to the wire, three contestants are still in the running.

Either Raymond Majerus, secretary-treasurer; Vice President Donald Ephlin, also director of the Ford Department, or Vice President Owen Bieber, also director of the General Motors Department, will be the recommended candidate to replace current President Douglas A. Fraser.

Fraser, 65, steps down as president at the UAW's Constitutional Convention in Dallas next May. The union has a mandatory retirement age of 65 for its officers.

The choice among Majerus, Ephlin and Bieber, will be made this Friday (Nov. 12).

On Friday, the union's 26-member international executive board will meet to make its recommendation for Fraser's successor. That recommendation will, in turn, be taken to the 300-member steering committee on the same day for their endorsement.

The final step will be when the successor is elected by delegates to the union's convention in Dallas.

The new leader will be the seventh president in the union's history. Francis J. Dillon was the first in 1936 (appointed by the AFL), followed by R. J. Thomas in 1939, Walter Reuther in 1946, Leonard Woodcock in 1970 (following the death of Reuther in a plane crash) and Fraser in 1977.

Following are the philosophies of the men who could succeed Fraser:

• Ephlin, 56, is a long-time advocate of joint company-union deavors for a more cooperative relationship between the parties. The new Ford-UAW contract has this idea as its basis in a new Employe Involvement program and Mutual Growth Forums. Under these programs, workers have input into the company at every level.

But Ephlin admits that those programs are still in their infant stages and the new philosophy is "not as much a part of the system as I'd like."

"We must institutionalize the joint endeavor program," he said. "It must be in the system so deep that it cannot be destroyed by a strike over economics."

The Mutual Growth Forums also allow worker and company to exchange financial information and could make it easier to negotiate a "modest agreement" in 1984, if Ford is still in trouble. But Ephlin warns that if either Ford or GM plan to ask for modest changes in the contract which expires in September, 1984, they should not be paying out dividends.

Ephlin also believes that the joint endeavors will help raise the status of the union in the eyes of the public. Unionism has lost popularity points and has been blamed for the slumping economy by certain sectors in recent months.

Also, the cooperative ethic could be a plus in organizing, Ephlin said.

"Our goal is not only (to see the union) accepted as part of a company's operation but to be given the credit publicly by the company for our contribution to the improvement of that company," he said. "If we can do both of these things simultaneously, then that builds the status of the union and enhances our opportunities to organize other workers."

• According to Ephlin, prime candidates for union organization are in the professional fields, the service industry, health care and high technology, plus engineers, nurses and those in aerospace.

Ephlin also believes wages

In effort to recapture the glory years of the 1960s

Halo car and motorsports are big at Pontiac

By Joseph Bohn
Marketing Editor

PONTIAC. — Pontiac's new 6000 STE four-door sedan will be a halo car for the 6000 line.

In fact, marketing will seek to establish it as the "best . . . of the entire Pontiac lineup," said R. Ed Benson, assistant general sales manager-marketing.

But, for all that, the division expects to build no more than 25,000 in the abbreviated '83 model run in order to concentrate on quality.

"Experience the most technically advanced Pontiac," says a print headline for the car, being officially kicked off with ads in January.

Pontiac officials are out to recapture the glory years of the '60s with their updated performance image, and outlined motorsports as part of the marketing to achieve that goal.

This past summer, Elliott Forbes-Robinson won the Sports Car Club of America Trans Am series, driving the Mecham/Huffaker prepared Trans Am. And officials looked for Richard Petty to win his 196th career championship in the NASCAR Grand National Championship. Other Pontiac drivers include Ricky Rudd, Buddy Baker, Geoff Bodine and James Hylton.

Pontiac's '83 motorsports program includes use of major network televised races. It already has secured the Daytona 500, the Michigan 500, the Winston 500 and the Michigan 400, Benson added.

Other major racing coverage, such as the Indy 500, is currently being explored with the networks, he added.

• Pontiac will also package a series of cable televised races through the year with ESPN and MIZLOU, the major cable sports network.

Exclusive sponsorship of the Motor Racing Network on radio will be maintained throughout '83. This network consists of some 400 local radio stations, broadcasting 33 racing events each year.

Because of its long-time association, Pontiac gets generous references and preferred exposures, as well as commercial time, at these events, Benson said.

"And since we will provide our 1983 Pontiac Trans Am pace cars for 17 NASCAR and SCCA events, we'll get great product exposure with fans as well as TV viewers," he added.

Expanded use of enthusiast magazines, supplements in racing markets and racing programs at the tracks also add exposure for image and performance on cars like Firebird, Grand Prix and 2000.

Again, in the affluent youth market, the division is looking at new and unique ad media.

One is the Ski View Network with which Pontiac signed on as the exclusive car advertiser. This medium reaches skiers via 200 tower displays at 50 ski area and resorts in 14 states.

Its display theme is "Go carve a turn."

Also, Pontiac is using expanded print ads in college magazines, like Nutshell and Directory of Classes, along with national media like Rolling Stone and Psychology Today to reach the young, educated affluent skiers who, as a group, spend less time with traditional media because of their lifestyle.

Of course, the division continues to target a host of other audiences through more traditional media.

As previously indicated, Pontiac is also running a syndicated TV special, "Stars in the Fast Lane," on an "ad hoc network" Jan. 23.

And supplementing its media plan for 1983 is a new syndicated TV series called "The Road to Los Angeles-1984," a one-hour weekly telecast for 30 weeks, starting in January. The Olympics will be held in Los Angeles in 1984.

Finally, the division is experimenting with computer-generated animation commercials. It has a futuristic setting, with a futuristic highway winding through a super city, which features a black-clad, leather-jump-suited girl putting the Firebird Trans Am through its paces.

"A car that conquered the wind, a car that lets you slip off the commonplace and experience driving excitement," says the voiceover.

Domestics near 1981 totals, imports up 7 pct.

October car sales show slight gain

By Jenny L. King
Staff Writer

October new-car sales in the U. S. held few Halloween surprises. The domestic auto makers kept pace with sluggish 1981 levels and the imports continued to stir restlessly, pushing their sales up for the third consecutive month and claiming a record share of the October market.

The industry total for the month was 656,250, up 1.24 percent from 648,185 a year earlier. Domestics were off 0.66 percent, dipping to 487,871 from 491,107.

Combined import sales were up 7.19 percent, to 168,379 from 157,078. They accounted for 25.66 percent of the month's market, up from 24.23 percent a year ago and a record for October.

Year-to-date industry sales reached 6,601,383, down 11.08 percent from the 10-month total of 7,424,092 recorded in 1981. Domestic sales were down 12.30 percent, to 4,750,466 from 5,416,984, while imports were down 7.78 percent, to 1,850,917 from 2,007,108.

On a daily-rate basis, October domestic sales were up a modest 3.16 percent. The daily selling rate for 26 days this year was 18,764 compared with 18,189 for 27 days in 1981.

• For the month, on a year-to-year basis, three of the five major U. S. auto makers notched sales increases. On a daily-rate basis, it again was three.

General Motors dealers retailed 296,317 new cars in October, up 0.29 percent from 295,473 last year (up 4.15 percent daily rate). Ford Motor Co. reported sales of 105,918 units, down 6.89 percent from 113,760 (down 3.31 percent daily rate).

Chrysler Corp. made the biggest gain, with sales of 66,156 up 16.08 percent from 56,992 (up 20.51 percent daily rate).

American Motors caught fire in October, aided by its new Renault Alliance which accounted for more than one-half of sales. AMC climbed 32.27 percent to 12,722 from 9,618 last year (up 37.36 percent daily rate). Volkswagen of America plunged 55.73 percent, to 6,758 from 15,264 (down 54.04 percent daily rate).

GM earned 60.74 percent of the domestic market during the month, up from 60.16 percent in 1981. Ford dropped to 21.71 percent from 23.16 percent. Chrysler earned 13.56 percent — its best month this year—up from 11.61 percent. AMC climbed to 2.61 percent (also a best-month level) from 1.96 percent, and VWoA skidded to 1.38 percent from 3.11 percent.

On a year-to-year basis, seven of the 14 domestic makes were up in October compared with their 1981 sales levels. Chrysler more than tripled its sales, Dodge was up 5.18 percent, Lincoln was up 45.52 percent, Buick was up 9.79 percent, Cadillac was up 7.30 percent, Oldsmobile was up 14.50 percent and AMC was up 32.27 percent.

In contract, Plymouth dropped 18.97 percent, Imperial was down 24.66 percent, Ford was down 9.08 percent, Mercury was down 13.08 percent, Chevrolet was down 10.71 percent, Pontiac was down 13.68 percent and VWoA was down 55.73 percent.

• Among the import companies, the top Japanese makers flexed their muscles in October, although still straining under the voluntary import restrictions.

Number-one importer Toyota reported a sales increase of 4.37 percent for the month, second-place Datsun was up 10.27 percent, Honda was up 23.31 percent, Mazda was up 7.71 percent and Subaru was up 17.81 percent. All of them have kept slightly below their 1981 sales levels for the 10-month period.

Other winners were BMW, up 44.09 percent from last October; Jaguar, up more than 100 percent; Mercedes-Benz, up 7.99 percent; Porsche, up 64.49 percent; Saab, up 19.24 percent, and Volvo, up 6.50 percent. All of these European importers are ahead of 1981 in their year-to-date sale as well not being held to any restrictions.

Mitsubishi began its own marketing operation in October

Firm agrees to sell assets to Consolidated International

Last hopes fade for reorganization of DeLorean Motor Co.

By Edward Lapham
Financial Editor

DeLorean Motor Co. capitulated last week, virtually ending any hopes it may have had of reorganizing under Chapter 11 of the U. S. Bankruptcy Code.

Th company agreed to sell virtually all of its assets to Consolidated International, Inc., and Group Investors Corp. (a Consolidated affiliate) for $1.25 million.

Consolidated earlier in the year "loaned" DMC $17.2 million when DMC in March and May relinquished title to 1,174 DeLorean sports cars through a technical bulk sale of assets. Consolidated had asked U. S. Bankruptcy Judge George E. Woods to take possession of the remaining 649 "financed" cars in DMC inventory shortly after DMC filed a petition for Chapter 11 status in Detroit, claiming DMC owed it about $8.8 million.

DMC had maintained the agreement with Consolidated, the Ohio-based salvage company which also acquired the remaining Bricklin inventory when that company went bankrupt, was strictly a financial arrangement and that DMC needed the cars to remain in operation.

However, just before a scheduled trial on the question last Monday (Nov. 1), DMC and Consolidated reached agreement on a proposed settlement.

Judge Woods will begin hearings today (Nov. 8) to determine if the arrangement is legal and in the best interests of all parties, including creditors.

• Under the terms of the proposed settlement, DMC would relinquish claim to the 649 cars, assign outstanding dealer orders to Consolidated, sell its parts inventory plus most of its office furniture and warehouse equipment to Consolidated, assign it distributor rights for the 1,100 Belfast cars which Consolidated hopes to purchase from the receivers of the bankrupt DeLorean Motor Cars, Ltd., subsidiary and grant rights to Consolidated to distribute any cars which subsequently might be produced.

Consolidated agreed to pay DMC $1.25 million immediately and $50,000 per year for the rights.

Lawrence K. Snider, one of the DMC bankruptcy attorneys who has been on retainer since last February, said that if the court approves the settlement, "the bulk of the assets are gone."

When asked if approval of the settlement would precipitate a conversion to liquidation under Chapter 7 of the Bankruptcy Code, Snider said, 'I can't tell you."

Although the settlement, if approved by the court, will effectively terminate DeLorean Motor Co.'s ability to operate, the final disposition of the company will likely not be settled that quickly.

The first creditors committee meeting had been scheduled for Nov. 15, but last week some of the creditors told Automotive News some form of legal action might be necessary before that time to block the DMC-Consolidated agreement.

Also, several questions remained unanswered. It was not clear whether DMC could in fact assign any rights to the car, because the DeLorean Limited Research Partnership, which raised $18.8 million for R&D in 1978, was assigned the rights to the car at that time.

Snider told Automotive News that DLRP had not been involved in the discussions with DMC, the general partner in DLRP. He said it is likely Consolidated will have to conduct separate negotiations with the partnership to obtain rights to produce the car.

• Sol A. Shenk, Consolidated president, confirmed he had not had any discussions with DLRP about the need to license the rights to the sports car. In conjunction with the action in Bankruptcy Court, Consolidated paid the London receivers of DMCL (1982) a down payment on its proposal to build cars at the Dunmurry, Northern Ireland, plant. Consolidated received a 45-day option to acquire a 99-year lease on the plant.

Paul Shewell, one of the DMCL (1982) receivers, told Automotive News he believes the DLRP rights questions will have to be settled separately and that the partnership still has some residual rights to the car.

"I don't think their position has changed," Shewell said.

He also said the receivers have not relinquished their claim that the U. S. company still owes the bankrupt factory $20 million for more than 1,000 cars which were shipped to the U. S. but never paid for.

The dispute has been a point of contention between the U. S. company and the receivers since early this year when DMC claimed it had offsetting warranty claims and other charges.

John DeLorean, in an interview in April, told Automotive News, "The British have a direct lien on all the property we own in the world including this necktie."

If in fact that proves to be the case, the British $20 million claim could take precedence over the claims of unsecured U. S. creditors and, perhaps, over a proposed settlement with Consolidated.

BIG FOUR FINANCIAL ROUNDUP

Net Income (Loss) in Millions of Dollars

	3rd Quarter		Nine Months	
	1982	1981	1982	1981
American Motors	($ 30.9)	($ 16.8)	($150.6)	($ 89.4)
Chrysler	9.4	(140.1)	266.2	(408.7)
Ford	(325.4)	(334.5)	(422.0)	(713.8)
General Motors	129.4	(468.2)	817.7	236.7
TOTAL	($217.5)	($956.9)	($511.3)	($975.2)

AMC's 3rd-quarter loss doubles to $30.9 million

SOUTHFIELD, Mich.—American Motors reported a net loss of $30.9 million (58 cents a share) for the third quarter ended Sept. 30 on sales of $754 million. In the same period last year, AMC incurred a net loss of $16.8 million (32 cents a share) on sales of $648 million.

The third-quarter results brought AMC's net loss for the first nine months of 1982 to $150.6 million ($2.75 a share) on sales of $2.02 billion compared with a net loss of $89.4 million ($1.59 a share) on sales of $1.97 billion in the same period of 1981.

The company blamed the loss on "the general economic downturn and a resulting failure of the domestic industry to achieve higher sales volume," although it said "continued application of stringent cost controls and the effect of the Alliance launch volume brought the quarterly results to its smallest loss in a year."

AMC's third-quarter wholesale total increased 0.5 percent to 80,068 from 79,686 last year. The nine-month total was off 17.0 percent to 202,861 from 244,504 in 1981.

The wholesale sales total for cars and Jeeps in the U. S. and Canada was a bright spot. In the July-September quarter, that total rose 19.3 percent to 72,783 from 61,011 last year. The year-to-date total was down, however, to 174,057 from 188,675, a decline of 7.7 percent.

Included in that total are imported Renault vehicle wholesale sales, which were up 55 percent in the quarter to 11,860 from 7,650. The total for the January-September period rose 56 percent to 41,281 from 26,545 in 1981.

International factory sales declined 61 percent in the third quarter to 7,285 from 18,675 last year. The nine-month total was off 48.4 percent to 28,804 from 55,829.

Bill to toughen drunk driving laws is signed

WASHINGTON. — President Reagan has signed into law a bill offering $125 million worth of incentive grants to states which adopt tough drunk driving laws.

The bill, which passed both the House and the Senate by voice vote, allows grants to states which satisfy four basic criteria:

1. Setting a 0.10-percent blood-alcohol concentration standard for legal intoxication.
2. Suspending driver's licenses for at least 90 days for first offenders and at least one year for repeat offenders.
3. Requiring a mandatory minimum sentence of 48 hours in jail or 10 days' community service for repeat offenders.
4. Increasing both enforcement and public information efforts concerning drunk driving laws.

Rep. James J. Howard, New Jersey Democrat, who sponsored the bill with Rep. Michael D. Barnes, Maryland Democrat, called the new law "a positive federal response to a severe national crisis."

NeSmith joins Olds

Martin W. NeSmith, left, signs with Oldsmobile to become dealer/operator of NeSmith Chevrolet-Oldsmobile, Inc., Claxton, Ga., with James S. Danhof, center, Oldsmobile assistant zone manager in Jacksonville, Fla., and John A. Martabano, zone manager, serving as witnesses.

Pennsylvania buys 150 Rabbits; VW's biggest state sale

HARRISBURG, Pa.—The state has purchased 150 of the first 1983-model diesel Volkswagen Rabbits built at the company's Westmoreland (Pa.) plant, a $1.1 million deal and the largest sale ever by VWoA to a state.

The purchase was arranged through VWoA's Field Sales Operations, established in mid-1982 to seek fleet orders. The winning bid for the purchase went to Bob Montgomery VW, a dealership in Altoona, Pa.

The cars are priced at $7,387 each, about $700 below the sticker price, or a total savings of $100,000.

Gov. Richard Thornburgh announced the purchase while visiting the plant. Dick Cummins, VWoA senior vice president, management and operations, greeted the governor at the plant and handed him the key to one of the Rabbits as well as a miniature scale model of the car.

News roundup

GM continues 60-cent dividend

NEW YORK. — General Motors directors declared a fourth-quarter dividend of 60 cents per share on common stock. The action continues the dividend rate that has been in effect since the second quarter of 1980 and brings 1982 dividends to $2.40 per share. GM is the only domestic auto company that has paid a dividend on common stock this year.

Honda promotes Ohio plant

GARDENA, Calif.—American Honda is spending $2 million in a corporate campaign to trumpet the opening of its new-car assembly plant in Marysville, O. The theme is "Starting now, made over here," backed with TV, news weeklies, business publications and newspaper ads. Needham Harper & Steers/West, Los Angeles, handles.

Yokohama Tire opens Georgia facility

SAVANNAH, Ga. — Yokohama Tire Corp. has opened what it calls a major tire distribution center here in a Georgia Port Authority dock warehouse. The firm expects 400 container loads during the next 12 months. Yokohama sells tires ranging from those for small passenger cars up to 58-ply jobs for earthmovers.

BL cuts first-half loss

LONDON.—BL reduced its first-half loss to the equivalent of $246.1 million this year, compared with $387.5 million in the first half of 1981. Sales of the state-run auto firm were $2.5 billion, up from $2.41 billion in the year-ago period. Production totaled 287,000 vehicles this year vs. 278,000 in the first half of 1981.

Canadian C of C backs free trade in autos

OTTAWA. — At its annual meeting here, the Canadian Chamber of Commerce adopted a free-trade position on Japanese auto imports. Delegates approved a resolution to "resist any calls for additional or prolonged imposition of protectionist measures against the Japanese auto industry, provided that fair access to that market is accorded Canadian suppliers." A tougher resolution was referred to the board of directors for further study. It was advocated by delegates from Windsor, Ont., which has been hard hit by auto industry layoffs.

M-B truck plant opens in Indonesia

WANAHERANG, Indonesia.—Daimler-Benz, of Stuttgart, West Germany, has dedicated an assembly plant here, said to be the first non-Japanese facility in Southeast Asia. The plant will assemble 3,000 to 4,000 trucks and buses and a few passenger cars each year.

Car production closes at 5.45 million

Model-year output is 21-year low

By Patricia Hoffman
Staff Writer

Stumping sales took a toll on the 1982 model year as output fell to its lowest point in more than two decades.

The car manufacturers produced only 5,447,135 units during the 1982 model run, a 17.96 percent decline from 6,639,954 in the comparable 1981 period. It was the lowest model-year output since 5,407,256 units were completed in 1961.

Each of the six auto companies suffered substantial production declines in the '82 model year. On a percentage basis, the largest dip was at American Motors as output dropped to the company's lowest point on record—70,898 cars, 48.30 percent below 137,125 in the '81 model year.

Volkswagen of America plunged to 102,664 cars in the 1982 model run, a 42.85 percent decline from 179,635 built in '81, and Checker Motors finisned with 2,000 units, down 32.20 percent from 2,950. Checker ended production last July.

Chrysler Corp. wrapped up the model year with 592,605 cars, 25.11 percent below the previous year's 791,258. It was Chrysler's lowest total since 1958 when 581,244 units were completed.

Ford Motor finished with 1,162,642 units, down 16.69 percent from 1,305,594, and it was the lowest model-year output since 1980 when 1,373,582 cars were built.

General Motors assembled 3,516,326 cars during the 1982 model run, a 14.93 percent decline from 4,133,392 in the comparable 1981 period. GM's output was its lowest since 3,484,224 units were completed in the 1975 model year.

New nameplates for 1982 included Buick Skyhawk and Century, Oldsmobile Firenza and Cutlass Ciera, Chevrolet Celebrity, Pontiac 6000, Lincoln Continental, Chrysler LeBaron and Dodge 400.

GM's other J-cars, plus Ford EXP and Mercury LN7, came out in the '81 model year as '82 models. Some were included in '82 production for the first time.

How calendar output was shared

Subaru dealers honored in L.A.

John Kelleher, left, Los Angeles area director, St. Jude Children's Research Hospital, presents a commemorative plaque to James C. Welsh, vice president and general manager, Subaru of Southern California, Inc., and Nicholas Shammas, president, Downtown L.A. Subaru. The men jointly donated a Subaru vehicle as the grand prize in the annual Danny Thomas St. Jude Children's Research Foundation raffle.

3.4 pct. real growth annually for 1985-95

Predicasts sees economic revival

CLEVELAND. — In a new analysis of short-term and long-term economic prospects, Predicasts forecasts that the late 1980s and 1990s will be "a period of unprecedented prosperity" compared with the negligible growth experienced since 1973.

The report is titled "The U. S. Economy: Outlook Through 1995."

The business information and research firm cited moderating inflation and interest rates, improved productivity and a new wave of technological innovations as factors which will drive real economic growth up 3.4 percent annually between 1985 and 1995.

T. Kevin Swift, Predicasts' chief economist and author of the report, said the U. S. is irreversibly evolving into a knowledge-intensive economy as opposed to a capital-intensive or resource-intensive society.

He said that although this transformation will be painful for the "sunset" industries (among them, motor vehicles, iron and steel and leather), excellent opportunities are at hand for "sunrise" industries such as robotics, biochemistry and information processing.

Due to the continued growth of the labor pool resulting from the high birth rate of the 1950s, Swift does not foresee a decline in unemployment until the late 1980s. With consistent gains in labor productivity and only moderate short-term economic recovery, the work force will not be able to absorb new entrants rapidly, he said.

However, demographic factors will ease this situation after 1985, and Predicasts projects an "acceptable" 5 percent unemployment by the early 1990s.

• In addition, Predicasts anticipates a decline in the cost of capital funds and credit which "will lower real (non-inflated) interest rates from the current abnormally high 6 percent to 1-2 percent by 1995."

Increased leisure time, a slow-growing, maturing population and the saturation of durable goods markets will each affect consumer spending patterns, Predicasts said.

Replacement will account for the balance of durable goods demand, the firm said, with consumers favoring luxury items which are household-oriented, conservative and classic in taste and styling.

Predicasts anticipates that services will remain the fastest growing segment of consumer spending.

It believes the burgeoning number of women in the labor force, changes in attitudes and and lifestyles and an increase in the annual number of births (the "echo effect" of the post-World War II baby boom) will enhance demand for child-care, personal (including cleaning), medical and recreational services.

The report is priced at $295 and is available from Predicasts, Inc., 11001 Cedar Ave., Cleveland, O. 44106.

NADA urges stricter laws against odometer tampering

WASHINGTON. — NADA has called for a crackdown on odometer rollbacks. The association wants stricter federal and state laws.

NADA President George W. Lyles cited injury to consumers and dealers alike as he urged federal and state authorities to take action against persons who roll back vehicle odometers to understate mileage prior to sale.

In a resolution passed unanimously by its board of directors, NADA urged enactment of federal legislation to require that all states use uniform vehicle title and odometer forms and that they maintain permanent records of vehicle mileage.

Further, the resolution called on state governments to enact and to enforce strong prohibitions against tampering with odometers.

NADA will also urge states to increase civil and criminal penalties for odometer tampering where they do not provide a sufficient deterrent.

In announcing the action, the NADA board expressed support for the enforcement of existing federal and state odometer laws.

However, Lyles said, "Existing laws do not go far enough to protect the purchasers of used cars and trucks. Dealers and their customers have no adequate way to verify the mileages on used vehicles in the market.

"The rollback of vehicle odometers to deceive potential purchasers is a fraud which the franchised new car and truck dealers of this country cannot and will not tolerate," he said. "NADA is pledged to fight this practice and to urge the prosecution of those who engage in it."

NHTSA enlisting auto sales force in belt campaign

PITTSBURGH. — Pittsburgh-area automobile dealers, sales managers and manufacturer representatives participated in a pilot program designed to get automobile sales personnel to encourage seat-belt use during their sales presentations.

The meeting, sponsored by NHTSA, was held at the General Motors Training Center in the Pittsburgh suburb of Monroeville.

A 40-minute flip-chart presentation was delivered by Jack Kearns, a former GM sales training administrator.

"We are turning to the automobile sales personnel for help, because we believe they can communicate best to their customers how simple it is to use safety belts and how the safety belt works under emergency conditions," Dr. Bruce Bigelow, NHTSA's head of motivation research, told the dealers.

The safety-belt program has the support of every domestic and foreign car manufacturer, as well as NADA.

FABULOUS FERRARIS!!

FERRARIS FOR THE ROAD, *by Henry Rasmussen.* Lavish pictorial coverage of : The LWB California Spyder, SWB Berlinetta, the Lusso, 275 GTS, 330 GTC, 275 GTB/4, Daytona Coupe, Daytona Spyder, 365 GTC/4, 246 GTS Dino, 512 Boxer, and the 308 GTS. 116 color plates and 153 black and white photos. Sections contain information on performance, construction specifications, original prices, and a chronology of Ferrari production cars. Hardbound, 19" x 11", 126 pages. F571A **$39.95**

ILLUSTRATED FERRARI BUYER'S GUIDE, *by Dean Batchelor.* Ferraris are NOT created equal. This book is your key to what these exciting cars are really about. 31 chapters cover all the magnificent street/production Ferraris from 1954 through 1981, and an additional section on nineteen super-exotic models. The author describes each model's heritage, good and bad points, what it's like to drive and own, specification tables, investment potential and ranking system along with a five-year analysis of Ferrari prices. Softbound, 7½" x 9¼", 169 pages, 232 illustrations. F610A **$13.95**

BOXER: THE FERRARI FLAT-12 RACING & GT CARS, *by Jonathon Thompson.* This book gives the full story of every flat-12 racing and GT car ever built. These range from the 1.5 liter 512 F1 in 1964 to the recent 180 mph 365 GT/BB512 road cars. Also gives complete technical specs., chassis number and race-by-race performance of every car. Hardbound, 9½" x 12¼", 184 pages, 200 ill., 24 in color. F649A **$34.95**

FERRARI, *by Hans Tanner and Doug Nye.* New format fifth edition. Bigger and better than ever before. This memorable book has been expanded and updated—read it and you'll want one of the cars. Hardbound, 500 pages, 653 ill., 40 in color. F344A **$55.00**

FERRARI BERLINETTA BOXER, *by Mel Nichols.* 365 and 512 series. Strong pictorial coverage and high overall quality. Approximately 80 black & white photos and 12 color photos along with authoritative text highlight the cars. Hardbound, 7½" x 9½". F518A **$14.95**

34.16 pct. of August registrations

Imports take record market share

By Jenny L. King
Staff Writer

Import registrations advanced slightly in numbers for August and were up enormously in percentage share of the total market, according to figures compiled by R. L. Polk & Co.

There were 214,290 new imported cars registered in August, 1982, up 4.27 percent from 205,507 last year. They carved out an any-month record of 34.16 percent of the month's market, up 5.65 percentage points from 28.51 percent in 1981, and up from the former record of 32.41 percent notched in July of this year.

Registrations for the first eight months of 1982 totaled 1,497,322, down 11.21 percent from 1,686,331 last year. Market share for the imports through August reached 29.75 percent, up from 29.07 percent a year earlier.

For August, five of the major importers improved their shares of the import market compared with a year ago: three lost ground. Nissan enjoyed an increase of 1.96 percentage points, Honda was up 0.70 percentage points, Mazda was up 0.98 percentage points, Volvo was up 0.48 percentage points and Mercedes climbed 0.10 percentage points.

Volkswagen dropped back 3.38 percentage points and relinquished fourth place to Mazda. First-place Toyota was down 0.07 percentage points, and Subaru was off 0.57 percentage points.

The top imports accounted for 89.42 percent of the market, up from 88.77 percent in August of 1981.

Eight-month registrations revealed Nissan taking the biggest step forward and Volkswagen losing the most ground. Nissan was up 1.89 percentage points for Jan. 1 through Aug. 31, 1982, to 20.11 percent from 18.22 percent a year earlier. Volkswagen slipped 2.73 percentage points, to 6.60 percent from 9.33 percent.

Other winners included Honda, up 1.22 percentage points; Subaru, up 0.43 percentage points; Volvo, up 0.85 percentage points; Mercedes-Benz, up 0.46 percentage points and Audi, up 0.08 percentage points.

• Toyota was off 0.45 percentage points during the first eight months, to 23.74 percent from 24.19 percent. Mazda was off 0.33 percentage points.

The top ten accounted for 90.18 percent of the import market for the first eight months of 1982, up from 88.45 percent in 1981.

Japanese nameplates accounted for 79.13 percent of all new imported cars registered in August, up from 75.17 percent a year earlier. German-built products claimed a distant 13.39 percent, down from 17.20 percent.

Japan provided 78.05 percent of all imports during the first eight months this year, up from 75.25 percent last year. German cars represented 14.15 percent, down from 17.39 percent.

Registrations by country of origin in August were:

	August, 1982	August, 1981
Japan	169,566	154,480
West Germany	28,702	35,349
Sweden	9,064	7,014
France	4,626	3,200
Italy	1,146	3,729
United Kingdom	914	1,554
Ireland	272	181

Registrations by country of origin for the first eight months were:

	8 mos., 1982	8 mos., 1981
Japan	1,168,709	1,268,993
West Germany	211,817	293,277
Sweden	63,940	53,091
France	33,198	29,515
Italy	11,159	27,281
United Kingdom	6,221	13,892
Ireland	2,278	282

Registrations of imported trucks in August totaled 37,429, down 10.47 percent from 41,808 last year. Totals by maker were as follows:

	August, 1982	August, 1981
Toyota	13,993	12,593
Nissan	8,291	9,514
Mazda	3,912	.....
Ford Courier	2,428	4,853
Chevrolet LUV	.....	5,071
Others	8,805	9,777
TOTAL	37,429	41,808

Registrations of imported trucks for the first eight months of 1982 were down 15.50 percent compared with 1981, to 274,789 from 325,178. Totals were as follows:

	8 mos., 1982	8 mos., 1981
Toyota	81,111	83,762
Nissan	60,306	73,799
Mazda	23,760	.....
Ford Courier	21,369	43,094
Chevrolet LUV	.....	46,975
Others	78,243	77,548
TOTAL	274,789	325,178

GM, Conn. firm settle dispute on metal ownership

HARTFORD. — General Motors and now-shuttered Bristol Brass Co. have resolved a year-long dispute in U. S. Bankruptcy Court here.

The agreement allows Bristol Brass to fill some outstanding orders for finished metal and pay off money due its lender, National Acceptance Co. of America.

As a result, GM will retrieve some one million pounds of metal (provided to Bristol Brass before the latter filed for protection from creditors last summer under the U. S. Bankruptcy Act's Chapter 11) for use in metal product manufacturing.

At the same time, GM has to pay $502,000 for an additional 775,000 pounds of metal retained by Bristol Brass.

That sum will go to National Acceptance to reduce Bristol Brass' debt and allow the firm to save about $1,000 a week in interest payments, according to legal counsel.

After Bristol Brass sought creditor protection last summer, GM brought litigation for rights to 1.5 million pounds of metal supplied to Bristol Brass.

Judge Robert Krechevsky, in the local court, said that GM had effectively sold the metal to Bristol Brass and, hence, could not claim ownership.

The Second Circuit Court of Appeals, to which GM appealed the judge's ruling, returned the matter to Judge Krechevsky for another hearing.

Volvo honors Stillpass, 20-year dealership

CINCINNATI. — Joseph and Stanford Stillpass, of Stillpass Bros., Inc., have been honored for 20 years of service as Volvo dealers.

The award includes an individually engraved block of Swedish crystal and a certificate signed by Bjorn Ahlstrom, president of Volvo of America Corp. Stillpass Bros. has a staff of 60 people and sells about 175 Volvos annually.

Wins order

Peter Young, left, Rolls-Royce Motors regional director, presents Order of the Silver Lady Award to Anthony Thompson, president of Rolls-Royce of Beverly Hills. The award, for outstanding sales achievement, was presented to Thompson for the sixth consecutive year.

But economy still scares buyers

Dealers note slight sales upturn

Continued from Page 1

in that car than I've seen in any new model in three or four years," Boeckmann said.

Roy Chapman, owner of Sheehy Ford, Philadelphia, said October was his best new-car month "in the last year." Chapman's movers are the Crown Victoria and the Escort. About the new LTD, Chapman said, "The public has not looked at that car enough yet."

• Chapman's dealership has already written 25 orders for the new Thunderbird.

Chapman also noted increased demand for luxury cars at the store's Lincoln-Mercury dealership in Springfield, Pa.

"The economy is the biggest problem; putting people back to work," he said. "People who aren't working can't afford to buy and people who are working are worried about how long they'll continue to be working."

"I think it's just an attitude of uncertainty by the buying public," said George Poling, general manager, Jerry's Chevrolet, Baltimore, Md. "People are concerned about what the future may bring."

Poling said his dealership is fighting high inventories of '82s, although he noted that the GM financing carrot seems to be working.

"We're optimistic," he said. "We think this program will work and work well for us. We're looking forward to the next 60 days."

Bob Langley III, Langley Oldsmobile, Jacksonville, Fla., said "sales of '83s are beginning to pick up," with big cars leading the way. "Business is a little better than it was at this time last year," he noted.

• At Sledge Chevrolet-Oldsmobile, Cleveland, Miss., sales were up in '82 and are expected to increase again in '83, said Thomas Sledge, general manager. The Oldsmobile 98 was the top nameplate at the dealership last year. Slow sellers have been the Malibu and Monte Carlo.

Joe Watts, general manager, Roy Rioux VW/Mazda, Westboro, Mass., said Rabbit sales are off about 20 percent but reception to the new high-performance Rabbit GTI has been "excellent."

"Right now, we're seeing the car buffs, the enthusiasts," he said.

His Mazda sales "have been going great guns," with the GLC his volume car. The redesigned Volkswagen Scirocco, however, "has not enjoyed the acceptance we had hoped for," he said.

Watts said that recent dips in the interest rate have not stimulated buyers.

"I think there's just too many people out of work," he said.

AMC/Renault dealers continue to cash in on the new Alliance. Greenfield AMC/Jeep/Renault in suburban Detroit sold 80 Alliance models in a month and a half, said Ed Quinlan, general sales manager.

"If I had had the cars on hand, it would have gone well over 100," he said.

"The acceptance of that car has been great," he added. "The car performs and handles just super. Once they've had a ride in it, they're not too hard to close.

"My salespeople like it, too. It's not too hard to sell a car when you're sold on it yourself."

Harvester makes two moves on financial front

CHICAGO—International Harvester shareholders have approved two proposals which the company said will allow it to move ahead with its refinancing plan.

Shareholders approved an increase in authorized common stock to 100 million shares from 60 million and the issuance of Series A preference shares and warrants.

Lenders earlier approved a financial restructuring plan that would permit the conversion of $350 million of debt into equity and also substantially reduce the company's cash interest payments.

Harvester also said it had resolved a dispute with Deere & Co. which it said could have threatened the sale of its construction-equipment business to Dresser Industries and possibly force the company into bankruptcy proceedings.

Deere, which had won a court order requiring Harvester to pay $28.5 million in damages for patent infringement, had liens placed against Harvester property in Illinois, including its construction-equipment facilities.

Harvester said it had agreed in principle to place its Phoenix proving grounds in escrow as security for the payment to Deere, pending the outcome of Harvester's appeal of the size of the award. It said Deere agreed to drop its liens.

Import-car sales climb in October; domestics steady

Continued from Page 3

and dealers reported sales of 1,175 new cars for openers.

Third-period domestic sales were off 4.25 percent, to 187,238 from 195,551 last year. With nine selling days this year compared with 10 in 1981, the daily rate of 20,804 was up 6.39 percent from 19,555.

In the final 10 days, GM was down 5.81 percent, Ford was off 4.31 percent, Chrysler was up 26.04 percent, AMC was up an estimated 12.50 percent and VWoA dropped 62.40 percent.

GM earned 59.54 percent of the last-period domestic market, Ford had 22.38 percent, Chrysler had 13.93 percent, AMC earned 2.40 percent and VWoA had 1.75 percent.

Based on third-period sales, an annualized rate for 1982 was 8,128,300 domestic cars.

416,675 cars built, leanest total since GM strike of 1970

October output lowest in 12 years

By Patricia Hoffman
Staff Writer

Domestic auto production in October was the lowest for that month in 12 years.

In October, the makers finished 416,675 cars, down 22.14 percent from 535,129 built in the comparable month last year. It was the lowest October total since 1970 when only 390,016 units were completed. All General Motors operations were closed by a strike in October of 1970.

Only one of the five auto makers showed a gain last month from the comparable 1981 period. American Motors assembled 16,514 cars, up 77.99 percent from last year's 9,278. Renault Alliance (13,118) made the difference.

Totals for the other companies were: Volkswagen of America, 7,518, down 58.68 percent from 18,195 last year; Ford Motor, 92,839, down 24.90 percent from 123,620; General Motors, 244,878, down 22.56 percent from 316,225, and Chrysler Corp., 54,926, down 18.45 percent from last year's 67,354.

Overtime at two assembly points and the return of two others helped boost last week's estimated output to 111,392 units, a 5.50 percent gain from the previous week's 105,580, and up slightly from the 110,563 units built in the comparable 1981 period.

Year-to-date, the makers finished 4,425,486 units, a 21.51 percent decline from last year's 5,638,483.

GM's Arlington plant operated six days last week.

Also at GM, the Detroit point worked 1.6 hours of daily overtime on both shifts last week, with two eight-hour shifts operating Saturday (Nov. 6).

GM's Lordstown facility was idle last week for inventory control. Production is slated to resume Nov. 15.

Still down last week due to high inventories were GM's Oklahoma City facility and Ford's San Jose point.

Model changeover downtime continues at GM's Bowling Green point and Ford's Lorain facility. Both plants, idled Oct. 13, are slated to begin 1983 model production in December.

The GM Doraville point and the Ford Metuchen plant returned last week following downtime to adjust overstocked inventories.

October output in Canada collapses to 18-year low

Scattered downtime due to high inventories slashed the Canadian auto production total in October to its lowest point in 18 years.

Last month, the car manufacturers assembled 54,284 units, down 9.59 percent from 60,045 built in the comparable 1981 month. It was the lowest October total since 1964 when only 34,414 cars were produced.

Downtime at Ford Motor's Oakville car facility pulled last week's estimated car production down to 18,245, a 17.13 percent decline from the previous week's 22,016, but output jumped 22.47 percent from last year's 14,898 units.

Year-to-date, the car makers have finished 733,347 units, a 5.75 percent gain from 693,480 built in the comparable 1981 period.

The truck manufacturers wrapped up October production with 35,858 units, a 29.62 percent drop from 50,946 completed last year. It was the lowest output for that month since 1976 when 33,324 trucks were assembled.

Due to downtime at Ford Oakville last week, the truck makers estimated 6,345 units, a 32.90 percent decline from 9,456 the previous week. Output also fell 22.02 percent from 8,137 in the comparable week last year.

So far this year, the truck manufacturers have built 423,790 units, down 2.85 percent from last year's 436,215.

Ford's Oakville car and truck facilities were idle last week for inventory control. Operations are slated to resume Nov. 15.

American Motors' Brampton point, idled Oct. 18 for inventory adjustment, returned last week.

Due to poor sales, General Motors will close its Oshawa car and truck facilities for one week starting today (Nov. 8). The Oshawa car line will also be idle the weeks of Nov. 29 and Dec. 6.

The GM Oshawa truck plant, which ended second-shift production of light-duty Chevrolet and GMC trucks Oct. 25, has scheduled an additional week of downtime beginning Dec. 6.

International Harvester's Chatham assembly point remained idle last week. The facility was closed Oct. 25 due to high inventories.

Qualifying for 25

A 25-year dealer award plaque is held by honoree Pat S. Cantey Sr., right, Chevrolet dealer at Cantey Motor Co., Madison, Fla. He is congratulated by R. J. Bresnahan, Jacksonville zone manager.

Truck production in October sinks to 12-year low

Although domestic truck production in October was up from the September total, it was the lowest output for that month in 12 years.

Last month, the truck manufacturers assembled 151,485 units, down 6.52 percent from 162,057 built in the comparable 1981 period. It was the lowest total for October since 1970 when only 108,343 units were completed because of a strike against General Motors.

Downtime at five assembly points pulled last week's estimated truck output down to 26,879 units, a 30.55 percent drop from 38,703 built the previous week, but the total was 1.42 percent above the 26,503 assembled in the comparable 1981 period.

So far this year, the makers have assembled 1,662,664 units, a 15.43 percent gain from last year's 1,439,729.

High inventories closed one General Motors point and four Ford Motor facilities last week.

The light-duty Chevrolet and GMC truck lines were idled for one week at GM's Flint plant. Operations are slated to resume today (Nov. 8). Also closed for inventory control were Ford's Kansas City, Louisville, Norfolk and Twin Cities plants.

International Harvester's Fort Wayne and Springfield facilities remained down last week to control inventory.

Volkswagen of America's Westmoreland point, idle since June 25, is slated to return next month.

Possible Toyota deal appears overshadowed

GM to build 300,000 Isuzu cars a year in U.S.

By John Hartley
Staff Correspondent

TOKYO.—Under terms of an agreement reached here, General Motors will build the Isuzu R-car in a Midwest U. S. plant at the rate of 300,000 a year.

The cars would be in addition to the 200,000 a year which Isuzu will produce in Japan for sale in the U. S. by GM, starting in 1984-85.

The Isuzu-GM deal must cast serious doubt on a proposed agreement between Toyota and GM. Those talks have dragged on much longer than expected.

With the sort of volume anticipated in the deal with Isuzu, GM apparently would no longer be interested in a joint venture with Toyota to build a version of the new Corolla in the U. S.

GM already has an agreement with Suzuki for the latter to supply GM with about 100,000 minicars with 1-liter engines.

• Reason for the moves to acquire some 600,000 Japanese minicars a year reportedly is GM's market research which indicates that the market for 1-to-1.5-liter cars in the U. S. is going to be much bigger than had been expected earlier.

It is understood that GM expects to be able to sell 800,000 units of this size annually at first, with growth to one million a year by the end of the decade.

The gap between the Japanese supply and the market demand apparently would be filled by domestically-designed and produced GM minicars.

The Isuzu R-car (called the ST-car in some quarters) has engines of 1.3 and 1.5 liters. It is a hatchback with an overall length of about 156 inches.

The initial version is a two-box design, for which Isuzu is now tooling up. Isuzu is building a new engine plant on Hokkaido, the northernmost island of Japan, and is re-equipping its plants near Tokyo to manufacture the transaxles and bodies.

An Isuzu source said the company felt obligated to agree to the GM deal because of its need to generate cash flow.

In addition to the cars it will build in Japan for sale in the U. S., Isuzu will build engines and transaxles for cars built in the U. S. This, along with a license fee from GM, should supply Isuzu with approximately $400 million annually.

(In the U. S., GM described the report as "speculative.")

But 1,267 domestic outlets fold during model year

20,821 dealers hang on

By John K. Teahen Jr.
Managing Editor

Another year of depressed sales resulted in another year of heavy losses for the domestic new-car dealer population.

The latest AUTOMOTIVE NEWS census finds that 1,267 dealerships departed from the ranks during the 1982 model year. It was the second-largest decline in the 20 years that this newspaper has been compiling model-year statistics. The worst was 1980, with a dip of 1,643 outlets.

The drop of 1,267 for '82 compares with a heavy, but much less severe, downturn of 758 in the 1981 model year.

On Oct. 1 of this year, there were 20,821 dealerships handling cars manufactured by the five major domestic makers. This compares with 22,088 establishments in operation on Oct. 1, 1981.

(Volkswagen is included in the figures for each year. Renault is not included since Renault dealers did not begin handling U. S.-built cars until the beginning of the '83 model year.)

Each of the five manufacturers contributed to the loss in the '82 model year, but General Motors and Ford Motor Co. were the hardest hit.

GM's car-dealer total declined by 575 during the period, and Ford's was down by 266. There were dips of 117 for American Motors, 111 for Chrysler Corp. and 61 for Volkswagen.

That's a total of 1,130. An increase in the number of intercorporate duals hiked the industry's net loss to 1,267.

All figures in this article and in the accompanying tables refer to the net change in the dealership population, both for the individual corporations and car lines and for the domestic industry as a whole.

• Looking only at the 1982 calendar year, the current total of 20,821 dealerships is down 859 from 21,680 at the beginning of this year.

The third quarter was the roughest of the calendar year with a drop of 303 outlets. It followed dips of 276 in the first quarter and 280 in the second. (The fourth-quarter slip last year was 408, bringing the model-year total to 1,267.)

As noted, Volkswagen is included in the domestic dealer count. Without VW, the total would have dipped below 20,000. The combined tally for AMC, Chrysler Corp., Ford Motor and GM was 19,984 on Oct. 1.

Turning to franchise figures, the 1982 model year was quite satisfying for three Chrysler Corp. makes and for Lincoln, but there were declines for the other entries.

Dodge showed a gain of 28 franchises for the period; Plymouth was up 26; Imperial was up 14 and Lincoln was up 2.

Chrysler had the slimmest loss, a dip of 15 franchises. Elsewhere, there were drops of 30 for Cadillac, 65 for Buick, 75 for Oldsmobile, 82 for Mercury and 135 for Pontiac. The biggest losses were suffered by Ford,

Domestic-car stockpile holds steady at 69 days

By Richard A. Wright
Assistant Managing Editor

The domestic new-car inventory held steady at a 69-day supply Nov. 1, unchanged from Oct. 1, but well below the 81½-day stockpile of a year earlier.

The domestic new-car inventory totaled 1,295,704 Nov. 1, down from 1,350,366 a month earlier. The days-supply figure remained the same despite the lower unit count because of a corresponding drop in the sales rate. A year ago, the industry had 1,480,768 new cars on hand.

Table on Page 7.

While the domestic inventory was holding steady, the stockpile of new imported cars in the U. S. rose during October to 365,467 on Nov. 1, a 56-day supply, compared with 354,500 a month earlier, a 48½-day stock.

Chrysler Corp. trimmed its supply during the month, while General Motors' was unchanged. Ford Motor Co. and Volkswagen of America saw their days-supply figures rise while unit counts fell. American Motors' supply figure rose, and it was the only corporate maker to increase its unit count as well.

• GM's stockpile held at 69 days. Its J-body, X-body and A-body front-drive cars were still in heavy supply, with the older-fashioned rear-drive cars (which were formerly A bodies and now designated G) in relatively lean supply.

Ford Motor Co. opened November with a 71-day supply, up from 67 days a month earlier. Ford's stockpile was heaviest in small cars, lightest in big cars.

Chrysler Corp. had a 64-day supply Nov. 1, down from an 85-day stock a month earlier. Chrysler had relatively good balance between the various market segments

AMC boosted its inventory to an 80-day supply Nov. 1, up from 71 days a month earlier. Its Alliance continued the sales pace it set in its first month and was in just about ideal supply, while other lines were heavy.

VWoA trimmed its unit count, but a lower sales rate pushed

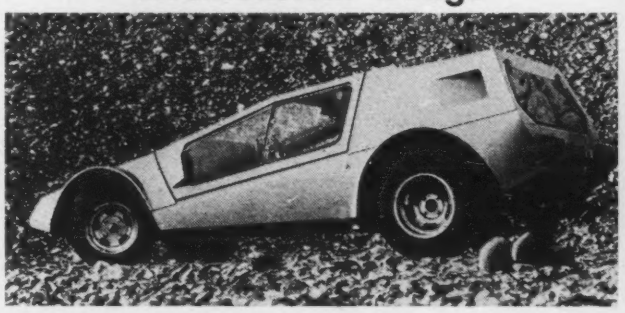
Liechtenstein wedge



The unusual Saphier

Liechtenstein is better known—if at all—for its scenery than its auto industry, but the Saphier, a wedge-shaped coupe, is made in that tiny principality between Switzerland and Austria. The car has a fiberglass body and can be outfitted with two or three seats. The whole middle is lifted for entry. Some are built on Volkswagen Beetle chassis and some on their own chassis with a midship-placed Rabbit engine.

breaking news

IH reups concessions on debts

CHICAGO.—International Harvester Co. said it has received commitments to $54.5 million in concessions from suppliers. That easing of debt pressure means the company can make a $150 million trade of debt for equity. Some of the concessions are verbal and must be written before the plan proceeds, however. IH said at a press conference it will lose only "a couple of tenths of a point" in heavy-truck market share this year and "a point at most" in mediums.

Low-interest financing sparks GM sales

DETROIT.—Low-interest financing programs are really churning up domestic auto sales. Chevrolet, for example, is expected to be up more than 31 percent for Nov. 1-10 over Oct. 21-30 and General Motors to be up more than 21 percent for the same period. Chevrolet, Pontiac and Buick, with the most '82s, are cashing in on the program more heavily than Oldsmobile or Cadillac.

Ford delays '83 programs

DEARBORN. — Job One dates for Ford Thunderbird/Mercury Cougar and Ford Tempo/Mercury Topaz have been delayed. T-Bird/Cougar output has been pushed from Nov. 29 to January. Tempo/Topaz has moved to late March.

Majerus to head Democratic site committee

WASHINGTON. — UAW Secretary-Treasurer Raymond Majerus has been named chairman of the committee which will select the site for the Democratic Convention in 1984. Detroit is in the running to host that event.

Cooperation allowed on emission controls

Smog decree eased; to expire in 5 years

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. — A 13-year-old consent decree that banned U. S. auto makers from jointly developing emission - control technology, has been amended to allow such activity, and the decree itself will be permitted to expire in five years, on the orders of a U. S. District Court judge here.

According to the order signed by Senior Judge Jesse W. Curtis, "The modified final judgment would eventually bring to an end nearly two decades of regulation by the court regarding the defendants' development, manufacture and installation of motor vehicle emission-control devices."

The decree grew out of an antitrust suit filed in Los Angeles in 1969. It had charged General Motors, Ford Motor Co., Chrysler Corp., American Motors and their trade association (now the MVMA) with conspiring to delay installation of emission-control devices and stalling the development of such systems for 14 years.

One provision vacated by Curtis had prohibited the sharing of confidential company information from applied emission-control research.

Also vacated was the prohibition against joint filing of statements with government agencies promulgating emission-control or safety standards.

• As a result, Curtis' order holds that the defendants may now cross-license after-acquired patents, publicize R&D efforts, jointly assess third-party patent rights and license patent rights on a most - favored - purchaser basis. Makers must, however, file copies of such agreements with the U. S. for review.

The U. S. could then challenge any such agreement under antitrust laws or under the remaining injunctive provisions of the decree.

These broadly prohibit any agreement that limits, restrains or prevents the development, manufacture, installation or sale of vehicular emission-control devices.

Ironically, the same court vacated the consent decree three years ago when the Carter Administration sought to have the provisions of the decree extended.

On appeal, a higher court extended the provisions and set aside the lower court's ruling pending a wide-ranging hearing on the merits of the case.

Under the Reagan Administration, the Justice Department told the court it saw no need for an extension of the provisions. It thus opened the door for the district court to vacate some provisions of the decree and allowing it to eventually expire.

The move was opposed by the California Air Resources Board (CARB), the Center for Auto Safety (CAS) and Los Angeles County Supervisor Kenneth Hahn.

Curtis noted these parties' objections raised the same arguments that existed when the decree was issued in 1969 and offered no new evidence that the restrictions should continue.

"The objectors, however, fail to give proper recognition to the vastly different environment in which the automobile industry finds itself today as compared with 1969," Curtis wrote.

"In 1969, it was perceived that the solution to pollution could best be found by manufacturers pursuing independent R&D programs; whereas today it is apparent the problems of air pollution and the efficient use fuels is beyond the ability of any single manufacturer, technologically or financially," Curtis explained.

"Although there have been advances made in these areas during the time the judgment was in effect, these have more probably been the result of the technology developed by foreign manufacturers and the efforts of domestic manufacturers attempting to match the performance of foreign cars."

• The judge pointed out that foreign manufacturers are free from restraints such as those imposed by the decree and collaborate freely with one another through mergers, joint ventures and licensing agreements.

Curtis said he feels that has given the foreign companies "a substantial competitive advantage which the defendants have denied by this decree."

Curtis said that in the highly competitive environment of the U. S. market in which imports play an important role, there is little likelihood that the U. S. car makers could engage in the kind of anticompetitive behavior the government sought to prevent with the decree.

He added that the U. S. manufacturers are still open to antitrust proceedings if they do engage in anticompetitive practices and that the penalties are stiffer now than they were in 1969. Sherman Act violations have been elevated from misdemeanor to felony status and the maximum fines increased from $50,000 to $1 million.

"Additionally, in the last 12 years, there has been an increasing recognition on the part of the public that in many instances industry has been stifled by excessive government regulations and government agencies have been urged to re-examine their procedures and deregulate those instances where the regulations are unnecessary," Curtis said.

"In my view, the expired injunctive provisions of the original decree come clearly within the characterization of those regulations which are not only unnecessary, but which are unduly restrictive and are inappropriate in today's world."

Lennox named chief executive at Harvester

CHICAGO. — Donald D. Lennox, International Harvester president, was named last week to the additional post of chief executive officer, effective Dec. 1. He will succeed Louis W. Menk as chief executive. Menk will continue as board chairman and Executive Committee chairman.

Lennox relinquished the post of chief operating officer. The company has not announced its plans for this position.

At a special session, directors also authorized immediate implementation of previously announced securities offerings providing for conversion of up to $350 million of interest and debt principal into equity by Harvester lenders.

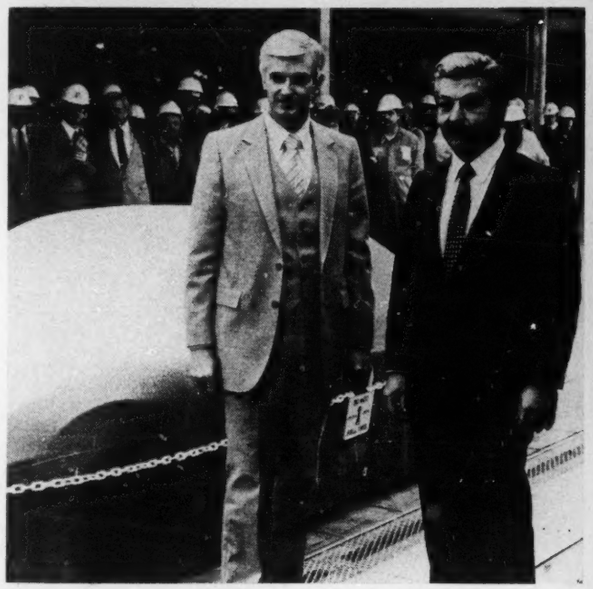
Menk said his own agenda as CEO has been completed, and he called Lennox "well equipped to tackle the remaining problems confronting the company."

Menk added that he and William G. Karnes, who continues as Finance Committee chairman, "will devote as much time as may be required to the activities of International Harvester. We will be available to assist Mr. Lennox and his management team on major policy questions as they arise."

Gallen loses 3rd-term bid as governor of N. H.

CONCORD, N. H.—Hugh Gallen, a former Chevrolet dealer in Littleton, was defeated in his bid for a third term as New Hampshire governor.

Gallen lost to Republican John H. Sununu, 43, an engineering professor.



'P' nuts

Pontiac Division announced last week it would name its P-car the "Fiero." Posing in front of a covered Fiero prototype are John Schinella, left, chief designer—Pontiac Exterior Studio II, and Hulki Aldikacti, P-car project manager. The mid-engined Fiero will bow next fall as a '84 model.

Pontiac unveils P-car, names 2-seater 'Fiero'

By Jim Plegue
Staff Writer

PONTIAC, Mich. — "Fiero" is the name chosen by Pontiac Division for its P-car, the sporty mid-engine model which goes into production at the division's home plant here in July and will debut next fall as an '84 model.

Fiero is an Italian name which means "very proud," according to Pontiac, and was originally used on one of the division's show cars in 1968. On the P-car, Fiero will be followed by a designator, "2M4," which means 2-seat, mid-engine, 4-cylinder. The "designator" will change with optional powertrains.

The Pontiac home plant, over 50 years old, has been undergoing renovation since early August for production of the P-car, according to Ernest Schaefer, plant manager. The work is on schedule, and about 35 percent complete, he said.

Pilot production will begin Feb. 21, Schaefer said. Job One is set for July 18. Plant capacity is about 30 cars per hour on two shifts.

Pontiac officials have said they hope to sell 110,000 or more Fiero models per year.

Employes will begin reporting to the plant in January, with employment scheduled to hit 750 in June and 2,400 at start-up.

• While the Fiero name was kept secret, the P-car project itself has been one of the worst-kept secrets in the automotive community.

Its unique design (small two-seater with fiberglass body and powertrain mounted amidships), its unusual origins (it has been and remains a Pontiac exclusive, though sources now say Chevrolet has been testing its own version for the future), and its struggle to make it to the marketplace (by some accounts, GM corporate brass shelved the "P" program on at least four occasions) received plenty of publicity.

The $250 million Fiero — nee P-car — program finally received the corporate nod last spring.

Standard Fiero powertrain will be the Pontiac-built 2.5-liter four-cylinder engine, mounted over and slightly ahead of the rear wheels, driving the rear wheels through a four-speed transmission. Suspension will be independent at all corners — a Chevette-derived system up front and a strut-type system in the rear.

Pontiac officials, while not wanting to discuss the car's details, did acknowledge that more than one version of the Fiero is being considered. A sporty model, with aerodynamic enhancement, i.e., air dam or spoilers, is planned.

Sources inside Pontiac said the division is considering either a turbocharged version of the 2.5-liter engine or use of Chevy's 60-degree 2.8-liter V-6 as an option in the car. Use of the V-6 for example, would change the Fiero's designator to something like "2M6" or "2MV6."

Target price for the 1984 Fiero is said to be just under $10,000. It will compete against Fiat's X 1/9 and similar entries from Japan.

Pontiac unveiled the Fiero

Continued on Page 42, Col. 3

'Very proud'

Pontiac has named its '84-model P-car the "Fiero" (pronounced Fee-air-o), which means "very proud" in Italian. The designation "2M4" means 2-seat, mid-engine, 4-cylinder.

Topless Celica by Matrix 3

Matrix 3, Costa Mesa, Calif., has introduced this convertible conversion for the 1983 Celica. The electrically operated top can be lowered in 30 seconds, Matrix said. Leather seat packages are also available for the Celica through Matrix 3.

Nov. 1 inventory totals 1.2 million

U. S.-car stockpile holds to 69 days

Continued from Page 1

up its days-supply level from 53 days to 72 days.

The Nov. 1 domestic inventory was divided this way: GM, 60.63 percent; Ford Motor Co., 22.31 percent; Chrysler Corp., 12.59 percent; AMC, 3.03 percent, and VWoA, 1.44 percent.

A month earlier, the domestic inventory was divided as follows: GM, 61.64 percent; Ford Motor Co., 21.80 percent; Chrysler Corp., 12.54 percent; AMC, 2.60 percent, and VWoA, 1.42 percent.

• By size class, days supply figures ranged inversely by the size of the cars, as follows: Subcompact, 84 days; compact, 79 days; intermediate, 69 days; standard, 57 days, and luxury, 49 days.

The Nov. 1 inventory was divided this way by market segment: Subcompact, 19.84 percent; compact, 23.57 percent; intermediate, 35.71 percent; standard, 14.66 percent, and luxury, 6.22 percent.

The Nov. 1 days-supply figures by market class were:

Subcompact — Alliance, 58; Horizon, 58; Turismo, 59½; Charger, 64; Eagle SX/4, 65; Omni, 65; Rabbit, 72; Escort, 83; Chevette, 91; Lynx, 101; Pontiac 1000, 139; Spirit, 163; EXP, 164, and LN7, 201.

Compact — Zephyr, 36; Fairmont, 52; Reliant, 56; Aries, 60; LeBaron, 71; Mustang, 72; Cimarron, 86; Cavalier, 91; Capri, 95; Camaro, 95; Dodge 400, 108; Firenza, 113; Pontiac 2000, 115; Skyhawk, 124, and Firebird, 134.

Intermediate — Cutlass coupe, 39; Thunderbird, 42; Cougar XR7, 42; Cutlass four-door, 45; Bonneville, 48; Chrysler E-Type, 51; Marquis, 51; Cougar, 52; Regal four-door, 54; Grand Prix, 58; Malibu, 60; Ciera, 64; LTD, 71; Monte Carlo, 73; Omega, 74; Dodge 600, 77; Skylark, 77; Regal coupe, 77; Granada, 79; Century, 85; Citation, 101; Celebrity, 101; Eagle, 106½; Pontiac 6000, 111; Concord, 119, and Phoenix, 122.

Standard — Olds 88, 37; LeSabre, 46; Olds 98, 52; Diplomat, 55; Electra, 60; Grand Marquis, 62; Fifth Avenue, 68; Chevrolet, 68; Crown Victoria, 70; Cordoba, 71½, and Gran Fury, 74.

Luxury — Cadillac, 37; Lincoln, 41; Eldorado, 41; Continental, 43; Seville, 45; Toronado, 54; Mark VI, 59; Riviera, 63; Imperial, 107½, and Corvette, 160.

Alliance sets the pace

The Renault Alliance paced the 16,000 runners along the 26-mile course of the New York City Marathon. After the run, the 600 marathoners from France autographed the car. It was shipped to Paris for display.

California dealer Mardikian fined in sale of exotic car

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. — Albert Mardikian, owner of Trend Imports, a Newport Beach-based exotic car dealership, was found in contempt of a preliminary injunction barring him from selling new, uncertified exotic cars in California. He was fined $1,000.

Judge Leon Savitch found Mardikian guilty of five of the seven counts contained in a complaint filed by the state.

Three of those counts charged Trend with attempting to sell new, uncertified cars and two counts charged the firm with actually selling a new Mercedes 500-SEL and submitting documents to the state representing the car as used.

Mardikian was found not guilty on two counts of misleading advertising for distributing brochures last spring at L.A. Auto Expo that depicted cars that cannot be sold legally in California as new.

The injunction that Mardikian was found to have violated is part of a pending civil suit filed by the state seeking $310,000 in damages from Trend for allegedly selling exotic imported cars that do not meet California emission and registration requirements.

Under California law, a car with less than 7,500 miles is considered new and must be certified by the manufacturer as meeting California emission standards. Cars with more than 7,500 miles may be sold as used as long as they comply with the smog requirements.

The state charged that Trend, on three occasions, attempted to sell new, uncertified cars to government agents posing as prospective buyers.

Attorneys for Mardikian admitted as much, but contended that Trend had taken remedial action by discharging the salesman responsible and posting signs at the dealership saying that new exotics are not for sale in California. Judge Savitch found Mardikian guilty on those counts, but didn't impose a fine in light of the remedial actions.

Mardikian was fined $500 each on two counts of selling a new Mercedes 500-SEL. According to Deputy Atty. Gen. Susan Durbin, the car was sold and registered with the state on March 16.

An odometer statement filed listed the vehicle's mileage as 14,321 kilometers (8,879 miles). Durbin said the car was serviced 15 days later at a Mercedes-Benz dealership and the vehicle's odometer registered only 1,000 kilometers. The dealership's service manager, William Lawson, testified that the car appeared to be new.

Order more '82s or be terminated, Fiat tells dealers

Continued from Page 2

company may be preparing to "self-destruct."

There have been persistent rumors of Fiat disbanding its current set-up and turning the operation over to a distributor.

Brown said he wasn't privy to future organizational changes, and couldn't comment on them.

Fiat has 2,500 '82 cars still in port, plus those in dealers' inventory, which it has to work off.

Brown declined to put this into a days' supply number, saying days' supply would depend on the future rate of sales travel. But AUTOMOTIVE NEWS estimates the total inventory at a 255-day supply.

Fiat has been trying to promote sales through a co-op dealer advertising program, plus factory radio or newspaper in major markets and ads in buff books.

New Volvo outlet

WHITTIER, Calif. — Scandia Auto Imports is a new Volvo dealership.

Domestic dealer population drops 1,267 in model year

Continued from Page 1

down 232, and Chevrolet, down 290.

Since VW and AMC have only one make of domestic cars, their franchise losses were the same as their dealership losses —61 for VW and 117 for AMC.

• AMC had 1,475 dealers on Oct. 1, down from 1,592 a year earlier. It was AMC's heaviest model-year loss since 1971 and compared with a dip of 60 in the 1981 season.

AMC has about 735 duals with Big Three makes and 35 more with Volkswagen.

The VW dealer total slipped from 1,010 to 949 during the 1982 model year. VW has 116 duals with other U. S. makes, an estimated 77 of them with the Big Three.

Chrysler Corp.'s car-dealer total of 3,629 is down 111 from 3,740 in October of last year. The loss was lighter than the 131 outlets that faded in the 1981 model year, and it was the company's smallest dip since 1978.

Franchise totals for the four car lines on Oct. 1 were Chrysler, 2,644; Plymouth, 2,562; Dodge, 2,473, and Imperial, 430.

In addition to its 3,629 car dealers, Chrysler Corp. has eight that handle only Dodge trucks. They are not included in the corporation's car-dealer total or in the Dodge car-franchise total.

At Ford Motor Co., the Oct. 1 car-dealer total was 5,454, down 266 from 5,720 a year ago. In the 1981 model year, Ford's decline was 282.

Latest franchise totals are Ford, 4,630; Mercury, 2,585, and Lincoln, 1,473.

Ford Motor has 98 outlets that handle only Ford heavy-duty trucks. They are not included in the company car-dealer total or in Ford Division's car-franchise total.

The current census shows 10,230 car dealerships for GM, a decline of 575 from the 10,805 in business at the beginning of the 1982 model year. The dip compares with a loss of 330 in the 1981 season.

Franchise totals on Oct. 1 were: Chevrolet, 5,220; Oldsmobile, 3,135; Pontiac, 2,940; Buick, 2,905, and Cadillac, 1,575.

As mentioned above, the nine-month decline for the domestic industry was 859 outlets. It was shared this way: GM, 425; Ford Motor, 231; AMC, 72; VW, 57, and Chrysler Corp., 55. That total of 840 becomes 859 after allowing for the change in the number of intercorporate duals.

The third quarter resulted in dips of 140 for GM, 73 for Ford Motor, 36 for Chrysler Corp., 35 for AMC and 18 for VW. That's a total of 302. A change in the number of intercorporate duals made it 303.

They'll share building

SIOUX FALLS, S. D. — The South Dakota Automobile Dealers Assn. and the South Dakota Trucking Assn. are constructing a $300,000 building to house the offices of the two groups.

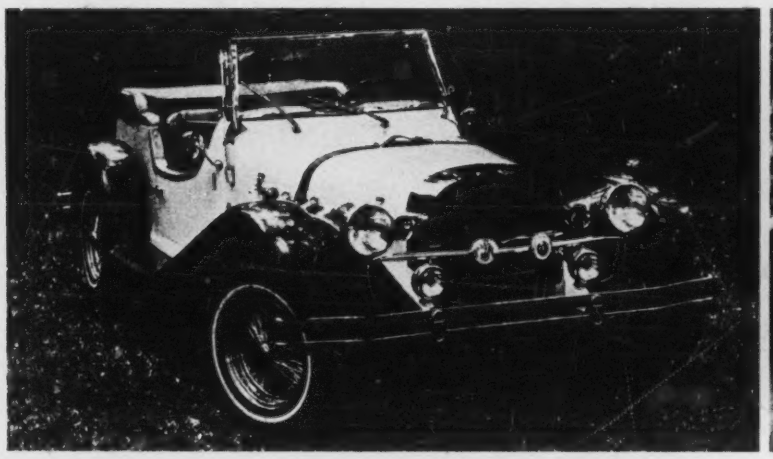
Beach Ford honored

Thomas A. Barton Jr., center, president of Beach Ford, Inc., Virginia Beach, Va., was presented with Ford Division's Distinguished Achievement Award for 1981 by Ford Chairman Philip Caldwell. They were joined by Virginia Gov. Charles Robb. The award is presented to a dealership for outstanding achievement in every aspect of the business.

Remember when showroom traffic kept everybody on their feet?



Bring back the crowds.

Showroom traffic climbs with the right car on your floor. And nothing draws like the new Piper Rogue.

The new Piper Rogue's elegant lines and handcrafted coachwork generate excitement among customers and sales staff alike...excitement you can turn into sales of your existing line.

Piper Rogue has over 7 years of craftsmanship and innovative engineering in its breeding: This limited edition motorcar from America's heartland is a product of one of America's pioneering aviation families. You'll see its classic heritage in the hand-rubbed burl veneer dashboard...the soft, supple leather seats. You'll sense its aircraft-grade construction in the car-sure handling and responsive V-8 engine.

Substantial profit potential on the Rogue's $24,500 list price. Dealer investment: $17,500. This special factory-direct offer is available only to car dealers in the continental U.S. And you are under no obligation to buy more or to become one of our regular dealers.

Deferred Payment Plan Available

After receipt of your deposit, we'll deliver direct to your showroom with our own truck. Final payment may be structured for one of our 30-, 60- or 90-day plans.

Superior Owner Protection Plan and Advertising Support

Every Piper Rogue is backed by a 3-year/50,000-mile protection plan on mechanical components — plus an optional no-fault body warranty. Your purchase qualifies you for ad materials and a liberal co-op program.

Fiberglass shell for compacts

Voyager, division of Gem Top Mfg., Inc., in Riverside, Calif., has introduced the "Antares," a fiberglass, aerodynamically styled shell for the long-box Chevrolet S-10, GMC S-15, long-box Ford Ranger, Datsun King Cab and long-box Toyota compact pickup trucks. It is available only in the West and Texas, the company said.

HD accident report calls for safety plan

WASHINGTON. — Projected increases in heavy-truck mileage during the 1980s will exacerbate an already serious problem with truck accidents, the Transportation Department told Congress in a report prepared by NHTSA and the Federal Highway Administration.

The report, the result of a study requested by the Senate Appropriations Committee, said a variety of factors involving the driver, the vehicle and the roadway are responsible for heavy-truck accidents.

Some of the most important causative factors. according to the report, include:

1. Drivers who are young, inexperienced, lacking in commercial training, fatigued and/or under the influence of drugs or alcohol.

2. Design, weight and crashworthiness of trucks (rollovers and jack-knifes are common problems).

3. Guardrails and median barriers which are not designed to accommodate the impact of large trucks.

4. Hazardous weather conditions.

The study recommended that federal and state governments identify and correct road hazards associated with a high risk of truck accidents.

• The federal government should develop and implement a comprehensive research and development program on truck safety in cooperation with the truck safety community, according to the study.

State governments should increase on-road truck inspections, broaden authorization for removing vehicles from service and implement improved truck driver license testing and issuance procedures, the study said.

Motor carriers, the study added, should require the use of safety belts; implement effective maintenance procedures; screen drivers more carefully; increase driver training and supervision, particularly of younger drivers, and ensure compliance with safety regulations.

"We need to know much more about what causes truck accidents," said NHTSA Administrator Raymond Peck, "but we do not have to wait for conclusive data to implement any of the short- and long-term countermeasures."

10 more firms to supply parts to Nissan Mfg.

SMYRNA, Tenn.—Nissan Motor Mfg. Corp., U.S.A., which will begin building compact pickup trucks here next August, has announced the award of contracts to 10 more U. S. supplier companies.

The firms and the materials they will supply are:

Crown Label, Inc., LaVergne, Tenn., and York Tape & Label Corp., York, Pa., pressure-sensitive labels; Dennison Industrial Systems, Framingham, Mass., certification labels; Globe Industries, Inc., Chicago, sound-control products.

Kusan Mfg. Co., decorative and functional thermoplastic components; Custom Trim Prod-

truck industry news

Compacts get '83 model year off to a good start

Big 3 sales up 3 pct. in October

Big Three dealers and factory outlets got the 1983 truck-model year off to a good start in October, reporting retail sales that were almost 3 percent higher than the first month of the 1982 model year.

During the month, 137,980 new trucks of all types were sold in the U. S., up 2.9 percent from the 134,103 units retailed in October, 1981. Ford Motor Co. was the only manufacturer to report fewer sales this year than last.

Table on Page 20.

For the first 10 months of calendar 1982, Big Three truck sales were 13.9 percent higher than a year ago, 1,728,198 versus 1,517,325. All four manufacturers reported increases for the January-October period.

Sales of compact pickup trucks during the month were particularly impressive, especially among the noncaptive Japanese imports which carry attractive financing rates and other incentives.

In October, sales of the small compacts, both domestic and imports, totaled 64,411 units, an increase of 81.7 percent over the year-ago 35,441. Through October, the count was 632,692 units, up 50.9 percent over last year's 419,245.

• Dealers who handle the noncaptive makes — Toyota, Datsun, Mazda, Isuzu and the newly introduced Mitsubishi — sold 30,501 units during the month, a gain of 57.1 percent over last year's 19,416.

Through October, the total was 251,449 units, up 4.8 percent from the year-ago 240,001.

Including the captive Ford Courier, Chevrolet LUV, Dodge Ram 50 and Plymouth Arrow, the total October count for the Japanese-built compacts was 38,170 units, 24 percent higher than last year's 30,789.

The 10-month count, however, was down 13.1 percent, from 382,403 units in 1981 to 333,202. Sales of the Courier and LUV, which no longer are imported, have fallen steadily since the introduction of the domestic Chevrolet S-10, GMC S-15 and the Ford Ranger compacts.

The imported compacts still

Winnebago, Coachmen note sales, profit gains

An increase in sales and profits has been reported by two major manufacturers of recreational vehicles, while a third has noted a moderate decline which it attributed generally to the "uncertain and ailing economy."

Winnebago Industries, Inc., said its net earnings for the fiscal year ended Aug. 28 amounted to approximately $10.14 million, a gain of 16.8 percent over the year-earlier $8.68 million.

Included in the net as an extraordinary item was a net operating loss carryforward of about $2.29 million in fiscal 1982, and $4.05 million in fiscal 1981.

Before the extraordinary item, the company said, earnings in fiscal 1982 were approximately $7.85 million, an increase of 70 percent over the year-earlier $4.62 million.

Sales in fiscal 1982 amounted to about $146.63 million, up 2.5 percent from the previous year's $143.05 million.

Coachmen Industries, Inc., said its earnings in the first nine months of calendar 1982 totaled approximately $4.81 million, a gain of 41.1 percent over the year-ago $3.41 million.

Coachmen's nine-month sales amounted to approximately $195.60 million, up 22.8 percent over last year's $159.26 million.

In the second quarter, according to Champion Home Builders Co., net profit totaled $834,000, down 18.3 percent from last year's $1.02 million. But the first-half net was up 28 percent, from $2.78 million to $3.56 million. Both periods exclude tax credits from operating loss carryforward.

Winnebago directors, at their October meeting, declared the first annual cash dividend ever paid on the firm's common stock —10 cents a share, payable Jan. 10, 1982, to shareholders of record on Dec. 10, 1982.

Coachmen directors reinstated

Heavier axles now offered on Volvo N-Series

GREENSBORO, N. C.—Volvo White Truck Corp. has beefed up its Volvo N10 conventional 6x4 truck for use in the construction, refuse and fuel-oil markets, offering a 38,000 or 44,000-pound rear axle and 16,-500-pound front axle as standard equipment.

The Volvo N1025, introduced in the U. S. late last year, now features the 16,500-front/38,000-rear-axle combination. There is a new model designation, the N1027, for the 16,500/44,000-axles.

The factory-matched N10 drivetrain includes a Volvo TD-100C six-cylinder, turbocharged diesel engine rated at 253 HP at 2,200 RPM and 671 foot pounds of torque at 1,400 RPM.

Transmission is eight-speed, fully synchronized range-type with dual-plate air-power assisted clutch.

Both N10 truck models feature a Volvo T-ride suspension which the company says offers extreme independent axle articulation over rough terrain, and eight torque rods maintain axle alignment under the most grueling conditions.

The 38,000-pound suspension utilizes two-leaf parabolic spring, and the 44,000-pound suspension has a conventional leaf spring pack. Ride is further improved with rubber cushions between spring and axle housing to absorb shock and vibration, the firm said.

Wheelbase selections for the N1025 and N1027 range from 191 to 270 inches. The BBC is 96.5 inches.

Aimed at handling single-piece rims

Truck-tire safety rules due soon

By Jake Kelderman
Washington Staff Writer

WASHINGTON.—New safety regulations aimed at minimizing accidents and deaths when mounting truck tires on single-piece rims will be announced within the month by the Department of Labor's Occupational Safety and Health Administration.

Written at the request of the National Wheel and Rim Assn. and Firestone Tire & Rubber Co., the proposed new requirements for the safe servicing of single-piece-rim wheels used on trucks, trailers, buses and similar type vehicles, are expected to prevent from 280 to 350 injuries during the remainder of the decade.

They follow similar regulations aimed at reducing injuries in the mounting of tires on multi-piece wheels.

The standards for single-piece rims are being issued now because an analysis of their danger was not complete when OSHA issued its multi-piece-rim standards in 1980. That analysis showed that the accident potential during the servicing of single-piece rims is as great as that which existed for multi-piece rims, sources said.

A report done for the National Wheel and Rim Assn. showed that between 1970 and 1980, some 112 accidents resulting in 15 fatalities were identified as involving single-piece rims.

The danger in single-piece rims, as in multi-piece rims, is in the overall force contained in the tire when inflated.

A standard 10-inch-by-20-inch tire, when inflated to the normal 105 pounds per square inch, puts a force of 20 tons on the rim flange. If the tire is mounted improperly and releases suddenly, it can throw a person across the room or send all 200 pounds of the tire and rim 30 feet in the air.

OSHA will propose that basically the same procedures and restraining devices used for servicing multi-piece rims be used

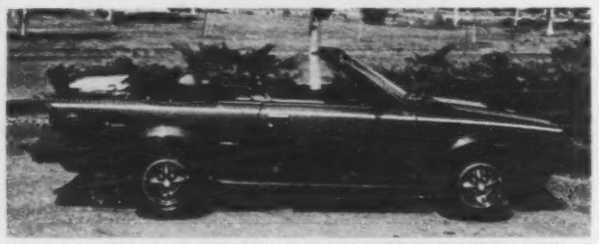
Star of '83 Mitsubishi truck line

This turbocharged-diesel compact pickup is the star of the 1983 Mitsubishi truck line. The vehicles are being marketed in the U. S. for the first time. The Dodge Ram 50 compact, which is built by Mitsubishi, also features a turbodiesel in 1983. The 2.3-liter diesel produces 80 HP at 4,200 RPM and 125 foot pounds of torque at 2,100 RPM.

TOYOTA "COROLLA" CONVERTIBLE
"ALL NEW FOR '83"



"AMERICAN CUSTOM COACHWORKS, LTD."

proudly announces it has superbly engineered and styled this "great" answer to a "new" breed of luxury and economy convertibles with . . . "a fully automatic convertible top." Base units can be drop shipped to American Custom Coachworks, Ltd. plants or there are open factory (pool cars) presently in build that are available.

Compacts gets '83 model year off to a good start

Big 3 truck sales rise in October

Continued from Page 16

are the leaders in this market, but their share of total sales has dropped drastically from a year ago.

In October, for example, imports accounted for 59.3 percent of the compact total, compared with 86.9 percent in the same month in 1981. The imports' 10-month share was 52.7 percent, versus 91.2 percent in the like period a year ago.

In October, two new compact-pickups made their debut—the Plymouth Scamp and the Mitsubishi—bringing the total entries to 16. The Scamp, Plymouth's version of the Dodge Rampage, replaces the Arrow, which has been dropped.

Chevrolet said its dealers retailed 56,551 trucks during the month, up 20.1 percent over the year-earlier 47,102. Through October, the count was 671,890 units, an increase of 15.9 percent over the 579,682 sold in 1982.

Ford truck sales were down 19.7 percent in October, from 59,970 units in 1982 to 48,179. The 10-month count, however, was up 4.1 percent to 658,424 units, compared with 632,523 a year ago.

Chrysler reported impressive increases for both the month and the January-October period.

Dodge and Plymouth dealers retailed 17,978 light trucks during the month, a gain of 27.7 percent over the year-ago 14,082. Through October, the total was 31.9 percent higher, from 158,106 units in 1981 to 208,566.

In October, GMC dealers retailed 15,272 vehicles, an increase of 17.9 percent over the year-earlier 12,949. The 10-month count was up 28.8 percent to 189,318 units, compared with 147,014 in the like period a year ago.

• October sales of four-wheel-drive Jeep vehicles totaled 5,727 units, an increase of 16.6 percent over last year's 4,910. But the 10-month total was off 1.2 percent, from 53,500 a year ago to 52,857.

Volkswagen dealers retailed 1,025 compact pickups during the month, down 67.9 percent from last year's 3,196. Through October, sales were off 61.6 percent, from 28,824 in 1981 to 11,076.

Toyota sales rebounded sharply in October to 13,376 units, an increase of 47 percent over the year-ago 9,099. The January-October count was up 2.8 percent to 120,087 units, compared with 116,861 in 1981.

Datsun dealers, with the help of a 9.9 percent finance rate, retailed 12,066 compacts during the month, an increase of 58.4 percent over last year's 7,617. The 10-month count, on the other hand, was down 17.5 percent, from 101,206 units a year ago to 83,478.

Mazda sales continued to gain during the month, the total of 3,178 units being 119.3 percent higher than last year's 1,449. Through October, sales were up 129.7 percent to 32,892, compared with 14,318 in 1981.

Mitsubishi reported 252 compact-pickup sales in its first month in the U. S. market, and said it was the best start ever for a Japanese truck.

Winnebago, Coachmen report increase in sales, profits

Continued from Page 16

a regular quarterly dividend—five cents a share payable Dec. 9 to shareholders of record on Nov. 17. The company suspended dividend payments in mid-1979.

Commenting on the Winnebago results, Chairman John K. Hanson said the earnings improvement in fiscal 1982 can be attributed to increased sales of large motor homes with higher profit margins, reduced warranty expenses and increased income from higher investment levels.

• "We are optimistic in our outlook for fiscal 1982," he said. "The stability of prices and availability of motor fuels and the decline in inflation and interest rates are indications of an improvement in the economy.

"Our new lines of fuel-efficient motor homes and vans are designed for first-time buyers of leisure travel vehicles and should add excitement and interest to the recreation-vehicle business," Hanson added.

In his announcement of the Coachmen results, Chairman Thomas H. Corson said, "Recent declines in interest rates and some slight improvement in certain economic indicators seem to have boosted consumer-confidence levels, an important determinant in the selling of our products."

He added that the fourth-quarter outlook "looks comparatively good also."

"The decline in interest rates has had a direct favorable impact on our dealers' cost of carrying inventory and we are beginning to see a small increase in the average number of units our dealers are stocking."

Joseph J. Morris, president of Champion, which builds mobile homes, motor homes and small buses, said, "Tight consumer credit for our industry and an uncertainty about future interest-rate levels—causing a wait-and-see attitude in the marketplace—restricted our sales in the second quarter.

"Price cutting by some of our housing competitors in certain regions during the quarter also affected our sales penetration," he added. "We're countering this price competition with broader promotion and production of our popular lowest-priced series."

10 more firms to supply Nissan

Continued from Page 16

ucts, Atlanta, body-side moldings; Northern Engraving, Sparta, Wis., vehicle identification-number plates.

Perfect Equipment Co., Murfreesboro, Tenn., wheel weights; Schrader Automotive Products, Nashville, pneumatic tubeless-tire valves; White Advertising Co., body-side graphics.

The $500 million facility currently under construction in Smyrna is the first U. S. manufacturing venture for the firm's Japanese parent, Nissan Motor Co., Ltd. It will have the capacity to produce 156,000 units a year.

Highway Users tap Gustafson; Snyder to Safety Foundation

New chairmen elected by HUF, ASF

DETROIT. — Stanley W. Gustafson, president of Dana Corp., has been elected chairman of the Highway Users Federation. He succeeds Will Scott, Ford Motor Co. vice president of governmental relations.

William B. Snyder, president of Government Employees Insurance Co., has been elected chairman of the Automotive Safety Foundation, the federation's educational and scientific affiliate. He succeeds Roger S. Penske, president of Penske Corp.

Other federation officers, re-elected for second terms, are Robert B. Smithwick, vice president of Texaco, U.S.A., vice chairman; F. Alan Smith, executive vice president, General Motors, treasurer; and Frank L. Nageotte, president of Greyhound Corp., secretary.

William G. Sharwell, vice president of American Telephone and Telegraph Co., was elected vice chairman of the Automotive Safety Foundation.

Four new members were elected to the federation's Executive Committee for one-year terms: Gerald Greenwald, vice chairman, Chrysler Corp.; Patrick C. Ross, president, Tire Group, B.F. Goodrich Co.; Roger J. Stroh, vice president - public affairs, United Fresh Fruit and Vegetable Assn., and Lawrason D. Thomas, president, Amoco Oil Co.

Greenwald, Stroh and Thomas were also elected to three-year terms on the federation's board of directors. Other new members of the board, elected for three-year terms, are:

Tetsuo Arakawa, president, Nissan Motor Corp., U.S.A.; Bennett E. Bidwell, president, Hertz Corp.; Donald F. Craib Jr., chairman, Allstate Insurance Co.; Joseph P. Flannery, chairman and president, Uniroyal, Inc., and Samuel F. Fortunato, president, Metropolitan Property and Liability Insurance Co.

Also, Robert R. Kingsbury, senior vice president, N.W. Ayer, Inc.; Roger Manfred, president, TraveLodge, Inc.; W. Paul Tippett, chairman, American Motors, and Harold J. Weiler, executive vice president, New Mexico Assn. of Commerce and Industry.

The Highway Users Federation for Safety and Mobility is a national, nonprofit coalition of more than 400 businesses, industries and associations promoting safer, more efficient ground transportation. Through affiliated groups in every state and 26 metropolitan areas, it represents more than 5,000 business, transportation, civic and agricultural organizations.

The Automotive Safety Foundation, founded in 1936, encourages traffic safety on behalf of private industry and fosters educational and research programs for safe use of streets and roads.

Anglo American buys two more U.S. auctions

NASHVILLE.—Anglo American Auto Auctions, Inc., the U. S. holding company for British Car Auction Group, has purchased its third and fourth auction firms in this country.

They are Minneapolis Northstar Auto Auction, Shakopee, Minn., and Omaha Auto Auction, Inc., Omaha. Earlier this year, Anglo American acquired Nashville Auto Auctions, Nashville, and Metro Auto Auction of Kansas City, Lee's Summit, Mo.

Minneapolis Northstar has consignments of 500 to 600 cars weekly. Sam Gelt will remain as president.

Omaha Auto Auction has a 450-500-vehicle weekly consignment. The business was purchased from Hubert Monsky and Walter Louis, who have left the company. Alan Johnston has been named executive vice president.

Extension, reduction of auto export limit eyed

U.S. may seek more Japanese curbs

WASHINGTON.—The Reagan Administration's number two man on trade raised the possibility last week that the U. S. will ask Japan to not only extend the current limitation on the export of Japanese automobiles to this country but to reduce the number below the current level of 1.68 million units annually.

Deputy U. S. Trade Representative David Macdonald revealed the possibility in releasing a 75-page report highly critical of Japan's trade policies and its apparent unwillingness to do much substantively about them.

The report centered mainly on Japan's barriers to agricultural, beef, tobacco and citrus imports and America's inability to get the Japanese to ease those barriers despite repeated negotiating attempts.

Six-months ago, Japanese trade officials promised they would make it easier for a variety of American goods to be sold in Japan but, according to Macdonald, that promise has not been kept.

Warning that U. S. patience with the Japanese is wearing thin and that the constituency for "free trade principles" is eroding badly, Macdonald said the Japanese must "accelerate from a turtle's pace to a hare's pace their efforts to open their market," or face the prospect of strong protectionist measures by the U. S.

"Whether it realizes it or not, the government of Japan is in a race against time," Macdonald said.

• U. S. openness to Japanese imports is one of the big sticks the government has available in its dealings with Japan, with whom the U. S. is running an annual trade deficit of at least $18 billion.

Thus far, the Reagan Administration has not sought to go beyond the current "voluntary trade agreement" with Japan in terms of pressuring the latter country to open its markets to foreign goods, but pressure is building.

Local-content legislation has been proposed in Congress, and recently the domestic auto makers have begun pressing for a lower limit on Japanese imports and extension of the current limitations.

Until recently, the Reagan Administration had objected strongly to both those positions.

The Macdonald warning would seem to indicate a change in the Administration's position, however. Combined with proposals put forward by U. S. Trade Representative William Brock at a recent cabinet council meeting — points to a tougher trade stance by the Administration in the future.

The Brock proposals call for a coordinated trade stance by the Administration that, while heading off protectionist pressure in Congress, also lets this country's trading partners know the U. S. will not tolerate barriers.

In the main, the proposals as reported by the Wall Street Journal, call for a speedup in how the U. S. handles complaints by U. S. firms of unfair trade practices, a much greater use of loan guarantees for U. S. exporters to match financing offered by foreign governments and revamping of the Domestic International Sales Corp. to comply with the rules of the GATT.

The proposals also call for new government subsidies for research and development by firms whose products have been targeted by foreign competitors, a new program to retrain laid-off workers in declining industries like autos and steel and a change in U. S. antitrust laws to permit joint ventures in areas related to increasing U. S. competitiveness abroad.

Other sections include a review of the Foreign Corrupt Practices Act to see if it puts U. S. businessmen at a disadvantage and a request for greater authority for the Administration to negotiate with U. S. trading partners.

Brock also has said that he thinks the current export limitations on Japanese cars should be extended for a third year.

When the Japanese government and its auto makers agreed to the "voluntary limitations" two years ago, it was agreed that the possibility of a third year of limits would be a decision to be made by the Japanese.

GM-UAW adopt lifetime jobs at three plants

By Marjorie Sorge
Labor Editor

DETROIT. — General Motors and the UAW have announced lifetime job security at three GM facilities.

The pilot program will begin immediately at all Buick operations in Flint, the New Departure-Hyatt Bearings plant in Bristol, Conn., and the Fisher Body soft trim plant in Grand Rapids, Mich. There are 14,000 workers affected in Flint, 1,317 in Bristol and 850 in Grand Rapids.

Under the program, 80 percent of the workforce would be protected from permanent layoff. Any reduction in the workforce would be accomplished by attrition or by alternative work assignments either within GM or externally.

Manpower reductions caused by schedule changes would be accomplished by laying off the ineligible 20 percent of the workers and then by reducing the work time for the 80 percent. Eligibility is determined at the local level, taking into consideration the products produced in the facilities, seniority and the skills of the workers.

According to Owen Bieber, UAW vice president and director of the GM Department, the project goes into effect immediately and all details will be worked out at the local level.

The lifetime job security program was negotiated by GM and the UAW in the current contract. That agreement calls for a fourth pilot plant which Bieber said will be announced in about 10 days.

Pontiac's P-car is named Fiero

Continued from Page 3

name at the plant with all the hoopla normally reserved for Job One celebrations or new-model showings. The name was announced not only to the press but to hundreds of future Fiero assembly-plant employes who had been invited.

Entertainment was provided by the "GM Boogie Grass Band." Speeches were made by the plant manager, mayor of the City of Pontiac and the local UAW committee chairman. Hulki Aldikacti, Fiero project manager, and John Schinella, chief engineer - Pontiac Exterior Styling Studio II, were also present.

Opens doors

Just waiting for spring

The 1983½ Dodge Shelby, based on the Dodge Charger 2.2, builds its image on a racing look complete with air dam, ground effect skirts, special paint and tape treatment. A Shelby logo, covered C-pillar and Shelby interior are fit to a modified 2.2-liter four-cylinder engine with five-speed transaxle. The Dodge Shelby goes on sale in March.

Shelby Performance Center opens for Chrysler R&D

SANTA FE SPRINGS, Calif. —Chrysler Corp. officially opened Chrysler Shelby Performance Center, a sporty-car development facility headed by renowned driver and sports-car designer Carroll Shelby.

Located on the back lot of Chrysler's Nu-Car Prep Center, the new performance "think tank" will be used by Shelby to develop affordable high-performance specialty cars, as well as racing equipment for Direct Connection, Chrysler's performance aftermarket division.

The center includes a metal fabrication shop, paint and fiberglass department, 15,000-square-foot garage with 10 stalls, engine build-up area, machine shop and a dynamometer. There is also a one-eighth-mile acceleration strip and a seven-acre skid pad.

Harold K. Sperlich, president of Chrysler's North American Automotive Operations, said the goal of the project is to develop efficient, fun-to-drive cars that are "easy on the pocket and easy on the gas."

Spirlich said the center is not a sign of a move back to factory racing.

"It is not a factory race team," he said. "It is not an effort to put the biggest, deadliest hogs on the road. It's not a drag-race party."

"Factory racing is passe'," Shelby said. "We want to build some interesting front-wheel-drive cars that people can take and say 'this is the kind of car I want to buy as my first car.'"

The first product of Shelby's new affiliation with Chrysler was on display at the opening. Scheduled to go on sale in March, the Shelby Charger features a 2.2-liter engine producing 107 HP at 5,600 RPM and 127 pounds-feet of torque at 3,200 RPM.

The engine has a higher compression ratio, rephased camshaft and NOx sensor for an improved spark curve, boosting power by 13 HP and torque by 10 pounds-feet.

Other equipment changes include a higher final-drive ratio of 3.87 for better acceleration, higher-rate springs and shocks, improved brakes and a lower suspension with quicker steering.

Exterior changes include new wheels and tires, revised C-pillar treatment, air dam, Shelby badging and specialty paint scheme. The car will be built at Chrysler's Belvidere (Ill.) assembly plant.

NHTSA proposes rule change for panel symbols

WASHINGTON. — NHTSA has proposed allowing some new instrument-panel symbols in an attempt to bring U. S. standards into harmony with international ones.

Resulting partly from a petition from Renault, the proposed rule would make minor adjustments in the symbols used for such items as turn signals and the brake fluid indicator light.

Sept. 1, 1985, is the proposed effective date for voluntary use of the new symbols. Jan. 3, 1983, is the deadline for comment.

AMC extends Le Car incentive

SOUTHFIELD, Mich.—American Motors has extended the wholesale dealer incentive purchase program on Renault Le Car, called Le Car Sellabration, from Nov. 15 to Nov. 30.

Dealers receive zero for the first unit they buy, $200 for the second, $300 for the third, $400 for the fourth, $500 for the fifth and $600 for the sixth and over.

The retail portion of Le Car Sellabration—under which dealers received $200 for each '82 3-door and $500 on each '82 5-door they retailed and delivered —ended Nov. 15 on schedule.

7 plant closings reduce auto output

By Patricia Hoffman
Staff Writer

With seven more assembly points closed for inventory control, last week's domestic car production dipped considerably below the previous week's total.

Last week, the makers targeted 88,730 units, down 19.27 percent from 109,908 the previous week, and down 10.06 percent from last year's 98,652 units.

So far this year, the manufacturers have assembled 4,512,732 cars, a 21.32 percent decline from 5,735,309 units built the same time last year.

The General Motors Tarrytown, Van Nuys, Willow Run and Wilmington facilities were idle last week due to high inventories. Tarrytown is slated to resume operations today (Nov. 15). Willow Run is scheduled to return Nov. 22, while Van Nuys and Wilmington will remain idle until Nov. 29.

Also down last week to control inventory were Ford Motor's Metuchen and Wayne facilities, plus Chrysler Corp.'s Belvidere point.

GM's Lordstown facility, idled Nov. 1, remained down last week for inventory control. Production is slated to resume today.

The GM Bowling Green and Ford Lorain points remain closed for model changeover. Both points, idled Oct. 13, are slated to resume in December.

Operations resumed last week at GM's Oklahoma City facility. Production was halted there Oct. 25 due to high inventories.

The GM Detroit plant operated on daily and Saturday overtime schedules last week. Also operating six days last week were GM's Baltimore point and Ford's Wixom facility.

Mercedes Pullman limousine unveiled

Royal Coach Division of 611 Group, Inc., has introduced this Pullman version of the Mercedes-Benz 300-SD or 380-SEL sedans. The 47-inch double cut has a formal roof design that gives the rear-seat passenger 2½ inches more headroom than the conventional sedan. Standard equipment includes TV, electronic bar and intercom. Dealer cost is $32,000 to $35,000.

Six plants return to work; truck output rises for week

Domestic truck production fared slightly better last week than in the previous week as six assembly points returned from downtime for inventory control.

Last week, the makers scheduled 27,614 units, a 3.33 percent gain from the previous week's 26,725, and up 5.60 percent from 26,149 units built in the comparable 1981 period.

So far this year, the manufacturers have assembled 1,690,124 trucks, up 15.31 percent from last year's 1,465,752.

General Motors idled its Janesville, Moraine (S-truck), Pontiac (medium-duty line) and St. Louis facilities last week due to high inventories. Pontiac and Janesville are slated to resume operations today (Nov. 15), while Moraine and St. Louis will remain down another week.

Also closed last week for inventory control was Chrysler Corp.'s Belvidere point. Production is scheduled to resume Nov. 22.

Ford Motor's Louisville and Twin Cities facilities were idle for the second week last week due to high inventories.

Back last week following downtime to control overstocked inventory were: GM's Flint (No. One) point; Ford's Kansas City, Norfolk and San Jose plants, and International Harvester's Fort Wayne and Springfield facilities.

Volkswagen of America's Westmoreland point remained closed for model changeover.

Slump and strike cut Canadian car production 70 pct.

A strike, poor sales and high inventories idled three car assembly points last week, pulling Canadian auto production down 70.14 percent from the previous week's total.

Last week, the makers finished only 6,346 units, down from 21,254 built the previous week, and down 64.51 percent from last year's 17,881 units.

Year-to-date, the car manufacturers have assembled 742,702 units, a 4.36 percent gain from 711,672 completed in the comparable 1981 period.

Truck production last week reached 5,775 units, a 33.20 percent decline from the previous week's 8,645. Output fell 42.24 percent from 9,998 units built the same week last year.

So far this year, the truck makers finished 431,865 units, down 3.23 percent from last year's 446,282.

Chrysler Corp.'s Windsor car and truck facilities were idled last week (Nov. 8) by the strike which began Nov. 5. About 10,000 hourly and salaried workers walked off the job.

General Motors' Oshawa car and truck facilities were idled last week due to sagging sales. Operations at both points are slated to resume today (Nov. 15). The Oshawa car plant will be closed again for the week of Nov. 29, and both car and truck facilities will be idle the week of Dec. 6.

Ford Motor Co.'s St. Thomas point joined the company's Oakville car plant in downtime last week, caused by overstocked inventory. Operations were idled at Oakville Nov. 1 and are scheduled to return today. St. Thomas is slated to resume production Nov. 22.

Ford's Oakville truck facility, idled Nov. 1 to cut inventories, returned last week.

BMW prices up 2 pct. for 1983

MONTVALE, N. J. — BMW of North America has increased prices an average of 2.03 percent on its 1983 models. The 320i two-door sedan is unchanged at $13,290, and the fancier models are up $660 to $2,215.

The 528e four-door sedan is $23,985 (up $660); the 733i four-door sedan is $34,300 (up $985), and the 633CSi coupe is $39,210 (up $2,215). New standard equipment for the 633CSi includes on-board computer, electronic service interval indicator and improved suspension.

BMW has a new model for '83, the 533i four-door sedan. It is priced at $28,985.

New-car sales in November get strongest start since '78

By Jenny L. King
Staff Writer

Early-November new-car sales showed some refreshing signs of life with their best first-period rate since March of 1981 and best early-November total since the boom year of 1978.

Interest-rate and sales-incentive programs aimed at clearing out the rest of the 1982s probably had a lot to do with the first-period sales spurt.

Nov. 1-10 domestic sales totaled 188,441, up 32.57 percent from 142,143 last year. There were nine selling days in the period this year compared with eight in 1981, yielding a current daily-selling rate of 20,938, up 17.84 percent from 17,768 a year earlier.

General Motors enjoyed a 37.17-percent sales increase in the period with sales of 124,566 compared with 90,811 in 1981. On a daily-rate basis, GM sales were up 21.94 percent. Ford Motor Co. reported sales of 40,515, up 33.80 percent from 30,280 (up 18.94 percent daily rate).

Chrysler Corp. dealers retailed 16,791 new cars during the period, up 9.68 percent from 15,309 (down 2.49 percent daily rate). Estimated sales of American Motors passenger cars were 4,500, up 66.67 percent from the

Tailored for NASCAR

Monte Carlo SS debuts

Debuting this week at the South Florida Auto Show in Miami Beach is the Chevrolet Monte Carlo SS, a performance model with a distinctive front end, air dam and a spoiler on the rear deck. There is no exterior brightwork, and the car has an aerodynamic drag coefficient of .375—15 percent lower than a stock Monte Carlo. The engine is a 5.0-liter (305-CID) V-8 rated at 175 HP. Production is scheduled to begin early in 1983. The Monte Carlo SS has been approved by NASCAR for Grand National Stock Car racing.

DeLorean Motor dies, but legal snarls linger

By Edward Lapham
Financial Editor

DeLorean Motor Co. is essentially out of the car business following a Federal Bankruptcy Court ruling in Detroit which allowed Ohio-based Consolidated International, Inc., to retain possession of 649 cars, plus the company's parts inventory, for $1.5 million.

Judge George Woods approved a proposed settlement in the adversary proceeding between DMC and Consolidated plus its affiliated Group Investors, Inc. (CG) (Related story on Page 50).

The ruling and opinion, which said in effect "a bird in the hand is worth two in the bush" came after earlier claims that various investor groups might be able to make better offers for the assets failed to materialize.

Two DMC-Cadillac dealers, Charles DeLorean, Cleveland, and Don Massey, Detroit, were part of one group which had sought to acquire the cars and parts. Charles DeLorean is a brother of John DeLorean.

In addition to the cars, which CG acquired in lieu of an $8.8 million debt, and the parts, the Ohio firms also acquired from the receivers of the bankrupt factory DeLorean Motor Cars, Ltd., 1,090 DeLorean cars for $12,500 each.

Despite the acquisition of these cars and parts by CG, the DMC story is not yet over.

Although it was generally agreed there are few assets left to divide among the secured and unsecured creditors, it is not likely the DMC affair will end quickly.

The schedule of statements and affairs, which will accurately list the company's assets and liabilities, will not be filed until Dec. 15.

In a creditors' hearing last Monday (Nov. 15), a tentative list was provided by DMC Secretary George Hayward.

He said assets included the $1.8 million in parts inventory, sold the following day to CG; 649 cars, also acquired by CG the next day; "several other vehicles;" $300,000 to $400,000 in dealer accounts receivable; $2 million in a partnership equity; $3.2 million owed DMC by its subsidiary, Composite Technology Corp., also in Chapter 11, and some office furniture.

Liabilities included $17 million owed to the Northern Ire-

American Motors faces belt-tightening time

By Joseph Bohn
Marketing Editor

SOUTHFIELD, Mich.—American Motors was expected to send out layoff notices to salaried employes last Friday, as part of a previously announced streamlining and restructuring of its automotive operations.

Reportedly, cutbacks ranging up to 20 percent, or 1,250 employes, will begin taking effect by Dec. 3 through a combination of attrition, early retirements and layoffs.

It was learned that AMC is closing its Cincinnati and Minneapolis zone offices as part of the move, with some employes being transferred and others let go.

An AMC spokesman would not confirm the exact timing of the layoff notices or the number.

He did say affected employes would be notified before the end of the year.

"Until the review of all our (automotive) operations, line and staff, is completed and final decisions made . . . we can't determine the actual number of layoffs," he said.

AMC currently has about 6,300 employes in its automotive operations, he added, noting that the company had already reduced its head count by 13 percent from 1980 through the early part of this year.

AM General, which deals heavily in government sales, is not expected to be affected.

Industry sources said many veteran employes will be gone from the company before the year is up.

AMC has had some substantial losses because of the slow, flat car market and is "bringing costs into line with the anticipated buying climate," said the spokesman. Forecasters say the industry will get only modestly better at a slow pace in 1983.

Import inventory rises to 56 days; shortages persist

By Richard A. Wright
Assistant Managing Editor

While the domestic new-car inventory held steady at 69 days during October — although the unit count dropped by more than 50,000 — the stockpile of new imported cars in the U. S. climbed to a 56-day supply Nov. 1 — up from 48½ days a month earlier.

The inventory of new imported cars in the U. S. Nov. 1 totaled 365,467, up from 354,500 on Oct. 1.

While the overall import inventory was up, some severe shortages persisted in certain lines.

The inventory of new imported pickup trucks was down, however, to an 86½-day supply Nov. 1, compared with a 98-day stock Oct. 1. There were 127,019 new trucks on hand Nov. 1, compared with 138,417 a month earlier.

The combined imported car and truck inventory Nov. 1 totaled 492,486 units, virtually unchanged from 492,917 a month earlier. Because of the lower new-car daily sales rate in October, however, the combined stockpile represented a 62-day supply Nov. 1, up from 56½ days a month earlier.

The combined domestic and imported new car inventory Nov. 1 totaled 1,661,171, a 66-day supply, compared with 1,704,866, a 60-day supply, a month earlier.

The inventory of Japanese-built cars jumped to 247,567 Nov. 1, a 47-day stock, compared with 234,331 a month earlier, a 39-day supply.

Despite the increase, several nameplates were still in very short supply, including Honda, 24 days, and Toyota and Subaru, both with 28-day supplies.

• Other Japanese lines and their days-supply figures Nov. 1 were: Mazda, 58; Nissan, 72½; Isuzu, 94, and Mitsubishi, 135. In addition, Chrysler Corp. had a 142½-day stock of Mitsubishi-built cars, including Plymouth Colt, 149; Dodge Colt, 129; Plymouth Sapporo, 147½, and Dodge Challenger, 157½.

The stockpile of West German-built new cars totaled 73,400 Nov. 1, down a bit from 74,569 a month earlier. But the Nov. 1 inventory represented a 104-day supply, up from 88 days a month earlier.

Mercedes-Benz was shortest with a slim 28-day supply, followed by Porsche, 49; BMW, 55; Audi, 171, and Volkswagen, 204. In addition, VW had a 72-day supply of U. S.-built Rabbits, for a total 124-day supply.

Days-supply figures for other European lines Nov. 1 included Volvo, 55; Jaguar, 56; Saab, 63; Peugeot, 114; Renault, 148; Fiat, 235, and DeLorean, 273. (It should be noted that much of the stock of the DeLoreans at the beginning of November was tied up in legal entanglements, which have since been solved.)

Days-supply figures for new imported pickup trucks in inventory Nov. 1 were: Toyota, 54; Ford Courier, 77; Mazda, 77½; Nissan, 93; Chrysler Corp./Mitsubishi, 128; Isuzu, 151; Mitsubishi, 228, and Chevrolet LUV, 238.

breaking news

Smith denies GM-Isuzu report

DETROIT. — A report in last week's Automotive News that General Motors had reached an agreement to build 300,000 Isuzu cars a year in the U. S. has been denied by GM Chairman Roger B. Smith. Smith told Automotive News GM is still negotiating with Toyota to build a version of the new Corolla in this country. He said GM's deal with Suzuki to supply vehicles to the U. S. market involves 90,000 minicars.

Ford to close San Jose assembly plant

MILPITAS, Calif.—Ford Motor Co. will close its San Jose assembly plant by next June 1 because of what the company called "the continuing influx of imported vehicles into markets served by the plant." Escort, EXP, Lynx and LN7 cars and F-series light trucks are built at the San Jose plant. Ford has been producing vehicles at the plant for 27 years.

Ford Ranger, Bronco II get a V-6 option

Ford Motor Co. will buy 2.8-liter V-6 engines from Ford of Europe for use as an option in Ranger and Bronco II trucks. The agreement, according to a source, calls for the purchase of 1.8-million engines at a rate of 200,000 per year from the Ford plant in Cologne, Germany. The V-6, modified for truck use, will be available for the Bronco II Job One (1984-model) date of Jan. 17.

Presidential nominee a tough bargainer

Bieber follows ideals of UAW in quiet style

By Marjorie Sorge
Labor Editor

DETROIT.—The UAW won't make any 360-degree turns in philosophy under its new leadership.

Owen Bieber, 52, the administrative caucus' candidate to replace retiring President Douglas A. Fraser, follows the same ideals as Fraser and past Presidents Leonard Woodcock and Walter Reuther. He believes the UAW should move forward, branch out in its activities and be flexible.

"The secret to the success of this union is maneuverability," he said in a recent AUTOMOTIVE NEWS interview.

But while the philosophies won't change, some of the style will. Fraser has been an outgoing, gregarious president with a wry sense of humor. And, as one observer said, Fraser has the ability to look at someone across the table and that person can tell by the look that he is ready to jump across the table and strangle you if you don't change your ways.

Bieber is a quieter man who seems to think about each word and its impact before he says it. Insiders say he is patient and level-headed, able "to walk into a maelstrom and not become emotionally involved in the things around him. That may prove to be his best quality."

Bieber is loosening up a bit. He is becoming more relaxed and less structured, especially in public appearances and with the press. But insiders say he will probably never display Fraser's type of off-the-cuff sense of humor or remarks. They say Bieber would probably never call someone a "horse's ass" in public as Fraser did when referring to then General Motors Chairman Thomas Murphy during GM negotiations in 1979.

Bieber also has the respect of his counterparts at GM. He is currently a UAW vice president and director of the GM department.

"I am very, very pleased with Owen's assignment," said Alfred S. Warren, GM vice president, industrial relations. "It bodes well for both the industry and the UAW."

According to Warren, Bieber is an astute bargainer who will continue guiding the union down the same road as past presidents.

"Owen's a tough man to bargain with," Warren said, "but I don't mind tough bargainers as long as I know where they are (in their thoughts) and with Owen, I do. He is an honest man".

While Bieber is the candidate of the administrative caucus' (the 26-member executive board and the 300-member steering committee), he still must be elected by the 3,000 delegates to the UAW's Constitutional Convention in Dallas next May.

Bieber won the nomination for the $72,000-a-year-job as president from Secretary-Treasurer Raymond Majerus. The first board vote showed a 13-13 tie for the two candidates. Bieber won on the second ballot by a vote of 15-11. The board then voted to make the choice unanimous.

Vice President Donald Ephlin was also a candidate to lead the 1.2 million member UAW, but withdrew from the race before the voting began because of lack of support.

After his election, which is al-

UAW's choice

UAW presidential nominee Warren Bieber: Traditional ideas, but with a quiet new style.

UAW to eliminate one VP position at May parley

DETROIT. — There will be one less vice president at the UAW after its Constitutional Convention in May.

According to UAW President Douglas A. Fraser, only one of the two vice presidencies vacated in May will be filled because of the shrinking membership in the union. He said Bill Casstevens has been nominated by the 26-member International Executive Board and the 300-member steering committee to fill the vacant vice presidency.

The UAW has lost 300,000 members since the start of the recession in the auto industry in 1980.

Under regular circumstances, there would be two vice presidential openings in May following the retirement of Martin Gerber, also director of organizing, and the one vacated by the presidential nominee, Owen Bieber, if he is elected by the convention. Fraser said the position vacated by Gerber will not be filled.

The UAW will also eliminate an additional vice presidency in the future when there is a vacancy provided it does not upset the racial or gender balance, Fraser said. There is currently one black vice president and one woman vice president.

Casstevens, who will fill the open vice presidency, is a director of Region 2 covering Northeast Ohio and Northwest Pennsylvania. He joined the UAW in 1945 after being hired at the General Motors Fisher Body Coit Rd. plant in Cleveland. He became a director of Region 2 in 1970 and, at 54, is one of the youngest members of the UAW International Executive Board.

In addition, the union will also reduce the Detroit regions to two as regional directors retire over the next few years.

Besides Fraser and Gerber, five regional directors will retire at the May convention.

Remote-control top

Convertible Specialists, Gardena, Calif., has developed a remote-control convertible conversion for the Datsun 200-SX. Operable by a remote unit from 800 feet away, the conversion carries a dealer price of $3,495. The firm says it has a self-latching top in prototype stage. Convertible conversion without remote control is $2,995.

Fewer areas to be covered

EPA plans eased '84 altitude rules

By Jake Kelderman
Washington Staff Writer

WASHINGTON.—U. S. auto makers should have an easier time meeting 1984 "all-altitude" emission requirements under new proposals issued by the EPA.

In the first of two steps to ease a requirement that many auto makers had feared might eliminate certain low-power-to-weight automobiles (the 1984 requirement demands that cars and light trucks meet low-altitude emission standards even at altitudes as high as 7,000 feet), EPA is proposing to reduce the number of states and localities wherein only cars and light trucks modified for high-altitude operation may be sold.

The counties to be excluded from the requirement are located in Arizona, Idaho, Montana, Nebraska, Oregon, Texas, and Wyoming and cover areas both below and above the 5,200-foot altitude of Denver.

EPA's rationale is that those areas are already in compliance with National Ambient Air Quality standards for auto-related pollution and will continue to be even with the removal of the high - altitude vehicle requirement.

Thus, continuing to charge car buyers there $23 extra for high-altitude modifications is not cost beneficial.

• Cars and light trucks designed to meet emission standards at low altitudes generally will emit about 50 percent more hydrocarbons and 100 percent more carbon monoxide in places like Denver.

The EPA proposal would retain the high-altitude emission requirement for Colorado, Nevada, New Mexico and Utah, where compliance with the ambient standards in the high-altitude areas is yet to be achieved.

The easing of the 1984 "all-altitude" requirement comes about because the elimination of the aforementioned high-altitude counties effectively lowers the high altitude compliance test point to 5,200 feet, or Denver.

In so doing, the cost of complying with the 1984 "all-altitude" requirements is substantially reduced.

For instance, the large number of vehicles that now employ feedback emission control systems will now likely be able to meet the "all-altitude" requirement without modification.

Low power-to-weight vehicles, the ones most jeopardized by the "all-altitude" requirement, could comply by the addition of a single aneroid at a cost of approximately $10.

• Had EPA not eliminated the high-altitude counties, the 1984 "all-altitude" requirement would have made it necessary for most vehicles to be fitted with at least one aneroid device and some with more costly variable aneroids.

Regulations spelling out the 1984 high-altitude compliance procedures will be issued by the EPA in December.

EPA said it would hold a hearing by Nov. 22 on the issue of eliminating the counties, if someone asked for one. That was not expected, however, as environmental groups and other parties who might logically be expected to oppose the move, have agreed to go along.

Thus, the EPA and the auto industry will in effect have attained one of their major goals in this year's failed attempt to rewrite the Clean Air Act—an easing of the "all-altitude" requirement at a savings of more than $100 million.

Environmentalists will have gained too, though, for stricter emission control for the truly polluted high-altitude areas will also be in effect.

GM issues wiper recall

DETROIT. — General Motors is recalling about 5,300 early-production 1983 Oldsmobile Toronado, Buick Riviera and Cadillac Eldorado and Seville models for modification of the windshield wiper system.

It has been determined that the capacitor in the windshield wiper motor may overheat and fail, possibly causing loss of windshield wiper operation or an underhood fire.

GM has received four reports of underhood fires which may have been caused by this condition. There have been no reports of injuries, GM said.

On, Wisconsin!

Wisconsin Gov. Lee S. Dreyfus takes delivery of the first of 427 Alliances the state is buying from American Motors for use by its various agencies. George A. Maddox, vice president of manufacturing operations for AMC, goes along with Dreyfus for the ride from the Kenosha plant where the Renault Alliances are being built.

BMW deal for Belliveau

Autocar back with tandem steering axle

GREENSBORO, N. C.—Volvo White Truck Corporation has announced the return of a "tandem-tandem" Autocar model, and said it is "renewing emphasis on the custom-built capabilities for Autocar buyers."

"This isn't the first time anyone has seen a tandem steering front-axle conventional," said Larry Oliphant, Autocar Division vice president.

"In fact, this isn't the first time it has been available on Autocar trucks," he added. "Some of our customers wanted it again, so we brought it back—to show the 'muscle truck' is built to satisfy even the toughest applications."

The 8x4 configuration Model DC64F, is used primarily for oilfield services, Oliphant said, although the tandem steering front axle also is well-suited for specialized heavy applications in construction, logging, and other on/off highway operations.

• "With more weight distributed to the front axle, GVW ratings of 74,000 to 101,000 pounds can still meet many state weight requirements," Oliphant said. "The 8x4 design also allows the payload to be distributed proportionally over a greater number of axles, which results in less ground load bearing pressure per tire and improved flotation in soft terrain."

The Autocar double tandem package includes two Rockwell FL951 front axles at a combined 44,000 pound capacity. Suspension is a 40,000 pound Neway TL640. Brakes are 15x6-inch Stopmaster with 13-1/16-inch BC hubs and drums.

Front wheels are 24x8.5-inch

Ford develops truck diesel for Brazilian market

By Roger Rowand
Engineering Editor

TROY, Mich.—Ford Motor Co. has developed a 4.4-liter, four-cylinder diesel engine for use in its best-selling Brazilian light and medium trucks.

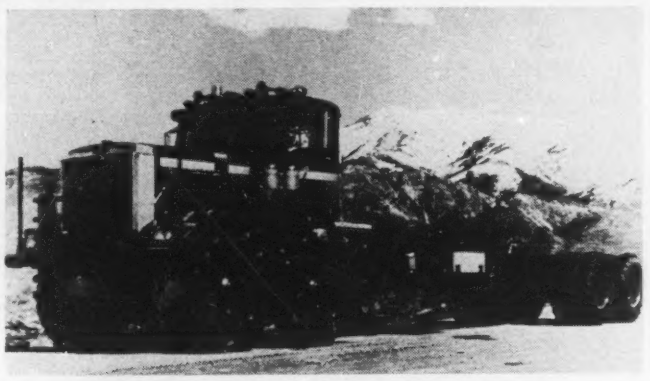
The new power plant is a derivative of a Ford farm-tractor engine. It generates 93 HP and has a high-torque capability ideal for Brazilian truck applications, said Mervyn H. Manning, general manager, Ford Tractor Operations.

"The new engine is a derivative of our proven tractor diesel and benefits from Ford Tractor's worldwide experience in producing more than 4 million diesel engines in the past three decades," Manning said.

The new truck engine is being built in Taubate and Sao Bernardo do Campo, Brazil.

"Work on the 4.4-liter truck diesel program began in June, 1980, to keep pace with a growing demand for 4-cylinder truck diesels in Brazil," he said.

"Sales of trucks equipped with diesels in Brazil have increased more than 400 percent since 1975, and Ford's share of this market has grown even faster than the industry average, due to the success of the F-4000 and the new F-2000 models," he said.



'Double-tandem' Autocar revived

In response to customer demand, Volvo White Truck Corp. has revived an Autocar with a tandem steering front axle conventional. The 8x4 Model DC64F is used primarily for oil-field services, but is well suited for tough jobs in construction, logging and other on/off-highway operations.

2 new transmissions introduced by Clark

INDIANAPOLIS. — Two new five-speed transmissions for Classes 6 and 7 trucks are the first major product offerings of the new Clark Automotive Products Corp., formerly the Components Division of Clark Equipment Co.

The transmissions, introduced at a press conference during the annual SAE truck and bus meetings here, were developed under a design and manufacturing program which Clark called "Best Available Technology."

Robert W. Wolfe, engineering director, cited some of the most important features of the new transmissions, the CL 450 and the CL 550:

A process called shot-peening, in which a high-speed bombardment of the machined surfaces with properly sized steel balls provides a controlled compressive residual stress on the gears.

Wolfe said the technique makes it possible to use smaller gears which have greater resistance to metal fatigue.

"As a result, the new Clark transmissions have the highest torque-capacity-to-weight ratio of any five-speeds in their respective torque ranges," he added.

A proprietary CAD (Computer-Aided Design) program has resulted in a number of important breakthroughs, including gears with greater helix and pressure angles to minimize pitting of teeth and provide additional life.

• The use of constant-mesh gearing in all gears (including low and reverse) eliminates gear tooth damage.

With Clark positive torque-lock, resistance to gear jump-out increases as the amount of torque from the engine increases. The higher the torque, the more secure the gear engagement, Wolfe said.

Extensive use of needle roller bearings in both transmissions helps increase efficiency and extend life, he added.

"Exclusive Clark split-pin synchronizers are comparable in size to those used in much higher capacity transmissions, resulting in a better synchronizer-to-gear-size ratio," Wolfe explained.

"They're simpler and more durable, with large cone diameters to increase synchronizing ability and insure long life."

Wolfe said the Clark progres-

Farm bred

Ford has redesigned this farm tractor diesel for truck use in Brazil. Its basic characteristics include, Ford says, impressive durability, efficient protection from dust and dirt, simple maintenance and the ability to work with fuel of less than the most desirable quality.

HD registrations for nine months down 18.7 percent

Nine-month registrations of new heavy trucks in the U. S. dropped 18.7 percent below last year's total, and there is little likelihood of any change in the final three months of the year.

During the January-September period, according to R. L. Polk & Co. statistics, there were 97,829 Groups 7 and 8 tallies, compared with 120,276 in 1981.

The 1982 count through September was down 34 percent from the 148,194 heavies registered in the first nine months in the first year of the current decade.

Tallies were off substantially this year for both Groups 7 and 8 vehicles.

The Group 7 count was 43,118 units, down 15.1 percent from last year's 50,816. The Group 8 total of 54,711 units was 21.2 percent lower than the year-earlier 69,460.

During the first nine months of 1980, Group 7 registrations totaled 60,365 units, 40 percent higher than this year's count. And the Group 8 tallies through September two years ago hit 87,829 units, almost 61 percent

truck industry news

Truck registrations for 9 months rise 6.6 pct. over 1981

With light trucks accounting for almost 93 percent of the total, registrations of new trucks of all types in the U. S. through September were up slightly over the first nine months of 1981.

Table on Page 46.

According to R. L. Polk & Co. statistics, 1,775,915 new trucks were registered in the January-September period, an increase of 6.6 percent over last year's 1,665,676.

This year, light trucks were the only market segment to show a gain in tallies over the 1981 totals. A year ago, all three market segments were down from the 1980 count.

Through September, 1,644,672 light trucks were registered in the U. S., up 9.4 percent over the year-earlier 1,503,478 units. There were good gains in all three of this market segment's weight classifications.

The Group 1 total for the nine months was 924,170 units, 10.7 percent higher than last year's 834,585. Group 2 was up 7 percent, from 659,445 units in 1981 to 705,752. There were 14,750 Group 3 tallies, an increase of 56.1 percent over last year's 9,448 units.

• Registrations of the Japanese-built, non-captive compact trucks also showed a small gain over last year in spite of the stiffer competition from the domestic compacts introduced in the 1982 model year.

Through September, the non-captive total was 240,340 units, up 2.3 percent over the previous year's 235,011.

Medium-truck tallies for the nine months dropped 20.3 percent below the year-ago count, with declines in all three of this market's weight groups. The January-September count was 33,414, compared with 41,922 units in 1981.

Only seven Group 4 trucks were registered in the first nine months, versus 11 a year ago.

General, Goodyear get Nissan tire orders

SMYRNA, Tenn. — General Tire & Rubber Co. and Goodyear Tire & Rubber Co. have been awarded contracts totaling $28 million to supply tires for the new Nissan light-truck assembly plant scheduled to begin production here next August.

Goodyear and General tires will appear on 1984 model Nissan compact trucks, according to Marvin T. Runyon, president, Nissan Motor Mfg. Corp., U. S. A. The Goodyear tires will be manufactured in Union City, Tenn. General has not yet announced where its tires for the Nissan trucks will be produced.

FISITA warned of long-term shortages of engineers

Professor tells of teaching cutbacks

By Ann Hope
Special Correspondent

MELBOURNE, Australia. — An eminent professor of engineering has appealed to the auto industry to wake up, while also hitting out at what he called the "cretinism" sweeping England and Australia in particular but also the U. S.

Professor Sam Luxton, of Adelaide University, declared in his speech at the end of the four-day 19th Congress of FISITA (Federation Internationale Des Societies D'Ingenieurs Des Techniques De L'Automobile):

"I cannot suppress my anger that the school of automotive engineering at Cranfield (England) which has contributed so much to the automotive world, has become one of the victims of the unbridled cretinism sweeping England and Australia.

"I am not joking when I appeal to industry to help us convince our political masters that their policies are shortsighted in the extreme, for my own department is close to extinction."

Luxton, professor of mechanical engineering at Adelaide University, made his outburst before an audience of more than 700 delegates from 21 countries.

Paraphrasing a statement made earlier at the international forum by Prof. Takeishi Sato, of Keio University, Yokohama, Japan, Luxton went on: "One cannot run before one can walk. It is one role of university research to take the first faltering steps so that industry can learn to run."

• Luxton blamed "anti-intellectualism" now sweeping the UK, Australia and, to a lesser extent, the U. S. Cutbacks in teaching staffs will mean fewer mechanical and auto engineers in the long term, he said.

Talking of the changes at Cranfield, Guy Tidbury, director of the Impact Centre formed at the end of July, said support from the auto industry had been "sadly lacking."

The theme of the congress was energy and mobility.

Keynote addresses were given by David Simon, managing director of BP Oil International, UK; Umberto Agnelli, president, Committee of the Common Market Automobile Constructors and vice chairman of Fiat; Sir David Griffin, on behalf of Hans L. Merkle, chairman of Robert Bosch, and Gerald B. Mitchell, chairman of Dana Corp.

Luxton said vehicle design had been given two huge "shots in the arm" in the past dozen years:

1. The challenge of controlling emissions.

2. The double challenge of reducing fuel consumption while meeting ever-tighter emissions legislation.

These challenges produced a dramatic increase in the degree of sophistication in the science and the technology as well as the management methods and structures in industry, Luxton said.

While the probable future trends of science and technology can be broadly predicted with reasonable confidence, the same could not be said of management structures, he said, adding that these will depend on the state of financial institutions in different parts of the world.

• "We may find that big is not necessarily beautiful when referring to corporations, as several in Europe have recently found, and that there will emerge international trading cooperatives . . . controlled and regulated by interdependence rather than corporate domination," he said.

Referring to the "Jacobson Dictum"—a lighthearted suggestion by Marcus Jacobson, chief engineer of the British Automobile Assn., that "If you want to save fuel, stay at home" — Luxton added that it was perhaps a little extreme. People will travel by private cars, he predicted.

Uniroyal Tire promotes Schell

TROY, Mich.—Fred H. Schell has been appointed general sales manager, replacement sales for Uniroyal Tire Co.

Schell joined Uniroyal in 1966 and most recently was director, private brands.

Mitsubishi nears dealership goal

FOUNTAIN VALLEY, Calif. — Mitsubishi Motor Sales of America (MMSA) has appointed 10 more dealers, bringing the new company's dealer count to 65 in 22 markets.

About five more dealers will be named to reach the company's goal. The company began selling cars under its own name in the 1983 model year.

Three of the new dealers are in California, two in the Pacific Northwest, two in the Midwest, two in the East and one in Texas.

In Southern California, franchises have been awarded to William G. Trefel, in the San Diego suburb of El Cajon, and to David L. Ho Jr., in the Los Angeles suburb of Glendale. Trefel is part owner and general manager of his father's dealership, Toyota of El Cajon. Ho is president of Pacific BMW in Glendale.

Near San Francisco, MMSA has appointed Benjamin Kopf Jr. dealer for Redwood City. Kopf also is president of Town Ford Sales, Redwood City, and his new store will be called Town Mitsubishi.

Robert D. Lanphere and George R. (Randy) Francis were named to run the Beaverton (Ore.) Mitsubishi point. Lanphere started Beaverton Honda 12 years ago and Beaverton Saab five years ago. He added a Beaverton Chrysler-Plymouth store in 1980. Francis acquired Damerow Ford in 1955.

MMSA also named Dana R. Martin and Donald R. Doyle in Bellevue, Wash. Martin owns Martin Cadillac in Los Angeles. Doyle, who had worked for General Motors for 14 years, is Martin Cadillac's vice president and general manager.

Two dealers named in the Midwest are Hess Kline, in the Minneapolis area, and Elvin Silverman, in Independence, Mo.

Kline, who will operate White Bear Mitsubishi, has been in the auto business since 1946 when he became chairman of Kline Oldsmobile in Roseville, Minn.

He is also chairman of Royal Oldsmobile, in St. Paul, and Royal Datsun, Kline Volvo-Fiat-Lancia and Metro Mazda-BMW, all in the Minneapolis area. Silverman has owned Independence Volkswagen since 1971.

In the East, Ernest Boch was named to a Boston-area point and Francis I. McGowen and John P. Lane to a franchise in Ardmore, Pa.

Boch's new store will be in Norwood, Mass. He owns Boch Toyota, Boch Oldsmobile and Subaru of New England (distributor for Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island and Vermont).

McGowen and Lane are co-owners of McGowen Ford, in Ardmore, where Lane is president and general manager. In addition, McGowen is general manager of Westtown Lincoln-Mercury, in West Chester, Pa.

In Texas, S. Finley Ewing Jr. and Ralph J. Gaden Jr. were named to a Dallas point. Ewing is president and principal owner of Ewing Buick Co., North Dallas, and majority owner of Autohaus, Inc., a North Dallas Mercedes-Benz and Volvo dealership. Gaden is general manager of Ewing Buick and part-owner and general manager of Autohaus, Inc.

9-month truck registrations increase 6.6 pct. over 1981

Continued from Page 14

The Group 5 total was off 18 percent, from 1,446 units in 1981 to 1,185 this year. There were 32,222 Group 6 tallies, down 20.4 percent from the year-earlier 40,465.

Through September, heavy-truck registrations totaled 97,829 units, a decline of 18.7 percent from last year's 120,276.

In Group 7, there were 43,118 tallies this year, down 15.1 percent from last year's 50,816. The Group 8 count hit 54,711 units, a drop of 21.2 percent below the year-earlier 69,460 vehicles.

• Light-truck registrations in September were down for the third consecutive month, and dropped slightly below the count for the same month a year ago.

During the month, there were 167,515 light-truck tallies, a decline of 5 percent from the year-earlier September's 176,340 units and 5.3 percent below the 176,872 vehicles registered in August.

In July, there were 182,326 light-truck registrations, while the June total hit 210,736 units.

A turnaround in light-truck tallies is anticipated in the final quarter of the year as a result of a number of new entries in the market and the resumption of incentives after spotty offerings during the summer months.

Going into the final three months, Chevrolet had a lead of almost 15,000 units over Ford, 554,094 versus 539,431, and the race for leadership is likely to continue close down to the wire.

Chevrolet was No. 1 in the 1982 model-year retail-sales race with 758,387 units, compared with Ford's 754,541.

Through September, only three nameplates — Chevrolet, Dodge and GMC — improved their share of total registrations over the previous year.

HD registrations for nine months down 18.7 percent

Continued from Page 14

greater than the 1982 total.

September registrations were down 27.8 percent from a year ago, 9,721 units versus 13,455. The count was the lowest since February's 9,371 vehicles. In September, 1980, heavy-truck tallies totaled 15,838 units, 63 percent higher than the 1982 total for the month.

Ford was No. 1 in registrations of big trucks through September with 23,220 units, almost 8 percent higher than second-place International's 21,540 and good for 23.73 percent of the nine-month industry total.

Ford's penetration was up 2.49 percentage points over last year, when it was No. 2 with 25,545 tallies accounting for 21.24 percent of the total.

International, first a year ago with 30,811 registrations, suffered a loss of 3.60 points in market share this year. International accounted for 22.02 percent of the total this year, compared with 25.62 percent in 1981.

International, however, was No. 1 in Group 8 tallies with 12,597 through September, 30.3 percent higher than second-place Mack's 9,666 units.

Ford had the highest Group 7 total with 16,134 units, which was 54.3 percent greater than No. 2 GMC's 10,613 units.

Miller appointed

PHOENIX.—Daniel R. Miller has been named government relations counsel for the Arizona Automobile Dealers Assn. For the last two years, he has served in a similar position with the Truck Trailer Manufacturers Assn. in Washington.

Two transmissions for Classes 6, 7 trucks introduced

Continued from Page 14

sive shift pattern minimizes driver confusion and makes shifting more natural.

A shorter side throw helps cut down driver fatigue, he continued, and the replacement of the "short" fourth with the Clark "soft" fourth results in easier, progressive shifting with two-speed axles.

"Finally, Clark's state-of-the-art testing procedures include laboratory, in-truck, intra-city, mountain, and desert road tests, as well as tests under actual use conditions in selected fleets," Clark said. "Quality-control procedures applied on a regular basis include verification of shot-peen intensity and coverage," he added, "and a lab technique to measure the compressive residual stress, plus X-ray diffraction, dynamometer evaluation, engineering audits, and vehicle testing, for one of the most stringent QC procedures in the industry today."

Autocar unveils tandem model

Continued from Page 14

discs, with 12 24.16 tires. Also included is Ross HFB 70 steering with Vickers Power Ram, and special design tandem-tandem dual fenders.

Although a 38,000-pound capacity rear axle is standard for the DC64F, Oliphant said, the 8x4 configuration is more commonly used with rear-axle capacities of 58,000, 65,000 or 70,000 pounds, all available for Autocar trucks.

Ford Motor dealers doubled profits in early '82—Lataif

DALLAS. — Ford Motor Co. dealers doubled their profits in the first six months of 1982 compared with the same period last year, according to Ford Division General Manager Louis Lataif.

He also said his company's dealers "may be able to double their profits again in calendar 1983."

Lataif said he was aware some Ford dealers were having difficulty. But the difficulty was primarily due to dealers' bad business management, he said.

Lataif was in Dallas to launch his company's 1983 cars and trucks which, he said, will make 1983 "a major turning point in the company's 80-year history."

"Ford dealerships are substantially stronger and more profitable this year (calendar 1982) than last year, which was better than 1980," Lataif said. "I believe this is due to their better management of cost and revenue.

"In fact, if anything comes out of the ill winds of the economy, it will be that dealers will be better businessmen. We all will be better businessmen."

Lataif said Ford would like to see fewer rebates during the 1983 model year "because we'd like to see cars sell on their own merits."

Director White sees possibility of a split

Canadian impact on UAW growing

Continued from Page 8

how far off are we when we make it?' "

White also criticized Chrysler for submitting the U. S. contract, which was rejected overwhelmingly by the U. S. workers, to the Canadians. He said the company had not even taken the time to put the contract into the Canadian framework. That, he said, was an insult, not only to the UAW, but to the company's Canadian labor relations team.

"Fisher (William Fisher, Chrysler Canada's chief negotiator) has to have a working relationship with the bargaining team here," White said, "and to have him come in and read that document which doesn't even fit the Canadian mosaic was unbecoming."

According to White, the U. S. contract was not even feasible in Canada. The contract called for a one-year agreement on economic issues and two years on non-economic issues, with renegotiation on economics scheduled at the end of the first year.

White said that is not possible in Canada because it would be considered a reopener, which is not legal in Canada. He said Canadian law prohibits workers from striking during the length of a contract. Consequently, he said, the union would have had no clout when the economic issues would have been negotiated in 1983.

According to a Chrysler insider, the union is interpreting the law to benefit its argument. He said the company believes the law would allow negotiations on economics in 1983.

Moving back down the road to parity with workers in Ford and GM is also a major demand in Canada, but White said he is not certain it can be obtained in one contract.

He said the bargaining team would bring back "the best possible settlement" to the membership and hopefully "that gets us back within striking distance of parity, but I don't have any magic number to tell us when we take it back or when we don't."

The Canadian UAW also wants increases in pensions and a resumption of quarterly COLA payments.

According to White, the union is asking Chrysler to base the COLA formula strictly on the Canadian Consumer Price Index. It is currently based on a combined U. S. and Canadian CPI, weighted toward the rate in the U. S. The Canadians say this limits their COLA payments and does not keep up with Canadian inflation, currently running at 10.4 percent.

• In addition, White said the UAW will try to change the current supplemental unemployment benefit program (SUB). Under the old contract, workers who are laid off because of a strike are not eligible for SUB payments. That means that Chrysler workers in the U. S. who are laid off because of the Canadian strike do not collect those benefits.

According to White, neither Ford or GM has this policy, and "there is no reason to continue it at Chrysler." He said an amendment to alter that provision is on the bargaining table at Chrysler Canada.

Some observers believe that U. S. workers will not be so supportive of a strike in Canada when they are laid off en masse and aren't getting SUB. But White disagrees, noting that had the U. S. workers voted to go on strike Nov. 1, rather than wait until January to negotiate, the Canadian workers would have been in the same boat.

"History has always been like that," he said. "We never went around and said, 'Oh, woe is us; the U. S. workers are making the fight for us.' This is one of the few times since I've been in the union that we are making the fight which is going to be beneficial to the U. S. workers."

In the past, most contracts have been negotiated in the U. S. and then tailored to the Canadian needs.

25 Pontiac years

Victor H. Scholfield, right, of Scholfield Bros. Pontiac, Inc., Wichita, receives a plaque citing his 25 years as a Pontiac dealer from William W. Lane, Pontiac general sales manager.

DOMESTIC SALES

November new-car sales enjoy best start since '78

Continued from Page 1

year-ago 2,700 (up 47.93 percent daily rate), and Volkswagen of America was off 32.01 percent, to 2,069 from 3,043 (down 37.20 percent daily rate).

GM's 66.10-percent share of the early-November domestic market was the corporation's second largest chunk of the calendar year. It was an increase of more than 2 percentage points, from 63.89 percent last year.

Ford earned 21.50 percent, up from 21.30 percent. Chrysler slipped back to 8.91 percent from 10.77 percent a year earlier (and from 13.93 percent the final October period); AMC earned 2.39 percent, up from 1.90 percent, and VWoA had 1.10 percent, down from 2.14 percent.

On a year-to-year basis, 11 of the 14 U. S. makes tallied sales increases in early November. Chrysler doubled its total, going to 4,453 from 2,128, and Lincoln was up 94.13 percent, to 3,605 from 1,857. AMC was up 66.37 percent, Cadillac was up 62.79 percent, Oldsmobile was up 54.77 percent and Chevrolet was up 45.55 percent.

Pontiac was up 37.17 percent, Ford was up 34.02 percent, Mercury was up 17.92 percent, Buick was up 4.31 percent and Dodge was up 0.90 percent.

On the other side of the fence, VW was down 32.01 percent, Imperial was down 32.95 percent and Plymouth was down 12.70 percent.

Year-to-date sales through Nov. 10 numbered 4,938,907, down 11.16 percent from 5,559,127 in 1981. Annualized sales based on the early-November rate would be 7,030,733.

IH notes positive signs; Chapter 11 still a threat

Continued from Page 2

able market share," he stressed, although he acknowledged that "in this kind of a market, market share is largely a function of how much you want to (price) discount."

Lennox said he anticipates the truck business will hold to about the same revenue levels as achieved in the last half of 1980, while the agricultural equipment business would hold to about two-thirds of the revenue level for that period.

"We will have a much heavier proportion of our revenues from truck than from ag than was the case in the past," he said.

In the past six months, International Harvester's new management team has made concerted efforts to streamline an overextended product line and pare back on non-essential production facilities.

Among the steps taken was the sale, long recommended by observers, of its unprofitable construction equipment business for $100 million to Dresser Industries, Inc., the recently proposed sale of its axle and transmission facility in Fort Wayne to Dana Corp., and the announced closing in approximately a year of its aging Fort Wayne truck plant.

Lennox said the trimming is not yet done. Two more plants are under study for the future with the company. One is the Melrose Park (Ill.) plant, where crawler tractors were formerly manufactured, and which is only 50 percent utilized now in the manufacture of engines.

Smokin' with the Bandit

Burt Reynolds, who drove the Pontiac Trans Am to glory in "Smokey and the Bandit," will autograph 200 "Bandit" conversions slated to be built by Trans Am Specialties, Cherry Hill, N. J. The conversion includes fiberglass hood, lower air dam, front-wheel flares, rear wing, aluminum wheels, Goodyear Eagle tires, a 150-MPH speedometer and minor suspension changes. Cars retail for about $19,000 through Pontiac dealers.

Bieber follows UAW ideals, but in his own quiet style

Continued from Page 3

most assured, Bieber must face the troubles of the union as its leader. The UAW is suffering from a shrinking membership and a tough economy and is still waging a fight for content legislation.

To improve the UAW's position in these areas, Bieber said he will continue to expand the union's organizing drives in white-collar ranks and its educational programs to train workers for the jobs of the future. And, as a "staunch Democrat," he will also continue to keep the union heavily involved in politics.

Many of those challenges will come to a head about 15 months after Bieber takes office. The UAW contracts with Ford and GM expire and a presidential election will take place.

"There will be no shortage of work or problems for the new president," he said.

• In addition, Bieber will continue to pursue the cooperative work ethic between the company and the union, improving communication between the two parties.

But Bieber has let it be known that quality of worklife (QWL) programs do not affect the collective bargaining process adversely. He said that representing the members at the bargaining table is still the union's most important job and that the company will always remain on the opposite side of the table during negotiations.

Warren, in a recent Automotive News interview, said he would like to help improve communications by explaining new contracts, or other situations directly to the union's GM Council. But Bieber said that scenario is highly unlikely, at least for now.

"I don't think it's Al Warren's place to explain the contract to the Council," he said. "It is a role of the union to explain the contract (to the Council), just like it's Roger Smith's (GM Chairman) role to explain the contract to the board of directors.

"I'm not planning it (Warren speaking to the Council) in 1984. But if you asked someone 15 years ago if Doug Fraser would be serving on the board (of Chrysler Corp.), you would have gotten a resounding NO. But it did come to pass."

Bieber said he will also pursue a union seat on the board of directors of Ford and GM and will remain active in merging other unions with the UAW.

Talks have taken place with the International Assn. of Machinists union and the United Rubber Workers. Bieber said there is no action on a merger with the URW currently, but the talks with the Machinists are continuing.

• While he was not a Bieber supporter, Vice President Robert White, director of the Canadian region, said he will be able to work with Bieber.

White said that some of the GM members in Canada have said they won't support Bieber, but "I'm going to talk to them. It's like any other decision you make. If you support a candidate and your candidate loses, you have the obligation to get behind the winning candidate."

According to White, internationalism will play a big role in the future of the UAW.

"Reuther, Woodcock and Fraser might have disagreed with me on certain things, but they had an international perspective," White said. "They looked at the world as much more than just the U. S. and that has to continue."

According to Bieber, there is a need for a close cooperation between the international unions and he will move to strengthen those ties.

obituaries

Jerry DeNooyer

KALAMAZOO, Mich. — Jerry DeNooyer, 80, retired owner of DeNooyer Chevrolet here, died Oct. 25. Mr. DeNooyer entered the auto business in 1919 and, with his brother Jacob, opened an Oldsmobile dealership in Battle Creek, Mich., in 1927. They switched to Chevrolet in 1932 and bought their Kalamazoo location in 1943.

Roy Christenson

HIGHLAND, Ind.—Roy W. Christenson, 64, president of Christenson Chevrolet here, died Oct. 19. He was one of the original owners of the dealership started by his father, Warner, in 1951.

Beijing headed for U. S.?

An Oregon importer is negotiating to bring in kits of the Chinese-made Beijing to the U. S. The two-door hard-top version, pictured here, is planned in several colors and two trim levels.

Importer eyes Chinese 4x4 for marketing in America

PORTLAND, Ore. — If West Coast import-export executive Paul Millius has his way, the next wave of foreign cars unloading at U. S. ports will be Chinese.

Millius, head of Portland's China Trade Associates, Inc., is working out details of a two-year effort to bring the rugged Beijing Jeep-like utility vehicle to this country.

The little rig has a minimum of frills, four-wheel drive, four-cylinder gas engine and three-speed transmission. Millius has been named exclusive U. S. importer.

"For the U. S. market, we're planning to bring the car and pickup models over in easily-assembled kit form," Millius said. "This is to keep cost below $6,000 per unit and to meet EPA requirements on emissions."

Beijing body styles include four-door and two-door canvas-top versions, a two-door hard-top and a two-door canvas-top pickup. Curb weight ranges from 3,234 to 3,498 pounds. All body styles come in a variety of colors.

• Standard powerplant is Beijing's 2.4-liter, 75-HP engine. The in-line four is water-cooled.

Millius said a diesel option is a "strong possibility" for the U. S.

"We are setting up a nationwide dealer network, with emphasis on establishing West Coast outlets," he said. Meanwhile, the firm is negotiating with EPA to meet its requirements.

The utility vehicle is the mainstay of the Chinese army.

"Our three major priorities for the coming year are heightening U. S. dealer interest, winning EPA approval and importing about 5,000 Beijings," Millius said.

Growth of parts exports tops import rise, ITC says

WASHINGTON. — Imports of certain motor-vehicle parts increased 28 percent from 1977 to 1981, but exports of those parts more than doubled, according to the International Trade Commission.

The import total climbed from $2.5 billion to $3.2 billion during that five-year period, and the import market share jumped from 14.5 percent to 16.5 percent.

The major sources of U. S. imports in 1981 were Canada, Japan and West Germany.

The ITC said that exports of these products increased each year during the period studied, growing from $3.4 billion in 1977 to $6.9 billion in 1981. Major U. S. export markets in 1981 were Canada, Mexico and Venezuela.

The ITC said the U. S. had a trade surplus in these products during each of the five years, rising from $827 million in 1977 to $3.7 billion in 1981.

Shipments by U. S. producers increased from an estimated $18.4 billion in 1977 to $23.1 billion in 1981.

Apparent U. S. consumption of the parts included in the report increased from an estimated $17.6 billion in 1977 to $19.4 billion in 1981, the ITC said.

The principal motor-vehicle parts included in the study are body stampings, wheels, radiators, exhaust systems, brakes, transmissions, and "miscellaneous" parts.

Body and mechanical parts used in the assembly of new motor vehicles accounted for the majority of the U. S. market during each year, the agency said.

The report noted that the U. S. is the second largest manufacturer of motor vehicles (Japan is first) and is the largest manufacturer of the type of parts covered in this summary.

Toresco adds Ford to dealership string

UNION, N. J.—Donald Toresco has purchased Bob Doran Ford here and renamed it Don Toresco's Fordland.

He also owns Dodgeland, U.S.A., Springfield, N. J.; Towne and Country Chevrolet and Towne and Country Imports, both in Toms River, N. J., and Dom's Import Car Center, North Plainfield, N. J.

Makers schedule 103,365 for week

Overtime, returns hike auto output

By Patricia Hoffman
Staff Writer

Domestic auto production fared substantially better last week than in the previous week as three assembly facilities scheduled overtime and operations resumed at four plants following downtime due to high inventories.

Last week's production was targeted at 103,365 units, a 15.19 percent gain from the previous week's 89,736, but down 8.22 percent from 112,628 built in the comparable 1981 period.

Year-to-date, the makers have finished 4,617,103 cars, 21.10 percent behind last year's 5,851,265.

General Motors' Leeds plant was down last week for inventory control. Operations are slated to resume today (Nov. 22).

Still down for inventory adjustment were GM's Van Nuys, Willow Run and Wilmington facilities, plus Chrysler Corp.'s Belvidere point. All five plants were idled Nov. 8. GM Willow Run and Chrysler Belvidere are slated to resume production today, while GM Van Nuys and Wilmington facilities are due back November 29.

The GM Bowling Green and Ford Lorain plants remained closed last week for model changeover. Bowling Green is scheduled to return Dec. 1. The Ford Lorain facility, originally scheduled to resume production in December, will remain idle until January.

Operations resumed last week at GM's Tarrytown and Lordstown facilities. Lordstown was idled Nov. 1 due to high inventories, and Tarrytown closed Nov. 8, also for inventory control.

Also back last week from inventory adjustment were Ford's Metuchen and Wayne plants. Both were idled Nov. 8.

Saturday overtime was scheduled last week at GM's Arlington and Baltimore points, plus Ford's Wixom plant.

Production of the 1983 Ford Crown Victoria is slated to begin Nov. 29 at the company's St. Louis facility. The plant already assembles the Mercury Grand Marquis. The 1983 full-size Ford will be built at a rate of 8.6 units per hour on two shifts.

All car facilities will be idle this Thursday and Friday in observance of the Thanksgiving Day holiday. Normal five-day operations are slated to resume at most plants Nov. 29.

Return of 4 plants hikes truck production 23 pct.

The return of two General Motors and two Ford Motor plants helped boost last week's domestic truck production 23.25 percent from the previous week's total, and output rose 19.99 percent from last year's figure.

The truck makers estimated last week's output at 31,399 units, up from 25,475 the previous week and also up from 26,169 trucks built in the comparable 1981 period.

Year-to-date, there have been 1,719,384 trucks assembled, a 15.26 percent gain from last year's 1,491,764.

High inventories idled two assembly points last week. They were GM's Flint light-duty Chevrolet and GMC truck line and Ford's Kansas City light-truck line. Both points are slated to return today (Nov. 22).

Still down for inventory control last week were GM's Janesville and Pontiac (medium duty) facilities and Chrysler's Belvidere point. The GM Pontiac and Chrysler Belvidere plants are slated to resume production today, while GM's Janesville point will remain closed until Nov. 29.

Operations resumed last week at GM's St. Louis plant and Moraine S-truck line. Both facilities were idled Nov. 8 due to high inventories.

Also back last week were Ford's Louisville and Twin Cities facilities. Both plants were closed Nov. 1 for inventory control.

All truck facilities will be idle Thursday and Friday this week in observance of the Thanksgiving Day holiday.

Thompson's silver

Milton B. Thompson, right, owner / operator of Thompson Sales Co., receives his silver anniversary award from Cadillac Midwest Regional Manager W. M. Donahoe at the dealership site in Springfield, Mo.

Cooks adds Porsche-Audi

FARMINGTON HILLS, Mich. —Bill Cook Porsche Audi has opened here. Owner Bill Cook also heads a Buick dealership in Farmington Hills.

GM, Ford reopen plants in Canada; output doubles

Canadian auto production last week almost doubled the previous week's total as operations resumed at one General Motors point and one Ford Motor facility. The return of those plants helped more than offset downtime at American Motors' Brampton plant, which was idle due to high inventories.

Last week, the auto makers targeted output at 12,645 units, a 97.79 percent gain from the previous week's 6,393, but an 18.03 percent decline from 15,427 units built the same week last year.

Year-to-date, the car manufacturers have completed 755,394 units, up 3.74 percent from last year's 728,190.

The return of GM's Oshawa truck facility helped boost last week's estimated truck output to 7,350 units, a 28.61 percent gain from the previous week's 5,715, but output fell 33.10 percent from 10,986 units assembled in the comparable 1981 period.

So far this year the makers have finished 439,155 trucks, down 4.08 percent from last year's 457,816.

High inventory idled AMC's Brampton car facility last week, the first of a four-week shutdown. The plant, which assembles Spirit, Concord, SX-4 and Eagle cars, is scheduled to resume operations Dec. 13.

The strike at Chrysler Corp. continued last week, idling the company's Windsor car and truck facilities. Production ended at the plant Nov. 5.

Ford's St. Thomas car point remained closed last week for inventory control. The facility, idled Nov. 8, is slated to return today (Nov. 22).

Also at Ford, the Oakville car plant returned last week following two weeks of downtime to control inventory.

GM's Oshawa car and truck plants resumed operations last week after being idle one week due to slow sales. The Oshawa car facility is scheduled to close again the week of Nov. 29, and both the car and truck points will be down the week of Dec. 6, also the result of sagging sales.

French mini mini

Tiny four-seater from Duport

A small factory near the French Alps produces one of the smallest four-seaters in the world, the Duport Parco, shorter than the British Mini. It has a plastic body—except for the doors, which are from the Renault 14, and the tailgate, which is from the Le Car—and is powered by a 600-cc air-cooled one-cylinder Lombardini diesel.

Used-car market still firm in face of many problems

By Jenny L. King
Staff Writer

Take one part economic recession, add a lot of red tape from loan institutions, subtract clean late-model cars, mix in state regulations for smog control and safety and boil out all the sales between individuals.

The result is today's used-car market, a still flavorsome porridge but not without lumps.

An AUTOMOTIVE NEWS survey of the used-car market around the country resulted in a complicated recipe for success.

Whereas things are good in northeast Georgia, the Dallas area is really feeling the economic recession that has hammerlocked other parts of the country for up to three years.

State regulations in California and residents' penchant for selling vehicles to each other without professional involvement have made it a difficult market for used-car operations.

"Exceptionally well off" were the words Jim Hardman used to describe the economy in his hometown of Gainesville, Ga. The 31-year-old president of the state's used-car dealer association was pleased to report that businesses are relocating and opening in that greater-Atlanta area and he is experiencing "good steady growth" in sales of new and used cars.

Hardman has what might be a perfect combination of vehicle services in a healthy area. He bought a Pontiac - Buick - GMC dealership a little more than a year ago and runs two used-car lots as well. He uses his service department to repair and recondition used cars.

Hardman has a used-car buyer working fulltime in Atlanta, buying for retail sale. He also has installed a toll-free 800 line in Gainesville so new-car dealers can talk directly with him about used cars they want to wholesale.

He said the local banks will make loans only on the purchase of cars five years old or newer, so he is building up a financing program of his own for customers.

In California, a recent court decision made financing on used-car purchases very difficult to obtain, adversely affecting the used-car dealer, according to Roy Wilhite, head of used-car sales at Auburn Volkswagen-Mazda, Auburn, Calif.

Wilhite recently gave up his independent outlet to join the new-car dealership. He said private sales of used cars have reached astronomical heights in the Golden State.

"I read that 74.5 percent of all vehicles transferred are between individuals; that leaves 25.5 percent for dealers," Wilhite said. "Of this, I think more than one-half are sold by new-car dealers. The projection is that used-car sales by dealers will be down to 20 percent soon."

State regulations require smog controls and safety measures on all cars sold by licensed dealers, which can cost the used-car dealer several hundred dollars if he is handling a car that isn't properly equipped. This is a major reason people deal with each other: They can ask more than wholesale and still underbid a dealer, since they are not subject to the emissions and

No pickup in car market at least until spring, he says

Iacocca sees a delayed recovery

By Edward Lapham
Financial Editor

The real U. S. car market recovery has been delayed at least until the 1983 spring selling season, according to Chrysler Chairman Lee Iacocca.

"Next year looks fair," Iacocca told AUTOMOTIVE NEWS in an exclusive interview. "I'd say that if (total U. S. new car sales) goes up 10 percent to 8.5 million, we're lucky."

He said the forecast assumes the U. S. government will be prudent in its monetary and fiscal policies and that the Japanese government will be "prudent also and roll over the voluntary (car-export) restraints on a year-to-year basis, starting next year."

The recovery will gain momentum slowly. "We have to boom in the last six months of '83 to make the 8.5 million, or let's say hopefully as high as nine," he said.

Iacocca said Chrysler is "poised" with the proper products to take advantage of the upturn when it comes, with more new product, the G-24 sports car and T-115 van set for introduction next autumn as '84 models.

In order to launch the new products, the company will have capital expenditures totaling about $1.2 billion next year, Iacocca said, compared with 1982 capital expenditures of about $700 million to $800 million.

"Next year, spending will exceed amortization and depreciation by about $600 million or so that will be a sucking out of about $600 million just for the capital program," Iacocca said. "That's why this celebrated billion dollars in cash doesn't go very far."

Spending for the T-115, which the company is careful to note is an all-new platform, not a K-car derivative, is $700 million.

In addition to the new-model programs, the company also is beginning to do some "modernization of total plant," which has been delayed so Chrysler could bring new product on stream on time.

"The roofs are starting to leak around here," Iacocca said.

• The Chrysler chairman conceded management "may have not done well" in explaining the $1 billion cash puddle and for what it is earmarked "to the troops out there."

He said, however, the company "will make sure we communicate it better" in the current round of contract talks.

Iacocca began the interview by saying he didn't want to discuss the Canadian strike situation, but its impact on the survival chances of the company assured that it did pop up several times.

He blamed the strike not only on the failure to explain the company's financial situation to workers but also on economic conditions in the U. S. and Canada.

He said, "I've got a strike in Canada. Why? They worked 107 percent of straight time last year for the whole year. Why? Building big vans and big New Yorkers, all gas guzzlers. Why? $1.25 gas."

Later, he said the economic uncertainties and fluctuations in interest rates have hurt businesses and individuals, preventing a solid recovery.

"That's what's happening in Canada," Iacocca said. "Mortgages are rolled over every year, and they're up to 22 percent. The interest rates are not deductible by Ottawa law and I said, 'What are you getting mad at me for?' They said, 'Well, we need money to cover it.'

"Well, go see your chaplain, what the hell are you talking to me for? Yet I've got the strike, not the chaplain."

Chrysler was to have discontinued the rear-drive New Yorker this year, but later decided to extend it. "We'll extend it two years," Iacocca said. He expects to sell 50,000 each of the new front-drive New Yorkers

RV industry sees good '83

By Jack Walsh
Truck & RV Editor

Manufacturers and retailers of leisure vehicles, as well as their suppliers, have had a relatively good year in 1982, and they're looking for a better one in the next 12 months.

The recreation-vehicle indus-

RV Section follows Page 44.

try long has prided itself on being a leader in a recovery from a general economic slump, and experts in the field point to increased sales in 1982 as an indication that it's leading the way again.

Thomas H. Corson, chairman, Coachmen Industries, Inc., noted that the "recent declines in interest rates and improvement in certain other indicators, albeit slight, cause us to feel that prospects for 1983 look promising."

"The direction of the economy," he added, "finally seems to be pointing upward and there is every reason to believe that the beginning of the long-delayed recovery is at hand."

John F. Sillick, Chevrolet's special-vehicle sales manager, said the attitude of manufacturers and dealers "is very optimistic," based partly on the 1982 sales gains and the availability of new products in the 1983 model year.

• James T. Riley, GMC Truck general sales manager, anticipates continued strong RV demand in 1983, particularly in the travel-van segment, and he called RV applications a "significant factor in GMC's strong light-duty truck sales performance in the 1982 model year."

Shipments of recreational units from manufacturers to dealers

breaking news

Warranty extended on Chrysler imports

DETROIT.—Chrysler Corp. has extended the limited warranty on the power train of its imported cars and trucks to 24 months or 24,000 miles, whichever comes first. The extended power train warranty provides no-charge repair and replacement of defective parts for major components of the drive trains of all 1983 Dodge Challenger, Plymouth Sapporo and Colt passenger cars and Ram 50 trucks.

GM, VW slate auction sales

TAYLOR, Mich.—General Motors has scheduled its second auction sale for dealers at Aptco Auto Auction on Dec. 2, with 400 vehicles to be offered. GM's first sale at Aptco, on Oct. 19, was highly successful. Volkswagen will hold its first sale at Aptco on Dec. 5, with 50 VWs offered to dealers.

Fisher named AWC president

LOS ANGELES.—William P. Fisher has been named president of American Warranty Corp., succeeding Ronald F. Glime, who resigned. Fisher is AWC's fourth president in two years. He is president of United Equitable Corp., AWC's parent company. AWC also announced a series of new service contracts for new and used cars and trucks. Beginning Dec. 1, AWC will offer dealers lower rates and new mileage programs on 268 new-vehicle models and 316 used models.

Over import of non-compliant vehicles

CARB considers suit against EPA

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — California's Air Resources Board is considering suing EPA over the latter's policy of allowing on a one-time-only basis the importation of 1977 or older vehicles without modification to comply with U. S. emission standards.

According to CARB sources, the board has an informal opinion from the Attorney General's office suggesting the policy is illegal and contrary to the intent of Congress when it adopted amendments to the Clean Air Act in 1977.

When the board might act is uncertain, the sources said, but it would not be too soon for certain European auto makers who are disturbed by the notion that there will soon be in the U. S. a substantial number of their products they never intended to be here and which they must now be prepared to service.

Indeed, one of the makers, Ferrari, has petitioned EPA to rescind the policy or provide it with the legal basis for EPA's action.

Mercedes-Benz, BMW and Porsche-Audi share that view, but have been reluctant to act thus far because they are more interested in pushing legislation through Congress that would prevent so-called "gray-market customizers" — or for that matter, anyone — from bringing new Europe-only models into the country and modifying them to meet U. S. emissions and safety requirements.

• Such activity is more damaging to their dealers and the corporate good name, they reason, so why bother with the exemption for five-year-old cars. EPA adopted the five-year exemption largely to rid itself of a paperwork burden.

But what originally was thought would be a trickle of cars so exempted has turned into a bit of a flood, according to EPA sources, who illuminate the point by saying that "whole families, including babies and dogs, have begun applying for the one-time-only exemption."

"We're getting hundreds of requests," they said. And many of those requests are coming from car-crazy California, which is why the CARB is thinking of suing the EPA.

California sets its own emission standards under rights granted it by Congress. The state has been tough about them because it has some of the most difficult auto pollution problems in the country.

• California allows no vehicle to avoid the emission standards, including used cars coming from out of state, so it has a little problem when EPA adopts a policy that allows individuals to import, on a one-time-only basis, a five-year old or older vehicle that does not meet U. S. emission standards and operate it.

"There is an element of unfairness we don't like here, never mind the fact that we don't need the added pollution," a CARB source said.

California recently shut down the lucrative business of importing brand new exotics and modifying them to comply with the state's emission standards when it ruled that such vehicles could be sold in the state only if they are certified as being in compliance with emission standards by the actual manufacturer, not a modifier.

Used vehicles imported into the state must comply with federal emissions standards.

Converter in search of a new market

Coach Builders Ltd., High Springs, Fla., has modified its convertible conversion of the BMW 320i and is now marketing the conversion to car owners who are tired of a hard roof over their heads. Equipped with a padded, insulated manual top and plastic window, the conversion carries a $4,900 dealer price, which includes body reinforcement.

0.2 GPM particulate standard set back 2 years

EPA delays tougher diesel rules

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — Confirming what had been in the wind for months, the EPA last week said it would postpone for two years tough new emission requirements for diesel cars and light trucks.

In moving the effective date of the 0.2-gram-per-mile diesel particulate standard from 1985 to 1987, the EPA agreed with the makers that technology will not be ready for compliance at the earlier date.

EPA currently enforces a 0.6-gpm diesel particulate standard which, by and large, is being met without resorting to the trap-oxidizer technology needed to meet the 0.2 gpm standard.

Diesel particulates are damaging to humans and air quality. They have shown mutagenic properties in the Ames Test, a measure of carcinogenic potential, but researchers have not found hard evidence of this.

EPA first moved to control diesel particulate emissions in February, 1979, largely in response to concern that diesel-powered vehicles might well have a 20-percent share of the auto market by the mid-1980s.

It proposed a 0.6-gpm particulate standard for 1981 and a 0.2-gpm particulate standard for 1983 models. Subsequently, it changed the effective dates to the 1982 model year and the 1985 model year, respectively, and modified the light-duty truck standard to 0.26 gpm in the 1985 model year.

The agency expected trap-oxidizer technology to be ready by then to meet the stricter standard, but development work has apparently not progressed at the pace the agency thought it would.

The problem lies not with the trapping device, the agency has found, but with integrating the regenerating systems needed to return the trapping device to maximum efficiency.

The two trapping systems the agency and manufacturers now have under serious consideration are a Cornign-built ceramic honeycomb, much like the catalyst used in gasoline-powered cars, and a wire-mesh system developed by Johnson-Matthey.

Both have proved capable of trapping with high efficiency through the requisite 50,000 miles when properly regenerated.

Regeneration is the problem, though. EPA and manufacturer studies have shown that to initiate regeneration, temperatures must range in the neighborhood of 500 to 650 degrees Centigrade for non-catalyzed traps, and oxygen levels must be at least 3 to 4 percent. These levels are required for 2 to 10 minutes.

Catalyzed traps require temperatures of only 310 to 350 degrees Centigrade to commence regeneration.

Unfortunately, temperatures do not reach that height for that long during normal driving; thus, an outside heat source is necessary.

• The makers are investigating such things as intake air throttling, exhaust stroke fuel injection and electrical heating to get that added heat. They are having some success at it, but a system that senses when to regenerate the trap and then accurately controls the regeneration (e.g. preventing a meltdown) still remains out of reach.

Feedback controls similar to those used in today's gasoline-powered cars will likely prove to be the solution. But the logic for these systems will be complex because the temperature and oxygen level of the exhaust varies quickly and dramatically with changes in driving conditions.

Furthermore, because particulate loading cannot be directly measured with available sensor technology, accumulated mileage or engine revolutions will have to be used as a surrogate to determine when to commence regeneration.

EPA now estimates a basic working system will be available for assurance testing by January, 1983. It also estimates confirmatory testing and analysis will take 20 to 24 months, and that another 18 to 24 months will be needed to get into mass

FTC proposes wider franchise exemption

WASHINGTON.—Volkswagen of America and 11 independent Subaru and Toyota distributors would be exempted from the FTC's Franchise Rule under a proposal issued by the commission.

The Franchise Rule requires a franchisor to provide detailed information on the nature of the business and the terms of the proposed franchise relationship.

The auto companies had asked to be exempted, saying they already provide sufficient disclosure to prevent abuses. They also argued there is no financial incentive for them to unfairly lure dealers into associating with them.

The FTC has already granted the same exemption to the domestic auto companies.

They also argued the rule was not intended to cover the auto industry because that industry does not employ any of the practices the rule was designed to prevent, such as high-pressure tactics to sign up new dealers.

The FTC is asking the public to comment on whether the petitioners have engaged in unfair or deceptive practices and if they should be exempted.

It also asks if the Automobile Dealers Franchise Act (the Dealers' Day in Court Act) is sufficient to remedy the abuses the Franchise Rule is intended to prevent.

Pending its decision on those issues, the FTC said it will exempt VWoA, Gulf States Toyota, Southeast Toyota Distributors, Mid-Atlantic Toyota Distributors, Subaru of New England, Distributors, Inc., Subaru Distributors, Inc., Subaru Northwest, Subaru Mid-America, Subaru South, Penn Jersey Subaru and Southwest Subaru Star.

Marching to his own drummer

UAW's White sets separate course in Canada

By Marjorie Sorge
Labor Editor

TORONTO. — He stands 10 feet tall in the eyes of the Canadian auto workers and some management people—other company people are less enthusiastic.

But, regardless of the side of the bargaining table you have to go a long way to find someone who will say something bad about Robert White UAW vice president, and director of the Canadian region.

White, 47, really is about 5-feet-10. He's a quiet, unassuming man, but possesses a will of iron.

That will was tested recently when the UAW in the U. S. voted to return to the bargaining table early with Ford and General Motors and made concessionary contracts.

Standing alone against the other members of the union's International Executive Board, White voted not to make concessions. He took that conviction back to Canada and, at the Canadian UAW Collective Bargaining and Legislative Conference last May, the entire Canadian membership voted for the no-concessions package.

That was one of the few times that White has disagreed with the IEB on such a major issue. He said he usually agrees with UAW President Douglas Fraser on "90 percent of the issues."

Besides being members of the same union, Fraser and White are friends. White said their opposite stands on concessions "tore at our guts, but we both felt so strongly about it, we said friendship is friendship. We have a responsibility. I think the fact that we are friends helped keep it contained."

That stand has raised a few eyebrows both at Solidarity House and at the auto companies from people who were used to the Canadian following more or less in lockstep with the U. S. decisions.

But lately, White has maintained that things are too different in Canada and the U. S. to negotiate almost exact agreements and has begun to carve out a separate Canadian strategy.

So far that strategy has won

As springboard to goal of 13-pct. penetration

Buick turns to Calif. market first

By Matt DeLorenzo
Los Angeles Reporter

RIVERSIDE, Calif. — With a goal of taking 13 percent of the new-car market by the end of the decade, Buick is using California as a springboard to expand its appeal to younger buyers, said Jim Perkins, the division's general sales manager, during a press conference here.

Taking a line from the song, "New York, New York," Perkins said, "We feel if we can make it here (California), we can make it anywhere."

Buick's new T-type models, performance versions of the Riviera, Regal, Century, Skylark and Skyhawk, were developed with an eye on California in hopes of making inroads to import buyers, he said.

"We're serving the West Coast market first," Perkins said of the division's sales and marketing efforts. He noted that the division showed the new '83 T-types to dealers here last May and launched the cars first in California during September.

Buick also used the state to test its new ad tagline (which calls the T-types "proof of intelligent life at Buick") and television commercials showing the cars in action.

Perkins said the television commercials showing the cars in motion will break nationally in February. That change in philosophy, going from static to moving display of vehicles, is part of "our drive and motivation to appeal to a wider spectrum of the market."

The pilot program, Perkins said, is beginning to work in California where the division has been able to increase its penetration from 5.0 to 6.2 percent. Nationally, Perkins said, the division finished the '82 model year with 9 percent of the market. The division has set sights on 9.7 percent penetration by the close of the '83 model year and 10 percent in '84. By 1990, Perkins expects Buick to account for 12.5 to 13 percent of total sales.

The new T-types figure prominently in the strategy to increase Buick's penetration.

"The T-types are not a one-year patch job," Perkins said, explaining that it will be an ongoing effort with more technologically sophisticated cars being introduced in future model years.

As GM's lead division in turbocharging and electronics, Perkins said, Buick will place an emphasis on developing a high-tech image.

"We want to appeal to the upscale import buyer," he said. However, Perkins noted that in order to crack the 10 percent level, "we must retain the customer that has been good to us in the past with traditional cars."

• As a result, Buick has not locked in a set percentage for T-types, but rather will let the market determine how many of the performance models will be built. Perkins reported that T-type sales since introduction have accounted for about 10 to 12 percent of the model mix.

For the first time, he added, Buick is seeing imports being taken as trades and Perkins called that "a promising trend." Although he declined to go into specifics on the data, he said that the vehicles are primarily Japanese subcompacts and that the people trading the vehicles are looking to move up to a larger car.

Beyond the T-types, Buick is looking at another California event to promote its product. As the official car of the 1984 Olympics in Los Angeles, Perkins said the division is already making extensive use of that commitment in its advertising and hopes to tie in dealer incentive programs with trips to the 23rd Olympiad.

Toyota goes to high school

Students at Sunny Hills High School, Sunny Hills, Calif., jump for joy at receiving a Celica Supra from Toyota U.S.A. for use in auto shop classes. Since the program began several years ago, Toyota has donated nearly 500 vehicles to high schools and technical/vocational schools across the country. Schools must demonstrate an outstanding need for a vehicle and have a well defined auto shop program.

Canada's dealership total down 179 for nine months

WILLOWDALE, Ont. — Canada's auto dealer population declined 4.7 percent during the first nine months of this year, according to the Federation of Automobile Dealer Assns. of Canada.

The total was 3,628 on Sept. 30, down 179 from 3,807 at the beginning of 1982, the FADAC said. The figures include dealerships handling both North American-built cars and imported models, and they include an adjustment for intercorporate duals.

Nearly three-quarters of Canada's dealers handle cars built in North America. The number is 2,661 of the 3,628, or 73.35 percent.

General Motors has the largest dealer organization with 982, followed by Ford Motor Co., 654; Chrysler Corp., 509, and American Motors (including Renault), 221.

Totals for the other North American-built makes are Volkswagen, 206, and Volvo, 89. Volvo is produced in Canada. Volkswagen Rabbits sold in Canada are built in the U. S.

Biggest dealer totals among the imports are Toyota, 210; Nissan, 203, Honda, 185, and Mazda, 143.

Two nameplates that are not retailed in the U. S. are found on the Canadian list—Japan's Suzuki and the Soviet Union's Lada. The FADAC survey shows 104 Suzuki dealers and 74 Lada dealers.

The biggest losses in the first nine months were suffered by the Canadian dealer organizations of the four manufacturers headquartered in the U. S. GM showed a decline of 87 outlets, and there were dips of 58 for Ford Motor, 33 for AMC and 13 for Chrysler Corp.

Among the imports, Fiat was up eight outlets for the period, and Lada was up five. Mazda was down four, and all other imports showed changes of three or less for the first nine months.

Canadian Dealer totals

	Sept. 30, 1982	Jan. 1, 1982
General Motors	982	1,069
Ford Motor Co.	654	712
Chrysler Corp.	509	522
American Motors	221	254
Toyota	210	208

Commerce Dept. to sponsor 1983 auto exhibitions

The U. S. Department of Commerce will sponsor several automotive exhibitions during 1983.

The U. S. Automotive Maintenance and Service Equipment exhibit is scheduled for Jan. 10-23 in the Dominican Republic, Ecuador, Panama and Guatemala. For more information, call Carolyn Swope, Department of Commerce, (202) 377-3973.

AUTOVAK '83, a garage equipment and tools show, will be held Mar. 24-30 in Amsterdam, Holland. For information, contact Richard Cohen, Export Development Office, 123 Charles de Gaulle 92200, Neuilly, France.

EQUIP-AUTO, an automobile parts and accessories show, will be held Sept. 30 to Oct. 5 in France.

A Trade Mission to Nigeria (Lagos, Kaduna and Port Harcourt) is scheduled for May. For more information, contact Loretta Allison, Department of Commerce, Room 2107, Washington, 20230. Phone: (202) 377-4706.

National Autofinders appoints Lederer

WICHITA. — Jules Lederer, founder and former chairman of Budget Rent-A-Car Corp., has joined National Autofinders as vice chairman.

Dennis J. Brough is co-founder, chairman and president of National Autofinders. The firm franchises new-car dealerships to sell cars for consumers on consignment.

200,000 qualify for trips in Chevy 'buy-fly' promotion

Chevrolet's "Buy and Fly" promotion ended Nov. 15, with an estimated 200,000 persons qualified to fly on Eastern Airlines.

Although the "buy" phase of the promotion ended, the exact number of those entitled to Eastern round-trip tickets won't be known for several months because 71,814 purchasers of Chevrolets during the promotion may not apply for their tickets until they take delivery of their vehicles.

Some 60,000 applications for travel certificates have been received by Chevrolet to date. They continue coming in at a rate of several thousand a day, Chevrolet said.

Each certificate is worth two round-trip tickets almost anywhere Eastern flies almost anytime through Nov. 15, 1983.

Chevrolet dealers either sold outright or took retail orders for more than 229,700 cars and trucks during the promotion period, according to Thomas A. Staudt, general marketing manager.

"While not every purchase involved a designated 'Buy Now and Fly' vehicle, we know the program was instrumental in bringing customers into Chevrolet dealerships," Staudt said.

• For the six-week promotional period through Nov. 15, Chevrolet's model year combined car and truck sales were up 26.3 percent over like 1982.

Retail sold order receipts — the dealer's signal to the factory to build a specific vehicle for a specific customer—were up 86.5 percent, according to Staudt.

Campbell-Ewald handles both Chevrolet and Eastern as clients and was instrumental in putting together the cooperative venture.

Meanwhile, Chevrolet expanded its media plan to include exclusive sponsorship of CBN Cable Network's "Saturday at the Westerns."

Beginning in November, the spots rotate for eight Saturdays in CBN Cable's highest-rated program slot. The series includes the best of old-time western series and classics.

Chevrolet is using them to promote its 10.9 percent financing offer, among other things.

Giving more than before

Metropolitan Detroit-area American Motors/Jeep/Renault dealers have won this year's United Foundation Big Eye award for having the largest percentage gain in contributions to the local 1982 UF campaign. Larry Burns, right, UF Commercial Unit director, presents the Big Eye to, from left: Dean Greb, AMC regional sales manager; Ron Hogue, Detroit zone manager, and Naiff Kelel, Greenfield AMC president and president of the local AMC/Jeep/Renault dealers association.

Export market shrinks for U.S.

WASHINGTON. — The U. S. exported fewer passenger cars in the 12 months ended Aug. 31 than it did in the corresponding period a year earlier, according to figures published by the International Trade Commission.

The ITC said the total exports numbered 405,237, compared with 610,319 a year earlier, for a setback of 33.6 percent.

Countries receiving most U.S.-exported passenger cars were: Canada, 351,782; Saudi Arabia, 13,536; Kuwait, 6,475; Venezuela, 4,145; Japan, 3,284; West Germany, 2,416; Switzerland, 666; Belgium, 605, and all others, 22,328.

Auto historians honor MVMA

The Society of Automotive Historians has awarded its first James J. Bradley Distinguished Service Award—a memorial to the curator of the National Automotive History Collection at the Detroit Public Library—to the MVMA. The association was cited for its support of the collection. From left, David Lewis, professor of business history at the University of Michigan and SAH president, presents the award to MVMA President V. J. Adduci and James A. Wren, MVMA patent department manager and auto historian.

Chrysler offering 10.9 pct. on some 1982-83 models

By Joseph Bohn
Marketing Editor

Chrysler jumped into the low-interest finance subsidy wars with a new 10.9 percent program to compete with General Motors' 10.9 percent and Ford Motor Co.'s 10.75 percent.

The Chrysler program runs from Nov. 20 to Dec. 31 and covers both '82 and selected '83 models. It is in addition to rebates offered on '82s.

On the '82 models, Chrysler's plan is very attractive. But for '83s, it amounts to little more than a token, since dealer contributions eliminate a large portion of what buyers might save.

The program offers 10.9 percent financing on '82 and '83 Plymouth Horizon, TC3, Turismo and Turismo 2.2 and Dodge Omni, 024, Charger and Charger 2.2 models; '82 Dodge Aries, Plymouth Reliant, Dodge 400, Chrysler LeBaron and Town and Country; '83 Dodge 600 and Chrysler E Class; '82/'83 domestic pickups, including Rampage and Scamp; '82 Plymouth Champ, Sapporo, Dodge Colt and Challenger.

As indicated, Chrysler is offering 10.9 percent financing on '82s (dealers have to give up their finance reserve), in addition to rebates of $600 on '82 Omni-Horizon, TC3/024/Turismo/Charger and Dodge 400; $500 on Reliant/Aries, LeBaron and Rampage; $300 on import cars, Cordoba, Mirada, Gran Fury, Diplomat, New Yorker, Imperial, light duty trucks, vans and wagons.

With its 10.9 percent financing on '83s, Chrysler is indirectly taking back a lot of what it is giving.

Dealers are required to contribute $300 toward the financing cost on '83 L-body Omni/Horizon and Turismo/Charger; $400 on the Dodge 600 and Chrysler E-Class and $300 on the pickups, including Scamp and Rampage.

Also, on '83s, they are required to forfeit their entire finance reserve.

Chrysler is paying banks the difference between 10.9 percent and the institutions' normal lending rate of 16.5 percent — whichever is less.

Payments are discounted, with Chrysler paying 90 percent of the difference on 1-12-month loans, 85 percent of the difference on 13-24-month loans and 75 percent of the difference on 25-to-48-month loans.

Nissan increases output in Mexico despite recession

MEXICO CITY. — Despite a stagnant automobile market, Nissan has reaffirmed its commitment to Mexico by announcing a 4,000-unit production increase for 1983, according to a spokesman.

Gustavo Baz, Nissan Mexicana S.A., said the increase should push total production of Datsun automobiles in Mexico to more than 75,000 units next year.

The spokesman said that, contrary to recent reports, Nissan officials in Tokyo have "complete optimism and confidence" that Mexico's current troubles will be short lived.

Baz said Nissan will continue its expansion program in Mexico, including the $300 million assembly plant in Aguascalientes and an engine assembly plant and foundry.

The Aguascalientes assembly plant will build some vehicles for the export market.

Pennsylvania rules on sales closing costs

HARRISBURG, Pa. — The Pennsylvania Department of Revenue has ruled that the state's 6 percent sales tax does not apply to automobile sales closing costs or documentary fees if the charge is stated separately and identified as such on dealer invoices to customers.

The Pennsylvania Automotive Assn. said "this should settle once and for all a problem area," but added in a notice to dealers: "We wish to caution you that your closing costs or documentary fees should be reasonable to avoid any repercussions."

Automotive News analysis of new-car registrations based on R. L. Polk & Co. statistical report.

September totals trail last year for domestics, imports

Month's registrations decline 18 pct.

By Jenny L. King
Staff Writer

Total new-car registrations in September were at their lowest level since February and were worst for September since 1970, according to figures compiled by R. L. Polk & Co.

During the month, 624,640 new passenger cars were registered, with 31.62 percent of them (197,508) imported models. The total was down 0.44 percent from 627,374 in August and down 18.11 percent from 762,792 for September of 1981.

Table on Page 51.

It was the smallest number this year since 545,746 units were reported in February.

The total of 427,132 domestic units was an increase of 3.40 percent over 413,084 in August but a plunge of 22.81 percent from 553,362 in September of 1981.

Imports slipped 5.69 percent, to 197,508 from 209,430 last year. However, their share of the month's market catapulted to 31.62 percent from 27.45 percent, setting a record for the month.

Ford Motor Co. was the only other entity to gain in its share of the month's market, up 0.31 percentage points to 15.89 from 15.58 percent last year. General Motors dropped 3.05 percentage points, to 42.83 percent from 45.88 percent.

Chrysler Corp. was down to 7.77 percent from 8.90 percent; American Motors dropped to 1.86 percent from 2.12 percent and miscellaneous domestics slipped to 0.03 percent from 0.07 percent of the total September market.

• Of the domestics only, GM passenger cars accounted for 62.63 percent, down from 63.24 percent. Ford earned 23.24 percent, up from 21.48 percent a year earlier. Chrysler slipped to 11.38 percent from 12.27 percent; AMC was down to 2.71 percent from 2.92 percent and miscellaneous domestics dropped to 0.04 percent from 0.09 percent.

The import segment easily overshadowed rival market class categories in September. Imports had 31.62 percent of the total, followed by intermediates at 19.96 percent, subcompacts at 16.42 percent, compacts at 16.37 percent, standards at 10.62 percent and luxury models at 5.01 percent.

A year earlier the market class spectrum included: Imports at 27.45 percent, compacts at 21.78 percent, intermediates at 19.80 percent, subcompacts at 16.38 percent, standards at 9.84 percent and luxury models at 4.75 percent.

Of the domestics only in September, the market-class breakout was: Intermediates at 29.18 percent, subcompacts at 24.92 percent, compacts at 23.94 percent, standards at 15.53 percent and luxury models at 7.33 percent.

The September, 1981, domestics by market class were: Compacts at 30.02 percent, intermediates at 27.29 percent, subcompacts at 22.58 percent, standards at 13.56 percent and luxury models at 6.55 percent.

• New-car registrations for the first nine months of 1982 were down 13.83 percent, to 5,656,444 from 6,564,329 last year. Domestic models through September numbered 3,961,614, down 15.14 percent from 4,668,568. Imports added to 1,694,830, down 10.60 percent from 1,895,761.

The imports' share of the nine-month market amounted to 29.96 percent, up 1.08 percentage points from 28.88 percent. General Motors was off 0.85 percentage points, to 43.50 percent from 44.35 percent. Ford gained 0.50 percentage points, climbing to 16.81 percent from 16.31 percent.

Chrysler was down to 8.50 percent from 8.82 percent, AMC dropped to 1.20 percent from 1.60 percent and miscellaneous domestics slipped to 0.03 percent from 0.04 percent.

Of the domestic market only GM earned 62.11 percent of the nine-month registrations market, down from 62.36 percent; Ford was up to 24.00 percent from 22.94 percent; Chrysler had 12.13 percent compared with 12.40 percent in 1981; AMC had 1.71 percent, down from 2.25 percent, and miscellaneous domestics accounted for 0.05 percent, the same share as in 1981.

Fleet executives cool to propane

ROCHESTER, Wis.—The limited availability of propane fuel is the main reason 80 percent of surveyed fleet managers say they would not purchase one of Ford's new propane cars, according to Runzheimer Reports on Automotive Alternative.

In a mini-survey of 65 fleet administrators in the U. S. and Canada, representing 38,846 vehicles and averaging 598 per fleet, only 6 percent said they would be interested in purchasing Ford's propane car. Half of these fleet administrators said the vehicles would be used for limited, "messenger-type" service.

In 1982, Ford had two propane models—the Granada and the Cougar. In 1983, Ford offers propane vehicles in the LTD model and the Mercury Marquis.

50 years for Audy Baggett

Audy M. Baggett, right, owner of Wilson Chevrolet, Inc., Smithfield, N. C., is presented with a plaque honoring Baggett's half century as a Chevrolet dealer by Larry K. Mayfield, Chevrolet Charlotte zone manager.

Analyst Keller predicts end to red ink there

GM seen turning corner in Europe

NEW YORK. — General Motors is beginning to show signs that it has turned the economic corner in Europe, says Paine Webber Mitchell Hutchins, Inc., in a status report on the auto maker.

Prepared by Analyst Maryann N. Keller, the report says that the overseas losses incurred by GM since 1980 will be smaller in 1982 and may disappear altogether in 1983.

"The turnaround in Europe could lift GM's earnings in that area above the $376 million reported in 1978 sometime during the next four years," Keller says.

It is difficult to predict when the earnings surge may come and how large it might be, Keller says, but "it is clear that after many years of appearing to be the step-child of the corporation, the European operations are on the threshold of contributing significant income and cash flow to the parent."

Keller notes that between 1976 and 1981, GM's share of the European auto market fell from 10.3 percent to 8.4 percent and its share of the truck market went from 6.3 percent in 1975 to 5.0 percent in 1981 and 4.0 percent through July, 1982.

• Ford, meanwhile, saw its share of the auto market rise from 9.8 percent in 1975 to 12.3 percent in 1981. Its share of the truck market, while declining from 13.6 percent in 1975 to 11.1 percent in 1981, was still more than double GM's share in 1981.

Keller noted that Ford merged its German and British subsidiaries into one organization in 1967, Ford of Europe, while GM retained two identities, a strong Opel operation in Germany and a weak Vauxhall operation in the UK.

GM has moved toward streamlining its European operations, giving Opel overall responsibility, although Vauxhall retains its name and local management. About 40 percent of the GM cars sold in the UK are from Germany.

Keller said GM hopes to increase its market share in Europe, particularly in France, Italy and Spain, with its new subcompact, the Corsa.

• The Corsa is the smallest car GM has ever produced but, she says, was the most expensive to develop.

GM estimates 40,000 Corsa models will be sold in Germany next year and, if Britain's Transport and General Workers Union does not go ahead with its threat to ban the vehicle, 20,000 in the UK, rising to 30,000 in 1984.

In all, GM hopes to sell 197,000 Corsas throughout Europe next year, Keller says.

Noting that GM's European operations lost $559 million in 1980 and $427 million in 1981, Keller says the loss will narrow this year.

It would be naive, she says, to characterize Europe as a growth market.

But GM, she says, is poised to gain market share and to enhance its earnings by "sourcing vehicles and components in lower-cost countries, taking advantage of high British prices with more exports to that country and improving overall efficiency through personnel cutbacks and investment in manufacturing processes."

Thornton adds Pontiac

Lee Thornton, center, has added a Pontiac franchise to his Honda and GMC dealership in St. Louis. With Thornton at the signing were D. D. Snyder, left, Pontiac assistant zone manager, and H. T. Ridsdale, Pontiac St. Louis zone manager.

Two Ford truck recalls involve almost 80,000 units

DEARBORN. — Ford Motor Co. is notifying owners of 79,362 1982- and 1983-model E- and F-Series light trucks with heavy-duty rear axles to return them to Ford dealerships for inspection and, if necessary, repair of the axle.

"Ford has found that a rear axle bearing-adjustment nut may loosen as the result of a lock wedge coming out of position. This may permit outward displacement of the left-side axle shaft," said Robert H. Transou, Ford Parts and Service Division service engineering manager.

"Substantial displacement could result in loss of rear-wheel braking or, in the extreme, separation of the left rear wheel assembly. However, we have had no reports of any such separation, nor of any accidents or injuries."

He said that front-wheel braking of the vehicle would not be affected, and that outward displacement of the shaft should be evidenced by abnormal noise and possible loss of power transfer to the rear wheel.

Ford also is recalling 667 1983-model F-Series trucks equipped with diesel engines for replacement of hood hinge lift assemblies. "Ford has learned that a spring may come off the lift assembly, creating the possibility of an open hood closing unexpectedly," Transou said.

He added that spring separation could occur forcefully, posing a hazard to passersby if the hood were open at the time. However, Ford has had no field reports of any such incidents. The hood hinge lift assemblies will be replaced with revised-design assemblies.

Vehicles involved in the two recalls include approximately 75,000 in the U. S., 3,200 in Canada and 1,700 in export locations.

Market share, country comparisons

Through July, 1982

	Ford	General Motors
Western Europe	11.8%	9.8%

package that requires no alternatives.

"The Class C vehicle is easier to service because it is familiar to truck dealership service personnel. The Class C unit often can be manufactured at lower cost than a Class A vehicle. Class C minis have more doors and a lower step height, so they're easier to enter and exit."

In view of the market potential, Sportscraft of America is planning to expand its distribution in the next year, according to Davis.

"We have been covering the Midwest primarily, but we now expect to move into Eastern and Southern markets," he said. "We'll hire some more sales people, and participate in major trade shows in these new territories."

Richard E. Klingler, president, Holiday Rambler Corp., said his firm's sales are "running about 30 percent ahead of a year ago, and we see no letdown.

• "We see nothing to change the trend in 1983," he continued. "Our biggest problem is getting chassis from the manufacturers. They tell us that due to design changes, they've had a difficult time getting their plants going full bore.

"They also tell us they can't start to run their plants just to serve our operations," he added. "It's a problem that seems to be plaguing the entire RV industry."

Currently, Klingler said, Holiday Rambler's biggest sellers on a percentage basis are the motorized units, followed by fifth-wheel trailers.

Jim McDonald, general manager, Good Times Vans, said the company's van-conversion sales in the 1982 model year were up 12 percent over 1981 to about 2,350 units.

"We're looking conservatively at another 50 to 60 percent increase in 1983," he said. "Buyers have become more affluent. About 90 percent of Good Times van buyers are in the 40-to-50 age bracket with families. Vans are coming into their own again."

Fred L. Lands, president, Lands Design, Inc., said 1982 model-year van-conversion sales "were very strong and 1983 looks to be even better, if the manufacturers of the raw chassis can meet the demand."

• He said sales in 1982 would have been higher had the van converters been able to get an adequate supply of chassis, "especially during the peak season between February and October.

"The retail demand is definitely there," Lands said. "Our products are directed toward the highly sophisticated, discriminating buyer and those people who are always in the market for luxury transportation."

"This year was a fruitful one for recreational vehicles, and 1983 promises to be even better," says James Zampetti, vice president and general manager, National Coach Corp., Gardena, Calif. "With the upsurge in more practical and convenient ways to travel, vans are playing an important role in offering individuals and families a more desirable way to get around."

Zampetti says his firm's 1983 Landmark van models have "started off with a bang, and we look forward to a very successful year."

"With a decrease in interest rates, hopes for a slow but sure upturn in sales, not only for the motor home industry, but the entire manufacturing community, may well indicate that our country is on its way to an economic recovery," says Barry Essenfeld, vice president-finance, Apollo Motor Homes, Inc., Carson, Calif.

Apollo's hopes also are pinned to the Sceptre, a 35-foot motor home with a rear-engine diesel pusher and an Allison four-speed automatic transmission.

The Oshkosh chassis includes an air-suspension system. The body, framed around the company's "ring of steel," is of sandwich construction, using the interior paneling and insulation as structural components.

Norman Jacobson, vice president, Contempo Enterprises, also is looking for a strong year in 1983 for van conversions.

"Dealers who sell vans all year long are stocking more units, and there are more dealers today who are stocking them on a casual basis," he said. "Factories have initiated more van-conversion chassis pools in areas where van sales are low or there are no significant conversion firms."

He added that the "outlook is very bright for van conversions, especially with fuel economy of 16-17 MPG on gas vehicles and 21 on diesel-powered units."

On the relationship between the manufacturer and RV dealers, Chevrolet's Sillick noted:

"It's probably at the highest level in recent times. Those manufacturers and dealers in the market today are good businessmen. They are the survivors.

• "They have a profitable working philosophy and they work hard to sell the correct product," Sillick said. "Manufacturers know they need dealers, and dealers obviously need manufacturers. It's similar to the truck industry.

"Manufacturers need to work closely with their dealers. Possible areas of improvement are customer orientation and dealer education in the product. Again, it's similar to how it works in the auto industry.

"I think it is time the RV manufacturers look at the strong dealer network out there and develop this relationship," Sillick said.

Leisure Motor Vehicles

Formerly called the RVIA issue, Automotive News' new Leisure Motor Vehicles Extra reflects the newly rejuvenated recreation vehicle industry and its relationship with car and truck dealers. By definition, Leisure Motor Vehicles are self-propelled motor vehicles designed primarily for recreational use and travel. These include various types of motor homes and van conversions, as follows:

MOTOR HOME. This is a recreational camping and travel vehicle built on, or as an integral part of, a self-propelled motor vehicle chassis. It may provide kitchen, sleeping and bathroom facilities and is equipped with the ability to store and carry fresh water and sewage. A motor home can be one of the following types:

Conventional Motor Home (Type A)

The living unit is entirely constructed on a bare, specially designed motor vehicle chassis.

Van Camper (Type B)

A panel-type truck to which the RV manufacturer adds any two of the following conveniences: sleeping, kitchen and toilet facilities, also 110 volt hook-up, fresh water storage, city water hook-up and a top extension to provide more head room.

Chopped Van (Mini)

This unit is built on an automotive-manufactured van frame with an attached cab section of a GVWR of 6,500 pounds or more, and with an overall height of more than eight feet. The RV manufacturer completes the body section containing the living area and attaches it to the cab section.

Chopped Van (Low Profile)

This unit is built on an automotive-manufactured van frame with an attached cab section having a GVWR of 6,500 pounds or more, and with an overall height of less than eight feet. The RV manufacturer completes the body section containing the living area and attaches it to the cab section.

Chopped Van (Compact)

This unit is built on an automotive-manufactured cab and chassis having a GVWR of less than 6,500 pounds. It may provide any or all of the conveniences of the larger units.

Multi-Use Vehicle

This is a motor vehicle designed for the transportation of people and/or property and altered by the RV manufacturer for esthetic or decorative purposes. These changes may include windows, carpeting, paneling, seats, sofas and accessories. They include the:

Multi-Use Van Conversion

A completed van chassis modified in appearance for transportation and recreational purposes.

Shipments up 6.8 pct. for first 9 months

Recreational-vehicle manufacturers shipped fewer units in September to their dealers than a year ago, but deliveries for the first nine months were higher than those in the like period in 1981.

During the month, according to the Recreational Vehicle Industry Assn., manufacturer members delivered approximately 18,600 units of all types to retail outlets, down 4.1 percent from last year's 19,400.

Through September, however, shipments increased 6.8 percent to 199,300 units, compared with 186,700 in 1981. Deliveries were higher in two of the three market segments.

The Index of Consumer Sentiment for September was up 3.9 points from August to 69.3 points, an RVIA spokesman said.

"Sharply declining interest rates have generally improved the outlook on personal as well as business prospects for the future," he said.

"However, unemployment remained the dominant concern of consumers in September, and has led them to adopt cautious spending plans," he added.

"Continued postponement of consumers' use of savings and reductions in new consumer-debt incurements are likely outcomes of the concern for the future of the economy."

For the first nine months, towable recreational vehicles of all types were the only market segment to show a decline in shipments from a year ago. Currently, these units account for about 45 percent of the shipments reported by RVIA manufacturer members.

Shipments of the towables through September totaled approximately 83,400 units, a decline of 0.6 percent from the 83,900 units delivered in the like period a year ago.

But folding camping trailers — generally the lowest-priced units and considered the ideal buy for the first-time RV buyer—with limited disposable income — were the only units in the three towable categories to show a drop from a year ago.

The January-September total for these vehicles was approximately 26,900 units, off 5.9 percent from last year's 28,600. The fold-down group also was the only one of the seven to have fewer deliveries for the nine-month period than a year ago.

Shipments of conventional and fifth-wheel travel trailers through September totaled about 51,900 units, an increase of 1.6 percent over the 51,100 delivered in the corresponding period a year ago.

Truck trailers moved 9.5 percent higher than the previous year, from 4,200 units in 1981 to 4,600 this year.

• Motor - home manufacturers delivered approximately 32,200 units of all types to dealers in the first nine months, a gain of 14.2 percent over the year-earlier 28,200 vehicles.

Shipments through September were up in all three motor-home categories.

The conventional (Type A) total was 14,600 units, an increase of 31.5 percent from the year-earlier 11,100.

Manufacturers shipped approximately 3,300 van campers (Type B) in the first nine months, up 6.5 percent over last year's 3,100 units.

The number of chopped vans —mini, low-profile and compact motor homes—shipped through September hit 14,300 units, a gain of 7.1 percent over the year-ago 14,000 vehicles.

Nine-month shipments of multi-use vehicles totaled approximately 83,700 vehicles, a gain of 12.2 percent over last year's 12.2 percent.

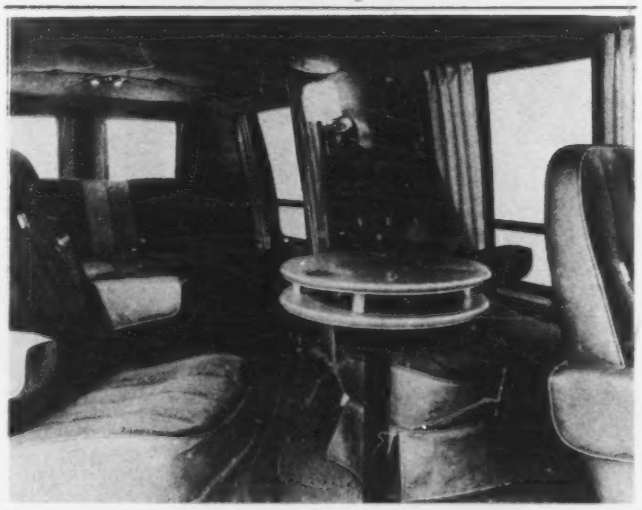
The RVIA defines a multi-use vehicle as one designed for the transportation of people and/or property and altered by the RV manufacturer for aesthetic or decorative purposes.

These changes may include windows, carpeting, paneling, seats, sofas and accessories.

In September deliveries were off in two of the three major markets.

Total towable shipments were down 2.5 percent for the month, 7,700 versus 7,900, and multi-use vehicles were off 8.1 percent to 7,900 units, compared with 8,600 in 1981. Motor homes were up 3.5 percent, 3,000 units versus 2,900.

See Table on Page E-26.



Increased popularity of family style transportation, kindled by van conversions such as this by Leisure Vans Inc., Elkhart, Ind., is helping to boost 1982 leisure motor vehicle shipments over 1981.

Shaping up America's roads will be costly

WASHINGTON, D. C.—Roads, streets and bridges—over which leisure motor vehicles run—are basic parts of America's public works infrastructure.

The following data, compiled by the Highway Users Federation, shows the extent of highway and bridge deterioration, and the estimated costs to reverse it.

• **Roads and streets.** Of the total 3,955,387 miles of roads and streets in the U. S., 21 percent are on federal-aid systems which carry 80 percent of all travel. Less than a third of those major roads are in good shape. A 1981 report from the Federal Highway Administration documents the declining quality of pavement conditions, showing more miles slipping into disrepair every year.

Data from state and federal studies indicates that capital requirements for the federal-aid highway system will be $200-$225 billion between now and 1995 just to retain present levels of service. The costs break down into three major components: Almost half for non-Interstate resurfacing or reconstruction; about one-fourth for bridge replacement and rehabilitation; about one-fourth for Interstate completion and Interstate resurfacing, restoration, rehabilitation, and reconstruction (known as the "4R Program").

• **Interstate highway system.** The Federal Highway Administration reports that 1,786 miles of the 42,500-mile Interstate System were not yet open to traffic as of June 30, 1982. Pavement quality of the existing Interstate is steadily declining as 2,000 miles a year reach the end of their design life (20 years is the average age at which major reconstruction work is normally required for an average road).

In 1981 the cost of completing and upgrading the Interstate was estimated to be $53.8 billion. In late 1981 Congress redefined Interstate completion and limited the expenditure of funds, reducing the estimated cost to complete to $38.9 billion.

In addition to the cost to complete, about $20.8 billion is required for resurfacing, restoration, and rehabilitation of older sections. An additional $26.4 billion is needed for upgrading projects along existing completed Interstate routes.

• **Bridges.** The average life of a bridge is about 50 years. Some 206,000 (37 percent) of the nation's bridges are more than 40-years old, including 1,145 Interstate bridges.

The Third Annual Report on the Highway Bridge Replacement and Rehabilitation Program, submitted by the U. S. Secretary of Transportation to Congress in March 1982, reveals that as of Dec. 31, 1981, 248,527 of the nation's 557,516 bridges (45 percent) were classified as structurally deficient or functionally obsolete. Of those deficient and obsolete bridges, 67,696 are on the federal-aid system, and 180,831 are on the less important roads and streets off the federal-aid system.

The cost to replace or rehabilitate all deficient or obsolete bridges is an estimated $47.6 billion—$23.6 billion for those on the federal-aid system and $24 billion for the off-system bridges.

Closer liaison between RV and auto industries

The Recreation Vehicle Industry (RVIA) has reestablished an Automotive Liaison Committee to provide a formal communications channel between the industry and auto manufacturers, according to RVIA Chairman of the Board Elden Smith of Fleetwood Enterprises.

Smith appointed 16 industry officials, representing RV manufacturers in all five major product categories (motor homes, vans, travel trailers, folding camping trailers and truck campers) to serve on the committee, which has been inactive the past several years.

David J. Humphreys, RVIA president and general counsel, was appointed chairman of the committee.

Smith said the scope of the Automotive Liaison Committee will be much broader than it had been in previous years, when the major focus was on the needs and interests of Type A and Type C motor home manufacturers. He said the committee will now also address issues such as auto towing capabilities and pickup truck carrying capacities which are important to RV manufacturers who build towable units.

• The 16 industry officials who will serve on the committee are, in alphabetical order: Mel Adams, The Coleman Co.; Gerald E. Boman, Winnebago Industries; Keith Boswell, Pilgrim Mfg. Co.; Manuel Caravia, Komfort Industries; Jack Cole, Lance Camper Mfg. Corp.; Bud Coons, Coons Mfg.; Don Cuzzocrea, Starcraft RV; David J. Humphreys, RVIA; Norman Jacobson, Contempo Enterprises; Richard Klingler, Holiday Rambler Corp.; David Miller, Travel Equipment Corp.; Elden Smith, Fleetwood Enterprises; Gene Stout, Coachmen Industries Inc.; Harley Wingard, Ger-Win Vans Inc.; Al Yoder, Jayco Inc.; and John Zimmerman, Sunline Coach Co.

BL Ltd.'s Freight Rover subsidiary is now in production in England with a four-wheel-drive version of the Sherpa panel van/crew bus/pickup. The combination, rare from a European manufacturer, results from Land Rover's links with the light commercial-vehicle business of the former Austin-Morris Division.

Avon, a coachbuilding firm based at Warwick, England, is making wagon-style conversions to Jaguar sedans. They cost the equivalent of $12,750 on top of the car's regular price. Another Avon development recently is a turbocharged version of the Triumph Acclaim. The cars were exhibited at the recent international auto show, Birmingham, England.

Volkswagen bus started market rolling in 1949

Volkswagen began building vans in Germany in 1949. Eight were produced that year, but the first ones were not officially exported to the U. S. until 1952, when 10 were sold.

In the three decades since then, the VW Bus, as it was popularly known, started the van craze in America while attracting its own fierce brand of loyalists. During that time, the vehicle has been through two body changes, numerous other progressive refinements and a name switch to Vanagon.

The 1983 Volkswagen Vanagon is available in seven- and nine-seat configurations. The "wide-body" VW has a standard equipment list that reads more like specifications for a sports car than a van: Four-wheel independent suspension, disc front brakes, steel-belted radial tires, rack-and-pinion steering, four-speed manual transmission and VW's air-cooled, fuel injection flat-four engine.

Optional power is available in the form of a water-cooled diesel engine which for the second year in a row (it was only introduced with the '82 models) makes the Vanagon the most economical van available in the U. S. In Federal Environmental Protection Agency tests, the Vanagon diesel, which now features a five-speed gearbox as standard, was rated at 30 MPG city and 32 MPG highway. The standard gasoline version turned in 16 MPG city and 22 MPG highway.

For '83 the Vanagon's engine mounting was relocated and modified on diesel versions to reduce engine noise.

New gear ratios for 1983 are: First, 4.11; second, 2.33; third, 1.48; fourth, 1.02; fifth, 0.77; final drive, 5.43.

The front track has been increased from 61.8 inches to 62.3 inches to improve cornering and tire life.

The GL version of the Vanagon features patterned velour upholstery; large fold-down armrests for all seats including the two in the front; special "see-through" head restraints; color-coordinated headliner, additional sound insulation and an extra reading light for rear seat passengers. All Vanagons feature cut-pile carpeting throughout, two-speed windshield wipers with an intermittent mode, rear window defogger, tinted glass and a quartz clock.

One version which has been popular with American tourists taking delivery in Europe is the Vanagon Camper. Equipped with a "pop-up top," it has two full-size beds, screens and curtains for the windows, running water, a gas stove and a refrigerator that operates on 12 volts, 120 volts or gas. Hanging lockers and cupboards provide plenty of storage for food, clothing and vacation necessities and a luggage rack for bulky items, located over the driving compartment, can be reached through the screen window in the pop top.

Options for the Vanagon include air conditioning, a sunroof and an auxiliary heater as well as automatic transmission for gasoline versions.

Leisure Motor Vehicles—Deliveries to Retailers

Sales of leisure motor vehicles in the first nine months of 1982 fared better than the recreational vehicle market as a whole. LMV sales were up 12.1 percent for the January-September 1982 period compared to a year earlier, while total RV deliveries were up 6.8 percent. See story Page E-2.

Canadian firm buys interiors from Tra-Tech

FORT WORTH, Texas.—Tra-Tech Midwest (Pontiac, Mich.), a van conversion company, has signed a contract to sell its vacuum-formed plastic interior kits to Canadian Custom Conversions Ltd. (Guelph, Ontario) for building and marketing of Tra-Tech's luxury vans throughout Canada.

The announcement was made jointly here by Robert O. Isham, president and chief operating officer of Tra-Tech Corp., (Fort Worth), Bill Keller, president of Tra-Tech Midwest and Jerry Elmquist, president of the Canadian firm.

Each kit includes vacuum-formed walls, console, door panels and window moldings made from Cycolac ABS plastic manufactured by Borg-Warner Chemicals.

Tra-Tech vans offer custom-made sofas and chairs, a pedestal table, TV shelf, clothes closet and tinted Lexan windows.

The 10,000-square-foot Canadian facility, located 60 miles southwest of Toronto, employs 20 people.

Tra-Tech Corp., a three-year-old van conversion company based here, is owned by Robert O. Isham and reported sales of $19.5 million in 1982. Tra-Tech co-owns plants in Pontiac and Marietta, Georgia. In addition, VanCamp Industries in Sacramento, Calif., is licensed to build Tra-Tech vans for the West Coast market.

King Juan Carlos drives first Corsa off the line

GM dedicates new plant in Spain

ZARAGOZA, Spain.—General Motors' newest automobile plant has been officially dedicated here by King Juan Carlos of Spain, who drove a new Opel Corsa off its assembly line.

GM Chairman Roger B. Smith also drove a new Opel Corsa off the line and declared that this new GM Espana plant — which is one of the larger and more technologically advanced in the world—"is evidence of General Motors' continuing confidence in Spain and the future of the automobile industry in Europe."

Four ministers of the national government, along with about 500 Spanish officials and business and civic leaders, toured the 4.5-million-square-foot facility.

Richard C. Nerod, managing director of General Motors Espana, declared that the extensive and highly automated car manufacturing and assembly complex has been completed exactly on schedule, in 899 days from groundbreaking to the first start of production.

The plant builds the all-new Corsa designed by Adam Opel AG, smallest car built by any of GM's worldwide operations.

It will go on sale this month in Spain, France and Italy, and later throughout Europe, competing in the small-car segment which, in 1981, accounted for 24.9 percent of all passenger cars sold in Europe.

• The new GM Espana factory, situated in the community of Figueruelas in the Aragon region of northern Spain, will employ about 9,500 workers and produce 75 cars an hour, or 270,000 a year, when operating at its full capacity.

King Juan Carlos I arrived at the plant site by helicopter. After being greeted by Spanish government officials and GM executives, he spoke to the invited guests, toured the plant, drove a Corsa off the line and greeted guests at an informal reception.

The Opel Corsa driven by the king will be donated to a national charitable organization designated by him.

The Corsa driven by Smith was donated to a GM Espana employe selected by lot, in recognition of the success of the work force of this new GM company in completing the complex construction project, starting production on time and achieving high product - quality standards.

Smith reported that General Motors has invested 200 billion pesetas ($1.8 billion) in four new Spanish plants and he emphasized that GM is optimistic for their future.

"We are confident about the future of this plant, the Opel Corsa and the excellent Spanish work force that builds it," he said. "Likewise, we are confident about this great country, its economy and its future."

Despite current economic problems throughout Europe and the U. S., GM foresees continuing and growing long-term demand for new cars, reaching 13 million units annually by the end of this decade.

• Three other components-manufacturing plants have been built in Spain as part of GM's European expansion program and are making parts for the Opel Corsa.

In Puerto Real, in the province of Cádiz in southern Spain, two adjoining plants of GM Components, S.A., are producing steering and suspension components.

Near Logrono, in the La Rioja province of northern Spain, another plant of GM Espana, S.A., is making interior trim and injection-molded plastic parts. Each of these three plants will employ about 500 at full production.

Another major new manufacturing facility in GM's European expansion is an engine and transmission plant in Vienna, Austria.

Chrysler retiree awarded $50,000 in Arrow crash

DURHAM, N. C.—A jury in Durham County Superior Court awarded David H. Howard $50,000 damages in a lawsuit Howard had filed against Chrysler Corp. and Mitsubishi Motors Corp.

In Detroit, a Chrysler spokesman said the corporation may file an appeal.

The lawsuit grew out of an auto accident in which Howard was injured on March 5, 1978. Howard, 64, of Chapel Hill, N. C., retired in 1975 as a Chrysler financial consultant. He was driving a Plymouth Arrow which he had leased from Chrysler under a program for retirees.

Howard said he was injured when the transmission and driveshaft of the car locked and sent the auto skidding into a bridge abutment.

He contended that the transmission locked because of a bearing failure, and he charged that the bearing failed because of inadequacy in the manufacture and assembly of the car. The Arrow was made by Mitsubishi.

Volvo for M&E

MERIDEN, Conn.—The M&E interests have expanded with the opening of M&E Volvo on the M&E Ford property.

Aerodynamic devices, new Cummins diesel get major credit

New IH tractor sets MPG record

Continued from Page 24

New York, the radiator operated a total of less than 30 minutes, a tremendous accomplishment by any standards," Springer said.

The test-run 2375 had a 148-inch wheelbase, an IH 12,000-pound front axle and 12,000-pound taper-leaf front springs, a Rockwell 40,000-pound tandem axle with a 3.70 ratio, a Fuller nine-speed transmission, dual 85-gallon fuel tanks and Goodyear HT 285/75R low-profile radial tires.

The 2375 hauled a Fruehauf F-Plus 45-foot trailer with fiberglass-smooth sides, 10-inch corner radius, and a top-edge aerodynamic aid. Concrete blocks bolted down in a trailer brought the unit's GVW to 65,000 pounds.

The test run was independently sanctioned by Lew Kibbee, consultant to the American Trucking Assns. and the S.A.E.

"We set this new industry standard using 'real-world' truck drivers, not professional fuel-efficiency experts," said Tom Dougherty, Truck Group marketing vice president.

"And we did it with a truck that any IH customer could drive off one of our dealer's lots. No fancy gimmicks and no non-production 'hang-on' componentry."

He added that "we think the 2375 can readily show a 2½-MPG fuel-improvement over the average Class 8 heavy highway tractor on the road today."

Dougherty noted that based on a cost of $1.30 for a gallon of diesel fuel, one 2375 could save an independent owner/operator up to $6,180 each year in fuel costs.

"For a small fleet of five trucks, that means up to $31,000 in savings annually," he added. "Multiply that by a fleet of 100 tractors, and it slashes a staggering $618,000 off their operating expenses."

These numbers, Dougherty said, take on added significance when traditional fleet costs are analyzed.

"Our studies indicated that common carriers, contract carriers, private carriers and leasing companies spend as much as 50 cents out of every dollar on fuel," he explained. "No other area offers as much opportunity as fuel savings for lowering their cost of (truck) ownership."

Car assemblies total 68,345

Holiday trims week's auto output

By Patricia Hoffman
Staff Writer

With only three days of production last week due to the Thanksgiving holiday, domestic auto output fell 28.58 percent short of the previous week's five-day total.

The auto makers targeted 68,345 units last week, down from the previous week's 95,669, and down 12.14 percent from 77,785 units in the comparable 1981 week, also shortened due to the holiday.

So far this year, the manufacturers have finished 4,677,782 cars, a 20.99 percent decline from last year's 5,920,581.

Two General Motors points were closed last week for inventory control. The GM Van Nuys and Wilmington facilities, idled Nov. 8, are slated to resume today (Nov. 29).

GM's Bowling Green (Corvette) plant and Ford Motor's Loraine (Thunderbird and Cougar) facility remained idle last week for model changeover. Production of the 1983 Corvette is slated to begin at Bowling Green in December. The Ford Loraine plant will remain closed until January.

Operations resumed last week at GM's Leeds and Willow Run facilities, plus Chrysler Corp.'s Belvidere point. All three points had been idle for inventory adjustment.

GM's Detroit plant worked 48 minutes of overtime on each of two shifts last Monday and Tuesday. Normal eight-hour operations resumed on Wednesday.

Job-One production of the Ford Crown Victoria will begin today at the company's St. Louis plant. Production will start at a rate of 8.6 units per hour on two shifts.

All U. S. car facilities were idle last Thursday and Friday in observance of the Thanksgiving holiday.

Truck production drops as holiday cuts work week

The holiday week pulled domestic truck production down 33.52 percent from the previous week's five-day total. All U. S. truck assembly points were idle last Thursday and Friday in observance of Thanksgiving.

Last week, the makers slated 21,963 units, down from the previous week's 33,035, but up 13.78 percent from 19,303 units built in the comparable 1981 period, also shortened due to the holiday.

So far this year, the manufacturers have assembled 1,742,983 units, a 15.46 percent gain from last year's 1,509,540.

General Motors' Janesville plant was idle for the last of a three-week shutdown last week due to high inventories. Operations are scheduled to resume today (Nov. 29).

The coach line at GM's Pontiac point remains closed due to lack of orders. Production of coaches, idled last August, is slated to resume in January.

Four assembly points returned last week following downtime for inventory control. They were: GM Flint (Line-One) and Pontiac (medium-duty), plus Ford Kansas City light-truck line and Chrysler Corp. Belvidere.

Volkswagen of America's Westmoreland plant, idled June 28, remained closed last week. Operations are slated to resume in December.

Canadian car production rises 40 pct. to 17,713

Canadian auto production jumped 39.92 percent last week from the previous week's total as operations resumed at Ford Motor's St. Thomas facility following downtime due to high inventories.

The auto makers slated 17,713 units last week, up from the previous week's 12,659, and up 16.63 percent from 15,187 units built in the comparable 1981 period.

Truck output last week was targeted at 7,274 units, down 1.73 percent from the previous week's 7,402, and down 38.51 percent from 11,829 trucks built in the comparable 1981 period.

So far this year, the truck makers have finished 446,481 units, a 4.70 percent decline from last year's 468,499.

Chrysler Corp.'s Windsor car and truck facilities remained closed last week due to a strike. Operations at the points were halted Nov. 5

American Motors' Brampton car facility was idle for the second week last week due to high inventories. Operations are slated to resume Dec. 13.

Back last week from inventory-control downtime was Ford's St. Thomas car facility. The plant was idled Nov. 8.

General Motors' Oshawa car point will close today (Nov. 29) for two weeks due to poor sales. The point is slated to return Dec. 13.

The GM Oshawa truck plant will be idle for one week starting Dec. 6, also the result of poor sales.

Quality changes average $128 on '83s, BLS says

WASHINGTON. — The value of quality changes for 1983 domestic cars included in the government's wholesale price index averaged $107.66 at the manufacturing level and $128.04 at retail, according to the Bureau of Labor Statistics.

The annual assessment made by the BLS said the estimates represent about 49.9 percent of the average increase of $215.55 wholesale and about 48.5 percent of the average rise of $263.92 retail.

The $128.04 estimated retail quality change breaks down into $64.65 for changes to improve fuel economy and reduce emissions to meet current and expected federal standards, and $63.39 for other changes such as improved warranties and better rust protection.

EPA delays tougher diesel particulate rule

Continued from Page 3

production. Hence, it set the 1987 effective date.

EPA will hold a public hearing Jan. 18 at its Ann Arbor (Mich.) testing facilities.

Emission-control manufacturers and environmentalists are not expected to object to the two-year delay.

A GM spokesman applauded the EPA move, saying, "This will give us time to work on the technology required to meet the standard."

In the meantime, air quality will not be significantly affected, he said.

Phil Hutchinson, vice president for governmental affairs for Volkswagen of America, said he thought it was "a good idea, since none of us can meet the 0.2 gpm standard."

It will give makers time to work on the technology and to investigate whether the standard is necessary at that level, he said.

A Washington spokesman for Ford Motor Co. said: "We think EPA's decision makes common sense. As we have testified on several occasions, the technology does not exist to meet the standard by 1985. Ford is continuing to work on its own research laboratories and with our suppliers on particulate traps for diesel engines."

The mini-mum?

Japanese propose a car for commuting

The Japan Small Vehicle Assn., which includes makers of 550-cc midget cars, is proposing an even smaller class for Japan—cars with 250-cc engines. The class prototype shown here is 79 inches long, 39.4 inches wide and 55 inches high. Projected weight is 550 pounds. The car's second seat, for the passenger, is a lowback, staggered to the rear.

IRS proposal would peril 'open-end' lease business

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — The economic well being of the auto leasing business, one of the few bright spots in what have otherwise been a dismal few years in the car business, could be in for a devastating blow under changes being proposed by the Internal Revenue Service.

In a rulemaking proposal issued last week, the IRS said that in the future it will not consider an "open end" auto lease for business purposes to be a lease but rather the equivalent of a "conditional sale."

The lessor thus would not be entitled to the investment tax credit and depreciation allowances normally granted under leasing arrangements.

About 80 percent of all leasing companies use open-end leases, wherein the lessee usually agrees to pay a certain monthly fee in addition to all insurance and repair and maintenance costs.

The lessee also pays the difference between the wholesale value of the car and the estimated depreciated value at the end of the lease period if the former is less. This is the so-called terminal rental adjustment clause or TRAC.

Open-end leases generally are less costly to the lessee than "closed end" leases because of the tax credits and the adjustment agreement governing the end of the lease period.

• They have been common for nearly 30 years. But for nearly that long, the IRS has looked somewhat askance at them, and over the years it has brought selective actions against lessors using them on the grounds that such leases are not really leases but conditional sales contracts.

The leasing industry, though, thought it had successfully fought off this threat last year when Congress passed Section 210 of the Tax Equity and Fiscal Responsibility Act.

It prohibits the IRS from taking into account the existence of a Terminal Rental Adjustment Clause (TRAC) in determining whether an agreement is a lease. But somewhere between the drafting and passage of the Section, what was to have been a bar to retroactive activity by the IRS regarding open-end leases, turned into an opportunity for the IRS to finally have its way on the issue. This was made possible by the qualifying phrase: "In the absence of a regulation or law to the contrary."

IRS's current proposal would do just what the leasing companies had hoped to prevent. It would consider the existence of a TRAC in determining whether an agreement is a lease or a conditional sale, at least for those agreements entered into after Nov. 23, 1982 (e.g. a "law to the contrary").

• According to experts in the leasing business, the result of the IRS's move will be to force lease companies back to using

Can Americans learn to love the minicar?

LAFAYETTE, Ind.—A three-year study that could change the way America uses the automobile has been launched by the Purdue University Automotive Transportation Center.

Termed the Purdue Automobile Productivity Project, the study seeks to demonstrate more efficient ways to make use of the private car—specifically the micro-mini, or urban commuter.

The $750,000 project, funded by the Eli Lilly Foundation, is using 27 imported minicars as "hardware."

These vehicles, in the 500-cc-to-1-liter class, are split into two fleets. Twenty cars are in the consumer fleet and seven are in the engineering fleet.

Involved are Daihatsu Cuore, Suzuki Alto, Subaru Rex, Volkswagen Polo, BL Metro and Citroen Enterprise.

The consumer fleet is made up of Suzuki Alto and Daihatsu Cuore models. Upgraded Altos (Suzuki M-cars) are the cars GM will buy from the Japanese maker for resale in the U. S.

Dr. Tom Sparrow, director of the project, points out that 80 percent of all passenger-car trips are made with just one person in the car.

With this statistic in mind, the Purdue project aims to demonstrate that a two-car family would be much more efficient with one micro-mini and one big car rather than with two mediums. In other words, the project seeks to make the private car more productive.

The Purdue project also is testing the so-called "shared-fleet" concept. The scenario has individual families owning minicars and sharing ownership in a small fleet of other types—big cars, vans, pickups, etc. Each minicar owner would have the right to use a vehicle from the shared fleet a limited number of days per month. An alternative would be for the shared fleet to be made up of rental cars.

Sparrow said the consumer fleet will be tested by "selected university families." They will pay a modest fee for the use of the micro, and will use the car under a set of stringent restrictions.

• These involve avoidance of high-speed driving, limitation of range to urban surroundings and use in a pure commuter sense.

The Purdue study will attempt to determine whether Americans can follow the re-

Furious Claybrook lashes Peck for approach to data gathering

NHTSA called 'subsidiary' of Detroit

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Charges that NHTSA has become the "wholly owned subsidiary" of the auto industry made by Joan Claybrook (former NHTSA head) were called "absolutely unfounded" at a House hearing by Michael Finkelstein, in the absence of Raymond Peck (current NHTSA head).

At issue was whether NHTSA's new program of coordinating and possibly "cooperative" research work between the government and industry is really a "secret conspiracy" to abandon rulemaking in favor of protracted research, to concentrate only on what the auto makers might not oppose, and to abandon the Research Safety Vehicle program and the new-car assessment program, sometimes referred to as high-speed crash testing.

Claybrook, NHTSA head in the Carter Administration, has accused the agency under Peck of ignoring the law, scientific facts, nonpartisan traditions and its own staff recommendations.

The former official, now head of Public Citizen, a Ralph Nader organization, said NHTSA's research section (headed by Finkelstein, who had been Claybrook's chief standard writer) had abandoned its own independent role, started a secret "cooperative" research project with the industry, had discontinued all fuel economy research and dropped the RSV program.

• Throughout hours of fiery testimony and accusations, the real target—Ray Peck—was at a meeting of the Presidential Drunk Driving Commission but by week's end, he was expected

German prices set for BMW 3-series cars

MUNICH.—BMW has set preliminary prices for its new 3-series automobiles. The home market prices are the equivalent of $7,893 for the 316, $8,835 for the 318, $10,066 for the 320 and $11,234 for the 323i. The 320i replacement will go on sale in the U. S. in May. No price has been established yet for the U. S. market.

Low-priced Mercedes 190 introduced

STUTTGART. — The new Mercedes-Benz 190 and 190E models have gone on sale in West Germany without benefit of any special advertising campaign. Prices translated into U. S. dollars are $10,235 for the 190 and $11,100 for the 190E. The 190 series is expected to be available in the U. S. in the fall of 1983.

Attempt to delay safety standards comes out in trial evidence

Tape tells of Ford pitch to Nixon

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Last week, a fascinating bit of history surfaced—a White House transcript of a tape made by President Richard M. Nixon of a meeting in the Oval Office with Henry Ford II; Lee A. Iacocca, then Ford Motor Co. president (now Chrysler Corp. chairman); John D. Ehrlichman, head of the Domestic Council in the Watergate years, and an "unknown" person referred to only as Paul.

The date: April 27, 1971.

The transcript was admitted as evidence in lieu of a deposition from President Nixon in a product liability suit in a Georgia State court in Atlanta. The case involves a fire in a 1975 Mustang II and subsequent fatality.

Also admitted as evidence was a confidential Ford in-house memo, allegedly about not using a safety feature for gas tanks until it would be required four years in the future.

Ford now says the safety feature was being developed at the time the memo was written; therefore, it was unavailable for installation. According to Ford, the memo said the safety device was one of several on which action would be deferred because the government was frequently changing safety requirements at that time.

The content of the White House tape does not bear directly on the issues in the case (Stubblefield vs. Ford), which seeks medical and funeral costs plus punitive damages.

• But the tape itself has considerable historic interest. To Washington old-timers, the meeting itself was never doubted. There were repeated assertions from former California Congressman John Moss, who claimed Henry Ford II had appealed to the President to delay the passive-restraint standard and substitute Ford's better idea —the ignition interlock.

It was later approved by then-NHTSA head Douglas Toms. The ill-fated ignition interlock bombed with the public, was promptly overruled by Congress and even made the unseen air bag look simple and almost acceptable by comparison.

While meetings between Detroit VIPs and Presidents are neither uncommon nor necessarily sinister, this particular meeting assumed importance because it was never admitted by Ford until the court deposition.

Furthermore, the relationship between Ford's well known opposition to the air bag and the subsequent delay and radical change in the established standard by a so-called independent agency raised—and still raises—questions of the propriety of bringing personal, political and economic pressure on the legal process through the White House.

As Ehrlichman suggested during the meeting, there existed legal, ethical and appropriate ways for Ford to object — some ways that had already been used by Ford and other ways being considered by Ford.

The passive-restraint standard at that point had already survived a legal challenge in the Sixth Circuit Court of Appeals (by all auto companies except General Motors and Daimler-Benz). A further court challenge was not only possible and appropriate at that time, but actually planned within a few days by Ford.

• The standard—11 years later and now considerably different —is still in the court, this time in the U. S. Supreme Court.

"The conversation with the President 11 years ago was nothing more than what we were saying publicly at the time and have said ever since," a Ford Motor Co. spokesman said after the transcript was made public.

"In speeches and press interviews, Ford executives were calling for a rational approach to automotive regulations on a

Ford spots jeopardize Stewart's ABC job

NEW YORK. — ABC Sports has still not decided whether to sever its relationship with Jackie Stewart due to his role as on-air spokesman for Ford — although the probability looms high.

Irv Brodsky, spokesman for ABC sports, said the network had not reached a decision at press time.

He had previously said network executives believed Stewart—an analyst of ABC's coverage for all major auto racing, including the Indy 500 — may have lost his credibility and compromised his position as an objective commentator by appearing in Ford spots, starting last September.

Brodsky held out as a "good possibility" Stewart's not doing any auto racing coverage because of his participation in Ford commercials.

Stewart is not scheduled to appear in any of ABC's upcoming racing telecasts.

ABC's spokesman noted that, despite a clause in his contract requiring him to notify ABC of any endorsement agreements, Stewart failed to contact the network before signing up with Ford.

Stewart's business manager and agent, Bud Stanner, senior corporate vice president at Cleveland-based International Management Group, declined comment: "Neither Jackie nor I have anything to say regarding the issue ABC is talking about."

Similarly, Ford declined comment, noting that "what Jackie does for us is a logical extension of a relationship he's had (with Ford) since the 1960s."

Added the spokesman, "He has noncompetitive contracts with a number of firms, including a big watch company and a champagne company," and Ford did not deem it proper to comment on any of his dealings, including those with ABC.

Jaguar lets the sun in

Coach Builders, Ltd., High Springs, Fla., unveiled its new convertible conversion of the Jaguar XJS at the South Florida Auto Show. Dealer conversion price is $8,900.

Pennsylvania in U. S., Defense Dept. told

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — There is an "America" in "Volkswagen of America," but the maker of the front-wheel-drive Rabbit is having a little trouble convincing the Defense Department of that.

That inability, sad to say for VWoA, is costing it about 3,000 Rabbit sales each year, the company estimates. The Defense Department won't let VWoA sell its U.S.-made Rabbits in its PXs because, by its definition, VWoA is not an American company, but a German one.

According to the Defense Department, it may offer for sale only "American automobiles," built by American auto companies, in its PXs under a Buy America directive issued by the House Armed Services Committee in 1965.

Never mind that VWoA has a plant in Westmoreland, Pa., and is building another in Sterling Heights, Mich., has a stamping plant in South Charleston, W. Va., and a parts plant in Ft. Worth and that its Rabbits are considered domestic vehicles by the EPA and NHTSA—VWoA is not an American company, the Defense Department says.

VWoA now has taken its case to the House Armed Services Committee. At a hearing last week, it appeared to have made its point that U. S.-built Rabbits should be eligible for sale in U. S. Armed Services exchange stores.

VWoA Vice President for Industry-Government Relations Philip Hutchinson said this would be only fair, given the company's substantial investment in the U. S. and the fact that the Renault Alliance (built by American Motors with less domestic content than the Rabbit) is cleared for sale through the PX system.

All vehicles built in the U. S. by American workers should be entitled to compete for military exchange sales, he said.

The committee seemed inclined to let VWoA compete. A decision is due soon.

Consolidated adds warranty, pushes DeLorean sales

COLUMBUS, Ohio. — Consolidated International Inc. is proceeding with the sale of DeLorean sports cars, and has secured a 12-month/12,000 mile warranty to sweeten the package.

Chuck Shenk, Consolidated executive vice president, told Automotive News the warranty deal was made with Columbus-based National Auto Care and will be offered at no additional cost. "It's included in the price of the car," Shenk said.

The warranty will be offered on the cars Consolidated acquired in the U. S. and the cars it acquired in the U.K., he said.

"I don't know how many cars we've sold so far, but we've sold a lot of them," Shenk said. "We're selling cars every day to DeLorean dealers."

The official confirmed that former DeLorean Motor Co. vice president Jack Rakes has joined Consolidated in a sales/marketing capacity. Rakes is a veteran auto official. He has worked for several companies, including American Motors (Canada) Ltd., BMW and Saab.

Automotive News sources last week said at least one more ex-DMC official may join Consolidated. Shenk said he "didn't know" if that is true.

He also said there has been no decision yet on whether Consolidated will exercise its option to resume production at the former DeLorean sports car plant in Dunmurry, Northern Ireland. The option is due to expire Dec. 20.

Mid-November deliveries of 210,917, up 12 percent from 1981

U. S. car sales climb for third straight period

By Jenny L. King
Staff Writer

Mid-November domestic new-car sales increase made it only the second time this year sales have been up for three consecutive periods.

All three May sales periods wore plus signs compared to their year-ago comparison figures. The current upswing started Oct. 21-31.

November 11-20 sales blasted off to a 41.51-percent improvement over the period in 1981, with sales of 210,917 compared with 149,046. The daily selling rate averaged 23,435 compared with 16,561 a year ago. There were nine selling days both years.

The annualized sales figure based on the current rate was 7.3 million domestic units, a dramatic improvement over last summer's trough of about 4.2 million projected sales.

General Motors enjoyed its best 10-day total since mid-May with sales of 140,457 new cars, up 56.57 percent from 89,707. Ford Motor Co. sales were up 17.99 percent, to 43,658 from 37,001. Chrysler Corp. sales of 19,696 units were up 15.26 percent from 17,089.

Volkswagen of America reported sales of 2,106 new Rabbits, down 10.34 percent from 2,349 a year earlier, and estimated sales of American Motors passenger cars was 5,000 units, up 72.41 percent from 2,900.

GM earned a whopping 66.59 percent of the domestic market in mid-November, up more than six percentage points from 60.19 percent a year ago. Ford sales accounted for 20.70 percent, down from 24.82 percent. Chrysler slipped to 9.34 percent from 11.46 percent. VWoA earned an even 1 percent, down from 1.58 percent, and AMC had 2.37 percent, up from 1.95 percent.

All but three of the 14 U. S. makes came out ahead of their 1981 sales levels during the period. Chrysler was up 71.93 percent, Dodge was up 14.39 percent, Ford was up 14.38 percent, Mercury was up 14.08 percent and Lincoln was up 78.84 percent.

Buick sales jumped 86.73 percent, Cadillac was up 36.36 percent, Chevrolet was up 48.08 percent, Oldsmobile was up 60.02 percent, Pontiac was up 50.67 percent and AMC was up an estimated 72.41 percent.

Missing their year-ago sales levels were Plymouth, down 8.76 percent, Imperial, down 30.17 percent, and VWoA, down 10.34 percent.

Domestic sales from Jan. 1 through Nov. 20 totaled 5,149,824, down 9.78 percent from 5,708,173.

In year-to-date comparisons through Nov. 20, three domestic makes have improved over 1981 levels: Chrysler, Lincoln and Cadillac. Nameplates up from year-ago standings include: Ford Escort and Crown Victoria; Mercury Lynx and Grand Marquis; standard Lincoln; Buick LeSabre and Electra; Cadillac Seville, Eldorado and standard Cadillac; Oldsmobile 88 and 98; Pontiac Bonneville / LeMans and Firebird, and Chevrolet Camaro.

Gasoline boost only part of it

Trucking industry calls excise tax plan unfair

By Miles Moore
Washington Staff Writer

WASHINGTON. — The heavy-truck industry is protesting the Reagan Administration's proposal for financing a federal highway trust fund which the American Trucking Assns. (ATA) estimates could cost the industry an extra $1.3 billion a year.

The new bill, proposed by DOT and endorsed by President Reagan, would raise an estimated $5.5 billion annually for highway, bridge and mass-transit programs, mainly through increases in federal excise taxes.

The most publicized feature of the DOT proposal has been the five-cent-per-gallon increase in the gasoline tax. Most of the provisions of the bill, however, apply to owners of heavy trucks and manufacturers of heavy-truck parts.

"Trucks are simply not paying their fair share of highway maintenance costs," said DOT Secretary Drew Lewis at a hearing before the House Ways and Means Committee. "This proposal is a more equitable way of dividing the costs."

Among other things, the bill would:

1. Impose an excise tax of 12 percent on new trucks and truck parts, as opposed to the current 10 percent on trucks and 8 percent on truck parts.

2. Increase the excise tax on truck tires weighing more than 100 pounds from 9.75 to 25 cents per pound.

3. Quintuple the excise tax on tread rubber — widely used in the trucking industry to retread tires — from 5 to 25 cents per pound.

At the same time, excise taxes on inner tubes, lubricating oils and tires weighing less than 100 pounds would be eliminated.

Such changes in the highway user fee structure would "shift the relative burden from the lighter trucks to the heavier trucks," according to Lewis.

Representatives of the trucking industry scarcely agree with Lewis that the new tax proposal is equitable.

The equitability of user fees has been a bone of contention between the trucking industry and federal and state governments for at least 20 years, ever since a study by the American Assn. of State Highway and Transportation Officials stated that a five-axle tractor - trailer causes at least as much damage to a highway as 9,600 autos.

Ross C. Gaussoin, chairman of the ATA, placed much of the blame for the current proposal on one of two highway cost allocation studies performed by DOT in 1978.

"One was based on the incremental approach which has been the measurement accepted by highway engineers for many years," Gaussoin said at a hearing before the Senate Finance Committee.

• This study — which DOT has attempted to bury, Gaussoin claimed — "conclusively finds that trucks in all weight categories are paying their fair share of the current federal highway taxes."

The second study was done according to what Gaussoin said was a new methodology — the consumption or damage approach.

"Unfortunately, this latter study has received all the publicity—primarily because it calls for outrageous increases in truck taxes," he said. "The trucking industry seriously questions and disputes the methodology in this study because it attributes all highway damage to truck weight and gives no significant recognition to age, weather and environment."

The added tax on gasoline alone would cost the trucking industry nearly $1.05 billion, and that would be bad enough, according to Gaussoin.

But the additional, heavy-truck-related taxes would cost the industry an extra $1.04 billion in users' fees, $208 million in excise taxes on new trucks, $51 million in taxes on parts and accessories and $12.5 million in taxes on tires and tread rubber.

Only in lubricating oils—with a tax reduction of $12.5 million —would there be any gain, he said.

In conclusion, Gaussoin urged the committee "to defer any action on special truck taxes and adopt only the five-cent fuel-tax increase."

Agreeing in every particular with Gaussoin was Arthur T. Irwin, chairman of NADA's American Truck Dealers Division, who told House Ways and Means Committee that the "tremendous increases" in trucking companies' tax liabilities "will be a severe burden to an industry that is already in its worst condition in many years."

Irwin also objected to the collection of federal excise taxes in advance from the dealer, a practice he called "frustrating and unfair."

"At the same time our government is providing low-interest loans for disaster victims, the truck dealers—who are victims of an economic disaster

Secret Pontiac job —a Firebird pickup

By Al Fleming
Industry Editor

Hidden deep in the recesses of Pontiac Division's advanced engineering facility is — ahem — a Firetruck.

What else would you call a Firebird with a truck bed on the back?

The cobbled up version at Pontiac engineering is crude, to say the least, nothing as refined looking as the sketch above, which visualizes a possible finished product. In fact, the real thing, at the moment, is at this stage not much more than a Firebird with the upper rear section carved off and a plastic box nestled in its place.

It is apparent that the sporty looking personal pickup by no means represents a formal development project, but it does indicate the General Motors division is leaving no stone unturned in its quest for a new, contemporary ("We Build Excitement") image.

What's more, there is precedence for a Firetruck. In 1959 Pontiac built a personal truck, or "pickup car," along the lines of the Chevrolet El Camino. Reportedly, only one was built. The Catalina-based pickup was created as a possible production prototype, an idea which later was dropped.

When last heard of, the one-of-a-kind Catalina truck was owned by a collector in the Midwest.

As UAW takes tough stance on struck work

Deadline speeds up Chrysler talks

By Marjorie Sorge
Labor Editor

DETROIT. — Amid signs at presstime that UAW and Chrysler Corp. could be near an agreement, a high-ranking company official told AUTOMOTIVE NEWS an agreement must be reached by this week or Chrysler may cut off talks until after the first of the year.

"At some point in time, we have to look and see if it is better to cut off (talks) until next year," he said. "Next week is still OK, but by the following week, we will have to take a look."

Meanwhile, Chrysler has shifted some die casting work from Canada to its Kokomo (Ind.) plant, company insiders said. While they said that is currently the only facility doing struck Canadian work, the company is also looking at placing some trim work and some seat work with outside unionized suppliers. The work would be returned to Canada when the strike against Chrysler ends.

In a joint statement, UAW President Douglas A. Fraser and Vice President Marc Stepp, who also is director of the union's Chrysler Department, said, "Should we find that work which has been performed in Canada is being done in the U.S. for installation in Chrysler vehicles, we shall take appropriate steps to stop it."

Stepp has said shifting the Canadian work could hurt negotiations. Chrysler workers in Canada have been on strike since Nov. 5.

While progress was still slow on both sides of the border at presstime, it was expected to pick up substantially at the end of last week.

In Canada, UAW Vice President Robert White, director of the Canadian region, threatened to cut off negotiations until after the first of the year unless some substantial progress was made by yesterday (Dec. 5).

Agreements for both the U. S. and Canada must be reached simultaneously. The union and company spent most of last week discussing non-economic issues. Money issues were expected to be put on the table late last week.

In order to reach a settlement, the union has said there must be significant upfront money.

According to a high-ranking Chrysler official, the company is willing to "rearrange the pennies" from the contract the workers rejected in October, but it is not willing to raise its labor costs. He said the only way to put in substantially more money would be to negotiate a longer agreement. The rejected pact was for one year on economics.

Both Stepp and White have said a longer agreement could be acceptable to the union, depending on the economic offer of the company.

New plant to raise BMW capacity 40 pct.

By Richard Feast
European Editor

MUNICH. — The supervisory board of BMW has approved the group's plan to build an additional car factory in the southern German state of Bavaria.

The decision, made Nov. 25, comes 2½ years after BMW postponed a plan to build additional capacity for its luxury and sporty sedans. It will mean that by the 1990s BMW will be capable of manufacturing up to 40 percent more cars.

Initial investments in the factory, which will be located at Regensburg, some 70 miles north of Munich, will amount to $275 million. Work on the site will begin in 1984, and production — at a low level — will flow in 1986.

Production will slowly be increased to around 600 a day by the early '90s, by which time BMW will have invested some 1.5 billion deutschmarks (nearly $600 million).

• According to Eberhard von Kuenheim, the company's chief executive, the most likely model to be made at Regensburg will be the 3-series, the latest generation of which BMW unveiled in West Germany Nov. 27.

Von Kuenheim said that if BMW believed in the future it needed a new factory. It will, he pointed out, give BMW a better production structure.

At present, the company has two auto making plants, at Mu-

Chrysler names head of marketing operation

By Joseph Bohn
Marketing Editor

Arthur C. Kestleloot is the new head of Chrysler-Plymouth national advertising.

Edward Fleming reportedly will become merchandising manager for Chrysler-Plymouth, and John Damoose, merchandising manager for Dodge.

Raymond Schneider, a 24-year Chrysler veteran who was in charge of media and budget analysis, left the company to join BBD&O, the new Dodge agency.

William Oswald, management supervisor on Dodge car at Kenyon & Eckhardt, is going over to BBD&O in that position.

A number of K&E people simply got pink-slipped, such as Roy McKechnie, head of creative on Dodge truck; Paul Stevens, head of C-P dealer account and David Abodaher, senior writer on C-P dealer associations, who has a book out on Chairman Lee Iacocca.

(BBD&O is taking some of the field supervisors on dealer associations from K&E, but many field people are simply being turned loose.)

Kestleloot was formerly management supervisor on J. Walter Thompson's Ford account. He replaces Michael Howe.

Chrysler reportedly will expand its marketing organization, so that Kestleloot, for example, will have two ad managers under him, and Joseph Cronin, the Dodge advertising head, will also have two managers.

Chrysler has not made any official announcement of its planned reorganization, partly because it hasn't decided how big its staffs will be.

Reportedly, some 52 people were originally intended to become part of the new marketing organizations, being aligned along a brand concept.

However, officials have had second thoughts about the size of the budgets that would be required, with the additional number of people that would have to be brought in.

Currently, Chrysler's marketing organization is budgeted through the end of December, so that additional money for the newly contemplated organizations will not become available until January.

Sol Davis marks 50th anniversary

Celebrating 50 years as a Chrysler Corp. dealer, Sol Davis, center, S&W Sales Co., Ridgewood, N. Y., receives an award complete with replica of 1932-model Chrysler to mark the year he started. Myke Jacobs, left, New York zone manager, hands him the plaque as his son, Mal Davis, dealership president and a 25-year veteran, observes.

Registrations total 197,508, down from 1981

Imports take record share in Sept.

By Jenny L. King
Staff Writer

Registrations of new imported cars accounted for a record share of the September total in the U. S., although the actual number was down 8,000 units from the 1981 level.

Imports snatched 31.62 percent of the September market this year, according to figures compiled by R. L. Polk & Co. It was their best September penetration, based on 197,508 cars, down 5.69 percent from 209,430 a year earlier when penetration was 27.45 percent. September's import market segment was down from the all-time record of 34.16 percent notched in August, 1982.

Of the month's top 10 importers, five increased their shares of the market compared with 1981 levels. Nissan gained the most ground, climbing 1.72 percentage points, to 20.37 percent from 18.65 percent. Toyota was up 0.97 of a point to 23.35 percent from 22.38 percent and Mazda was up 0.87 of a point to 7.21 percent from 6.34 percent. Volvo was up 0.26 of a point and Champ/Colt was up 0.27 of a point.

Honda slipped back to 15.08 percent from 15.48 percent; Volkswagen plunged 3.79 percentage points to 6.47 percent from 10.26 percent, and Subaru dipped to 6.31 percent from 6.44 percent. Mercedes and BMW joined the top 10 this September replacing Colt and Audi from 1981.

• For the nine-months period, six importers gained in shares of the market. Nissan was up 1.87 percentage points; Honda was up 1.03 percentage points; Subaru was up 0.37 of a point; Volvo was up 0.79 of a point; Mercedes was up 0.47 of a point, and Audi was up 0.06 of a point.

From January through September, Toyota was down 0.30 of a point, Mazda was down 0.20 of a point and Volkswagen was down 2.85 points. BMW joined the top 10 and Colt dropped into the "other" category.

The top 10 companies captured 89.04 percent of the import total in September, up from 88.69 percent a year earlier. Ten auto makers accounted for 89.99 percent of the nine-months import market, up from 88.27 in 1981.

Japanese-built passenger cars were 79.11 percent of the September import total, up from 75.89 percent a year ago, and slightly short of the 79.13 percent they claimed in August.

For the first nine months of 1982, Japanese cars earned 78.18 percent of the import market, up from 75.32 percent.

Registrations by country of origin in September were:

	Sept., 1982	Sept., 1981
Japan	156,256	158,941
West Germany	27,511	35,552
Sweden	7,155	6,542
France	4,338	3,856
Italy	1,140	2,965
United Kingdom	876	1,170
Ireland	232	404

Registrations by country of origin for the first nine months were:

	9 mos., 1982	9 mos., 1981
Japan	1,324,965	1,427,934
West Germany	239,328	328,829
Sweden	71,095	59,633
France	37,536	33,371
Italy	12,299	30,246
United Kingdom	7,097	15,062
Ireland	2,510	686

Registrations of imported trucks in September tumbled 16.29 percent, to 37,700 from 45,036. Totals by major manufacturer were:

	Sept., 1982	Sept., 1981
Toyota	14,870	13,493
Nissan	8,702	10,185
Mazda	3,298	.....

Chevrolet LUV	.....	5,708
Ford Courier	.....	5,537
Others	8,080	10,113
TOTAL	37,700	45,036

Registrations of imported trucks for the first nine months were down 15.59 percent compared with year-ago levels. The breakout was as follows:

	9 mos., 1982	9 mos., 1981
Toyota	105,981	97,255
Nissan	69,008	83,984
Mazda	27,058	.....
Dodge Ram 50	23,237	.....
Chevrolet LUV	.....	52,683
Ford Courier	.....	48,631
Others	87,205	87,661
TOTAL	312,489	370,214

Mobil recalls faulty oil; could damage car engine

By Roger Rowand
Engineering Editor

CHICAGO. — Mobil Oil Corp. is recalling in six upper-Midwest states a large quantity of motor oil containing a faulty additive. Use of the lubricant at low temperatures might lead to engine damage, the company said.

Some 175,000 gallons of Mobil Super 10W-40, much of it in quart cans, are in the bad batch. The company is trying to reach buyers through advertising and press statements.

It is advising those who bought, or think they may have bought the oil, to return it for a no-charge replacement.

Mobil said it did not know what damage might occur, but an engine with the bad oil will be noticeably sluggish, will refuse to perform and the car's oil warning light will turn on.

Mobil said this type of incident never had happened to it before. Internal steps have been taken to prevent a recurrence, the company said.

Only one shipment of oil is involved. It was sold in Illinois, Wisconsin, Michigan, Ohio, Indiana and the eastern half of Iowa.

Des Moines dealer sets LeCar sales record

DES MOINES. — Bud Mulcahy's Des Moines AMC/Jeep/Renault set a national sales record for Renault LeCar: 121 sold in October as a result of its "Best New Car Buy in the State of Iowa" promotion.

The dealership took delivery of 80 LeCars in a single day and recorded the event for TV and newspaper advertising. Bud Mulcahy is president of the dealership.

Toyoda cagey on GM talks at dedication of Toyota HQ

TORRANCE, Calif. — Saying only that negotiations with General Motors on joint U. S. production are progressing, Eiji Toyoda, chairman of Toyota Motor Corp. was here to dedicate a new headquarters building for Toyota's U. S. sales subsidiary and to mark the company's 25th year in this market.

Toyoda said the demand for efficient automobiles has triggered a major revolution throughout the world auto industry.

"We are now witnessing a great variety of attempts to establish tie-ups between auto makers," he said. "This trend in itself is ample evidence of the struggle to efficiently manufacture at the earliest possible time, fuel-stingy vehicles with first-rate performance to compete effectively on world markets."

Although Toyoda refused to discuss the contents of the talks with GM, he admitted that the company does not have plans to build vehicles in the U. S. on its own but rather is looking to successful completion of the GM talks on a joint project.

When asked if the substance of GM Chairman Roger Smith's remarks on the type of vehicle and plant site were accurate, Toyoda replied that he has not heard anything official from Smith and that "I cannot make comment on what has been quoted in the newspapers."

He added, however, "I can say negotiations have been making progress."

Toyoda said his company is not in favor of import restrictions and added that it is too early to comment on the prospect of a third year of quotas imposed by the Japanese government.

In his prepared remarks, Toyoda said the world economy faces danger from protectionism.

"There are real fears that the free world, which is led by the U. S., faces a future of disunity and hindered development," he said.

"If we choose to avoid fair and healthy competition for fear of trade frictions and resort to protectionism not only will the end-user—the man on the street—be a big loser, but this also will have a negative influence on the American auto industry."

• Toyoda expects the U. S. car companies to regain their former strength when the American economy recovers.

Shochiro Toyoda, president of TMC, said he expects "many severe challenges from here on, not the least of which is the worsening global business environment."

He noted that this year Toyota expects to produce 3.2 million vehicles, of which 1.52 million are destined for the Japanese home market. This represents an increase in domestic sales, and a decrease in exports.

Both Toyodas dedicated the new five-building headquarters complex that includes corporate headquarters, data processing center, master parts depot, emissions lab and employe dining facility, situated on 41 acres.

The $100-million site is across the street from Toyota's old headquarters and employs 800 persons. The corporate headquarters building is four stories tall and has more than 290,000 square feet of floor space.

Koerner achievement

For his 25 years of selling and servicing Ford Division cars, Jack Koerner, right, of Koerner Ford, Rochester, N. Y., is awarded a commemorative plaque by Bernard L. Crumpton, division general sales manager.

GM dual adds Peugeot

CONCORD, N. H.—Banks Chevrolet-Cadillac, Inc., has been awarded a Peugeot franchise.

12-month plan covers used cars sold at retail

No mileage limit in Hertz warranty

By Francis J. Gawronski

Hertz Corp. has eliminated the mileage cap from the limited warranties it provides on its used cars sold at retail.

Previously the warranty coverage was for 12 months or 12,000 miles, whichever came first. The coverage is now for 12 months with no mileage.

Hertz also announced that extended limited warranty coverage is being offered through several options which buyers may select.

The basic no-cost limited warranty, which backs every car sold at retail, covers the powertrain, including engine, drive shaft, transmission and differential for 12 months.

The major extended warranty coverage Hertz is now offering is for 24 months with unlimited mileage. Priced at $299, this warranty covers powertrain plus air conditioning, brakes, power steering and electrical systems.

Another option, priced at $149, covers the powertrain for 24 months with no mileage limit.

A third option, which can be added to the basic limited warranty, provides coverage for air conditioning, brakes, power steering and electrical systems for the 12-month period of the basic warranty. It is priced at $99.

Elsewhere, William B. Tuttle has been named national account executive for Commercial Credit/McCullagh Leasing, Inc., an operating company of Commercial Credit Co., Baltimore.

Tuttle will be headquartered in Burlington, Calif. Prior to joining Commercial Credit/McCullagh, he was a district manager for Avis Car Leasing, San Mateo, Calif.

Southwest Leasing Corp., Los Angeles, reported income of $246,000 for the second quarter, ending September, 1982, compared with $405,000 for the same period a year ago.

According to Southwest Leasing, revenues were $10,217,000 for the second quarter, compared with $10,095,000 for the same period a year earlier.

Kayser Leasing Corp., Madison, Wis., has opened a new district sales office in Chicago's Sperry Univac complex, Suite 200 North, 8600 West Bryn Mawr.

Dave Mueller, formerly account manager - operations, has been promoted to accounting manager for National Car Rental System, Inc., Minneapolis, while Samuel Allison, formerly city manager in Fort Myers, Fla., has been named fleet manager of the Miami pool.

In other changes announced by National, Bill Ballou, formerly fleet manager for the Miami pool, has been named city manager in Fort Lauderdale, and Keith Schwenk, formerly city manager in Fort Lauderdale, has been named city manager in Fort Myers.

Also, Raul Cosio has joined the sales department as regional sales manager in Miami for Latin America, Mexico and the Caribbean, while Sheila Rafferty, who has been account executive in Chicago, has been promoted to national accounts manager in Chicago.

Also, James Steadman, formerly national accounts manager in Chicago, has been named account executive in Chicago, and Cathy Vanasco, who was distribution manager for the San Francisco pool in the Car Rental Division, has been named sales representative in San Francisco.

Toyota-Dodge dual

SALEM, N. H.—Walton Toyota-Dodge, owned by Owen Walton, has opened here.

Note: Figures are generally based on U. S. production. However, some Canadian-only sourced cars, or those where U. S. production does not give an accurate reading of the figures, are included.

Specific models include Chrysler's New Yorker, Gran Fury, Cordoba, Diplomat and Mirada; Ford's standard-sized Ford, EXP and LN7.

Figures are based on production of 5,712,297 U. S. models during the 1982 model year, including 70,898 American Motors cars; 724,548 Chrysler Corp. cars; 1,308,516 Ford Motor cars; 3,505,671 General Motors cars and 102,664 Volkswagen cars.

Wegners still selling GM products—and Datsun—in Pierre, S. D.

75-year-old deal stays in family

By Dolores Harrington
Staff Correspondent

PIERRE, S. D.—When former foundry worker and mill owner Henry John Wegner opened his auto dealership in 1907, he had at least 100 makes to choose from.

Today, his grandsons and great grandson are still keeping the store open, and they've been faithful to his early choice — General Motors.

They sell Oldsmobiles and Buicks. But they also sell Datsuns. H. J. would never have dreamed a foreign country's automobile would sell here. And he certainly never fathomed the computer that makes his place of business part of the GM galaxy of dealers.

H. J. first selected the Reo, made by R. E. Olds, because of its ability to climb hills. Pierre, the booming capital city of a new state, had steep hills.

Family stories claim that when Wegner started his dealership, "There weren't but about 12 cars in the entire city . . . and there was much talk . . . that the automobile was just a toy."

Trucks powered by motors were unheard of.

In the beginning, Wegner Auto Co., Inc., was housed in a basement from which cars were sold and repaired. One year later, a first floor was added, for storing cars.

• In order to supplement car sales and repair service revenue, Wegner provided two livery cars to transport customers about Pierre and its surrounding area, just as did the city's five livery stables.

As well as being one of the early car dealers and taxi services, Wegner was also a pioneer in the "filling station" business. Gasoline was kept in a hollow near his building. When a customer wanted some, he drained it into a can and then put it through a chamois skin into the car's tank.

Soon, Wegner added other lines, including Chalmers and Huppmobile. In 1910, he added Buick. In 1917, he added Dodge automobiles and "made-over" trucks. Two years later, his Buick franchise required taking on a one-ton truck for every five new cars ordered. This line is today's GMC.

In 1923, Henry John's two sons, Lester and Varro, abandoned college careers and entered the auto business full time.

In 1925, the dealership turned its full energies to selling Buicks.

Some sales stats: In 1926, Wegner Auto Co. sold 45 new Buicks, dropping to 18 in depression-torn 1931 and five in 1932. The following year, new-car sales totaled 2 Buicks and 6 new Oldsmobiles. The latter line was added because it offered 6-cylinder models. Buick had only 8-cylinder cars.

• Expansions in 1919, 1927 and 1954 added only office and garage space because until the late 1950s no one ever bought a car off the lot at Wegner's Each auto was ordered and built to the customer's specifications. In 1954, an adjacent parcel of land was purchased.

In 1958, the company became the Pierre area's first import dealer when it added Opel.

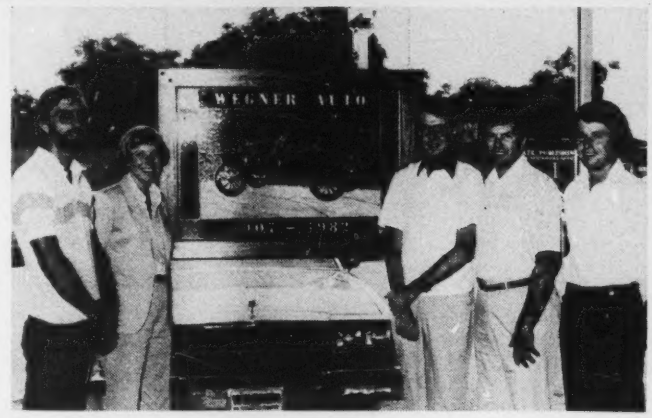
Varro Wegner died in 1959. His two sons, Henry John (Hank) and Tony, joined their uncle Lester in business in the mid-1960s. This third generation assumed ownership in 1966.

Six years later, they moved the company to a new building and a much-expanded lot several blocks from the old site. They expanded their body shop and new and used-car prep space in 1977.

The dealership now occupies 20,000 square feet and a full city block. Computer communication with GM's corporate offices and computer diagnostic equipment are also part of the operation. Present lines are Buick, Olds, GMC Trucks and Datsun.

A member of the fourth generation of Wegners—Jim, who is Hank's son—is now a member of the sales staff.

"With all the dealers closing their doors all over America, I feel our 75th year in business will make others perk up," said Hank. "We're doing well and making money."



Family stays with the GM family

Seventy-five years in the auto business is reason enough to have a stained glass window commissioned, believes Helen Wegner, who presented the artwork to her brothers for the diamond anniversary of Wegner Auto Co., founded by grandfather Henry John Wegner who sold the Reo and later, Buick and Olds. From left, artist Steve Stoneback; Helen Wegner; her brothers Tony and Hank, and Jim, the fourth generation of the family selling GM cars and trucks in Pierre, S. D.

Police patrol cars tested before purchase in Georgia

ATLANTA. — So many of today's high-performance cars are making sissies of state patrol cars around the South that the heads of patrols in several states are considering the purchase of some of the speedier models.

Patrolmen from 10 states gathered in Atlanta to see Dodge, Ford and Chevrolet cars go through acceleration, braking and handling tests.

It was the first time such tests have been conducted in Atlanta. They were held at The Atlanta International Raceway in nearby Hampton and at the Atlanta race track near Gainesville.

The Georgia patrol has three Mustangs and three Pontiac Trans Ams in its fleet as test models. Within the next six months, the state may buy 50 performance cars to be used as pursuit cars and another 140 standard police vehicles.

Lt. Bill Grant, who organized the tryouts, said testing the cars in Georgia is part of a new policy.

"In order to make bids to sell cars to the Georgia State Patrol, the manufacturers must bring the cars to Georgia, and the cars have to make a passing score on our tests," he said.

Grant contends that tests made in the Detroit area for the patrol cars rarely give practical results. Categories such as acceleration, speed and handling are rated in separate experiments.

During the tests here, patrolmen were allowed to test-drive the 1983 cars — a Chevrolet Impala, a Dodge Diplomat, a Ford Mustang, a Ford LTD and a Thunderbird prototype.

Cunningham appointed

KANSAS CITY. — Robert A. Cunningham, president and owner of Cunningham Oldsmobile, Inc., Kansas City, has been appointed to the Rockhurst College board of regents.

Pacer presentation

DETROIT. — The first Pacer built by American Motors has been presented to the Detroit Historical Museum by Capt. Robert H. Jones. AMC produced the Pacer from 1975 to 1980.

Cooperation between auto firms seen as vital

Saab chief discusses survival

Continued from Page 12

cial and military aircraft, satellites, and missiles—and we are greatly specialized in each of our fields of activity.

Q. Coming back to cars, will the Saab-Lancia model be an addition to your present range, or will the new car replace the ones you are now manufacturing?

A. They will overlap for a while, but we intend to motivate our customers into eventually buying a car of the new generation. The new car will be in the same price range, but it will be quite different from the 900 series. In the meantime, we will keep developing the 900, which will remain a modern car for many, many years.

Q. Will the new car help you increase your overall production?

A. We could easily produce 110,000 and 120,000 cars now with the large additional investment. We do not intend to go beyond that. There are advantages in being a small manufacturer; it allows you to be flexible and innovative. We don't have many engineers in comparison with the giants; but we have excellent people, and we are in a very good position to make use of all the technical knowledge we have in the company.

For example, our new truck program is the first in the world to put a truck through windtunnel tests. We have access to tremendous knowledge in electronics and the use of new material through our aerospace division. Our people are working with new material for the airplanes of the future. This can be of great benefit to our car division.

Q. Saab is a factor in Scandinavia and the U. S. On the whole, however, your dealer network is quite weak throughout Europe.

A. The truth is that we did not have really good export products until quite recently. It was not until the 70s that we actually produced cars that could be successful abroad. Then came the oil crisis in 1973, which made it very difficult to motivate dealers outside of Sweden. Nobody was ready to invest in new facilities and equipment. Then came the Japanese, who collected dealers and made it difficult for us to find the ones we needed.

Today, more and more distributors abroad are interested in selling our cars now that we have the Saab 900 series and especially the Turbo. We have our own sales organization in Scandinavia, England, Germany and the U. S. We have very good partners in Switzerland and in Italy. We just opened our own subsidiary in France.

Q. At what sales level can you break even with your own outlets in a foreign country?

A. It differs from market to market. In the U. S. we will sell around 18,000 cars this year and make a good profit. Every second car we sell in America is a turbo, and we sell them with a good profit margin. We sell around 10,000 cars in England, and that is the break-even point there. In countries like Denmark and Norway, we are profitable while selling about 2,500 units yearly; but you should not forget that we have a manufacturing profit to start with.

Q. You also finance some dealerships on your own.

A. Yes, whenever we fail to find a good dealer in a major city. We did it in Frankfurt, Antwerp, London and several other places in England. We will probably have to do it in Paris and Brussels, and we are going to open a showroom in Manhattan. We do not intend to keep these dealerships forever but are ready to sell them when they become profitable.

Q. Considering the limited number of Saab dealers in most European countries, why should anyone want to buy a Saab?

A. I recently asked a large Cadillac dealer in the U. S. why he was so interested in selling Saabs and Saab Turbos when he was selling Cadillacs and could sell any other make. His answer was simple: "Why should I sell a copy when I can sell the original!"

Actually, I believe we have a good quality car with status. Lots of people, particularly in the U. S., like to own a foreign car that gives prestige. In Europe, the Saab is considered a connoisseur's car, an individualist's car.

Q. In which areas do you feel that Saab-Scania will develop fastest—trucks, aerospace, cars?

A. The truck market is down the world over at present, but we had four consecutive fantastic years in this area. Even though the market will still be depressed in 1983, we have a very good potential in this field.

We have had our problems in the aerospace business, because the Swedish government hesitated for 10 years before deciding on a new generation of military planes; but Parliament made the decision at long last in June, and we have the contract. Our commuter plane will also help us develop that part of our business tremendously.

As far as cars are concerned, I have told you that we are quite optimistic. I believe that we will become more and more international over the next few years. We now export about 60 percent of our production, and I hope we reach 75 percent in five years. There is no alternative to exports for a company operating in as small a country as Sweden.

Q. How easy or difficult is it operating a private company in a socialist country?

A. We have lived with socialist governments, as a private enterprise, for 44 years, until 1976 when the Conservatives and Liberals came to power. The Social Democrats in Sweden have been moderate, and I hope they don't change. The real threat presented by the Socialist party in the last election campaign is what they call the "wage earners' fund." They would like every company to set up a fund that would help the public to take over the company partly, in one way or another. Many promises are made during campaigns, but I don't think anybody really knows what is going to happen in this case.

Q. How do you motivate your people with your high taxation?

A. That, of course, is a problem, but people won't work just for money. Therefore, you must prove to them that the company is dynamic, that it invests in the future, that it is developing. You have to create a good environment, a good atmosphere, so that people enjoy their work and really feel that they are achieving something. Our people were no longer motivated a few years ago; but we have invested in new programs, and that has changed the climate.

We have been able to make a good profit while investing a lot, so that all of our investments could be self-financed. I have a policy of no borrowing. When you live in a technologically risky world, you have to make your own money, invest from your own profits. We have not borrowed any money in the last four years, except that the Federal Reserve Bank of Sweden compels us to borrow money abroad when we want to invest overseas—we are not allowed to send money from Sweden.

Q. When do you think the world recession will come to an end?

A. Nobody can answer that. We live in a very exceptional world. We have all the problems coming from the Middle East, from the oil-producing countries. We have a new policy in the U. S. with Reagan's anti-inflation action and its high interest rates. I don't think anything good is going to happen until we get the interest rate down.

We have started a big employment program at Saab for youngsters between 16 and 19 without really having jobs for them. We don't hire them as regular employes, but as trainees to further their education. In close cooperation with the unions and with some help from the government, we try to give them a friendly attitude toward industry, to show them that the jobs can be interesting, that the pay is good.

If we didn't do this, we would be short of industrial workers in a few years when we need them. We took on 500 youngsters this year, and it looks as though 80 percent will stay with us. Industry just has to contribute and help society. If we don't do it now, we might be sorry about it five or ten years from now."

Total Cars, U. S.	1,447,601	25.34	63,085	1.11	110,765	1.94	158,380	2.77

Note: Figures are generally based on U. S. production. However, some Canadian-only sourced cars, or those where U. S. production does not give an accurate reading of the figures, are included.

Specific models include Chrysler's Gran Fury, Cordoba, New Yorker, Diplomat and Mirada; Ford's standard-sized Ford, EXP and LN7.

Figures are based on production of 5,712,297 U. S. models during 1982 model year, including 70,898 American Motors cars; 724,548 Chrysler Corp. cars; 1,308,516 Ford Motor Cars; 3,505,671 General Motors cars and 102,664 Volkswagen cars.

Total of 96,216 is 9.21 percent more than year ago

U. S. car output beats '81 week

By Patricia Hoffman
Staff Writer

The resumption of normal five-day operations at most assembly points last week pulled domestic auto production up substantially from the previous week, shortened by the Thanksgiving holiday. Output also was up from the comparable 1981 period.

Last week, the makers estimated a build of 96,216 units, a 45.29 percent gain from 66,224 cars built during three days of assembly the previous week, and up 9.21 percent from last year's 88,100 units.

Year-to-date, there have been 4,771,877 units assembled, a 20.65 percent decline from 6,013,443 built in the comparable period last year.

There were six facilities idled last week due to high inventories. They were: General Motors' Doraville, Lordstown and Tarrytown points, plus Ford Motor's Metuchen, San Jose and Wayne facilities.

GM's Bowling Green and Ford's Lorain points remained closed last week for model changeover. Production of 1983 Corvettes is slated to begin at Bowling Green Jan. 3. About 1,000 workers will be recalled from temporary layoff. The Ford Lorain plant is scheduled to resume sometime next month.

GM's Detroit (Cadillac) facility operated 1.6 hours of daily overtime on two shifts last week, plus eight hours on Saturday (Dec. 4).

Also working Saturday was GM's Arlington (Malibu, Monte Carlo and Regal) facility.

Production of the Ford Crown Victoria began last week at the company's St. Louis facility. Output is at a rate of 8.6 units an hour on two shifts.

GM's Van Nuys (Camaro and Firebird) and Wilmington (Chevette and 1000) points returned last week, following a three-week downtime to control overstocked inventories.

Truck production for week tops '81 level by 64 pct.

Domestic-truck production jumped 48.55 percent last week from the shortened holiday week, and output rose 64.12 percent from the comparable 1981 period.

Last week, the makers targeted output at 35,980 units, up substantially from 24,220 trucks built during three days of assembly the previous week, and up from 21,923 units in the comparable 1981 period.

So far this year, the manufacturers have completed 1,781,220 units, a 16.08 percent gain from 1,534,430 finished in the same period last year.

Normal five-day operations resumed at all but two assembly points last week (Nov. 29) following the holiday, and Saturday overtime was scheduled at one General Motors facility.

Chrysler Corp.'s Warren truck facility and one shift at Ford Motor Co.'s Louisville point were idle last week for inventory control.

GM's Pontiac coach line, idled last August, remained down last week due to lack of orders. Production is slated to resume next month.

Volkswagen of America's Westmoreland point remained closed last week for model changeover. Assembly of 1983 model trucks is slated to begin this month.

GM's Lordstown facility operated six days last week.

Also at GM, production resumed at the Janesville point following a three-week downtime to control high inventory.

BL adds 1,100 workers for launch of new Maestro

COWLEY, England. — BL's Austin Rover Division is taking on an additional 1,100 workers at its factory here in preparation for the launch of the new medium-range LM10 hatchback.

The model — which is widely tipped to carry the name Maestro—will be launched March 1 and make its public debut at the Geneva Auto Show. It will go on sale in the UK in the spring and in European markets in the fall.

By launch date, Cowley is expected to be producing 2,500 Maestros a week.

At the same time, the additional manpower will enable output of the Rover sedan to be lifted from 850 to 1,000 a week in response to increased demand, says the company.

The recruiting was given only a lukewarm reception by employes, who have seen total BL employment levels halved to around 100,000 over the past five years.

LM10 is a five-door hatchback which fits into the Ford Escort/Volkswagen Rabbit category.

It is an area where Austin Rover is particularly weak, following the deletion of the Allegro and Maxi models. Its representation rests solely with the aging Ital sedan and the more modern Triumph Acclaim, assembled from Honda kits.

In March, 1984, Austin Rover will unveil the three-box sedan version of the LM10, known as LM11.

Canadian output of cars plummets; five plants shut

With just two car assembly points operating last week, Canadian auto production fell a substantial 58.57 percent from the previous week's total, and output dropped 47.91 percent from the comparable 1981 figure.

Last week, the car makers scheduled 7,140 units, down from 17,235 the previous week, and down from last year's 13,708 units.

So far this year, the car manufacturers have finished 779,783 units, a 3.22 percent gain from 755,445 built in the comparable period last year.

Truck production last week was slated at 7,160 units, down 2.07 percent from the previous week's 7,311, and a 15.34 percent decline from last year's 8,457.

Year-to-date, the truck manufacturers have assembled 453,678 units, down 5.05 percent from 477,792 trucks completed in the comparable 1981 period.

General Motors' Oshawa car point, and Ford Motor Co.'s St. Thomas plant joined the downtime lineup last week, bringing the total number of idled car facilities to five. The Oshawa car operations will be idle two weeks due to poor sales. Operations are slated to resume Dec. 13. The Ford St. Thomas plant closed for one week for inventory control. Production is scheduled to return today (Dec 6).

American Motor's Brampton facility, idled Nov. 15, remained closed last week for inventory control. Operations are slated to resume Dec. 13.

Also still down for inventory control was Volvo's Halifax point. Production was idled at the plant Nov. 22.

Chrysler Corp.'s Windsor car and truck facilities remained closed last week due to a strike.

The GM Oshawa truck facility will close for one week starting today due to poor sales.

58th year—$40 per year, $1.00 per copy

Higher sales, lower output trim inventory to 52 days

By Richard A. Wright
Assistant Managing Editor

The domestic new-car inventory plunged sharply during November to a 52-day supply Dec. 1, down from 69 days on Nov. 1, partly because the sales rate picked up a bit, but mainly through the simple expedient of not building very many cars.

The domestic new-car inventory totaled 1,164,338 units Dec. 1, down from 1,295,704 a month earlier. A year ago, the industry had 1,491,078 new cars in stock Dec. 1, an 83-day supply.

Much of the industry's cutback was accomplished by General Motors, which chopped into its inventory with a vengence. While the lean 52-day supply could quickly become riddled with shortages in the event of a sales upturn, the industry is not worried about this.

More troublesome was the prospect of heavy stocks at high floorplan interest rates carried through the winter sales doldrums.

GM trimmed its inventory from 69 days a month earlier to a lean 47-day supply Dec. 1. A number of its bigger-selling lines, including Chevette, were in relatively short supply and the very heavy stocks of A and J-bodies which had persisted a month ago had been brought into line.

Ford Motor Co. opened December with a 57-day supply, down from a 71-day stockpile a month earlier.

Chrysler Corp., on the other hand, boosted its inventory from 64 to 69 days during the month, largely because its sales rate did not pick up during November as did Ford's and GM's.

American Motors opened December with a 79-day supply, off only slightly from 80 days a month earlier, and Volkswagen of America had a 67-day supply Dec. 1, down a bit from 72.

The Dec. 1 domestic inventory was divided this way: GM, 57.58 percent; Ford Motor Co., 23.93 percent; Chrysler Corp., 13.29 percent; AMC, 3.65 percent, and VWoA, 1.55 percent.

A month earlier, the domestic inventory was divided as follows: GM, 60.63 percent; Ford Motor Co., 22.31 percent; Chrysler Corp., 12.59 percent; AMC, 3.03 percent, and VWoA, 1.44 percent.

By size class, small cars continued in heavier supply than big cars, but the gap was narrowed and the Dec. 1 inventory appeared to be in better balance than has been the case for some time.

Subcompacts were in 59½-days supply, down from 84 a month earlier; compacts, 57 days, down from 79; intermediates, 49 days, down from 69; standards, 49½ days, down from 57, and luxury cars, 41 days,

Spying on Lincoln

Mark VII to debut in 1984

Spy photos of a prototype 1984 Lincoln Mark VII show a two-door model nearly a foot and a half shorter than the '83. It will share a platform with today's Continental. A 5-liter V-8 and BMW's 2.4-liter turbo-diesel V-6 are expected to be offered. The new Continental, which bears a striking styling similarity to the Continental Concept 90 show car, is to have a 108.6-inch wheelbase, an overall length of about 203 inches and a weight of 3,500 pounds.

Subaru to enhance its U.S. lineup with turbo, 2+2 and maybe a mini

By John A. Russell
New York Staff Writer

NEW YORK. — Moving to enrich its model mix, Subaru of America plans to introduce turbocharging on selected models and a two plus two sports coupe within the next two years and is strongly contemplating the introduction of a minicar to the U. S. market.

Harvey Lamm, president of SoA, said that a turbocharged 1.8-liter fuel-injected engine would be offered during the 1983 calendar year for its four-wheel-drive, automatic-transmission cars, which would mean the hardtop and four-door GL series.

He stressed that the car would be the lowest-priced turbo four-wheel-drive car available, but he would not reveal any further details on the project.

Speaking before the New York Auto Analysts Assn., Lamm said the strategy over the next few years is to enrich the model mix and concentrate on the upper end and lower ends of the range.

After the meeting, he told AUTOMOTIVE NEWS that plans call for the introduction of the two-plus-two line in 1984 for model year 1985.

The car is similar in concept to the Pontiac P-car, he said. There will be two versions, one sporty and the other, a high-performance, turbocharged model, will be offered "for sure."

Lamm emphasized that even if the voluntary restrictions under which all importers of Japanese cars operate continue into 1985, it "won't stop" the introduction of this car.

• The restrictions might, however, have an effect on another area SoA wants to explore and, at this stage of the game, pave the way: The minicar market. Various manufacturers have talked about the potential of this market in the U. S., but none, thus far, has made any firm plans to introduce this type of vehicle to the U. S.

SoA, according to Lamm, has been looking at the concept for several years, and he declared that if conditions were different for Japanese manufacturers, Subaru would have introduced such a car "two years ago."

In Japan, Subaru offers a minicar called the Rex, but Lamm said the one intended for the U. S. would not be the Rex, but a newly designed concept. If restrictions continue for the '85 model year, it might stop the introduction of this car, he said.

Lamm would not reveal any more details on the new products, but it seems certain that the sport coupe would be pow-

Peck denies charges of 'secret' auto talks

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — NHTSA head Raymond A. Peck has responded to Joan Claybrook's charge of "secret" talks with the auto industry about government-industry cooperation in research.

Peck said that on two occasions—March 23 before a House Energy Subcommittee and March 24 before an Appropriations Subcommittee — he informed Congress and the world that NHTSA had started a program to coordinate NHTSA's research with that of the auto companies.

Both times, Peck explained that early targets would be side-impact protection and improved safety of steering columns. The purpose, said Peck, was "more efficient use of R&D resources and ultimately the incorporation of safety improvements in production of motor vehicles at a faster rate than has been possible through regulation alone."

This clears NHTSA of charges of being secretive, but during Peck's appearance before a hearing held jointly by a House Science Subcommittee and a House Energy and Commerce Subcommittee, he was still questioned closely about the propriety of the meetings and the program.

NHTSA Research Officer Michael Finkelstein said he had checked with Dr. Robert Hess at the Highway Safety Research Institute at the University of Michigan and Hess had confirmed Claybrook's statements—that he vigorously objected to the cooperative research program and thought that independent researchers should also have been invited.

A subsequent check with Dr. B. J. Campbell — another respected safety expert — had elicited the same opinion.

Rep. Dan Glickman, Kansas Democrat, warned against even the appearance that industry might be trying to manipulate research and, through it, regulation. He warned of the need for an "arm's length relationship" with industry.

• The appropriateness of joint effort on side-impact protection was raised since it had been from 1979 the subject of an Advance Notice of Proposed Rulemaking. To the layman and even to lawmakers, this indicates a subject for writing a regulation. But NHTSA Chief Counsel Frank Bernd testified it had "no legal significance" — that it existed as one of many ways to elicit data.

Finkelstein described it as a "candidate" for standard-setting. Peck said it was a "custom, a convention" but that "in law," there is no such thing as an advance notice. Further, he said, it was only because of an "ex-

breaking news

Aluminized steel shines in GM's P-car

DETROIT. — There's plenty of news for steel producers when it comes to the Pontiac Fiero, better known as the General Motors P-body. The sporty little mid-engine car will have a plastic skin over steel framework. The steel will be light in weight and coated with aluminum. Aluminized steel now is used in virtually all exhaust systems and in some under-the-hood parts such as heat shields. The light metal is applied by a hot-dip technique. Aluminizing is better than galvanizing, steel men say, because it better withstands welding and is more resistant to corrosion.

Chrysler to bring back rumble seat

DETROIT.—Chrysler Corp. will introduce '83½ rumble seat versions of its Chrysler LeBaron and Dodge 400 convertibles. The new models will bow "in time for warm weath-

Information lacking from NHTSA

Lull in crashworthiness program

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — What has happened in NHTSA's assessment of new-car crashworthiness in the two years since Joan Claybrook flamboyantly introduced The Car Book, replete with matchstick men implying death or survival after a 35-MPH crash into a brick wall?

Has NHTSA head Raymond A. Peck ignored the recommendations of a December, 1980, report on small-car safety that estimated modest changes in the restraint system plus an upgrading of steering column assembly can enhance safety in small cars?

Has there been so much delay in announcing even the preliminary results of high-speed crash tests on '82 models that the information is useless to consumers?

What has happened to the recommendations of the international meeting held Dec. 8-9 in Lancaster, Pa., on the new-car assessment program?

When Kansas Democrat Dan Glickman in a recent congressional hearing noted that the 1972 law mandates ranking makes and models according to their crashworthiness in a "simple and readily understandable form," Peck said NHTSA is releasing all data but without "pass/fail" labels.

(The most recent release on Nov. 18 cites the clear superiority of a Chevrolet Celebrity, but NHTSA still has a number of '82 models to go. They include: Chevette four-door hatchback, Cavalier two-door, Impala four-door, Dodge Colt four-door hatchback, Ford Granada four-door, Lincoln Continental four-door, Mazda 626 four-door, Renault Fuego two-door, Toyota Corona four-door and VW Quantum four-door.)

• Peck, who had allowed the revised Car Book to go into a second printing, said the book "was not responsive to what people wanted," said there were a "couple of thousand left over" and predicted any attempts to make another one for sale "would be a disaster."

Meanwhile, a former employe of NHTSA is willing to take the commercial risk but he is waiting for data on the rest of the '82 models — said to become available around the end of the year.

At the 9th Experimental Safety Vehicle meeting in Kyoto, Japan, recently, NHTSA officials announced that the fallout from the first phase of the program—"gained at a minimal cost to the government and taxpayers since it is primarily an add-on to a scheduled compliance test program" — has been so worthwhile that the second phase is planned.

The program is not only to be continued but all '83 models scheduled for compliance testing for Standards 212, 219 and 301 — windshield and fuel system integrity—will be tested at 35 MPH—five MPH higher and with 34 percent greater energy absorption than required by any safety standard.

The preliminary list of those vehicles includes: Buick Riviera convertible, Chevrolet Cavalier convertible, Ford Mustang convertible, Ford Tempo four-door sedan, Ford Thunderbird coupe, Dodge 600 four-door sedan, AMC/Renault Alliance four-door sedan, Honda Prelude coupe, Isuzu Impulse coupe, Mazda 626 four-door sedan, Mitsubishi Cordia two-door hatchback, Mitsubishi Tredia four-door sedan, Nissan Pulsar four-door hatchback, Toyota Camry (front-wheel version of the Corona) four-door sedan, Toyota Tercel four-door hatchback, Volvo 760 GLE four-door sedan, BMW 320 four-door sedan, Ford LTD four-door sedan, Chevrolet Caprice four-door sedan, Buick Century four-door sedan, Mercury Capri two-door fastback and Peugeot 505 four-door sedan.

At the meeting in Kyoto, NHTSA engineer James Hackney announced the agency was considering test devices and procedures to assess new models for their side impact crashworthiness.

The cooperative research NHTSA plans with the domestic car companies and their counterparts in Europe and Japan should lead to agreement on a dummy and a standardized deformable barrier. First results in this area may be announced next February at the SAE meeting in Detroit.

While the dummy developed by the Highway Safety Research Institute at the University of Michigan has been chosen for an interim test device,

Griskivich gets highway safety post

WASHINGTON. — Peter Griskivich, vice president and director of the MVMA's Motor Truck Manufacturing Division, has been named chairman of the National Highway Safety Advisory Committee by Transportation Secretary Drew Lewis.

Griskivich, a Washington resident, chaired a meeting of the 35-member council, which was held Dec. 8-10 in Washington.

Peugeot marks 25 years in the U. S.

The 1983 Peugeot 505 S Silver Edition is a limited-edition model that marks Peugeot's 25th year in America. Available in fuel-injected gasoline and turbocharged diesel versions, it is finished in a rich silver metallic paint. Only 1,500 will be produced.

But that poses problems for U. S. products

VWoA recovery plan: Specialty cars

By Kathleen Hamilton
News Editor

Volkswagen of America is betting its low-volume special-series cars will appeal to enough young professionals to offset what it sees as a temporary indifference by Americans toward fuel-efficient cars.

VWoA won't be abandoning the low-price, mass-market Rabbit, but "we will not be the cheapest kid on the block," Volkswagen Division Vice President James R. Fuller said.

James R. Fuller

That's because VWoA will produce cars with features the public demands from German cars—stiff suspensions, quick braking and the like, he said.

In outlining the company's product and marketing strategy to the Detroit Auto Writers Group, Fuller said diesel orders are now taking about 25 percent of production.

That share is expected to grow to up to 30 percent in 1983, when turbocharged diesel engines are introduced for the Rabbit, Quantum and Jetta. Turbodiesels are expected to take about a third of all VWoA's diesel sales, he said.

"We think the reason people didn't buy diesels . . . was that they were not willing to contend with their performance" once gasoline became plentiful and its price disadvantage to diesel fuel disappeared, he said.

Many of the changes the market has wrought in this four-year slump are not just blips, but "fundamental structural changes," Fuller predicted. Three-year buying cycles have gone the way of the dinosaur, he said.

"People are going to buy cars when they break down.

Customers are planning to keep their vehicles longer; therefore, they are looking for longer-lasting, higher-quality, more-utilitarian vehicles much like Europeans do, according to this theory.

If it proves true, the high mileage, combined with the performance — and, hinted Fuller, the price — of the VW turbodiesels, should appeal to the long-range planning strategy of many buyers.

About 30 percent of VWoA's orders are for the new high-performance Rabbit GTI, Fuller said. The company will add zip to other models early in 1983, with the introduction of a water-cooled engine for the Vanagon van and by offering the 1.8-liter Audi 5-cylinder engine for the Quantum and Scirocco.

VWoA is giving advertising

Service Index drops, but stays ahead of '81

By Francis J. Gawronski
Service Editor

The rate of growth of service and parts business in new-car dealerships in October dipped 5.6 percentage points below the pace recorded the previous month, but it amounted to 103.2 percent of the business registered in the same month last year, according to the Automotive News Service Index.

The increase in October was the second lowest of 1982. The low for the year was recorded in July, when service and parts volume amounted to 100.3 percent of the business for the year-earlier month.

Although the rate of growth slowed, October marked the 20th consecutive month that the Service Index has shown an increase over the year-earlier month.

In October, four of the five indicators used to track service and parts business scored gains. The only one that dipped was repair orders written, which declined 2.8 percent below the number written in October, 1981.

The leading indicator was sales of parts and accessories, up 7.0 percent, followed by shop parts sales (those used on both customer-paid and warranty work), up 5.6 percent above the year-ago figure.

Gross profit on all labor, parts and accessory sales—the most important indicator from the dealers' viewpoint—was up 3.7 percent, while total labor sales (both customer-paid and warranty) were up 1.7 percent over the volume of the same month a year ago.

Figures used in the Service Index are averages compiled from replies on shop business from a cross-section of the nation's new-car dealers.

For the 10-month period of 1982, dealers' shop volume amounted to 108.0 percent of the volume reported for the corresponding period of 1981.

The leading indicator for the January-October period was shop parts sales, up 11.9 percent, followed closely by sales of all parts and accessories, up 11.4 percent.

Gross profit was up 10.0 percent, while total labor sales climbed 8.2 percent for the period. Repair orders written were down 5.0 percent.

SERVICE INDEX
103.2*

	Oct., '82 vs. Oct., '81	10 mos., '82 vs. 10 mos., '81
Gross Profit on All Labor and P&A Sales	+ 3.7%	+10.0%
Repair Orders Written	− 2.8%	− 5.0%
Total Labor Sales (Customer & Warranty)	+ 1.7%	+ 8.2%
Shop Parts Sales (Customer & Warranty	+ 5.6%	+11.9%
Sales of All Parts and P&A	+ 7.0%	+11.4%

*—Survey by Automotive News shows that dealers' service and parts business in Oct., 1982, was 103.2 percent of business in Oct., 1981. Service business in the 10 months of 1982 was 108.0 percent of business in the corresponding period in 1981.

New models to debut Feb. 17

1983 Thunderbird, Cougar detailed

By Roger Rowand
Engineering Editor

DEARBORN.—A Ford Motor Co. engineer disclosed fuel economy and performance figures for the Thunderbird/Cougar due for introduction Feb. 17.

Henry A. Nickol, chief power train and chassis engineer, discussed the cars at a regional meeting of the SAE here.

They will be offered with any of three engines—four, six and eight-cylinder — two types of automatic transmissions and, for the first time since 1960, a manual gearbox.

What Nickol called high-technology powertrain features for the line includes a new on-board computer, fuel injection and turbocharging.

He said a buyer looking for that high-tech equipment will find it in Thunderbird/Cougar with the optional 2.3-liter, four-cylinder turbocharged engine with electronic fuel injection and the five-speed manual with overdrive.

He said that car will go from zero to 60 MPH in 8.9 seconds. That compares with 9.3 seconds for the Porsche 924 turbo and 10.0 seconds for the Saab 900 Turbo, he said.

Fuel economy, not yet certified by the EPA, is 21 MPG city and 33 MPG highway, Nickol said.

The 5.0-liter V-8 with automatic overdrive will deliver zero to 60 in 10.9 seconds with 18 MPG in the city and 28 MPG on the highway.

With the standard 3.8-liter V-6 and standard three-speed automatic transmission with lock-up torque converter, zero to 60 is 13.9 seconds with fuel economy of 21 MPG city and 29 highway.

With the optional four-speed manual with overdrive, zero to 60 MPH is 12.8 seconds and mileage is 20 MPG city and 32 highway, he said.

Thunderbird and Cougar originally were to be introduced in mid-January. Delays were caused chiefly by the company's reluctance to man-up for an episode of rushing which would be followed by layoffs, President Donald E. Petersen has said.

Initially the cars will be built in Lorain, O. Later, Thunderbird will be built at Atlanta as well.

Defense seeks mass of data from U. S.

DeLorean trial delayed; new date is April 19

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. — The trial of John Z. DeLorean, who is charged along with two others in Federal District Court here with conspiracy to possess and distribute cocaine, has been moved to April 19 from January 7 by Judge Robert M. Tagasuki.

DeLorean and co-defendant William Morgan Hetrick are also scheduled to appear before Tagasuki this week for a bail reduction hearing.

DeLorean is free on a $10 million bond secured by his property in New York, New Jersey and Southern California. Hetrick remains jailed in lieu of a $20 million bond.

The third defendant, William Arrington, also remains in custody under a $250,000 bond.

The trial was rescheduled to allow additional time for the filing of pretrial motions and hearings on those motions. Earlier, attorneys for DeLorean had filed wide-ranging discovery motions that will take the government some time to answer.

In those motions, DeLorean's attorneys are seeking to determine the credibility of the government's main informant, James Timothy Hoffman, as well as how much the government told outsiders of the investigation that resulted in the arrest of the trio on the drug charges in October.

Hoffman has been identified as the "cooperating individual" who allegedly introduced DeLorean to Hetrick. The discovery request not only asks for all documents pertaining to Hoffman in the DeLorean case, but in other cases in which Hoffman has testified either as a defendant or a government witness.

• The DeLorean defense team is also looking for government records pertaining to any contacts the FBI or the Drug Enforcement Agency (DEA) may have had with the British government or the receiver for DeLorean Motor Co., Ltd.

Another request seeks similar information regarding government contacts with any individuals who were considering giving any type of financing or funding to DeLorean's ailing car company.

The motions include 48 separate requests for specific information regarding identities of undercover agents and informants, notes, videotapes, telephone logs and recordings resulting from DeLorean's meetings with undercover agents as well as from similar meetings conducted between agents and informants.

DeLorean's attorneys also want to know why Eureka Federal Savings and Loan Assn. was used in the operation and the nature of contacts between the financial institution and the government.

The discovery motions also seek information regarding the extent of involvement of James P. Walsh, the assistant U. S. attorney prosecuting the case, in the investigation and whether he "personally authorized a 'sting' operation directed against defendants John Z. DeLorean or William Morgan Hetrick or both."

Bugas among Ford's top executives in '47

John S. Bugas, second from left, was among Ford Motor Co.'s top executives seated around Henry Ford II, fourth from left, in April, 1947. Others, from left, are John R. Davis, Benson Ford, Ernest R. Breech, Albert J. Browning, Harold T. Youngren and Lewis D. Crusoe.

John S. Bugas dies; postwar Ford giant

DETROIT. — John S. Bugas, a key figure in the reorganization of Ford Motor Co. following the bitter power struggle between Henry Ford II and Harry Bennett in the mid-1940s, died Dec. 2, a week after undergoing heart surgery. He was 74.

Mr. Bugas retired in 1968 after nearly 25 years with Ford as an executive, officer and director. At the time he left, he was a vice president and consultant, reporting directly to Henry Ford II.

"John Bugas was one of my closest and dearest friends," said Ford. "His death is a tremendous loss to me personally. He, Mead Bricker and John R. Davis played key roles with me in reorganizing Ford Motor Co. in September, 1945."

Mr. Bugas was chief of the FBI's Detroit office when he was hired by Bennett in 1944. Bennett was impressed by the FBI executive's firm moves against thefts, bootlegging and black-marketing at the huge Ford-operated war plant in Willow Run.

• After Mr. Bugas fired a Bennet protege, his relationship with Bennett rapidly cooled. Subsequently, Henry Ford II turned to Mr. Bugas as an ally in his bid to wrest control of the company from Bennett, who was hired years earlier by Henry Ford I and eventually became the founder's closest confidant.

Henry Ford II had been released from Navy service in 1943 after the death of his father, Edsel, with whom Bennett long had been at odds.

After his grandfather reluctantly yielded the presidency of the company and gave him a "free hand" to make any changes, young Henry dismissed Bennett.

Bennett blamed Mr. Bugas for his firing and the rise of Henry Ford II to the top. "He called me every name in the book, and he knew them all," Mr. Bugas later recalled.

After the change in command, Mr. Bugas became director of industrial relations late in 1945, and for the next 14 years he gained a wide reputation in the field of labor relations.

Mr. Bugas directed the company's industrial relations activities, ranging from labor negotiations to employe services and company-wide personnel programs.

In 1946, Mr. Bugas became a company vice president and he

Two ships carry 1,028 autos and stock of parts

Final DeLorean cars head for U.S.

By Edward Lapham
Financial Editor

The last two boatloads of DeLorean sports cars are on the water, due to arrive at Baltimore later this month.

Sol A. Shenk, president of Consolidated International, Inc., Columbus, O., told AUTOMOTIVE NEWS last week that 1,028 cars and a "very large supply of parts" are en route to the U. S.

"We have acquired, in most cases, a five-year supply of parts, and in some cases a lifetime supply," Shenk said. "Even after all of the cars are liquidated, we intend to stay in the DeLorean parts business."

He said that of the 649 cars his company acquired in the U. S., about 300 have been sold. "They've all been sold to dealers," Shenk said. "I am selling cars and parts only to dealers because that is the ethical way to do it and I am an ethical businessman. We are positively not selling to individuals."

Shenk said he has not raised prices on either parts or cars.

"We have maintained the same price schedules the DeLorean Motor Co. was using the last 10 months or so," he said.

"We also have the parts people and parts facility in Irvine, Calif., so really, we've just picked up where DMC left off."

As previously reported, Jack Rakes, former DMC vice president, has joined Consolidated as vice president and director of Eastern operations, essentially a job parallel to his DMC position.

In addition, Jock Ferer, also a former DMC vice president, has joined Consolidated as vice president and director of Western operations, also virtually the same job he held at DMC.

Other former DMC employes who have joined Consolidated include Jack Wong and David Allen, both district managers, and Doug Semer, Western area service director and technical specialist.

Shenk said DMC dealers are reporting they are still getting a premium for the cars. "That's very good," he said. "I hope they can get as much as possible — they've had some very tough years."

He said he still "has people in Northern Ireland studying the possibility" of exercising an option which would allow him to reopen the Dunmurry plant.

"I would estimate that within six to eight months the cars will all be gone unless somebody or ourselves opens the plant," Shenk said.

"Right now that seems a very remote possibility."

VW beats auto rivals to Red China assembly

By Richard Feast
European Editor

WOLFSBURG, West Germany. —Volkswagen has beaten the world's other auto makers to an agreement for car assembly in the People's Republic of China.

It is believed to be the first deal with Red China on passenger cars, and it was achieved in the face of strong competition from major manufacturers in Europe and Japan.

The reaction from those who lost out—among them, Fiat, Renault, Citroen and Toyota — is that the Chinese have been playing them off against each other to learn about the latest technology.

The basic agreement, signed Nov. 29, calls for assembly of 20,000 Santana sedans and production of up to 100,000 engines annually, beginning in 1988. The surplus engine output would be supplied to other VW factories around the world in order to obtain foreign exchange to help finance the deal.

Discussions on the financial structure of the joint venture are continuing and decisions are expected by the end of next summer.

It is believed that the basic formula will find Volkswagen owning 50 percent, Shanghai Tractor & Automobile Corp. owning 35 percent and the Bank of China owning 15 percent.

Just how large the capitalization will be will depend on a review of the Shanghai company's production facilities.

Volkswagen's project team,

Bendix, Yaskawa sign robot pack

SOUTHFIELD, Mich. — Bendix Robotics Division has reached an agreement with Yaskawa Electric Mfg. Co. covering distribution and development of robots.

Bendix has been in the robot business for about one year and makes large-capacity robots. Yaskawa is Japan's largest robot producer with a line of lighter machines.

Initially, Bendix will distribute three Yaskawa robots in this hemisphere. It also will cooperate in a technology exchange and in developing new robots, Bendix said.

Lowry is appointed controller of Crain

Jack Lowry has been named corporate controller of Crain Communications, Inc., owner of AUTOMOTIVE NEWS.

He will be based in Detroit which has been selected as the site for the Crain corporate accounting department now in Chicago.

Jack Lowry

It will be moved on a gradual basis after the first of the year. By mid-1983 there will be about 25 working in corporate accounting and in data processing.

Lowry holds a masters degree in business administration from the University of Michigan where he also earned a bachelors degree in industrial engineering.

He worked in the Detroit office of Arthur Andersen & Co., a Big Eight certified public accounting firm, for eight years. Just before joining Crain, he was finance manager for a Detroit construction firm.

Lowry, 35, lives with his wife, Pamela, and their son and daughter in West Bloomfield, Mich.

NADA sets up convention hotline

WASHINGTON. — Effective Dec. 1, NADA will inaugurate a national, toll-free 24-hour telephone hotline with a recorded NADA convention update message.

The NADA Convention Newsline, in a two-minute recorded message, will provide callers with up-to-the-minute information on the convention activities, speakers and workshops. The toll-free number is: 1-800-241-0336. The NADA convention will be held Feb. 12-15 in Las Vegas.

Cut-rate loans spur rise; imports also gain

Domestic sales up 29 pct. for month

By Jenny L. King
Staff Writer

Domestic new-car sales in November showed their strongest gain for any month of 1982, with a total up 29.28 percent compared with the same month of 1981. Imports followed suit, reaching their best total since August and climbing 21.02 percent above the year-ago level. Lower interest-rate levels available through domestic dealers were most likely the key sales stimulant.

U. S. manufacturers' dealers retailed 558,146 new cars during November, up 29.28 percent from 431,726 a year earlier, and up 14.40 percent over the previous month's total of 487,871. It was their best monthly total since May's 584,074.

Import sales numbered 185,059, which was 21.02 percent ahead of 152,910 for the corresponding 1981 month. They were up 9.91 percent over October's 168,379.

The industry total in November was 743,205, an increase of 27.12 percent over 584,636 in 1981.

Industry year-to-date was 7,344,610, down 8.29 percent from 8,008,588. Domestic 11-month sales were down 9.23 percent, to 5,308,612 from 5,848,710, while imports were off 5.74 percent, to 2,035,998 from 2,159,878.

• With 25 selling days this November compared with 24 in 1981, the domestic daily selling rate averaged 22,326, up 24.11 percent from 17,989 in November, 1981.

All major U. S. auto makers except Volkswagen of America reported sales increases in November. General Motors was up 32.99 percent, to 359,349 from 270,198 last year. Ford Motor Co. sales were up 25.62 percent, to 122,661 from 97,646.

Chrysler Corp. dealers retailed 55,921 new cars in November, up 24.24 percent from 45,011; American Motors was up 42.47 percent, to 13,461 from 9,448, and VWoA reported sales of 6,754 U. S.-built Rabbits, down 28.32 percent from 9,423.

GM earned 64.38 percent of the domestic market for the month, up from 62.59 percent a year earlier. Ford dipped to 21.98 percent from 22.62 percent. Chrysler stood at 10.02 percent, down from 10.42 percent. AMC sales accounted for 2.41 percent, up from 2.19 percent, and VWoA earned 1.21 percent, down from 2.18 percent.

Imperial (down 25.80 percent) and VW were the only domestic makes unable to match or surpass last year's totals for the month. Chrysler was up 98.57 percent, Dodge was up 15.51 percent and Plymouth was up 2.91 percent compared with 1981.

Ford was up 27.51 percent, Mercury was up 11.49 percent and Lincoln was up 64.22 percent. Buick was up 36.56 percent, Cadillac was up 38.73 percent, Chevrolet was up 22.51 percent, Oldsmobile was up 42.66 percent and Pontiac was up 40.34 percent.

• Sales of new imported cars were buoyed by substantial gains for the largest companies during the month. Top-ranking Toyota was up 18.55 percent over last year, second-place Datsun was up 25.24 percent and third-place Honda was up 34.57 percent. BMW reported a sales increase of 80.55 percent and a record for the month; Mercedes sales were up 10.45 percent to a monthly record; Saab was up 34.42 percent to a record and Jaguar record sales more than tripled compared with 1981.

Others to report gains for the month included Mazda, up 22.65 percent; Subaru, up 28.10 percent; Volkswagen, up 46.26 percent; Porsche, up 29.99 percent; Renault, up 17.75 percent, and Volvo, up 6.63 percent.

The market class breakdown for the total industry in November this year compared with '81 was as follows: Imports had 24.90 percent, down from 26.16 percent; intermediates had 22.33 percent, up from 19.44 percent; compacts had 17.79 percent, down from 20.33 percent; subcompacts had 16.58 percent, down from 17.20 percent; standards had 12.00 percent, up from 11.04 percent, and luxury models had 6.40 percent vs. 5.83.

In the final November sales period, the domestic total climbed 13.87 percent, to 158,727 from 139,389. There were seven selling days both years, so their averages also had a difference of 13.78 percent, up to 22,675 from 19,913.

Annualized domestic sales figured on the Nov. 21-30 total were just over six million units.

GM sales were up 5.18 percent in late November; Ford was up 26.75 percent; Chrysler was up 54.08 percent, AMC was up an estimated 44.44 percent, and VWoA dropped 36.02 percent.

For the period, GM earned 59.43 percent of the domestic market; Ford had 24.25 percent; Chrysler earned 12.24 percent; AMC had 2.46 percent, and VWoA had 1.62 percent.

Toyota expands its range of minivans

Toyota has added the Master-Ace series to its line of Ace passenger vans. The entire Ace line has been rebodied, with the new models featuring much larger windshields, and neatly faired-in bumpers. The vans are available with 1.3, 1.6 or 1.8-liter gasoline engine or 1.8-liter diesel.

Toyota rebodies Town Ace, adds a leisure van model

By John Hartley
Staff Correspondent

TOKYO. — Toyota has rebodied its Town Ace cab-over van series, and has added an extra model aimed at the leisure market — the Master Ace.

Powered by either 1.3, 1.6, 1.8-liter gasoline or 1.8-liter diesel engines, the new models have smoother styling and much larger windshields than previously.

Large polypropylene bumpers project from the body, but are neatly faired in, while the nose slopes more than previously.

Town Ace wagon models — these are eight-seaters — have neat rectangular headlamps, while the Master Ace has a four-headlamp system.

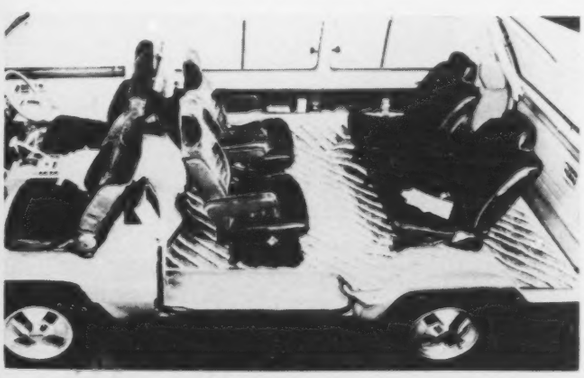
In addition to the front doors, there is a wide side door as well as the normal full depth rear door. However, since the front doors are partly over the wheelarches, the actual door opening is still fairly small.

Mechanically, Toyota has done a lot to improve performance. First, there are coil springs with four-link location at the rear axle instead of semi-elliptic leaf springs. Then, power steering in which the power assistance reduces as engine speed increases is available. Steering is very light for parking, but not too light for high-speed maneuvers. The automatic transmission is Toyota's four-speed version. Inside, there is an extra heater for the passengers in the rear.

As is normal with the latest versions of these vans, some models, such as the Town Ace Wagon Royal have very luxurious interiors. The four armchairs in the rear can be adjusted for comfort, and the front row can be turned around so that they face the rear row. Also, the seats on some models can be arranged to form beds.

Toyota plans to sell 8,000 units a month in Japan, split between 3,000 Town Ace vans and trucks; 3,000 Town Ace wagons, and 2,000 Master Aces.

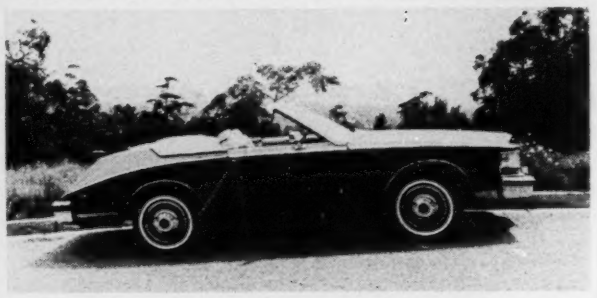
Exports to Europe and Australia are due to start at the end of the year.



Toyota's luxury minivan

Cutaway shows off nifty interior of Toyota's Town Ace Wagon Royal, featuring four armchairs that can be adjusted for comfort. The front seats can be turned to face the rear seats and, on some models, the seats convert to beds.

SEVILLE "ROADSTER" CONVERTIBLE



"AMERICAN CUSTOM COACHWORKS, LTD."

Very sporty and very elegant. The Seville "Paris" Roadster Convertible is a personalized 2 passenger touring car designed and styled for individuality and excellent roadability. The top mechanism is fully powered for ease of raising and lowering. Base units can be drop shipped to one of several manufacturing plants, or there are open factory (pool cars) presently in build that are available.

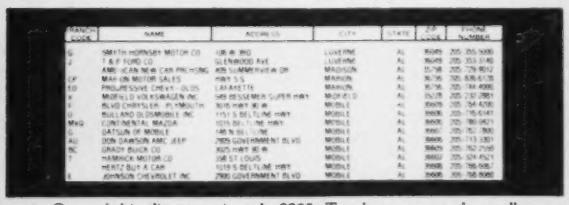
NEW CAR DEALER DIRECTORY
27,910 names - $295

The New Car Dealer Directory has been compiled from the Yellow Pages of approximately 4,800 telephone directories. It covers virtually every city and town all across the country; and includes name of dealership, address, zip code, telephone number and the major brand sold by the dealer.

This directory can be a perfect tool for Market Planning, Sales Prospect identification, Direct mail list, Telephone sales or as a reference directory. Brand information lets you select Chevrolet dealers or Toyota dealers or any other major franchise in any sales territory. The potential use of this directory is limited only by your imagination.



Cost of this directory is only $295. To place your order, call (402)331-7169 or mail your order today.

Predicasts forecasts 11 pct. annual increases

Continued growth seen for truck aftermarket

CLEVELAND. — The U. S. market for truck and bus replacement products is forecast to grow at a rate of nearly 11 percent a year, reaching more than $23 billion in 1995, according to a study by Predicasts Inc.

The market research firm says manufacturers' shipments of truck aftermarket parts, accessories and chemicals grew from $1.1 billion in 1967 to $4.9 billion in 1980. This growth reflected rapidly rising light truck registrations, steady heavy-duty vehicle registrations growth, an aging vehicle population, the trend toward preventive maintenance on long haul commercial vehicles and higher inflation rates since 1973.

Despite a slowing of future truck registrations (2.7 percent annually versus 6 percent between 1967 and 1980), truck aftermarket shipments will increase at a 10.9 percent annual rate, as a result of rising vehicle usage and a rapidly rising commercial vehicle population. Total shipments are forecast at $23.2 billion in 1995. Specifically, Predicasts sees shipments increasing 12.2 percent annually through 1985 and slowing to 10.3 percent annually thereafter, as inflation slows.

The study suggests that vehicle and engine design changes, vehicle mix changes and rising vehicle operating costs will alter the historic growth rates of many product groups. For example, the slowing of personal use vehicle registrations will adversely affect shipments of chemicals, batteries, brake parts and exhaust system parts. On the other hand, shipments of engine system parts, transmission parts and drivetrain products will benefit from a rising commercial vehicle population and the trend toward preventive maintenance.

Although heavy-duty trucks (Classes 7 and 8) and buses account for 6 percent of the total truck and bus population, they command a substantial 35 percent of total aftermarket shipments because of their high usage rate (over 50,000 miles per year) and growing preventive maintenance programs among owners of heavy-duty vehicles. Predicasts says heavy-duty vehicles consume nearly eight times the amount of truck replacement products (on a dollar basis) as light-duty trucks.

An important determinant of truck aftermarket demand is inter-city freight movement, and motor trucks account for about 25 percent. Motor trucks are expected to continue expanding their share of this market, accounting for 28 percent of the freight transportation market in 1995, when truck transport is forecast to amount to 1.1 trillion ton miles.

Predicasts says commercial truck operators are more concerned with the costs of vehicle downtime and problem diagnosis, rather than the actual costs of replacement products and labor. This concern has led to the establishment of extensive preventive maintenance programs which positively impact the aftermarket.

For instance periodic replacement is made on many parts such as filters, lubrifiners and oil. In addition periodic inspections are performed on engines and drive trains.

Of the $23.2 billion truck and bus aftermarket in 1995, nonelectrical parts will be the largest, accounting for 72 percent. Electrical parts will amount to $3.8 billion, and accessories and chemicals will total $2.6 billion, Predicasts expects.

Chrysler diesel school moves to larger quarters

WARREN, Mich. — Chrysler Institute, the training arm of Chrysler Corp., opened its newly relocated MoTech Diesel and Heavy-Duty Mechanic School Dec. 1 to train tuition students for jobs in diesel technology.

The school, operated by Chrysler Learning, Inc., a subsidiary, moved from Lyndon Avenue in Detroit to its new East Eight Mile site here to "gain space for expansion to accommodate increasing enrollments," according to Eugene P. Jacoby, director of Chrysler Institute.

"The new location provides us with 38,000 square feet on more than four acres," Jacoby said. "The facility is fully equipped for our training purposes, and public transportation to the door makes it easily accessible."

Chrysler Institute established the tuition school in 1981. The 40-week program evolved from a $1.5-million contract with the City of Detroit in 1980 to help meet the city's need for qualified mechanics to keep buses, fire trucks and other heavy-duty vehicles in running order.

Basis of the Detroit program was a Skills Improvement Program which Chrysler Institute launched in 1979.

Donald L. Maxwell, manager of Automotive and Industrial Training for Chrysler Institute, has responsibility for the school.

Maxwell said the MoTech program includes 1,200 hours of training on diesel engines, chassis and electrical systems and heavy-duty transmissions.

The school is licensed by Michigan, accredited by the National Assn. of Trade and Technical Schools (NATTS), approved by the Veterans Administration and to serve Vocational Rehabilitation clients and Social Security recipients.

It also is recognized by the Comprehensive Employment and Training Act (CETA). Job placement assistance is available.

Current enrollment of more than 100 includes 25 CETA-funded trainees under a contract with the City of Detroit that was launched Dec. 1.

The new site, formerly occupied by the Place Machine Division of Budd Co., will also house Chrysler Institute's Transmission Program that trains tuition students funded by the Michigan Commission for the Blind.

VW-Mazda dealership moves to bigger store

MESA, Ariz. — A ribbon-cutting, clowns, free refreshments and special car discounts were featured in the grand opening ceremonies for Berge Mazda-Volkswagen at its new dealership here.

Bill Furano, general manager, said the dealership moved because more room was needed.

Room for more students

Eugene P. Jacoby, right, director of Chrysler Institute, hands over the keys to the new Warren (Mich.) MoTech Diesel & Truck Mechanic School to L. R. Knowlton, manager. The tuition school, operated by Chrysler Learning, Inc., moved from Detroit's west side to gain space for increasing enrollments.

Modest recovery forecast for auto industry in 1983

New car sales in the U.S. will climb 10 percent to 8.6 million

By Edward Lapham
Financial Editor

DETROIT.—Next year should bring some recovery to the U. S. auto industry, but not to the degree needed for a real boom.

U. S. new car sales in 1983 will total about 8.61 million units, up 10.4 percent from 7.8 million units in 1982, according to the AUTOMOTIVE NEWS WORLD OUTLOOK (ANWO).

The reason for the listless outlook continues to be the anemic U. S. economy which has deferred a recovery through all of 1982.

ANWO, a joint venture between AUTOMOTIVE NEWS and Data Resources Inc. (DRI), projects the recovery will be gradual, with an annual sales rate below 8.1 million units in the first quarter, nearly 8.4 million in the second quarter, but not cracking the "9 barrier" until the industry achieves a 9.2 million-unit car sales rate in the fourth quarter.

"The economy remains trapped in recession as 1982 draws to a close," declares DRI chairman Otto Eckstein. "Hopes for economic recovery must now be focused on 1983."

Eckstein says cutbacks in employment, industrial production, capital spending plans and orders, as part of an inventory correction process, "have prompted a significant downward revision" in the recovery for a forecast.

"Signs of economic recovery continue to be elusive," he says. "Consumer response to the July tax cut is unenthusiastic to date, and the deterioration of the trade balance is chronic. Real GNP shows no significant growth in the fourth quarter."

Eckstein, a Harvard University professor and member of President Johnson's Council of Economic Advisors, is encouraging about long-term prospects, however. "Lower interest rates and subdued inflation provide the foundations for a sustained recovery once the inventory correction is completed," he says.

The ANWO forecast projects a moderately improving GNP through 1983, with a total annual increase of 2.2 percent. The 1984 growth in real GNP is projected at 4.4 percent.

In 1983 the automotive sector of the economy will plod along in step with the economy again.

Although the automotive outlook throughout 1982 was downgraded each quarter by ANWO, in conjunction with lower economic expectations, one aspect has remained relatively unchanged: Auto import penetration still is expected to decline.

Domestic penetration, estimated at 72.34 percent in 1982, will grow to 73.52 percent in the first quarter, and increase gradually to a fourth quarter share of 75.61 percent, making an annual penetration of 74.58 percent. Domestic penetration in 1984 is expected to be about 76.65 percent.

Timothy Kula, DRI district manager in Detroit, says the improvement in domestic penetration is almost by default. "We assume the Japanese once again will dissipate strong protectionist sentiment in the U. S. by voluntarily rolling over the import restraints for another year," Kula says.

"Japanese car sales in the U. S. should top off at a 1.68 million rate until April, 1984 after which we believe there will be some kind of agreement which will allow Japanese imports to increase along with sales at a set penetration."

ANWO also projects a shift in U. S. car market segmentation through the forecast period. Full-size and intermediate models will account for about 62 percent of total industry sales in 1982 and again in 1983 but will fall to about 47 percent in 1984, according to the forecast.

"There are two kinds of action here," Kula notes. "There are actual shifts in segmentation as well as changes in segment volumes. The segmentation shifts are from new model entries while the changes in segment volumes reflect a change in buyer preferences.

"Much of the change relates to the real price of gasoline. Real gas prices actually declined in 1982. We see slight growth in real gas prices in '83, including the gas tax increase, and in 1984 a substantial increase," he says.

Light-truck retail deliveries, which surged in mid-1982, are expected to finish the year at about 2.27 million units and slowly gain momentum through next year for a 1983 annual sales tally of 2.54 million units.

The gradual growth in sales rate will continue through 1984, according to ANWO, with a 1984 sales tally of more than three million units.

Heavy-duty truck sales also will have a moderate recovery, according to the forecasts. Sales for 1982 are about 210,000, rising to 250,000 in 1983 and 280,000 in 1984.

"There will be at best a moderate recovery in demand," says Jim Hendrix, DRI trucking ser-

Continued restraints much on minds of Japanese importers

They expect a modest rebound in total U. S. new-car sales during the next 12 months

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. — Despite restrictions that limit the number of cars Japanese manufacturers can sell in the U. S., import executives see an upturn in the total U. S. market during 1983.

The sales rebound will be modest, according to projections by Japanese import firms, who concede there probably will be a third straight year of restraints imposed by the Japanese government. Local content also is shaping up as a hot issue in 1983, they say.

"The overall market will be a lot better by comparison to this year," according to Norman D. Lean, senior vice president and chief operating officer of Toyota Motor Sales. "This year will finish at 7.8 million cars," he says, predicting the industry is "looking to do 9.1 to 9.2 million next year."

Whether the industry can hit the 9-million-unit rate early in the year depends on the types of programs in place, Lean says.

"If they keep up advertising incentives and introduce new models, we'll move into it quite quickly." He says "subsidized finance rates" offered by manufacturers are working well: "Anything that effectively reduces the monthly payment will move cars."

There will be a payback, however, "if they stop the programs too quickly," Lean says, explaining that the trick will be "to phase them (incentive programs) out gradually as demand increases." As a result, many of the incentive programs may continue through the first quarter, then slowly be dropped as the spring market picks up steam.

In addition, prices should tend to moderate. "We've got to hold the line on that (prices)," Lean says. "We demonstrated it with Tercel." The new Tercel's price has been kept the same despite a reskinning of the car, and Lean says it is the company's fastest moving line.

Next year promises to be good for the small truck market, according to Lean. "The small truck deal is really wild," he says, predicting industry sales may go as high as 1 million units next year.

Lean does not see Japanese import restraints going away, but feels they have done little to help the domestic industry. "We don't like it. It's a placebo for some, but headaches for us and our dealers," he says, adding that it's likely to continue a third year. In a non-restricted environment, Lean estimates Toyota would be running about where it was two years ago when car and truck sales were about 800,000 units.

• For 1983 Charles P. King, Nissan Motor Corp. U.S.A. vice president - sales, sees a total U. S. car market of 9 million units, with domestic models taking 6.5-million and imports 2.5 million.

"Our objectives for the 1983 model year embrace sales targets of 475,000 cars and 125,000 trucks for a total of 600,000 units," King says. The company expects to finish 1982 with sales of 452,000 cars and 97,000 trucks.

The rebound in the U. S. car market will be gradual, King believes, although he expects a robust rate of growth in the Gross National Product (GNP) by the end of 1983. According to King, GNP should be increasing at a three to four percent rate by the fourth quarter.

For the auto industry to recover, however, King says consumer confidence has to be rekindled, and the key to that is interest-rate stability. "Interest rates have to get to 10 or 11 percent and stabilize," King says. He calls subsidized finance rates offered to consumers "a success," and expects them to continue through the first quarter, then possibly be dropped in the spring. He adds a drop in sales is possible when incentive programs are eliminated.

Further down the road, King sees both domestic and import sales climbing, and that by 1985 American auto makers can expect sales of 8.4 million cars and importers a record 3 million.

• Cliff Schmillen, American Honda vice president - auto sales, is less optimistic. "It's not going to be better than this year," he says of the market. "Sometime late next year, the economy will turn around." The modest recovery will bring a slight increase in car sales, he says.

For 1983 Honda's quota is 348,000 units, although Schmillen says the company expects a 10 percent increase in sales as its new Ohio plant builds up steam on Accord sedans. Approximately 35,000 are expected to be produced there next year and by early 1984, Schmillen projects, the plant will be operating at its 150,000-unit capacity.

U. S. output will allow the company to expand imports of other model lines, most notably Prelude. The sporty coupe is scheduled for overhaul midway through 1983 and the U. S.-built Accord will allow Honda to hike monthly shipments of the new Prelude 50 percent from 3,000 to 4,500 per month. "It (the new Prelude) will account for approximately 15 percent of our model mix," Schmillen says.

The City minicar is unlikely to appear in the U. S. in the near future. "They're selling every City they can in Japan," Schmillen says. "We won't get it here." Although he would like to sell the minicar in the U. S., Schmillen hints "something better will come along later."

Modest growth beginning next spring is the outlook offered by John C. Reilly, senior vice president and general manager of American Isuzu. "I think the total overall market will pick up some in May or June," he says. "I don't think it will be anything dramatic." He figures buyers most likely will be those replacing worn out cars.

The gradual upswing will result in total sales of 8.8 to 9 million cars in 1983, according to Reilly. The recovery, in light of upcoming political elections, will continue in 1984 with the total U. S. market posting sales of 9.4 to 9.5 million cars, he predicts.

Vehicle price is a hurdle that has to be overcome in order for the car market to rebound, Reilly notes. "It's a price-sensitive market," he says. "I think rebates will go away, but subsidized interest rates will stay through the first quarter." Although the interest programs have been successful, Reilly doesn't see consumer loan rates falling much, which "could hinder the recovery."

Another area of concern for Isuzu is diesel sales. Reilly attributes the bottoming out of the diesel market to two factors: The narrowing spread between gasoline and diesel fuel prices, and the highly publicized problems with General Motors diesels.

Reilly thinks diesels could come back quickly given an increase in the spread of gasoline and diesel fuel prices or a fuel crunch generated by a recovery in the world's economy.

In 1982 diesels represented approximately 65 percent of Isuzu's model mix. Reilly sees that settling at about 50 percent next year. While diesel sales have softened, Isuzu has experienced a 45 percent increase in small truck sales and is looking to sell 25,000 next year, 25 percent more than this year's total of 20,000. "S-10 and Ranger (GM and Ford products) have taken a dramatic share of the market," Reilly says. "The question is whether they will maintain it. If quality is good, they stand a good chance."

Next May Isuzu's car line will be bolstered by addition of an Impulse 2+2 sport coupe. "We'll be able to generate excitement with Impulse, mainly because it is all new," Reilly says. He expects monthly shipments of 1,400 to 1,500.

Newest entry in the U. S. market, Mitsubishi Motor Sales of America (MMSA), is locked into a 30,000-unit level for passenger cars because of the restrictions. However, Richard Recchia, executive vice president and chief operating officer, feels the total U. S. market may increase by several percentage points during 1983.

"There won't be a sudden surge," he says, adding that the lower prime rate "won't be felt until next spring. We should be back at a decent rate (of sales) by next fall, but it won't be anything to write home about."

Recchia sees at least an 18 month climb back to where the market should be and feels winter weather will keep sales down in the short term.

Subsidized financing programs, should they expire before the market has recovered, also will have an effect on limiting the sales rebound. "It's taken us a long time to educate the public on prime rate," Recchia says. "Now that they've gotten the message, those who haven't taken advantage of the 9.9 or 10.9 financing are going to sit back and wait."

• For Subaru of America 1983 will be a status quo year for car sales. Tom Gibson, senior vice president - sales, expects them to reach the same level as 1982, about 144,000 to 150,000 units, due to import restrictions.

Gibson expects the company's parts and service business to expand, however, while Subaru Financial continues to develop and wholly owned distributors continue to generate a profit.

For the overall auto market in the U. S., Gibson projects 1983 at 9 million units with most of the gain realized by domestic makes; he expects a 2.2 million year for imports.

Gibson does not foresee retail interest rates "tumbling down" rapidly, but declining gradually. The prime interest rate, he anticipates, will stay down until next spring, then go up, but not to record levels of the past two years.

Outlook

Continued from Page E-4

vices director. "There should be a little sharper recovery in production, however.

"Inventories have dropped to very low levels and once the recovery begins there will be bigger line rates, which will result in slight accumulations."

Hendrix believes '83 will be moderate "because vehicle utilization stays low" throughout the year.

"Excess fleet will be used to pick up tonnage for most of '83," he says. "That will take a large hunk out of final demand for new vehicles."

European

Continued from Page E-35

says, without citing numbers. "We're asking those who are not committed to part friends."

Meetings have been held to keep dealers informed of the situation, and Brown says flatly, "We're operating for survival and the dealers should know."

Rumors have circulated about various alternatives for Fiat including a new distribution system by independent distributors, but Brown says he has no knowledge of this.

• With sales running 110 percent over 1981, Graham W. Whitehead, president of Jaguar Rover Triumph, has reason to be pleased. He expects to finish 1982 with 9,500 Jaguar sales and looks for 11,000 in 1983.

Since the company dropped the MG, Triumph and Rover lines in the U.S., Jaguar sales have boomed, and Whitehead fully expects the luxury car market (around 440,000 total sales in '82) to increase slightly in 1983.

While he "hates forecasting," Whitehead says indications are for a general upturn in the market, "but for Jaguar it is time to devote more effort to improved service programs and distribution. It's a year to grow, but also to attend to other matters."

For Peugeot 1983 appears to be a year it may reach 20,000 units, according to Pierre Lamaire, president of the import firm, which will finish 1982 about 2,500 units below its original projection of 17,000. Lemaire noted this was "directly connected to the decline in the diesel market" in the U.S.

Lemaire calls it a "stabilization" of the market after a boom in diesel demand, and for '83 Peugeot will put more emphasis on gasoline models. Scheduled for introduction in 1983 is a 505 station wagon in turbodiesel and gasoline versions.

Anthony Aldarelli, general sales manager, believes the drop in diesel sales probably worked to the company's advantage for the long run by turning the company's attention to the gasoline models.

Lemaire forecasts total auto sales in the U.S. of 9 million in 1983 with "domestic car makers getting the greatest benefit."

With new Porsche and Audi models coming next year, Peter Fischer, vice president and general manager of Volkswagen of America's Porsche-Audi Division, sees a 10 to 12 percent increase for the combined marques in '83.

But the real jump will come in the Porsche line for which Fischer projects a 40 percent increase to 20,000 units.

Fischer expects the division to finish 1982 with around 60,000 units, 46,000 of them Audis. He sees Porsche reaching 20,000 units and Audi 47,000 in 1983, "primarily because of the phase-in of the replacement for the Audi 5000."

Also in store for 1983 is added production of the Porsche 944 and the introduction of the 928S and 911 Cabriolet.

Fischer concurs that the "spark has gone out of the diesel," but believes there is a place for it at Audi which will continue to offer it "with some adjustments in mix."

Next year promises to be another of growth for Saab-Scania of America. Robert J. Sinclair, president, forecasts 22,000 sales in '83, up from 18,000 this year, which represents a 28 percent increase over 1981.

A pressing task for '83 will be continued development of the dealer organization, particularly in service. Sinclair notes it is "good now, but has to develop in line with the projected car sales."

The company also will concentrate on developing sales on the West Coast, but is not looking to increase the number of dealers to a great extent, according to Sinclair.

Sten O. Helling, vice president—sales, says Saab's growth "will be a function of the growth of the demographic group it is in." This is projected to grow to 322,000 units in 1983, up 38 percent over 1982.

Saab has an even balance of turbo and normally aspirated car sales which Sinclair says is important "because we do not want to be too specialized."

A goal for '83, as in the past several years, is to increase sales per dealership. Sinclair notes that when he took the helm of the company, average per-dealer sales were four cars a month and is now six.

• In 1983, for the first time, Volvo of America will hit 70,000 sales, and Bjorn Ahlstrom, president, expects 1983 to be another strong demand year with sales reaching 75,000 to 78,000.

The new 760 model has generated excitement and while probably fewer than 10,000 will be available in 1983, Ahlstrom sees it as having an effect on the entire line.

The company forecasts between 9 and 10 million industry sales in the U.S. next year with most of the upswing going to domestic manufacturers.

Joseph L. Nicolato, senior vice president — car operations, says '83 is a year Volvo would like to see its dealers involved in all aspects of the business including leasing, financing and insurance.

Ahlstrom does not expect Volvo's dealer network of 410 to expand in '83, but plans on growth in sales per outlet.

Subaru honors Boch for sales record

PENNSAUKEN, N. J.—Ernest J. Boch, chairman of Subaru of New England, Norwood, Mass., set a record by selling 2,683 Subaru vehicles in a single month.

Boch is the Subaru distributor for Connecticut, Maine, New Hampshire, Rhode Island, Vermont and Massachusetts. He received a special award from Tom Gibson, senior vice president, sales and marketing of Subaru of America.

Dow Corning will market Japanese silicon fiber in U.S.

MIDLAND, Mich.—Dow Corning Corp. and Nippon Carbon Co., Ltd., Japan, have announced a test marketing agreement under which Dow Corning will be the distributor in North America for Nicalon silicon carbide fiber products manufactured by Nippon Carbon.

Dow Corning will introduce Nicalon fiber into aerospace and other high-technology industries.

Nicalon continuous silicon carbide fibers are manufactured through a unique new polymer process under development in Japan. The 10 to 15-micron-diameter fibers exhibit strengths of more than 350,000 PSI and moduli greater than 26 million PSI, Dow Corning said. Good psysical properties are retained at temperatures well in excess of 1000 degrees Centigrade.

Nicalon fibers exhibit excellent chemical resistance and are readily wet by most resins and aluminum, Dow Corning said, adding that the fibers are easy to handle and can be woven or formed by conventional techniques.

Nicalon fiber is expected to be used in plastic, metal, and ceramic matrix composites. Its high temperature resistance and ability to be wet make it especially suitable for aluminum matrix composites now being developed for aerospace applications, according to Dow Corning.

The fiber may also be used for high-temperature insulation and other fibrous products.

Make a Smooth Shift.

Prices are rising—and your market is changing.

More and more, customers who once would have insisted on brand new automobiles are opting for the savings and satisfaction of quality late-model used cars. The kind that may be scarce on your lot.

How can you smooth this shift in market conditions? Regulate your used car inventory at a Manheim Auction. You'll find more of those front-line '78's, '79's and '80's you need—at profit-boosting prices. You'll find plenty of buyers for your real performers!

And you'll find something else equally important: fair and equal treatment—the Manheim way.

Make a smooth shift—at a Manheim Auction.

Packwood leads effort in Senate

Opposition to local content gains

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—An attempt is being mounted in the Senate to block action during the lame-duck session of Congress on the UAW-backed auto local-content bill.

Behind the effort is Senator Robert Packwood, Oregon Republican and chairman of the Senate Commerce Committee.

Hearings are scheduled before the full committee Dec. 16 and 17—the now-scheduled and theoretical end of the 97th Congress, when all bills die.

Packwood is expected to be a strong opponent of the UAW measure which he feels may create a few auto-related jobs but steal jobs from other segments including those of UAW members working on Boeing aircraft in Oregon.

He is asserting his leadership over two other members of his committee—Senator Wendell Ford, the Kentucky Democrat who chairs the Consumer Subcommittee and who is the chief sponsor of the UAW bill, and Jack Danforth, the Missouri Republican who chairs the Surface Transportation Subcommittee.

Danforth is a strong opponent of the UAW content bill and the chief sponsor of a trade reciprocity bill.

As the House prepared at press time to ram through the UAW bill — probably with an amendment geared to save American Honda which has already spent $250 million here and is now making Accords in Ohio—the Senate move is very important.

• Last week, rumors abounded that two labor-oriented Democrats, Senators Carl Levin of Michigan and Howard Metzenbaum of Ohio, were planning to add the UAW bill to a "must" bill guaranteed to slide through the Senate at the last minute.

This would present President Reagan—an opponent of protectionist legislation — with the hard choice of vetoing a bill widely advertised as a "jobs bill."

The Packwood announcement of hearings before the full Committee should at least contain the UAW bill — even if the House, as expected, passes the bill this time 'round. But the issue is certain to reappear next Congress.

At press time, positions were hardening and tempers flaring as House action neared. With 222 House sponsors—some now wavering — it appeared certain the modified UAW bill would pass.

But equal time was being allotted to the House Energy and Commerce Committee Chairman John Dingell, Michigan Democrat, and to the House Ways and Means Trade Subcommittee and its chairman, Sam Gibbons, Florida Democrat.

During the House Rules Committee debate, there was no lack of similar opinions and invective coming from those who predicted salvation of the auto industry and those who said protection merely keeps an industry noncompetitive.

The bill has already made strange bedfellows—Democratic boll weevils, conservative Republicans and the Reagan Administration lined up with true-blue liberals on one side. On the other side were other true-blue liberals and labor supporters, especially in the Northeast-Midwest belt of auto-related unemployment who support the UAW in its final salute to retiring UAW President Douglas Fraser.

The number of opponents far outweigh the supporters, but labor has the tremendous emotional appeal of unemployment in its corner. Its argument—disputed by some including the influential Congressional Budget Office—is the bill that will entice foreign auto companies to manufacture in the U. S.

Nissan, however, which has already spent $100 million at its little truck making plant outside Nashville, says if the bill is passed, it may have to abandon its plans. It is hoping Senate majority Leader Howard Baker, Tennessee Republican, will help stem any tide in the Senate.

Opposing the bill is the entire farm lobby, as well as the National Assn. of Manufacturers, the U. S. Chamber of Commerce, the Reagan Administration, NADA, the National Independent Automobile Dealers Assn., Volkswagen of America, American Honda, General Motors, Ford Motor Co. and, standing somewhat aside—American Motors/Renault and Chrysler Corp.

Although scheduled at press time, House debate may not actually start until today (Dec. 13). But the debate will be hot and heavy and the door is wide open for amendments. The week will end with equally hot and heavy debate at the Senate Commerce Committee hearings.

obituaries

HOUSTON. — John H. Blankenship, 64, vice president and general manager of Sam White Oldstown here for 31 years, died Nov. 19.

C. Warren Cheely

EAST POINT, Ga. — C. Warren Cheely, 64, president of Cheely Motor Co. (Volkswagen-Subaru), died Nov. 10. He formed the company in 1960 as a Volkswagen dealership and added Subaru in 1975. Mr. Cheely retired from active management in 1976.

New Jersey Senate OKs new-car lemon legislation

TRENTON, N. J. — New-car "lemon" legislation has passed the state Senate which would require auto makers to either buy back or replace a defective vehicle if four attempts were made to fix it or if the vehicle were out of service 30 days while the car is under warranty.

It now goes to the state Assembly for final consideration.

Norman Scherbert, government relations representative for General Motors, explained the bill requires the consumer to first go through a "qualified dispute settlement procedure" before the provisions of the bill take effect.

"Qualified procedure," according to Scherbert, means procedures established by manufacturers to handle consumer disputes that follow rules of the Federal Trade Commission. The bill does not disrupt the customer-dealer relationship or the manufacturer-dealer relationship, he said.

In New Jersey, there is no "lemon law" on the books. Similar legislation has passed in California, Connecticut and Kentucky.

Charles E. Walton, president of the New Jersey Automobile Dealers Assn., noted that as it is written, the dealer group has no major problem with the bill. But he termed this a compromise bill which the association and manufacturers worked to adjust in a number of ways after it was introduced.

"All parties are comfortable" with this bill, he said.

NHTSA's Peck denies charge of 'secret' talks with makers

Continued from Page 1

cess of caution" that he decided to terminate the advance notice.

Rep. Albert Gore, Tennessee Democrat, was still critical of the meetings with industry with no input from the public or other concerned industries like the insurance industry, with a delay in opening a docket and months of delay in terminating the advanced notice of proposed rulemaking.

Throughout the hearing, Peck was critical of Claybrook's charges. He countercharged that the Public Citizen report was "unacceptably erroneous" but seemed short on specifics.

Peck defended his filing with the appellate court on the time when the industry could put passive restraints in cars and said a staff report indicated an earlier date ignores changes that would have to be made to the standard, such as omitting the center front seat position.

Asked pointblank whether the decision to rescind Standard 208 (passive restraints) was "political or scientific," Peck replied it "was as scientific as any decision could be."

Responding to Claybrook's criticism of his absence at the conclusion of the Experimental Safety Vehicle meeting in Kyoto, Japan, Peck explained he was present three minutes before the scheduled conclusions but the meeting had broken up early. The reason for his lateness, he added, was because he had witnessed an air-bag demonstration at Takata Kogyo and then been delayed in traffic.

Winkler signs

Russell S. Winkler, left, signs a Chevrolet franchise agreement to become owner of Steve Winkler Chevrolet-Cadillac, Paris, Ill., as Robert F. Svendsen, Chevrolet Peoria zone manager, looks on.

Higher sales, lower output trim car stocks

Makers schedule 109,667 cars

Auto production moves up for week

U. S. auto production jumped 5.4 percent last week, the result of increases by General Motors and Ford Motor Co.

Domestic makers scheduled output of 109,667 cars last week, up from 104,044 the previous week and a 12.38-percent boost from the 97,589 assembled during the equivalent 1981 week.

GM scheduled inventory-adjustment downtime last week at its Willow Run, Framingham and Lakewood assembly plants. Additionally, GM's Bowling Green plant remained closed for model changeover. Bowling Green is scheduled to open Jan. 3. It will build the Corvette.

The GM closures were offset by overtime at four other plants. Working Saturday last week were GM Baltimore, Flint No. 40 and the Lansing "G" line. Daily overtime was slated at GM's Detroit (Cadillac) plant.

Ford San Jose and Metuchen plants remained closed last week to trim car inventories, while the company's Lorain (O.) plant remained down for model changeover.

Ford scheduled Saturday overtime work at its Wixom plant last week.

Volkswagen of America shut its Westmoreland (Pa.) assembly plant last week to trim Rabbit stocks. The plant was to reopen today (Dec. 13).

Both American Motors and Chrysler Corp. reported all plants operating on five-day schedules last week.

Year-to-date, the makers have assembled 4,889,372 cars, a 19.99 percent drop from the 6,111,683 built during the comparable period last year.

Truck production holds steady at 36,648 for week

U. S. truck production remained steady last week as increases by Ford Motor and Chrysler Corp. offset cuts by Jeep Corp.

Planned output was 36,648 units, up slightly from the 36,350 built during the previous week and up 18.58 percent from the 30,907 trucks assembled during the equivalent week in 1981.

Chrysler Corp. reopened its Warren truck plant after one week of inventory adjustment downtime. Ford resumed normal operations at its Louisville plant last week but, at the same time, shut down its San Jose point to trim truck stocks. San Jose will reopen today (Dec. 13).

Jeep closed its CJ-5/CJ-7 (junior) line at Toledo last week to balance inventories. The CJ line was to resume operations today (Dec. 13).

General Motors last week shut its Flint No. 1 plant to trim inventories. It reopens today. GM also scheduled overtime last week at its Lordstown (O.) plant.

Year-to-date, the domestic manufacturers have built 1,818,238 trucks, up 16.77 percent from the 1,557,111 assemblies of the comparable period last year.

Canadian output climbs as Ford reopens plant

Canadian car production soared 66.99 percent last week as Ford Motor reopened its St. Thomas assembly plant after a week of inventory-control downtime.

Car output last week was slated at 12,945 units, up from 7,752 the previous week, but down 14.67 percent from the 15,170 assemblies of the equivalent 1981 week.

Chrysler Corp.'s Windsor car and truck facilities remained closed last week because of a strike. American Motors' Brampton plant was closed last week to trim car stocks. It is scheduled to resume operations today (Dec. 13).

General Motors will reopen its Oshawa car and truck plant today (Dec. 13) after a two-week shutdown for inventory adjustment.

Year-to-date, Canadian makers have built 793,340 cars, up 2.87 percent from the 771,217 assembled during the comparable period last year.

Canadian truck production was targeted at 4,711 units last week, a 34.01-percent drop from the 7,139 of the previous week and down 49.70 percent from the 9,366 built during the equivalent 1981 week.

Cumulative truck production last week was 458,368 units, down 5.88 percent from the 486,987 built during the comparable period in 1981.

Truck dealers' efforts block retail excise tax collection

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — At press time, the details had not been worked out in the omnibus Gas Tax bill before the Congress, but one thing did seem clear: The nation's truck dealers appeared to be headed for one of their biggest legislative victories ever.

The House and the Senate Finance Committees, at least at press time, had agreed to lift the excise tax on most trucks and truck parts.

The point of collection of the excise tax on large trucks was to be changed from the wholesale level to the retail level. The change would be significant on a large truck. For example, the dealer would no longer have to borrow an additional $7,000 to pay the excise tax on a $70,000 truck he wished to floorplan.

NADA had been fighting for the changes for years. While it did not get all it wanted, it came closer than ever before.

Under the legislation now under consideration (and it must be noted things are still in a state of flux), the excise tax on trucks would be repealed provided the trucks had a Gross Vehicle Weight of less than 33,000 pounds.

In the case of truck parts, the House would also eliminate the excise tax but the Senate would retain it, at least for those parts unique to vehicles with GVWs of 33,000 pounds or more.

According to Capitol Hill sources, though, the Senate's tax on parts may be eliminated when the House and Senate confer to iron out the difference in their respective bills. DOT and the Department of Treasury have indicated they may support such a repeal.

Only in the excise tax on the very large trucks did the dealers actually lose ground. Both the House and the Senate Finance Committees increased it from the current 10 percent to 12 percent. But this tax will apply only to vehicles with GVWs of 33,000 pounds or more, and the tax will be collected at the retail level.

Mexico tightens import restraints

MEXICO CITY. — The government has published a list of guidelines for the automotive industry which will force it to reduce imports of foreign parts.

Among the components targeted for domestic production are 318 parts that are presently subject to import permits from the General Control Exchange. Thus, batteries, shock absorbers, axles, gasoline engines and pneumatic motors will increasingly be produced by the domestic industry.

For the first time, permits for automatic transmission imports may be withheld. All luxury items will be denied permits.

EPA would do the job for almost nothing

U. S. to spend $175,000 to test politico-backed fuel device

By Jake Kelderman
Washington Staff Writer

WASHINGTON.—The Federal Government, at the behest of two congressmen and the counsel to the Vice President, C. Boyden Gray, is about to pay as much as $175,000 for the testing of an alleged fuel-economy device that the EPA would test for next to nothing.

Known as the Webster-Heise Valve, for its inventors, Sherwood Webster, Richard Heise and Douglas Heise, the device is alleged to improve fuel economy by up to 20 percent, increase torque by up to 40 percent, decrease nitrogen oxide emissions by up to 50 percent, cut carbon monoxide by up to 45 percent and cut hydrocarbons by up to 13 percent.

Further, it is alleged to allow cars to run on 75-octane gasoline.

Among investors in the valve are former President Gerald Ford; Ford's former White House Counsel, John Marsh; Senator John Warner, Virginia Republican, and former Senator Carl Curtis, Nebraska Republican.

That political clout and a letter from Transportation Secretary Drew Lewis calling the device "extremely interesting" and a possible "breakthrough with respect to pollution control, fuel economy and octane ratings" may explain why the DOT is paying for the testing of the device.

• First brought to public attention about two years ago, the device has had a rebirth of sorts in the wake of a Congressional Research Service analysis concluding that it presents the "potential for substantial national benefits in fuel efficiency, reduced dependency on imported oil, improved balance of payments position and reduced automotive air pollution," and the subsequent call for further testing of the valve by Reps. James Broyhill, North Carolina Republican, and Richard Madigan, Illinois Republican.

The usual practice on fuel-economy devices is for the investor to apply to the EPA's Technology Assessment and Evaluation Branch for confirmatory testing.

That office, specifically established to assess the value of alleged fuel-economy devices, will accept a device for complete testing at EPA's Ann Arbor (Mich.) Emissions Testing Lab free of charge to the inventor, provided preliminary data indicates a reasonable potential for fuel-economy improvement.

To get such preliminary data, inventors typically need to equip a vehicle with their device and have it tested on a dynamometer at an EPA-approved test facility and over an EPA-

A Christmas Fantasy

Or John Z. the Snowman

'Twas the night before Christmas, Detroit was quite tense;
Sales were no better than Roger Smith's PR sense.
There were plenty of cars, there was no need to make 'em,
And with rebates we had to pay buyers to take 'em.
Efforts to sell cars were clumsy, maladroit,
Like Ford's Jackie Stewart at the Grand Prix-Detroit.

Auto persons nestled all snug in their beds,
While visions of just-in-time danced in their heads;
Local content and kanban did haunt all their sleep
and the thought of Yank soldiers driving Le Jeep.
(The names of the men at the top seemed to show
That American Motors is as French as Peugeot.)

And American workers singing "Honda over all"
And Canadian workers who won't work at all.
The Japanese found workers here an odd bunch—
Won't wear company caps or do pushups at lunch.
And DeLorean found, as have many good folk,
That things do not always go better with coke.

"To save Irish jobs I did this thing only;"
Some thought that was blarney, but most said baloney.
VW as a U. S. car maker took root,
But when things went sour, for McLernon, das boot.
"Other greats have been fired," Jim said without reticence,
And he cited his pal Iacocca for precedent.

Iacocca for president? Let's light up cigars;
He's had much experience dense-packing cars.
He'd be tough with the Russians, dealers say that's no bull—
'Cause they know he's a master of the old push-pull.
It's enough to stir up the political libido—
Now that Teddy won't run, why not go with Lido?

But now a most wonderous sight gives us pause,
There in a Full Cleveland is old Ronnie Claus.
He spoke not a word, but went straight to his work,
Tossed Gorsuch to the wolves, called Yuri a jerk,
Then waving an MX and thumbing his nose
At jolly St. Tip, up the chimney he rose.

He sprang to his sleigh and they soared off with ease
Like protectionist sentiment against Japanese.
But we heard him exclaim in a voice a bit hoarse
"Merry Christmas, Detroit—Oh, yes, stay the course!"

—Richard A. Wright

IRS probes U. S. subsidiaries of Toyota, Nissan and Honda

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — The Internal Revenue Service is investigating the U. S. subsidiaries of Toyota, Nissan and Honda for possible illegal profit transfers between themselves and their Japanese parent firms that could be depriving the U. S. Treasury of millions in taxes.

According to information obtained by AUTOMOTIVE NEWS, the investigation, a so-called 482 investigation, was begun by the IRS's Special Investigations Unit in August, 1978, and involves the fiscal years 1975 through 1978.

It is being conducted out of the IRS regional office in Los Angeles. It was triggered by the release — to the IRS by the U. S. Customs Service — of documents submitted by the Japanese firms in the course of the 1975 investigation of all auto importing companies for alleged dumping. That investigation found the Japanese makers innocent of such activity.

In the present investigation, the IRS is scrutinizing the manner in which the U. S. subsidiaries of Toyota, Nissan and Honda have chosen to determine, for tax purposes, the so-called "arm's length" or transfer price of vehicles sold to the U. S. subsidiaries by their parent firms.

This price, which is an expense to the U. S. subsidiary, plays a major role in what their taxable income will be for the year.

The IRS apparently suspects

Imports cut new-car stock to 51 days

By Richard A. Wright
Assistant Managing Editor

The inventory of new imported cars in the U. S. was trimmed during November, not as drastically as the domestic stockpile, but an already lean import stock got even skinnier.

The inventory of new imimported cars Dec. 1 totaled 374,775—which was actually up from 365,467 a month earlier—but at the higher sales rate was only a 51-day supply, down from 56 days Nov. 1.

The increase in the unit count is normal for this time of year—generally importers build their stocks toward a peak which is reached in February or March—but the decline in the days supply is a bit unusual.

The inventory of new imported pickup trucks was also

But Senate action on UAW-backed measure unlikely this year

House passes local-content bill

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — As expected, the UAW-backed automotive local-content bill passed the House of Representatives, but the margin — 215 yeas to 188 nays—was much closer than expected, especially since the bill had 224 sponsors.

That's probably as far as it's going this year. The bill has been sent to the Senate, but action there is unlikely before the end of the current session.

Morover, the House voted — 195 to 194—to accept a crippling amendment that — were the measure to become law—would cloud the outlook, if not gut it.

That amendment, offered by Rep. Millicent Fenwick, New Jersey Republican, added: "Notwithstanding any other provision of this Act, nothing in this Act shall be deemed to supersede the terms or conditions of any treaty, international convention, or agreement on tariffs and trade which is in existence on the date of enactment of this Act and to which the United States is a party."

The obvious reference is to the General Agreement on Tariffs and Trade (GATT). The UAW and the bill's major sponsors, Rep. Richard Ottinger, New York Democrat, and Rep. John Dingell, Michigan Democrat, say the bill does not violate GATT, but there are many others, including most trade experts, who feel that it does.

While some might view the vote as a going-away present to a lame-duck lawmaker and others as a recognition by the sponsors of trouble brewing, its existence can also be seen as giving hope to free traders — even though there is no trigger mechanism in the Fenwick amendment.

Another surprise was the overwhelming rejection given by voice vote to the "save-Honda" amendment. This was also offered by a lame duck, Rep. Clarence Brown, Ohio Republican, whose district includes the Marysville plant now producing Accords.

This was an attempt by Brown to retain a new foreign company operation and to save jobs for Ohio UAW workers and a way to say thank you to Honda for investing some $250 million and creating 2,000 new jobs in Ohio.

Honda has said it cannot meet the content requirements on the schedule set in the Ottinger-Dingell bill and will be penalized by restrictions on Civics and Preludes it must import to have a full line of cars. Honda was to be allowed lower content requirements and then to have the Secretary of Transportation decide in 1988 and later whether its content should be one-third or one-half. Honda hopes to reach 65 percent content within a few years.

But Ottinger and Dingell called the move a "sweetheart deal" for Honda that would give it a special niche and a move that would discriminate against Volkswagen which would have to meet a higher content.

Others argued that while

Hold the anchovies!

Domino's pizza chain has put 10 of these unique three-wheel Aero delivery vehicles into the field for testing. Built by Tritan Ventures, Inc., Ann Arbor, Mich., the Aero weighs about 800 pounds and is powered by a 250-cc engine that reportedly can yield up to 100 MPG. A small oven in the back seat keeps the pies warm. If the vehicles measure up, Domino's officials have said they would consider buying another 5,000 to 10,000 Aeros.

Unofficial estimate of 13-month union contract

Chrysler pact to cost $155 million

By Marjorie Sorge
Labor Editor

Chrysler Corp.'s new 13-month agreement with the UAW in the U. S. and Canada will cost the company about $155 million, according to company sources.

With the new contract, workers in the U. S. will get an immediate 75-cent-an-hour raise, which jumps to $1.39 by the time the pact expires Jan. 14, 1982. In Canada, workers got a $1.15 an hour upfront wage increase and that increases to $1.79 an hour by the end of the agreement.

The more substantial increase in Canada is due to the higher inflation rate and prices in that country. The Canadian Chrysler workers approved their contract on Dec. 12 and returned to work last Monday (Dec. 13), ending a 38-day strike.

The new contract will cost the company substantially more than the pact negotiated in September and rejected by the U. S. workers. That agreement provided workers with about 50 cents an hour in quarterly cost-of-living-adjustments (COLA) and increases in wages tied to the company's profitability. It was rejected overwhelmingly by the U. S. workers.

According to a high ranking Chrysler official, Chrysler cannot afford the new contract without borrowing money from internal projects. He said much of the cost of the new pact will be taken from the marketing area, but new projects and modernization plans will be the last to be sacrificed.

But while the company must take money from other projects

Fraser says Chrysler may avoid R&D cuts

By Roger Rowand

Chrysler Corp.'s new-product development budgets won't necessarily be sliced as the firm casts about to find funds to meet the cost of a new UAW contract. It's the marketing kitty that may feel the knife, UAW President Douglas Fraser said.

"Look at the enormous amount spent on merchandising. I think they can get money from that pot," he said. "There are a lot of places other than the product or new product plans to get that kind of money," Fraser said.

He is a member of Chrysler's board as well as president of the union. He withdrew from board activities during recent strike-marred negotiations that ended this month.

UAW members in the U. S. late last week were expected to approve a new 13-month contract. They reached an agreement with Chrysler after first rejecting proposals but working through a five-week strike by Canadian workers.

Canadian UAW members have

UAW, Chrysler adopt new absentee policy

By Roger Rowand

DETROIT. — The UAW and Chrysler Corp. are taking a tough love approach to their chronic problem of absenteeism.

An agreement reached during contract talks calls for a wiping clean of absentees' slates for a new start. They get an even break, starting now.

However, as of July 1, 1983, a new look will be taken at attendance records of today's chronic offenders. If there has been an improvement, no further action will be taken.

But if a chronic absentee has continued in that category, the employe will be subject to further union-management efforts.

These are some of the details of what will happen under the absenteeism plan. They come from a memorandum of understanding between Chrysler and the union acquired by Automotive News.

A national attendance council will be created. It will consist of two members each from labor and management.

The council will communicate attendance procedures to employes and can adjust those procedures from time to time as it sees fit.

The council also can explore other approaches to the absent worker problem.

• A six-step procedure will start Feb. 1:

Step 1—Joint union-management counseling involving the employe's chief steward and foreman.

Step 2—Joint counseling involving the employe's chief steward and general foreman. Worker informed next offense will bring five-day disciplinary layoff.

Step 3—That five-day layoff will be accompanied by counseling by employe's committeeman and foreman. Timeoff may be waived but employe will be warned next offense could bring 15-day disciplinary layoff.

Step 4—Disciplinary time off must be served. Further counseling by local president and labor relations supervisor. Employe told next offense means 30 days off.

Step 5—Time off must be served. Worker informed that further absenteeism will result in firing. A letter from the national attendance council may be sent to the employe's home advising the employe that firing can result if more absenteeism occurs.

Step 6—Discharge.

Employes with the worst attendance records will be identified and counseled. Those will be workers with absence rates, including absences for illness and non-job injury, of 20 percent or more in six months.

Terminated employes will have the right of appeal to the national attendance council.

Early-December tally shows fifth consecutive gain

U. S.-car sales up 13 pct. for period

By Jenny L. King
Staff Writer

Sales of domestic-built new cars in the U. S. climbed 13.28 percent in early December compared with the same period a year ago. It was the fifth consecutive 10-day gain.

But the Dec. 1-10 improvement looked less impressive juxtaposed with late-November sales or with Dec. 1-10 sales of 1980.

Nudged by lower financing rates available to new-car buyers, early December sales climbed to 142,995 from 126,234 last year, an increase of 13.28 percent.

The preceding sales period (Nov. 21-30) brought 210,917 deliveries. Two years ago Dec. 1-10 sales numbered 174,898.

There were nine selling days this year and last, yielding averages of 15,888 and 14,026, respectively.

Year-to-date domestic sales of 5,451,607 were down 8.76 percent from 5,974,944 last year.

In early December, General Motors dealers reported sales of 84,620 passenger cars, up 5.93 percent from 79,880 in 1981. Ford Motor Co. sales totaled 34,971, up 41.39 percent from 24,733. Chrysler Corp. sales were up 15.65 percent, to 18,303 from 15,826.

Estimated sales of American Motors units were 3,500, up 29.63 percent from 2,700, and Volkswagen of America sales stood at 1,601, down 48.27 percent from 3,095.

Of the domestic market in early December, GM sales accounted for 59.17 percent, down four percentage points from 63.28 percent last year. Ford earned 24.46 percent, up from 19.59 percent. Chrysler edged ahead to 12.80 percent from 12.54 percent. AMC stood at 2.45 percent, up from 2.14 percent, and VWoA dropped to 1.12 percent from 2.45 percent.

Ten of the 12 Big Three makes reported sales gains this Dec. 1-10 compared with a year ago. Missing the mark were Imperial, down 45.83 percent, and Plymouth, down 3.76 percent.

Chrysler sales were up 29.99 percent, Dodge was up 28.28 percent, Ford was up 45.18 percent, Mercury was up 25.51 percent and Lincoln was up 64.22 percent.

Buick was up 0.91 percent, Cadillac was up 1.61 percent, Chevrolet was up 5.24 percent, Oldsmobile was up 3.70 percent and Pontiac was up 23.40 percent.

DOMESTIC SALES

	Dec. 1-10, 1982	Dec. 1-10, 1981
AMERICAN MOTORS	3,500†	2,700†
Chrysler	4,274	3,288

Slammer time rule stretched by UAW

WINDSOR, Ont. — There's been a sweetening of one odd benefit in the UAW's Canadian master agreement with Chrysler Corp. It's the one covering time in jail for traffic offenses.

Under the new pact, a UAW member may spend 120 days in the calaboose without losing seniority. Previously, seniority was lost after 90 days in the jug.

U. S. to equip 6,000 cars in '85

Air-bag demo test moves a step closer

By Jake Kelderman
Washington Staff Writer

WASHINGTON.—The air-bag demonstration program the nation's auto makers have wanted for nearly as long there has been talk about passive safety, same a step closer to reality last week.

NHTSA and the General Services Administration announced a plan to equip as many as 6,000 cars in the federal government's fleet with the devices as early as the 1985 model year.

NHTSA sources said the air bags would be mounted on the driver's side only, and that they would go in a range of car sizes, although the safety agency had wanted all of them to go into subcompacts.

The safety agency also had wanted the devices installed as original equipment, but barring a firm commitment to this end, it is prepared to accept retrofitting of the devices, a source said.

NHTSA recently contracted with the Arizona State Police to retrofit 130 of their late-model Ford LTD cruisers with driver-side air bags as part of its effort to get in-use data on the controversial devices.

The GSA plan was immediately hailed by at least one auto maker and the insurance industry as a definite step forward.

Ford Motor Co.'s Roger Maugh, director of Ford's Automotive Safety Office, said the maker welcomed the announcement as a chance to resolve questions "that can only be answered by much greater in-use experience . . ." The program could shorten development time, he said.

• "Some concerns we would like to see evaluated include system effectiveness, usage rate for the lap belt that is an essential part of the system, actual repair frequency after accidents and the general acceptance of the concept," Maugh said.

Lowell R. Beck, president of the National Assn. of Independent Insurers—the group that earlier this year convinced the U. S. Court of Appeals here to overturn the NHTSA's rescission of the passive restraint standard—said the GSA was to be commended for its action.

"This is a great step forward," Beck said. He said he thought many corporate fleets, including insurance company fleets, will be ordering similar cars from the manufacturer who fills GSA's order. NAII, meanwhile is preparing to argue before the Supreme Court to let the Appeals Court decision stand regarding the passive restraint standard.

The GSA said it would also be fitting the passenger vehicles in its fleet with a high-mounted brake light which research has shown to be effective in reducing rear-end collisions.

The GSA operates a fleet of 85,000 vehicles, but not all of these will be fitted with the extra brake light.

A similar program involving District of Columbia taxi cabs showed the devices to be very effective in reducing rear-end collisions. While NHTSA was pleased with these results, it wanted a greater data base before moving ahead with regulations regarding the device, NHTSA sources said.

NHTSA will fund the air-bag demonstration program, but it could not say what the cost would be since this is highly dependent upon whether the installation of the air bag is OEM or retrofit.

No ordinary Christmas gift

Stephen Forristall, of Forristall's GT Cars of Houston, stands beside the Ferrari 308 GTS that actor Tom Selleck drives to weekly adventure on "Magnum PI." Forristall is including six Hawaiian shirts and a cassette tape of the show's theme song for the buyer of the $55,000 car.

Won fame as car designer and builder

Colin Chapman, 'Mr. Lotus,' dies

NORFOLK, England. — Group Lotus Chairman Colin Chapman, famed race-car designer and founder of Lotus Cars Ltd., died Dec. 15 of an apparent heart attack at his home, Ketteringham Hall, near the Lotus factory here. He was 54.

Anthony Colin Bruce Chapman was born in North London on May 19, 1928. He first built racing and trial cars in 1947. He founded Lotus Cars in 1955 with the help of 25 pounds he borrowed from his girl friend, Hazel, who later became his wife.

An ex-RAF pilot and a graduate of London University, Mr. Chapman was a brilliant innovator and a shrewd businessman. His influence on race-design was legendary and brought Lotus several World Championships as well as victory at Indianapolis.

He was an amateur race driver in the 1950s and it was from this stage of his life that Mr. Chapman became involved in passenger-car production. His first road car, the 1957 Elite, was a typical Colin Chapman creation—a fiberglass-bodied monocoque powered by an engine developed from a Coventry Climax firepump.

Demand for his small-volume car increased, bolstered by his fame on the race track. The company went public in 1968 and Mr. Chapman's successes made him a millionaire.

His early cars were sold as kits which customers assembled. Taxation changes in the United Kingdom forced the company to abandon the kit market. Lotus moved upmarket with more luxurious but still very sporty machines.

The current generation of cars —the Esprit, Eclat and Elite— was launched in 1975. Making more expensive cars meant making fewer cars. The 1981 output amounted to 345 cars, but production this year has been double that figure.

In recent years, the Lotus engineering department has been hired by other auto makers for developmental work. This led to the 1978 contract to help develop the ill-fated DeLorean sports car and, more recently, a contract to design the power unit in BL's new MG Metro Turbo.

Mr. Chapman had extensive knowledge of glass-reinforced plastics, exhaust emissions and turbocharging.

He was Mr. Lotus and commanded enormous respect and loyalty from his staff at the Hethel factory, where he was known affectionately as "the old man."

Mr. Chapman's right-hand man at Group Lotus had been Fred Buchell, the firm's accountant. Managing Director of Lotus Cars is Mike Kimberley. But Mr. Chapman was so closely associated with Group Lotus that it is difficult to predict a natural successor. So many of the key Lotus decisions were Mr. Chapman's.

Colin Chapman

Mr. Chapman is survived by his wife and three children, Jane, Sarah and Clive.

His unexpected death comes at a time when the fortunes of his company are at their lowest ebb. Two weeks earlier, Group Lotus had belatedly announced its 1981 financial results, showing a net loss of 109,000 pounds ($177,000) on greatly reduced sales.

Lotus needs a new financial backer. Its five-year loan agreement with American Express expired in September and has been extended through Dec. 31. Lotus' debt with AmEx amounts to 1.7 million pounds ($2.8 million).

Against this financial background, Lotus is re-establishing its own sales network in the U. S. following the breakup with Rolls Royce. The U. S. is considered a key market for Lotus, though for a period of about one year Lotus stopped building cars for the U. S. market to trim heavy inventories.

—Richard Feast

Ford airs big plans in paint technology

By Al Fleming
Industry Editor

Ford Motor Co. is applying a broad brush to plans for innovative automotive paint products during the next five years.

From now through 1987, development efforts in paint and coatings technology — including corrosion-resistant coatings, stone chip-resistant coatings and low-emission coatings — are expected to lead to:

1. Introduction of chip-resistant primers and stone chip-resistant coatings on upcoming 1984-model Ford Tempo and Mercury Topaz replacements for Ford Fairmont and Mercury Zephyr.

2. Unveiling of "unibase" materials — flexible, durable polymers—for use as a paint base coat on both steel and plastic auto exteriors; these are targeted for appearance on 1984 Mark VII and future models.

3. Breakthrough application of high-solids clearcoat and base coat polymers that reduce paint-operation emissions and are expected to go on the 1985 Ford Sierra and, later, the company's luxury models.

4. Full implementation by calendar year 1987 of emission-reducing paint systems throughout Ford Motor Co.'s network of U. S. assembly plants.

The research, development and trial projects have been under way in Mt. Clemens, Mich., where on Dec. 10 Ford unwrapped a new $5 million facility staffed by 76 engineers and technicians. Their job is to improve the corrosion resistance, durability, appearance and emissions of Ford paints and coatings.

• The new chip- and stone-resistant primer/coating slated for Tempo/Topaz models will replace vinyl coatings for lower-body side protection. The intent is to improve exterior appearance, get equivalent protection at half the coating thickness and eliminate in-plant "masking" operations required for vinyl applications.

Although impact-resistant materials already are used on some Ford and other cars in Europe, engineers in Mt. Clemens claim their new coating offers additional benefits of lower-temperature curing and much-improved corrosion resistance.

Following introduction on Tempo/Topaz in March, the new coating is planned for other car lines during the next few years.

Another project involves polymer development for high-solids enamels, basecoats/clearcoats and primers.

Several projects are moving ahead in Mt. Clemens including

Mardikian firm files Chapter 11 bankruptcy

SANTA ANA, Calif. — Albert Mardikian, owner of Trend Import Sales, Inc., of Newport Beach, has filed for bankruptcy under Chapter 11 in U. S. District Court here.

According to papers filed by Mardikian, he has claims and debts totaling $3,605,504.77 against his company and assets of about $1 million. Mardikian told several local papers that the California Air Resources Board's civil lawsuit seeking at least $310,000 in penalties forced him into the move.

In his papers, Mardikian reported $2.6 million in claims resulting from two lawsuits currently in litigation. The CARB action is listed at $1.6 million, while the other, a $1 million lawsuit, was filed 18 months ago by Dr. Rick Hartbrodt in a Torrance (Calif.) superior court.

According to Hartbrodt's attorney, the lawsuit was filed after several cars purchased by his client from Mardikian were seized by government agents as stolen cars. Although Mardikian was never implicated in the thefts, Lee Lipscomb, Hartbrodt's attorney, said the seller should be responsible for the financial loss.

By filing bankruptcy, Mardikian was able to obtain a stay on the litigation pending against him. Susan Durbin, the state's assistant attorney in charge of CARB's case, said she will file a motion asking that the stay be lifted.

shop talk

Continued from Page 10

4 percent, asuming an inflation rate of 4 to 5 percent."

Because of the increased age of cars on the road, Pond said the demand for parts should remain strong for the foreseeable future.

"However, given the 10 percent increase in car age since 1979, we have not seen the level of growth in repair activity that we would expect," he said. "The reason for this is some deferral of maintenance."

Pond said the high level of unemployment and the lack of growth of discretionary income over the last three years has caused many drivers to seriously neglect their cars.

"Fortunately, we do not see this as a long-term trend and, when the economy once again picks up steam," he said, "I think we are going to see a release of purchasing power for car maintenance and parts that should translate into strong sales growth for the industry in 1983."

Turning to the outlook for the shock and strut market overall, Peter J. Huber, Maremont's vice-president, sales and marketing, Domestic Automotive Group, said the firm is continuing its program to increase production of struts and strut cartridges, although this market is still in its relative infancy.

"While we are projecting total strut units shipped to grow from only 4.7 percent of the total market, or 2.2 million units, in 1981, to 10.6 percent or 4.75 million units by 1985," he said, "struts will account for 26.2 percent of total retail sales dollars in 1985."

For the shock and strut market as a whole, Huber predicted an overall flat to slightly declining market in total units between now and 1985.

"Total retail sales, however, should grow from $800 million in 1981 to slightly more than $1 billion in 1985," Huber said. "Beyond 1985, we are projecting continued sales growth due to the increasing number of strut-equipped vehicles."

While some 95 percent of all new domestic and import vehicles will be strut-equipped by 1985, Huber noted that only 45 percent of cars on the road will be strut-equipped at that time. Struts, with a higher ticket and absolute dollar profit margin, will continue to grow in unit volume and sales value well into the 1990s, he said.

• Huber noted further changes in the shock and strut business.

"Today, about one-third of all shock sales are in the do-it-yourself category," he said. "We expect this number to drop correspondingly with the increased usage of struts, since the do-it-yourselfer will be discouraged by the cost of the tools needed, the difficulty of replacement and the fact that a front-end alignment is often required when replacing struts."

On the exhaust side of the aftermarket, Huber said total aggregate volume in the industry has declined 1½ to 2 percent per year since the early 1970s, adding up to a decline of 18 percent in mufflers shipped by major manufacturers in the last decade.

"However, the declining unit volume doesn't tell the whole story," Huber said. "From 1970 to 1981, the total dollar value of the exhaust market increased approximately 170 percent from $650 million to $1.75 billion at retail."

Because of its market size, ranked third behind tires and batteries, Huber said the distributor and retailer cannot overlook the opportunities the exhaust market presents.

Huber estimated that one out of every four cars and light trucks on the road have some exhaust system work done on them each year and noted that there are several key factors which should result in an overall increase in exhaust-system repair work and total exhaust sales.

"These factors," Huber said, "include the growing number of vehicles on the road, the increase in the average age of vehicles on the road, the continued increase of total miles driven and the move to lighter gauge materials which reduce vehicle weight, which should increase exhaust wear.

"This past year we have seen indications that exhaust replacements on recent model cars are returning to pre-catalytic-converter era wearout rates," Huber said. "By 1985, we are projecting total retail sales of exhaust system parts to reach $2.25 billion, an increase of 28.5 percent over 1981 sales."

In addition, Huber projected a slight upturn in exhaust unit volume, reversing a 10-year decline.

BECAUSE OF THE NEW YEAR HOLIDAY, OUR DEADLINE WILL BE MONDAY, DEC. 20 FOR JAN. 3rd ISSUE

Hikes are $100 to $300 on 200-SX and 280-ZX; most trucks unchanged

Nissan ups prices on sporty models

CARSON, Calif. — Nissan U.S.A. has completed the pricing of its '83 models with boosts of $100 to $300 on 200-SX and 280-ZX autos.

Prices of eight pickup truck models are unchanged for '83, and five others rose $190 each.

Earlier, Nissan announced hikes of $100 to $300 on its Sentra, Stanza and Maxima cars (AUTOMOTIVE NEWS, Sept. 27). The company said the increase on its full line of '83 cars and trucks averages $198, or 2.2 percent.

Destination and handling charges were boosted $10 to $175.

Nissan also placed stickers on the rest of its Pulsar line, which replaces the 310 series for '83. The Pulsar two-door sedan is $6,299, and the four-door sedan is $6,499. They join the Pulsar NX coupe, previously announced at $7,399.

The newly priced 200-SX and 280-ZX are Nissan's sporty models. In the 200-SX line, the Deluxe hardtop and hatchback coupes rose $260 each, and the Sports Luxury hardtop and hatchback went up $100. The 200-SX models are priced from $7,999.

On the 280-ZX, Nissan announced increases of $300 across the board — the 2-seater and 2+2 coupes and the Turbo versions of those models. Prices of the 280-ZX start at $14,799.

Pickup truck prices start at $5,858 for the Standard regula bed. The Deluxe regular bed $6,529, and the Deluxe long b is $6,729. All are unchang from final '82 prices. Prices diesel pickups also are u changed.

Up $190 are the Sports Tru (2WD and 4WD), the Delu King Cab GL (2WD) and t 4WD regular bed and long b units.

Neoclassic maker finds showroom

CHICAGO. — Neoclassic-car maker Baroque Motorcars has entered into an agreement with its dealer here to use his new showroom for Baroque's national showroom.

Baroque President Russell A. Knudsen said the decision was prompted by changing flight schedules, which make access to the maker's manufacturing facility in Omaha difficult.

Remodeled facilities of Carriage Works, Ltd., here, feature Baroque models as well as other restored classic and exotic cars. Dealer is Marvin Guccione.

Toyota sweetens truck incentives

TORRANCE, Calif. — Toyota has added two programs to its "82 Record Challenge" truck incentive, which pays $250 on 4x4 gasoline pickups, $400 on 4x2 gasoline pickups and $550 on 4x2 diesels.

A new "Record Run" program, going from Dec. 3 to Jan. 2, 1983, pays dealers an extra $200 on every '82 or '83 truck they sell, once they hit a 100 percent qualifying December objective. The still-current Record Challenge program paid off only on '82s.

Under a "Pull for the Record," also from Dec. 3 to Jan. 2, salesmen receive a pull on a regional board, each time they se a truck, giving cash awards of $50 to $500. Sales managers earn a 25 percent bonus, based on whatever their salesmen earn.

Adams Motor Co.'s 50th year

Julian O. Adams, center, and his son, Julian R. Adam right, are joined by L. W. Baker, Washington zone manage for Chrysler Corp., on the occasion of the 50th anniversa of Adams Motor Co., a Chrysler-Plymouth dealership locate in Lynchburg, Va.

November total swelled by light-truck incentives

Truck sales highest in five months

Continued from Page 14

than triple the year-ago 10,650. The 11-month count of 341,336 units was more than seven times greater than last year's 47,592.

The Motor Vehicle Manufacturers Assn. reported 197,273 sales in November by dealers franchised by its members, an increase of 42.7 percent over last year's 138,244 units.

Through November, the total was 2,070,679, an increase of 12.1 percent over the 1,846,628 units sold in the like period in 1981.

No. 1 Chevrolet said its dealers sold 78,279 vehicles during the month, a gain of 46 percent over last year's 53,599. The 11-month total of 750,169 units was 18.5 percent higher than the year-earlier 633,281.

During the month, Ford dealers retailed 67,376 new trucks, up 47.3 percent from the year-ago 45,756. The January-November count was up 7 percent to 725,800 units, compared with 678,279 in 1981.

November sales by Dodge and Plymouth dealers totaled 17,574, an increase of 33 percent over last year's 13,223. Through November, the count was 226,140, up 32 percent from the year-earlier 171,329 units.

GMC dealers sold 21,629 vehicles during the month, an increase of 82.7 percent over last year's 11,836 units. The 11-month total was up 32.8 percent, from 158,850 units a year ago to 210,947.

Sales of four-wheel-drive Jeep vehicles during the month totaled 5,512 units, a gain of 7.3 percent over the year-earlier 5,139. The January-November count was down slightly from a year ago, 58,369 versus 58,639.

Volkswagen pickup sales were down drastically for both November and the 11 months. The November total was down 55.2 percent, from 2,222 units in 1981 to 996, and the 11-month count was off 61.1 percent, from 31,046 a year ago to 12,072.

Toyota pickup sales during the month totaled 11,125 units, up 23 percent from the year-ago 9,044. Through November, the count was up 4.2 percent to 131,212 units, compared with 125,866 a year ago.

In November, Datsun dealers sold 13,789 units, 71.2 percent higher than the previous year's 8,054. The 11-month count was 97,267, down 11 percent from last year's 109,260 units.

• Mazda reported a gain of 142.5 percent increase in November sales, from 1,585 units a year ago to 3,844. The January-November count was 131 percent higher than last year, 36,736 versus 15,903.

Isuzu dealers retailed 1,523 new pickups during the month, an increase of 31.4 percent over the year-earlier 1,159. Through November, the total was 16,263 units, a gain of 85.3 percent over last year's 8,775.

During the month, Mitsubishi dealers sold 442 units, bringing the newcomer's two-month total to 694 vehicles.

Pennsylvania order prompts bus builder to expand

Continued from Page 14

foot structure near the main plant.

Scheduling material continues to be the biggest production problem, according to Harvey Dick, operations vice president.

"Hand rails don't come in or carpeting doesn't show up in time, and we have those buses just sitting there," he said.

Most of the steel products used are sourced in the U. S.

The company's major supplier of steel tubing is Pioneer Steel in Denver. "Forty-thousand to 90,000 pounds a week make Neoplan one of our major clients," said Harry Barnett, Pioneer salesman.

Local suppliers aid Neoplan's small-warehouse operation. A bus air-conditioning firm has been opened in the industrial area around Neoplan, and fiberglass is supplied daily from another satellite industry. Electrical materials are also purchased in Lamar.

Will the plant ever do its welding with robots? Probably not, said Dick.

"Robots are OK where you're building one after another of the same car, but we couldn't afford the investment required to accommodate the many variations that mean different materials along the lines here," he explained.

"We hit the break-even point in May and the plant has been profitable since June," Dick said.

Though it is an American factory which hires hometown workers, German is occasionally heard in the plant.

Approximately 30 skilled craftsmen from Neoplan's German plant have been brought to Lamar to aid in training. Lamar Community College also offered a training program for many of the local men and women.

In 1953 the firm came up with a new design for attaching axles to a bus steel skeleton. It was called "neoplan," meaning new idea, and the name has remained.

Loss rate high on unibody cars; too many 'totaled'

Continued from Page 14

car buyers by rating each make and model in terms of projected comprehensive and collision premiums.

3. Vehicle re-inspection should be mandatory when repair cost exceeds a predetermined level.

4. The department of motor vehicles should adopt a monitored mechanic training program, including standards for instructors.

5. The insurance department or the insurance trade associations should have an ongoing program to determine and monitor the relationship of total losses to all types of collision losses.

6. The Federal Trade Commission and other relevant bodies should act to bring the prices of replacement parts in line with their actual costs.

11 weeks later than in 1981

Auto production reaches 5 million

By Patricia Hoffman
Staff Writer

The five-millionth automobile of this year was produced in the U. S. last Friday, (Dec. 17), about 11 weeks later than in 1981. Last year, the makers reached the five-million mark on Oct. 1.

Year-to-date, there have been 5,005,484 cars assembled, a 19.59 percent decline from 6,225,156 built in the comparable period last year.

The makers slated 118,332 units last week, a 10.13 percent gain from the previous week's 107,447, and up 3.42 percent from 114,416 built in the same 1981 period.

Breakdown for the week by company was: General Motors, 59.40 percent; Ford Motor, 22.85 percent; Chrysler Corp., 12.38 percent; Volkswagen of America, 2.75 percent; American Motors, 2.54 percent, and Honda, 0.08 percent.

AMC's Kenosha facility was idle last week due to high inventories.

Still down last week for model changeover were GM's Bowling Green (Corvette) point and Ford's Lorain (Thunderbird-Cougar) facility. Both plants are scheduled to resume output in January.

Four assembly points returned last week following downtime to cut inventories. They were: GM's Willow Run plant, Ford's Metuchen and San Jose facilities and VWoA's Westmoreland point.

The GM Detroit plant operated 1.6 hours of daily overtime last week.

Also working overtime was Ford's Wixom point. Wixom operated Saturday, (Dec. 18).

Canadian car output climbs 73 pct. with strike settlement

Canadian auto and truck production last week showed substantial gains from the previous week's output as Chrysler Corp.'s Windsor facilities resumed operations after a five-week-long strike. Also helping boost last week's total was the return of General Motors' Oshawa points and the American Motors' Brampton facility, which had closed to cut high inventories.

Last week's auto output was estimated at 22,570 units, up 73.20 percent from the previous week's 13,031, and up 42.81 percent from 15,804 units built in the comparable 1981 period.

Car manufacturers have built 815,996 so far this year, a 3.92-percent gain from last year's 785,181.

Truck production last week reached 10,043 units, up 79.02 percent from the prior week's 5,610. But the total was 19.93 percent below the 12,542 units produced during the same time last year.

So far this year, the truck makers have finished 469,310 units, a 5.74-percent decline from 497,895 units built in the comparable 1981 period.

Chrysler's Windsor car and truck facilities resumed operations last week (Dec. 13) ending a five-week strike which began Nov. 5.

GM's Oshawa car plant and truck facility returned last week following downtime to control high inventories. Also back from inventory adjustment downtime was AMC's Brampton point.

All Canadian car and truck facilities were operating last week.

Truck production rises slightly as Ford, Jeep return

Domestic truck production last week rose 5.33 percent from the previous week's total, as operations resumed at Ford Motor's San Jose facility and Jeep's Toledo CJ-5 and CJ-7 lines started up, after downtime to cut high inventories.

Last week's output was estimated at 38,366 units, up from 36,424 built the previous week. But the total fell slightly below the 38,629 trucks assembled in the comparable 1981 period.

To date, there have been 1,856,280 units completed, a 15.91-percent gain from last year's 1,601,517.

The light-truck line at General Motors' Flint facility remained idle last week (Dec. 13) due to high inventories. Operations are slated to resume today (Dec. 20).

Also still down last week was Volkswagen of America's Westmoreland truck line. That line, idled June 28 for model changeover, is scheduled to return with 1983 models Feb. 7.

All other truck facilities were operating last week.

NHTSA backs world symbols for U. S. instrument panels

WASHINGTON. — The move toward development of a "world car" took another small step forward last week as the NHTSA offered a proposal that would allow auto makers to use internationally recognized instrument panel symbols in their cars, trucks and buses as early as 1983.

In responding to a petition by Renault, the safety agency said it would like to substitute the International Standards Organization (ISO) master lighting control symbol for the headlight and taillamp control currently in use and modify slightly the symbol specified for the clearance lamp system control.

NHTSA said it would also like to adopt the ISO-approved symbols for displays depicting brake failure and engine failure and for manual choke, horn and several heating and air conditioning controls.

The rationale for going to the ISO symbols is that they convey information more quickly and more accurately in addition to saving the manufacturers money by not having to produce separate instrument panels, controls and displays, NHTSA said.

The safety agency is proposing Sept. 1, 1985, as the effective date but said it would allow makers to adopt the ISO symbols as soon as it finalized its proposal, which should be in 1983 unless there is serious objection.

Newest Fiat

Uno to be unveiled for Europe

Fiat will launch its high-volume, lower-middle-price-range Uno in Florida next month in conjunction with the launch of the space shuttle, even though the car is to be marketed only in Europe. Styled by Giugiaro, the Uno hatchback is 143 inches long, 61 inches high and is available with 900-, 1,100- and 1,300cc powerplants. Story on Page 2.

Year's car production slumps to 5,055,551, lowest since '58

By Patricia Hoffman
Staff Writer

The 1982 calendar year was a losing battle for domestic auto makers as sluggish sales slashed car output to its lowest point in 24 years.

The industry produced an estimated 5,055,551 cars this year, down 19.50 percent from 6,280,045 in 1981. It was the lowest total since 1958 when only 4,244,045 cars were assembled.

Each of the auto companies suffered losses in 1982, with Volkswagen of America suffering the most on a percentage basis. It built 84,707 cars, a 49.51 percent decline from last year's 167,755. Also down this year was American Motors with 58,062 units, 46.89 percent behind 109,319 in 1981.

Declines by the Big Three were higher numerically but lighter on a percentage basis: Chrysler Corp., 600,180 for 1982, down 19.94 percent from 749,687 for 1981; General Motors, 3,207,593, down 18.39 percent from 3,930,176, and Ford Motor, 1,102,236, a 16.51 percent decline from last year's 1,320,198.

Checker Motors, which closed down operations in July, built 2,163 units in 1982, down 25.67 percent from 2,910 units produced during a full year of production in 1981.

Honda has built an estimated 610 units in the U. S. since production began Nov. 1.

• For December, the car manufacturers slated 386,568 units, an 8.99 percent gain over 354,697 built in December last year, but fourth-quarter output was estimated at only 1,208,743 units, down 7.64 percent from 1,308,774 finished in the final three months of 1981.

It is the lowest fourth-quarter total since 1975 when 1,931,648 cars were produced, and the lowest for any quarter since only 1,087,000 units were completed in the first quarter this year.

Truck production for the 1982 calendar year is estimated at 1,889,736 units, up 11.09 percent from last year's 1,701,122. It is the highest yearly output since 1979 when 2,973,498 trucks were assembled.

In December, the truck manufacturers scheduled 129,956 units, an 11.34 percent gain from 116,716 built in the comparable 1981 month.

For the final three months of 1982, the truck makers estimated 415,130 units, up 3.64 percent from 400,548 built during the fourth quarter last year.

Due to the shortened holiday week last week, domestic car production was estimated at 97,043 units, down 18.90 percent from 119,652 built during five days of assembly the previous week. Output rose 39.08 percent from last year's 69,775 units.

Breakdown for the week by company was: GM, 59.62 percent; Ford, 22.41 percent; Chrysler, 12.08 percent; AMC, 3.13 percent; VWoA, 2.68 percent

Seeks to avoid 'severe burdens' on industry and consumers

EPA to ease high-altitude rules

By Jake Kelderman
Washington Staff Writer

WASHINGTON.—The EPA is about to take step two in its bid to help out the U. S. auto industry.

On the heels of its previously announced two-year delay in the tough 1985 diesel particulate emission requirement, it will propose a significant easing of the 1984 and later high-altitude emissions requirements.

According to a draft of the proposed interim final rule, the EPA would require of the auto makers, not that their 1984 cars and light trucks meet low-altitude tailpipe standards at any and all altitudes as Congress apparently mandated, but rather that they display such emission control only when tested at 5,300 feet, or the Denver test facilities.

By adopting this approach, the agency avoids the necessity of having the auto makers mount "complex electronic controls or expensive turbochargers" on many vehicles sold nationwide to meet the requirements, the draft says.

"We do not believe Congress intended that its objectives regarding improved air quality at high altitudes be met by placing unwarranted and severe burdens on the industry and consumers," the EPA says in justifying this "creative" interpretation of the high-altitude requirement.

In this vein, the agency also will propose to exempt certain low-powered vehicles from the high-altitude requirements altogether, arguing that the cost of modifying them for 1984 high-altitude compliance would make them so expensive that they would be unsaleable at both high and low altitude.

"We do not believe that Congress wanted the high-altitude requirements to result in a nationwide loss of model availability," the EPA says.

To get the exemption, makers can apply the same criteria as the agency now accepts under its 1982-1983 high-altitude re-

breaking news

Fiat rebate aims at boosting sports car sales

HASBROUCK HEIGHTS, N. J. — Fiat Motors of North America, in an effort to cut 1982-model inventories and ease the transition to the '83s, is offering some new and hefty dealer incentives. Until further notice, a rebate of $2,000 will go to the dealer with retail delivery of each 1982 Fiat X 1/9, $1,500 with each Spider 2000 and $1,500 with each Spider Turbo. Fiat said a total of 4,978 units are eligible for the incentive.

Lyles says dealers are more confident now than when he took office a year ago

Outgoing NADA chief is guardedly optimistic about 1983

By Al Fleming
Industry Editor

When George Lyles became 1982 NADA president last February, car dealers were guardedly optimistic that the next 12 months would bring an end to the three-year decline in new-vehicle sales.

Even though interest rates — one of the major factors impacting dealers — have dropped since then, and the inflation rate is down, auto sales continued to slump in 1982. The hoped-for turnaround did not materialize.

Now, as Lyles approaches the end of his one-year term as head of the nation's franchised new-car and truck dealers (he will be succeeded by current First Vice President William C. Turnbull at the 1983 NADA convention in Las Vegas in February), he remains guardedly optimistic.

"The (NADA) forecast for 1983 is for a slight upturn, possibly 10 percent higher sales than '82. The lower interest rates and inflation slowdown have improved consumer confidence somewhat," Lyles said during an Automotive News interview in Detroit.

He added: "What happens to the general economy will be the controlling factor in how far sales climb, but we see signs of improvement, and if the voluntary restrictions by the Japanese on imports continue, the improvement will be mostly in domestic products."

Lyles said he believes the Reagan Administration's economic policies are working and that "no one within NADA has proposed that we take a position opposing the Administration's programs."

He said a survey of dealers taken by NADA shows they are more confident now than a year ago, especially those in the Midwest and Sunbelt areas.

• Lyles said dealer attrition continued in 1982, but that it may have bottomed out: "Throughout most of 1982, the number of dealers going out of business continued on a track of about 100 a month, but indications are the last quarter of '82 is not going to be nearly as severe as a year ago. Last year (the fourth quarter) was in the vicinity of 300. About 200 might be a pretty good estimate this year."

He said the nation's dealer body shrank by nearly 4,000 during the last four years and now numbers about 19,000 franchised new-car and truck dealers, domestic and import, in NADA.

Lyles, president of Lyles Chevrolet and Transco Inc., a Rolls-Royce franchise, both in High Point, N. C., added an AMC/Jeep/Renault franchise in High Point this year.

He said dealers hope auto manufacturers won't rush to fill in open points vacated by those who have gone out of business during the economic downturn.

"If there's a sudden demand for new vehicles and manufacturers want to fill in dealer points, we're prepared to encourage a program that will not put us back in an over-dealered situation," he said.

He said that if the sales rebound comes quickly and sharply rather than gradually, and if 1983 turns out to be an 11-million rather than 8 million-unit car year, "we are concerned the manufacturers will ask us to provide new facilities, larger-size dealerships and larger stocks — they may be eager to re-establish some of the dealerships they lost."

Noting that the current slump is "the longest downturn we've had — four years," Lyles said, "we believe a gradual comeback would help us keep on top."

The NADA president called the reduction in the dealer body a needed trend that should strengthen remaining dealers.

"It's the only way the retail body is going to survive," he said. "We knew five or six years ago we were over-dealered, especially General Motors and Ford in the Northeast."

He said the attrition of some 3,500 to 4,000 dealerships since then was needed because the record new-vehicle volumes that had been predicted for the 1980s are not likely to evolve.

"It's very possible that we'll never see, in the next 10 years, those record levels and increases of the 1960s and '70s," he said.

He underscored that possibility by noting in 1973, when Lyles was chairman of the Chevrolet Dealer Council, the big GM di-

Policy of cooperation with auto industry outlined at ESV conference in, appropriately, Japan

NHTSA changes approach to safety research management

By Helen Kahn
Washington Bureau Chief

KYOTO, Japan.—The change in the management approach in automotive safety research by NHTSA was announced during the Ninth International ESV Conference in Japan by Michael Finkelstein, NHTSA's associate administrator for R&D.

In order to introduce research results as early as possible into production cars, NHTSA has set up a cooperative research program, concentrating on transfer of technology. It has redirected a program to address safety improvements in subsystems, and it is giving more attention and priority to the crash avoidance area.

Finkelstein also explained that the cooperative program with the domestic industry was being expanded to include the European Experimental Vehicles Committee and the Government of Japan.

In the crash avoidance area, Finkelstein noted NHTSA is stressing improving mirror systems, rear lighting systems, driver operated controls, headlighting, brake systems and vehicle stability and generally looking at the different dynamics and geometrics associated with the new breed of smaller vehicles.

So far, work on rear lighting shows that rear-end car crashes can be reduced by more than half by using a single, high-mounted brake light.

Research is under way to find ways to reduce rear-end truck collisions, specifically "identifying means to increase heavy truck conspicuity using both reflectorization and signal lights that could be fleet tested to determine their real-world effect on accidents."

• Past NHTSA research has shown the feasibility of upgrading mirror systems, and Finkelstein noted that one vehicle class expected to benefit would be vans.

NHTSA's headlight research program addresses the light distribution pattern of low beams, and one beam pattern seems to be able to raise visibility distance without significantly increasing glare for oncoming drivers. NHTSA will evaluate this low-beam pattern by comparing it with typical U. S. and European beam patterns.

In the area of brakes, NHTSA is assessing a prototype electrohydraulic motorcycle antilock brake system. Work is also being done to develop a new test procedure for the federal safety standard for motorcycle brakes —refining general test equipment and developing a new wet brake fade and recovery procedure.

Two programs dealing with car stability have been completed. One analyzed the effects of mixing various tire types, sizes and makes and produced a system rate tire lateral performance. The other used scale model wind tunnel tests to analyze the effects of crosswinds on car-trailer combinations.

• Finkelstein added that NHTSA plans future research into the differences in stability and braking of the new smaller vehicles vis-a-vis older full-size ones—focusing on problem areas such as rollover propensity of small cars and their lateral spin-out characteristics under extreme braking conditions.

In addition, a parametric analysis of factors affecting heavy-truck stability will be concluded soon.

In the area of heavy-truck safety, Finkelstein said current research is nearing completion in the following areas:

1. Evaluation of truck splash and spray suppression devices to improve visibility for all drivers on wet roads.

2. Assessment of vehicle deceleration technique, mobile traction dynamometer and indoor flat roadway tests to produce repeatable tire traction measurements.

3. Evaluation of the performance characteristics and in-service costs of retarders for heavy vehicles, including how to measure controllability of retarder-equipped vehicles and how to teach drivers to get the best safety benefits from retarders.

4. Development of baseline truck driver anthropometric and seating preference data in cooperative effort with industry and labor.

In addition to NHTSA's new work attacking drunk driving and increasing use of seat belts, the agency is also fostering international harmonization of vehicle safety standards so long as that does not interfere with legal requirements and procedures the agency must follow and so long as that does not compromise safety in the U. S.

• As Finkelstein explained, there are four levels where standards can be harmonized:

1. Standards of different countries can be made compatible to ensure that cars can comply with all standards without altering design or construction.

2. The same test procedures can be used to reduce compliance costs.

3. Levels of performance and specifications can be made compatible or the same.

4. Ways to determine compliance, whether by homologation, self-certification, or otherwise, can be made the same.

Finkelstein added that since the Administration is engaged in "regulatory reform" and because it is considering new standards in the area of side-impact protection, pedestrian protection, truck rear-underride protection, center high-mounted stop lamps and headlighting, NHTSA is in a good position to foster harmonization.

Chrysler tries to crack tough market

Spend big to sell small in California

By Joseph Bohn
Marketing Editor

Chrysler's special California marketing program was expensive. No doubt about it.

Chrysler Corp. spent $10 million in California in 1982, selling 8,000 Mitsubishi-built cars. That's $1,250 per car in marketing costs — or more than the company earned on the vehicles.

But the idea was to learn how to market vehicles to the unique California consumer and to "change the historical pattern" in which Chrysler has been selling imports nationally, said Victor Olesen, executive vice president of Kenyon & Eckhart's Los Angeles office.

The agency office handles not only the California program, but all Chrysler import advertising nationally.

Chrysler officials haven't made any final decisions about continuing the program in 1983 — but industry sources say it may be continued with modifications.

Olesen said, "If they don't win in California, they won't win anywhere. That goes for GM and Ford, as well as Chrysler."

All the domestics have made attempts to crack the market, with limited degrees of success. The feeling is that if they can crack the California market — in any way, shape or form — it represents real penetration gains, rather than cannabilizing the domestic-car market.

Meanwhile, Olesen considered it a triumph that "we sold every Mitsubishi they allowed us." He thinks under Chrysler's new import manager, Darryl Davis, more Mitsubishi cars will be shipped into the state next year.

Mitsubishi products accounted for only 2 percent of the 6 percent market penetration Chrysler has in California, which is far below its national average.

Chrysler sold only about 100,000 Mitsubishis nationally last year. But Olesen said, "Who knows how long the import quotas will stay on? But if we get 150,000 or 200,000 Mitsubishis, we want to sell a helluva balance in California."

Chrysler has gone through twists and turns, trying to market cars in California, according to former K&E sources associated with the program.

K&E research originally indicated that, because of the salt-free streets there, the company's old, gas-guzzling cars lived on much longer than in the Midwest and other high-rust areas.

It was (and to some degree, is) these cars upon which Cali-

GM chooses Motorola to make AM stereo sets

By Roger Rowand
Engineering Editor

DETROIT. — General Motors has picked Motorola, Inc., to supply AM stereo systems that may appear as an option during the 1984 model year on some GM cars.

Only a very few stations broadcast in AM stereo, but the number is expected to grow rapidly in the years ahead.

Delco Electronics Division, Kokomo, Ind., GM's radio supplier, does not make the decoder needed for AM stereo.

An AM stereo radio receives only broadcasts from a transmitting unit made by the company that made the radio. In other words, one maker's radio will not decode another's signal.

Early in 1982 the Federal Communications Commission said it would not set standards for decoders and AM stereo systems. The marketplace would do that, the FCC said.

In April, Delco Electronics announced it would evaluate mobile systems for GM car divisions. It invited six makers of systems to participate and three accepted.

They were Motorola, the eventual winner; Harris Corp. and Magnavox Division of North American Phillips Corp.

The shape of the future?

An experimental hybrid sedan made its public debut at the international auto show in Birmingham, England. It is the work of Lucas Chloride EV Systems (the electric drive), Reliant Motor (gasoline engine and running gear) and Ogle Design (styling). The companies report that it could go into production within five years.

Deliveries of North American units plummet almost 33 percent

Domestic car sales slump in Canada

By Jenny L. King
Staff Writer

November sales of North American - built passenger cars in Canada suffered their sharpest decline since March, 32.63 percent from 1981, while truck sales fell 38.91 percent. Sales of both types of vehicles have been down every month of 1982 compared with 1981 totals.

November new-car sales totaled 41,021, down 32.63 percent from 60,886 last year. Year-to-date sales numbered 459,857, down 25.08 percent from 613,762. Truck sales in November reached 11,303 units, down 38.91 percent from 18,503. They were down 34.25 percent for the 11 months, to 148,582 from 225,978.

General Motors reported sales of 22,051 passenger cars in November, down 39.92 percent from 36,700 a year ago. Ford sales were 7,323 for the month, down 36.51 percent from 11,534.

Chrysler was down 11.65 percent, to 8,606 from 9,741. Volvo slipped 13.29 percent, to 587 from 677, and American Motors was up 9.85 percent, to 2,454 from 2,234. AMC sales included 722 imported Renaults this year compared with 979 in 1981.

GM's share of the November new-car market plunged to 53.76 percent from 60.28 percent. Ford slipped to 17.85 percent from 18.94 percent. Chrysler picked up more than four percentage points, rising to 20.98 percent from 16.00 percent. AMC was up to 3.98 percent from 3.67 percent, and Volvo was up to 1.43 percent from 1.11 percent.

All four major North American companies watched truck sales fall in November.

Ford suffered the greatest decline, down 45.35 percent to 3,728 from 6,821 last year. GM was down 37.89 percent, to 5,705 from 9,185. Chrysler dropped 26.64 percent, to 1,655 from 2,256, and AMC Jeep sales were down 10.79 percent, to 215 from 241. Truck sales include captive imports.

GM earned 50.48 percent of the truck market in November, up from 49.64 percent in 1981. Ford dropped to 32.98 percent from 36.87 percent. Chrysler was up to 14.64 percent from 12.19 percent and AMC edged ahead to 1.90 percent from 1.30 percent.

IH loss soars to $1.6 billion for fiscal 1982

CHICAGO.—International Harvester reported what is believed to be the largest three-month deficit in American corporate history in the quarter ended October 31, causing the struggling manufacturer a net loss of $1.64 billion for fiscal 1982, also one of the biggest.

In the final three months of its fiscal year, Harvester posted a net loss of $1.01 billion, which was larger than the quarter's sales of $979.5 million. A year ago, the deficit amounted to $318.9 million on revenues of $1.59 billion.

It was the third consecutive year of losses for the manufacturer of heavy trucks and farm equipment. Both markets have been in deep slumps since 1979.

In fiscal 1981, Harvester had a loss of $393.1 million on sales of $6.29 billion. Sales in 1982 dropped more than 30 percent to $4.29 billion.

Contributing to the higher deficit in fiscal 1982 were a $393.7 million loss from discontinued operations and restructuring costs of more than $440 million.

Harvester said the results also included a $42 million gain from foreign-currency translation, compared with $83 million in 1981, and an extraordinary cred-

3406 conversion cuts fuel costs, Cat says

PEORIA, Ill. — Caterpillar Tractor Co. has introduced a kit to convert to direct fuel injection its 3406 truck diesels with precombustion-chamber fuel systems.

A spokesman estimated that the conversion will improve fuel economy 7 to 11 percent, increase the engine's resale value and provide improved cold-weather starting, better cooling and improved torque rise.

Wartime Jeep's buddy takes the wheel

Bill Mauldin, who immortalized the World War II Jeep in cartoons, is at the wheel of a 1941 military Jeep presented by AM General Corp. to the Army Transportation Museum in Fort Eustis, Va. With Mauldin are Lawrence H. Hyde, left, AM General president, and Maj. Gen. Harold I. Small, the fort's commanding officer.

AM General presents WWII Jeep to museum

FORT EUSTIS, Va. — Bill Mauldin, who immortalized the World War II Jeep in cartoons, was on hand for the recent presentation by AM General Corp. of a 1941 Military Jeep to the U. S. Army Transportation Museum.

One of Mauldin's most famous cartoons depicted an enlisted man holding a pistol over his Jeep, one hand over his eyes.

There was no caption, but it was obvious to the viewer that this soldier's faithful Jeep had taken a mortal blow and the soldier was about to mercifully do away with his longtime friend.

In presenting the military Jeep to the museum, Lawrence H. Hyde, AM General president, pointed out that AM General traces its history to predecessor Willys-Overland, which designed and manufactured the quarter-ton vehicle that was the workhorse of World War II.

"More than 350,000 Jeep vehicles were produced during World War II," said Hyde. "In fact, George C. Marshall called the Jeep vehicle 'America's main contribution to modern warfare.'"

Hyde said the World War II Jeep was used by generals as well as statesmen. It was used and loved by fighting men in every part of the world, from bases in the U. S. to the most remote jungle outpost, he added.

• "The military Jeep could go just about anywhere and do almost anything," said Hyde. "In fact, it was a military Jeep that led the Fifth Army into hundreds of towns and cities as the war moved across Europe.

"Not only the American Army, but every allied nation depended on the versatile Jeep in battle

Lifetime ambition achieved

Bill Witcher, center, achieved what he called the ambition of a lifetime when he purchased the final shares of stock from H. A. (Red) Poling, left, executive vice president, Ford Motor Co. North American Automotive Operations, to complete the buyout of Alameda Ford Truck Sales, Los Angeles. Looking on is Edson P. Williams, general manager, Ford Truck Operations.

Terex phasing out output at plant in Cleveland area

CLEVELAND. — Terex Corp., caught in the slump in sales of heavy equipment, is putting the Greater Cleveland Brooklyn plant in mothballs and moving production on current orders to the nearby Hudson plant.

The Cleveland unit had 800 employes two years ago. Currently, 260 hourly workers and 60 salaried employees have been notified of the phasing down over the next eight months during the shift of production to Hudson.

The Hudson operation had 1,400 employes at its peak, and is now down to 307 hourly and 490 salaried workers.

Terex, which makes heavy equipment for the construction and mining industries, was sold by General Motors in 1981, but GM still has a 19.6 percent interest in the company. Dallah Establishment, a Saudi Arabian investment group, holds another 19.6 percent.

Terex is owned by IBH Holding AG of Mainz, West Germany, and is headed by Horst-Dieter Esch.

truck industry news

Total is highest since July

Light-truck gains boost October registrations

The late-summer increase in light-truck sales as the result of a wave of new incentives was reflected in October registrations of new trucks in the U. S. The total was higher than a year ago for the first time since July.

During the month, 193,243 vehicles were registered in the 49 reporting states, according to R. L. Polk & Co. statistics. The count was 13.3 percent higher than the year-earlier 170,584 units.

Light-truck tallies in October totaled 180,140 units, accounting for 93.2 percent of the month's count. The total was 18 percent higher than the 152,702 light vehicles registered in October, 1981.

The Group 1 total for the month was up 22.9 percent, from 87,155 last year to 107,091. In Group 2, there were 71,505 tallies, 10.9 percent higher than a year ago. Group 3 was up 48.3 percent to 1,544 units, compared with 1,041 in October, 1981.

Through October, the industry total was 1,969,158 units, an increase of 7.2 percent over the 1,836,260 registered in the corresponding period in 1981. Light trucks were the only segment to show an improvement over the year-earlier count.

Over the 10-month span, 1,824,812 light trucks were registered in the U. S., a gain of 10.2 percent over last year's 1,656,180 units.

Medium trucks dropped 19.5 percent, from 46,339 units a year ago to 37,305. There were 107,041 heavy-truck registrations in the January-October period, a decline of 20 percent from last year's 133,741.

Registrations were higher in all three light-truck groups for

Continued on Page 11, Col. 1

HD registrations through October decline 20 pct.

Registrations of new heavy trucks in the January-October period in the U. S. dropped 20 percent below those in the comparable period a year ago.

Through October, according to R. L. Polk & Co. statistics, 107,041 new Groups 7 and 8 trucks were registered in the 49 reporting states, compared with the year-earlier 133,741 units.

Tallies were down 31.6 percent for the month, from 13,465 units in October, 1981, to 9,212.

The totals for the two big-truck groups were off for both the month and the January-October period.

Through October, 46,530 Group 7 trucks were registered in the U. S., a decrease of 17 percent from the year-earlier 56,039 units. October's 3,412 tallies were 34.7 percent below last year's 5,223 units.

Group 8 registrations for the 10 months totaled 60,511, down 22.1 percent from the year-ago 77,702. In October, the count was 5,800, a decline of 29.6 percent from the 1981 total of 8,242 units.

Time for innovation, Petersen says

Ford honors 24 engineers, scientists

DEARBORN. — Ford Motor Co. honored 24 of its scientists and engineers from the U. S. and Europe for achievements in research product engineering and manufacturing.

It was the second annual presentation of Henry Ford Technological Awards. Award ceremonies were at Ford World Headquarters here.

In congratulating the award recipients, Ford President Donold E. Petersen said:

"Your achievements provide clear evidence that innovation is alive and well at Ford."

Discussing innovation and new technology and the role they are playing in directing Ford's future course, Petersen said the company "is committed, as never before, to making certain the voice of the technical community is heard on a continuing basis at the top levels of Ford Motor Co."

"We've recognized that we must broaden our horizons and extend our product development thinking and planning," he said. "In the past, I know we have failed to encourage risk-taking . . . taking chances became tantamount to living dangerously.

"We are determined to change these rules. Today, I can assure you, we're looking for wise risk-takers and action-oriented people. Timidity has no place in our organization.

"If challenge and change are catalysts to innovation, then the time is ripe. Perhaps at no moment in recent history has there been a higher premium placed on creative thinkers, innovators and risk-takers than there is today."

Research awards recipients are George C. Davis, Ann Arbor, principal research engineer associate, and Rodney Tabaczynski, Northville, Mich., principal research engineer, both in the Powertrain Research Laboratory, Engineering and Research Staff, joint awards.

Also, Neill Weber, Dearborn, staff scientist, Long Range and Systems Research Laboratory, and Joseph T. Kummer, senior staff scientist, Chemical Sciences Laboratory, both Engineering and Research Staff, joint award; F. Gordon Willis, principal staff engineer, Vehicle Concepts Research Laboratory, Engineering and Research Staff.

• Product engineering awards were given to Thomas M. Cairns, Beverly Hills, Mich., principal design engineer, Components Engineering, Body and Electrical Product Engineering; Sumorfin Salazar, Toledo, product design engineer, Components Engineering and Stanley L. Pierce, Northville, Mich., Advanced Transmission Engineering Section supervisor, Transmission and Axle Engineering, Powertrain and Chassis Product Engineering.

Also, Frank E. Rowland, components engineer, Chassis Engineering, and Kilian Hadank, principal vehicle engineer, Vehicle Engineering, both Ford of Europe, joint award.

Peter F. Salamon Jr., Dearborn, principal design engineer, Engine Engineering, Powertrain and Chassis Product Engineering, and Walter L. Doelp Jr., Livonia, Equipment Research and Development Section supervisor, Service Engineering, Ford Parts and Service Division, joint award.

Marcello Veneziano, Novi, Mich., and Thomas A. Spoto, Royal Oak, Mich., both product design engineers in Electronic Instrumentation and Features Engineering, Electrical and Electronics Division, joint award.

Manufacturing award recipients are Bryce D. Dell, Woodhaven, Mich., production equipment designer, Plant Engineering, Dearborn Engine Plant, Engine Division.

William J. Fuhrman, Birmingham, Mich., advanced manufacturing planning engineer, Manufacturing Development, Transmission and Chassis Division, together with Benjamin I. Bachrach, Dearborn, principal research engineer associate, Vehicle Concepts Research Laboratory, and Shyam K. Samanta, Ypsilanti, Mich., principal staff engineer, Material Sciences Laboratory, both Engineering and Research Staff, joint award.

Thomas C. Gordon, Irvine, Calif., engineering specialist, Electronic Engineering Department, DIVAD Division, Ford Aerospace & Communications Corp.; Rudiger Kresse, Manufacturing Engineering supervisor, Tooling, Body and Assembly Operations, Ford of Europe.

Also, Robert F. Muglia, advanced manufacturing engineer, and Gary A. Webb, West Bloomfield, Mich., Computer Aided Design Section supervisor, both of the Manufacturing Engineering Office, Body and Assembly Operations, joint award.

William H. Spicer, Holland, Pa., and Sylvester Karpchuk, Churchville, Pa., both manufacturing equipment design engineers, Electrical and Electronics Division, joint award.

Museum given WWII Jeep by AM General

Continued from Page 10

as a command car, troop carrier, supply vehicle, gun platform, radio car and ambulance," he added.

Hyde said the World War II Jeep was modified and improved over the years.

"Today's version is designated as the M151A2 ¼-ton, 4x4 tactical utility truck, but it will always be a 'Jeep' in the soldier's mind. Today U. S. Marines are patrolling the streets of Beirut in the M151A2, the successor to the World War II Jeep.

"AM General's proud heritage results from more than 40 years of experience in producing military vehicles beginning with the World War II Jeep and continuing through the current contracts for vehicles ranging in size from ¼-ton through 20-ton military trucks."

Hyde said that, "in addition, George W. Scharbach, who has nearly 40 years of experience designing military trucks and is now our vice president of engineering and product development, may have actually installed the gas tank on this particular military Jeep since he worked on the assembly line at Willys-Overland while a student in college."

Drunk driving crackdown

TRENTON, N. J.—The State Assembly has given final approval to legislation imposing a mandatory four-month jail sentence for conviction of death by auto while under the influence of liquor or drugs. Four months of community service can be substituted for the jail term.

Light-truck gains boost registrations in October

Continued from Page 10

the 10-month period, while there were decreases in all of the big-truck classifications.

Through October, there were 1,031,262 Group 1 tallies, up 11.9 percent over the previous year's 921,740. The Group 2 count was 777,257, a gain of 7.4 percent over the year-ago 723,951. In Group 3 the increase soared to 55.3 percent, from 10,489 units in 1981 to 16,294.

Only seven Group 4 vehicles were registered in the first 10 months, four fewer than a year ago. The Group 5 count was off 20.7 percent to 1,247 units, compared with 1,573 in 1981.

Group 6, which continues to lose ground to Group 7 in the growth of mid-range diesel power, had 36,051 tallies through October, down 19.4 percent from the year-ago 46,339.

At the same time five years ago, the Group 6 total was the third highest, with slightly more than 126,000 units. Today it ranks fifth.

Group 7 registrations for the 10 months totaled 46,530 units, down 17 percent from last year's 56,039. The Group 8 count was off 22.1 percent, from 77,702 units in 1981 to 60,511.

Chevrolet widened its lead over Ford in October, boosting its 10-month total to 611,862 units. Ford's total for the same period was 593,900. At the same time a year ago, Ford was the leader, 596,269 versus 543,942.

R-2000
CHEMOTEX™ CAR CARE
™

R-2000® ANTI-RUST COMPOUND PROVIDES THE MOST EFFECTIVE AND EASIEST APPLICATION AVAILABLE IN TODAY'S MARKET.

R-2000® ANTI-RUST COMPOUND
A superior anti-rust compound of wax and white spirit base. This unique compound is non-toxic, odorless, and does not require special facilities for proper application.

R-2000® Anti-Rust Compound offers tremendous advantages over common bitumen and tar-based rustproofers, plus insured lifetime rust protection coverage.

NO AFTER-SALES PROBLEMS
The effectiveness of R-2000® Anti-Rust Compound is backed with an insured lifetime rust protection service agreement when applied to new cars, and is transferable. In the event of a claim, service is direct and uncomplicated.

AVAILABLE FOR USED CARS, TOO.
R-2000® Anti-Rust Compound will effectively halt the rusting process on used cars, and carries up to 5 years of insured rust protection coverage.

UNIQUE ADVANTAGES
- **Clean and odor-free, no mess, no clean up time.**
- **Requires no protective clothing.**
- **Cars need no masking.**
- **No separation walls necessary, may be used next to other cars.**
- **High capillary action allows thorough coverage to all recessed seams and corners.**
- **Requires no hole drilling.**
- **May be used on any car lift.**
- **New car transferable insured lifetime rust protection coverage.**
- **Used car up to 5 years insured coverage.**
- **Direct and uncomplicated claims procedures.**

THIS 360° MULTI-DIRECTIONAL LANCE APPLICATOR DISTRIBUTES AN ATOMIZED FOG OF R-2000® ANTI-RUST COMPOUND EVENLY INTO ALL RECESSED AREAS.

ADDITIONAL R-2000® CAR CARE PRODUCTS
Now R-2000® Car Care Products offers you a line of fine products for the protection of the paint and interiors of new and used cars.

R-2000® PAINT SEALANT WITH BIXOL™
Produces a no maintenance, high gloss finish backed by a 5-year written agreement.

R-2000® FABRIC PROTECTOR
Repels dirt and inhibits staining of car interiors. Backed by a New Vehicle Owners Limited Five-Year Service Agreement.

R-2000® FABRIC CLEANER
A safe, sudsless cleaner for velour and cloth upholstery, vinyl, plastics, and carpets.

Alcohol use is strong

Octane stimulant sales shining

Continued from Page 13

gallons, up 194 percent from last year.

The volume of alcohol fuel being produced is catching some by surprise.

In September, alcohol plants produced 162 million gallons of fuel, compared with production a year earlier of only 55 million gallons.

The product is selling for around $1.70 a gallon, but at the retail level as octane booster, it is selling for anywhere from 79 cents to above $2 for less than a pint.

Alcohol is competitive with the other fuel additives, said Tim Galvin, an aide to Rep. Berkley Bedell, Iowa Democrat, who continues to boost the use of corn and other grains. He sponsored legislation allowing the agricultural secretary to allocate surplus grains into alcohol production.

Alcohol is being produced in large quantities, albeit without fanfare, even as highly publicized coal gasification projects are being downgraded.

W. R. Grace & Co. is the latest to say it is scaling down a proposed gasoline project, one at Basket, Ky. Ashland Oil Co. said it had decided not to build a $3 billion commercial plant in Breckenridge County, Ky., because of low world oil prices and the amount of capital required.

According to the Renewable Fuels Assn. in Washington, there are now about 100 commercial plants in operation producing fuel alcohol. They range in capacity from 500,000 gallons a year to 60 million gallons.

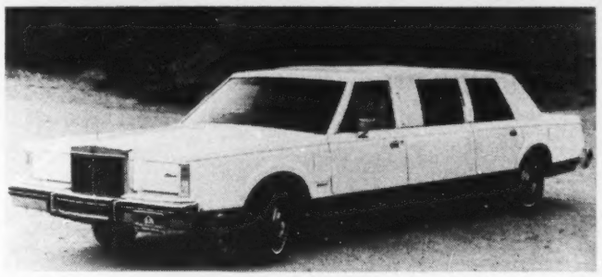
• Archer - Daniels - Midland, of Decatur, Ill., is the king of the alcohol distillers. The company produces an estimated 220 million gallons a year and plans to increase that to 300 million a year with a new plant at Clinton, Ia.

A. E. Staley Co. operates a large plant at Loudon, Tenn.

Farm organizations are continuing to push for more grain conversion to alcohol. They point to the eight-billion-bushel corn crop this year. Iowa and Idaho, where the potato crop is large, contends surplus potatoes can be converted to alcohol fuel.

Corn prices have dropped to below $3 a bushel, causing farmers to push for greater usage for not only feed but for fuel as well.

If Congress passes the five-cents-a-gallon tax, sources say, it may mean more sales of gasohol or octane boosters. Motorists may go back to the tight days of gasoline and try to get more miles per gallon.



Once a Lincoln, now a Savoy

O'Gara Coachworks, Simi Valley, Calif., converts the Lincoln Continental (shown) or Mark VI into its Savoy Limousine, with Corinthian elm and burled walnut cabinet, television, stereo, crystal beverage set, ice storage compartment and gold-plated insignia. The conversion is a 46-inch stretch which adds about $36,500 to the price of the original.

Ceramic engine fired up, Irish researchers report

Continued from Page 13

cles, apart from his academic work, is enthusiastic about the development.

"Apart from the obvious advantages of getting rid of the cooling system required by conventional engines, the new engine makes it practical to reduce fuel consumption by about one third. The 100-miles-per-gallon family car comes a bit closer," he said.

Work on the engine, said to be quieter and cleaner than conventional engines has been under way for five years. It has recently had 2½-hour runs in Dublin for the team from Carborundum.

Timoney told newsmen, "Carborundum is hoping to get an extended contract from the U. S. government to develop this engine and we in UCD in Ireland would be taking part in this project."

Carborundum supplied the materials for the Irish project, glued together by Loctite adhesive. Loctite Corp. has a Dublin R & D facility and manufacturing project.

Gengras elected

HARTFORD, — E. Clayton Gengras Jr., president of Clayton Motors (Dodge-Volvo), East Hartford, has been elected to a three-year term on the board of directors of the University of Hartford Associates.

Rowand report

Continued from Page 13

car in a period in which four-speeds were new to the U. S. and some were wary of them.

At about the same time, one of the importers fitted a car with a counting mechanism on the shifter and sent a couple of writers across the country coast to coast. A guess-the-number-of-shifts contest sparked interest and, again, people were talking about the car.

That was the point of all those exercises. They demonstrated the hardware — the iron, as Lee A. Iacocca sometimes calls the merchandise.

Nowadays, a Detroit reporter is likely to be asked to an auto maker's press conference and find the star of the show is a vehicle that runs on alcohol and coal dust or something equally as far out.

Sometimes the conference itself is the most interesting thing about the meeting with, as in one case, a multicity link by satellite of reporters and corporate brass.

Many press relations personnel seem dedicated to publicizing the brass and not the iron. That is common, and most reporters say it's a mistake.

Too often, in my book, reporters invited to see a new product are treated to a management speech saying sales are going to turn up in the third and fourth quarter of next year.

Or, guests of honor at a new-car showing may turn out to be leaders of the UAW who'll say how nice things are between labor and management.

It's abundantly clear that things are different these days following Ralph's reign of terror. There's a whole new ballgame in the post-Nader era.

But, cars by their nature are emotion-stirring machines. Canny operators in the past took advantage of that fact. They moved people's juices and, by doing so, moved large volumes of the product.

Good old-fashioned publicity stunts won't cure anything, but they'd help put some spark back in this business.

U. S. output totals 5,055,551 for 1982

Car production lowest since '58

Continued from Page 1

and Honda, 0.08 percent.

Truck production last week, also affected by holiday downtime, was targeted at 33,389 units, down 12.90 percent from the previous week's 38,333, but up 45.38 percent from last year's 22,966 units.

GM's Bowling Green (Corvette) facility and Ford's Lorain (Thunderbird, Cougar) point remained idle last week (Dec. 20) for model changeover. Both facilities are slated to return in January.

The GM Detroit (Cadillac) plant operated 1.6 hours of overtime during the four days of production last week.

All U. S. car and truck assembly points closed after Thursday's shifts (Dec. 23) and will remain closed this week (Dec. 27) in observance of the Christmas/New Year's holidays. Most plants will return Jan. 3.

Ford's Dearborn car point will remain idle an additional week after the holidays with operations slated to resume Jan. 10.

Also extending the holiday downtime will be Ford's San Jose, Metuchen and Wayne car plants, plus the Ford Kansas City, Norfolk, San Jose and Twin Cities truck facilities. The San Jose car and truck points are slated to return Jan. 24, while the other five assembly points are scheduled to resume production Jan. 17.

Also at Ford, assembly of 1983 Thunderbirds is expected to begin in late January at the company's Atlanta facility. The plant also builds LTD and Marquis.

Canadian car output up, but trucks down for 1982

While the Canadian auto makers finished the 1982 calendar year considerably ahead of last year's total, truck output was the lowest in seven years.

The car makers assembled an estimated 826,797 units in 1982, up 11.19 percent from last year's 743,570.

Truck production this year is slated at 474,602 units, a 23.11 percent decline from 617,264 assembled in 1981. It is the lowest total for any year since 1975 when only 389,728 units were finished.

The car manufacturers have estimated December output at 51,053 units, up slightly from last year's 50,799.

Total truck output for December is slated at 25,228 units, a 40.23 percent decline from 42,207 built in the comparable month last year. It was the lowest total for that period since 1974 when only 22,648 trucks were completed.

For the final three months of 1982, the car manufacturers are estimating 162,414 units, down 8.09 percent from 176,711 built in the same period in 1981. It is the lowest fourth quarter output since 1964 when only 125,696 units were assembled.

The truck makers are targeting fourth-quarter output at 90,728 units, a 37.34 percent decline from last year's 144,801, and the lowest total for the period since 89,123 trucks were built in 1974.

Early holiday closings at Ford Motor's car and truck facilities, plus a four day work week at all other assembly points, pulled last week's Canadian output down substantially from the previous week's total.

The car manufacturers slated 11,032 units last week, down 50.62 percent from the prior week's 22,339, but up 28.34 percent from last year's 8,596.

Last week's truck output was targeted at 5,248 units, down 47.97 percent from 10,087 the previous week, but up 1.43 percent from 5,174 units built in the comparable 1981 period.

The Ford St. Thomas and Oakville car and truck lines closed last week (Dec. 20) for holiday downtime.

All other car and truck facilities closed for the holidays last Thursday (Dec. 23). Production is scheduled to resume at most plants Jan. 3

New top for the 'J'

E&G Classics, Columbia, Md., has introduced a roof kit for the GM J-cars that includes inner and outer window block-out, padding, vinyl, stainless steel targa band, emblems, moldings and hardware.

Replicar builder seeks exemptions from safety rules

WASHINGTON. — Handcraft Motorcar Co., Bradenton, Fla., has asked NHTSA for temporary exemptions from several federal safety standards, saying compliance would cause it substantial economic hardship.

Handcraft was chartered last April to assemble vehicles from components — mostly mechanical components from Ford plus frame and major body parts from Thoroughbred Motorcars, Inc., Redmond, Wash. — to replicate a classic Mercedes 540K of the 1930s. It will be known as the "Magnum 540K."

Handcraft wants three-year exemptions from Standard 104, windshield wiping and washing; Standard 201, occupant protection in interior impact; Standard 202, head restraints; Standard 203, impact protection from steering column, and Standard 204, steering control rearward displacement.

It also sought exemptions from door locks and door retention components; Standard 207, seating systems; Standard 212, windshield mounting; Standard 219, windshield zone installation, and Standard 301, fuel-system integrity.

Handcraft argued that a month after incorporation, its assets were only $42,277. Testing would cost $150,000 (including the cost of the vehicle at $48,000) and would cause severe economic hardship.

Songer signs

Jack D. Songer, left, owner of Apple Buick-Chevrolet, Covington, Ind., signs Chevrolet franchise agreement as G. Neil Perkins, Indianapolis zone manager, looks on.

Ever-slumping sales take second place in balloting

DeLorean's downfall named Story of Year

By John K. Teahen Jr.
Managing Editor

There was a time — 10 to 15 years ago — when John Z. DeLorean was the golden boy of the auto industry.

Young. Brilliant. A General Motors vice president at 40. A leading contender for the presidency of GM.

No more. Today, DeLorean is 57 and his glitter is gone. His sports-car company is out of business, and DeLorean himself awaits trial in U. S. District Court in Los Angeles on charges of conspiracy to possess and distribute cocaine.

In short, 1982 brought the downfall of DeLorean. The trials and tribulations of the man and the company were named Story of the Year in the 30th annual poll of the AUTOMOTIVE NEWS editorial staff.

Second place went to the continuing sales famine. New-car sales in 1982 were even worse than in 1981, and 1981 was awful.

Labor developments took third place. There are new contracts at General Motors, Ford Motor Co., Chrysler Corp. and American Motors. GM and Ford workers made concessions. The Chrysler pact in the U. S. was negotiated after a costly strike in Canada.

The fourth-place story was GM's "Japanese strategy." The company plans to buy small cars from Isuzu and is talking with Toyota about joint production in the U. S.

• In fifth place was the beginning of Renault and Honda auto production in the U. S.; Renault by AMC and Honda in its own plant in Marysville, O.

The DeLorean saga was a year-long happening, but it didn't assume Story of the Year proportions until Oct. 19. That's the day John DeLorean was arrested.

In earlier months, the story concerned DeLorean's efforts to keep his sports-car company afloat. It wasn't easy.

As the year began, only about 3,000 of the 7,500 cars produced had been sold. There were lay-

Front-drive New Yorker

New generation is born at Chrysler

The 1983½ Chrysler New Yorker gets a rousing sendoff from Chrysler Corp. workers at the Jefferson Ave. plant in Detroit. The redesigned front-wheel-drive New Yorker is 18.5 inches shorter and 800 pounds lighter than the rear-drive Chrysler New Yorker Fifth Avenue. The new car will go on sale in February and 20,000 are scheduled to be built during the '83 model year.

GM's new incentive: 11.9 pct. on '82s, 83s

The new General Motors incentive program for the first quarter of 1983 calls for 11.9 percent customer financing on all new 1982 and 1983 passenger cars and light-duty trucks and vans.

It succeeds a 10.9 percent financing plan which expired Dec. 31. The 10.9 percent loan rate, however, applied only to 1982 cars, light trucks and vans. It started Nov. 1.

Thus the rate in the new program is not as advantageous to buyers, but the coverage is considerably broader.

As in the earlier setup, dealers contribute to the program by giving up 70 percent of their finance reserve.

The new GM-GMAC program through participating dealers covers 1982 and 1983 models delivered through March 31.

The 11.9 percent financing will also be provided on eligible 1983 models on order by customers as of Jan. 1.

In addition, the 11.9 percent will be available on eligible vehicles ordered by customers by Feb. 28 for future delivery, even if they are not delivered by March 31.

The program does not apply to fleet sales or leased units.

GM hopes to get calendar-year sales off to a fast start with its new low-interest offer. The 10.9 percent formula on '82 vehicles was highly successful during the final two months of last year.

In October, GM's car sales were up only a fraction of a percentage point over the 1981 level. But in November, GM sales jumped 32.99 percent over

Chrysler Corp. scores coup with Jamaican truck trade

By Edward Lapham
Financial Editor

Chrysler Corp. has scored a coup in the latest struggle for sales in the Third World by completing a counter trade to sell trucks in Jamaica.

Counter trading — multi-party deals which involve commodities, hard currency, local currency and complex negotiations — is one step beyond two-party, commodity-for-commodity bartering which many auto makers around the world have used in recent years.

Many large U. S. industrial companies, including Ford and General Motors, are currently negotiating counter trades in a number of developing countries which have an abundance of commodities and a dearth of hard currency.

Counter trades are particularly attractive to Chrysler, which does not have extensive overseas or international operations.

"The difference between bartering and counter trading is simple," said John J. Hummon, general manager of Chrysler's overseas sales operation. "In a barter, you swap a commodity for vehicles and then you have to sell the commodity yourself. In this deal we never touched the commodity nor did we pay for it.

"We merely found a buyer who was willing to buy it and pay hard currency."

Hummon said the deal took four months to negotiate. The trucks will be delivered some time in the second quarter of 1983.

• There were five parties involved in this "very elaborate deal," he said.

First, there was the New York-based European American Bank, which through its contacts found a buyer interested in Jamaica's alumina.

Then there was the buyer, an undisclosed European metals company, which agreed to buy 50,000 tons of alumina from the governmental Jamaican Commodity Trading Co., the third party. The deal was negotiated by Chrysler, the fourth party.

The U. S. dollars received from the sale of the alumina then went into an escrow account at the European American Bank. Chrysler can now manufacture and ship "several hundred vehicles" to JCTC, drawing down on the escrow account for payment.

JCTC, having purchased the vehicles from Chrysler for U. S. dollars, then sells them to Chrysler's franchised Jamaica distributor, the fifth party, for local currency and re-sells them in the Jamaica commercial market.

The counter trade was necessary to get the cars from the factory to the distributor because Jamaica has a new protectionist law requiring that all vehicle imports be consummated in this manner in order to assure an even balance of trade.

Chrysler and other U. S.

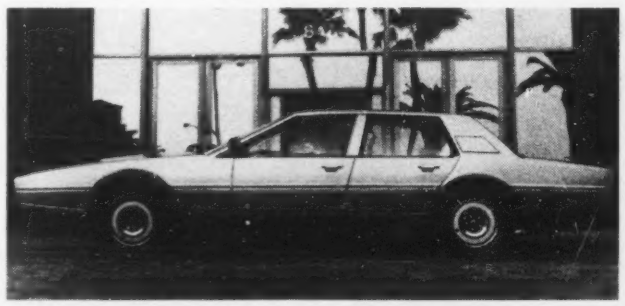
Vauxhall car, truck operations split

LUTON, England.—Structural changes at General Motors' Vauxhall Motors have separated the car and commercial vehicle businesses. Bedford Commercial Vehicle Division is now part of the newly formed GM Overseas Commercial Vehicle Corp., which is directly affiliated with the Worldwide Truck and Bus Group. Vauxhall Motors will continue to operate as GM's manufacturer and retailer of passenger cars in the UK.

Gilroy succeeds Hodgkinson at Land-Rover

SOLIHULL, England. — With Land-Rover's $320 million investment program almost complete and a new model expected within weeks, there has been a surprise change in top management. Mike Hodgkinson, managing director until the end of 1982, has taken a position outside the industry. He has been replaced by Tony Gilroy, previously managing director of the Freight Rover (Sherpa Van) subsidiary.

Launch in LA



1983 Aston Martin Lagonda debuts

The 1983 Aston Martin Lagonda will make its U. S. debut at the Greater Los Angeles Auto Show, Jan. 8-16 at the Los Angeles Convention Center. The $150,000 (East Coast) Lagonda features an aluminum body, shaped by hand and covered with 23 coats of lacquer, and a 5.4-liter aluminum V-8 made by a single person. Twenty-five will be available in the U. S. this year.

Program to build engine in Canada is on hold

Chrysler, Perkins eye diesel

By Jim Plegue
Staff Writer

Chrysler Corp. and the Perkins Group of Massey Ferguson will meet this month to discuss the future of their joint venture to develop and build diesel engines in Canada, a $367-million program that Chrysler shelved last month.

Chrysler said Dec. 23 that it was "deferring" its plan to build four and six-cylinder diesels for light trucks and cars at its Windsor (Ont.) Engine Plant "because of uncertain diesel sales." The program had been announced in August.

"Little sales improvement is foreseen in the absence of a national energy policy. With gas and diesel fuel prices drifting downward, there is little incentive for consumers to purchase diesel cars and trucks," Chrysler's Dec. 23 statement said.

Chrysler's postponement may jeopardize its Canadian unit's eligibility for portions of a complex financing arrangement with several Canadian governments, it was reported last week.

To finance the diesel program, the Canadian government and the Province of Ontario had agreed to provide a total of $233 million in loan guarantees and another $22 million in "repayable contributions," essentially interest-free loans.

The status of portions or all of that financing has been clouded by Chrysler's announcement to put a hold on its diesel project.

The first diesel engine from Windsor was to have bowed in 1984, a 3.7-liter six-cylinder turbo truck engine. A 2.2-liter four-cylinder car diesel was scheduled for production in 1985. The program was to have added 1,000 jobs at the Windsor Engine Plant by 1988.

Perkins has been working with Chrysler on development of the new engines for the last two years and has invested several million dollars in the program, according to William Winemaster, president, Perkins Engines, Inc., Wayne, Mich.

Winemaster said he could not comment on "whether or not we'd want to go alone" and continue with plans to build the diesel engine without Chrysler.

• Winemaster said he expected to meet with Chrysler officials this week.

Winemaster said that as much as 30 percent of total diesel production at Windsor — estimates had run as high as 350,000 engines per year when the plant hit full stride—was to have been sold to non-automotive buyers. Winemaster said those non-automotive diesel-engine buyers are still interested.

Chrysler and Perkins have been developing a family of direct-injection diesel engines for introduction in the late 1980s. They are said to offer 15 percent greater fuel economy than current diesels.

Truck industry gets presents in gas tax bill

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — The New Year is dawning a bit brighter for the nation's truck makers and dealers, thanks in large measure to the generous highway repair bill the 97th Congress passed in its final lame-duck session.

To be sure, car and truck drivers will be paying an additional five cents for each gallon of gasoline and diesel fuel. But that might well be offset by changes effected by the new law in the cost of buying and repairing the average light and medium truck.

Gone is the 10-percent federal excise tax on most trucks and trailers. Gone is the excise tax on truck parts, all lubricating oil, car tires, inner tubes, and tread rubber used for recapping tires.

Semitrailers may now be as long as 48 feet, trucks as wide as 102 inches, double trailers as long as 56 feet and gross vehicle weights as high as 105,500 pounds.

Only in the case of the heaviest trucks will the cost of buying and operating rise. Under the new highway law, the federal excise tax on trucks and trailers with gross vehicle weights of 33,000 and 26,000 pounds or more, respectively, will rise to 12 percent.

The tax will be collected at the retail level, however, which should save heavy-truck dealers a substantial amount of money because floorplanning a $70,000 rig under the old tax scheme meant the dealer had to pay finance charges on $7,000 worth of excise tax.

User fees also are restructured, so that the heaviest vehicles will bear the heaviest burden, reflecting the fact that such vehicles do the most damage to the nation's highways. Currently, the maximum tax paid is $240. That will jump to $1,600 by July 1, 1984, and to $1,900 by July 1, 1988.

The government estimates the gas tax law will bring in about $5.5 billion a year to finance transit systems and repair and build highways and bridges.

Changes in size and weight laws and the lifting of prohibitions against double-bottom trailers will produce savings of about $3.8 billion annually for the trucking industry, it says.

It means the average owner-

The future of American Motors' plant in Brampton, Ont., has been the subject of speculation in recent weeks, following announcement of plans to halt production indefinitely in April.

An AMC spokesman last week said only that the shutdown is to modify the plant for "increased manufacturing flexibility."

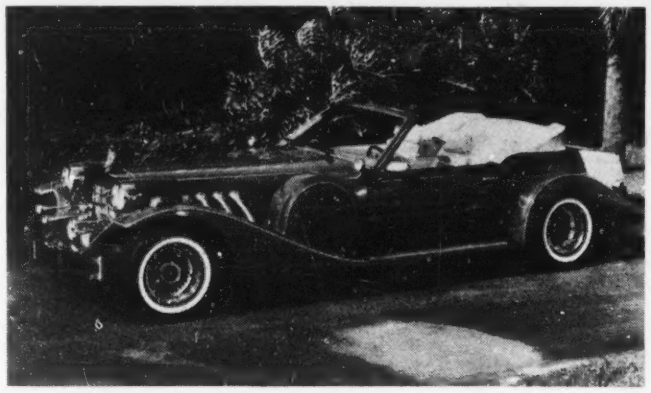
Chrysler Corp., however, confirmed rumors that Brampton is one of several assembly points being considered as a future source of rear-wheel-drive Chrysler cars after those models are pulled out of the company's Windsor plant.

Chrysler is converting its Windsor plant to produce its new front-drive T-115 van. It is slated to go into production in the 1984 model year. The company has not decided where or if it will build rear-drive cars after that.

Windsor currently assembles Chrysler's Gran Fury, Diplomat, Caravelle Salon, Cordoba, Mirada, New Yorker Fifth Ave. and Imperial models.

The AMC Brampton plant builds the Eagle and is the sole source of Spirit and Concord. Assembly of Eagle will continue at the company's Kenosha plant.

The Brampton shutdown will place about 1,600 workers on indefinite layoff.



Sunnier Golden Spirit

Zimmer Motor Cars, Pompano Beach, Fla., will show its new Golden Spirit Convertible at the Greater Los Angeles Auto Show Jan. 8-16. Equipped with a power top with full headliner, the new four-passenger model is based on Ford Mustang mechanicals—including the 5-liter V-8. Price is $67,850.

NHTSA crash tests find Quantum, 626 weak

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Latest results of high-speed crash testing of 1982 models show rather serious problems in the head-impact area for the Volkswagen Quantum four-door model, both for the driver and front passenger, and for the front passenger in the Mazda 626 four-door model.

In a 34.6-MPH barrier crash, the Quantum — a 2,950-pound German-made vehicle — produced a Head Injury Criteria (HIC) number of 1,353 for the driver and 1,194 for the front passenger. (HIC of 1,000 or lower is generally rated survivable.)

The Mazda 626 chalked up a marginal 969 for the driver and recorded an HIC reading of 1,693 for the front-passenger dummy.

In the same area — front-passenger-seat HIC — the Ford Granada L four-door also turned up with a marginally high number (1,050) at an impact speed of 34.6 MPH barrier. It handily passed for the driver side at 860 HIC. This continues a pattern for Ford, whose other earlier vehicles have had problems with passenger HICs.

The other '82 Ford tested — the Ford LTD four-door, tested at 35.5 MPH barrier — had HICs of 960 for the driver and 808 for the passenger.

All these vehicles had chest deceleration numbers well below the acceptable level of 60Gs (although the Ford Granada dummy driver had results listed as not available, apparently because something messed up the test).

All also passed the three standards for which they were tested — 301, fuel system integrity; 212, windshield retention, and 219, windshield intrusion.

But none of these results bear comparison with some other '82 models and their HICs: The '82 Chevrolet Camaro with 563/577; the '82 Chevrolet Celebrity with 478/395 or the Volvo with 550/381.

On the other hand, there so far is no assurance that exceeding the NHTSA criteria for Standard 208 (where the test speed is 30-MPH, compared to the high-speed crash tests conducted at 35 MPH, or one-third more forceful than required by law) means anything in the real world.

In fact, a research project nearing completion may provide some answers to that, and could possibly agree with the belief of some industry observers that the current test procedure is actually not at all what happens in the real world.

New-car deliveries up for sixth period in row

Mid-December sales gain again

By Jenny L. King
Staff Writer

Domestic new-car sales, moving at a pace in mid-December that belied their performance throughout the year, brought to six the number of consecutive 10-day periods that sales have been up compared with 1981 levels.

Dealers delivered 143,530 new passenger cars to customers Dec. 11-20, a 37.02-percent improvement over the paltry 104,754 delivered during the same period a year earlier. The annualized sales rate based on mid-December, 1982, was 6,607,000, almost a million units above the expected domestic total for this year.

With eight selling days in the period both years, the daily rate was up 37.02 percent, to 17,941 from 13,094.

The 1982 mid-month total was up 0.37 percent from 142,995 in early December. It was down 5.77 percent from 152,316 in mid-December, 1980, and down 26.34 percent from 194,848 for the period in 1979.

Four of the five major U. S. auto makers reported generous sales increases Dec. 11-20. Ford Motor Co. was up an astonishing 61.16 percent, to 33,848 from 20,842 in 1981. The majority of those sales were 1983 models as opposed to leftover '82s, according to a company spokesman.

General Motors was up 31.33 percent, to 84,993 from 64,718. Chrysler Corp. sales were up 35.54 percent, to 19,395 from 14,309. Estimated sales of American Motors passenger cars numbered 3,705, up 68.18 percent from 2,200, while Volkswagen of America, unable to escape the sales curse which has left it below 1981 sales levels throughout the year, was down 38.34 percent, to 1,594 from 2,585.

GM slipped to 59.22 percent of the market during the mid-month period from 61.78 percent a year earlier. Ford was up to 23.58 percent from 19.99 percent. Chrysler was squeezed to 13.51 percent from 13.66 percent, AMC had 2.58 percent compared with 2.10 percent and VWoA dropped to 1.11 percent from 2.47 percent.

Volkswagen and Imperial were the only makes unable to match their year-ago sales levels. VW was down 38.34 percent and Imperial was off 8.33 percent.

On the plus side were Chrysler, up 74.45 percent; Dodge, up 36.19 percent, and Plymouth, up 16.98 percent. Ford was up 57.13 percent, Mercury was up 59.01 percent and Lincoln doubled its sales.

Buick was up 33.17 percent, Cadillac was up 29.01 percent, Chevrolet was up 24.08 percent, Oldsmobile was up 29.57 percent and Pontiac was up 54.21 percent.

Year-to-date sales through Dec. 20 totaled 5,595,137, down 7.97 percent from 6,079,698 a year earlier.

DOMESTIC SALES

	Dec. 11-20, 1982	Dec. 11-20, 1981
AMERICAN MOTORS	3,700†	2,200†

Shenk won't produce DeLorean auto

NORTH MIAMI BEACH, Fla. — Sol A. Shenk, president of Consolidated International, said here that his company will not produce the DeLorean car.

Shenk's firm has acquired the remaining DeLorean cars and parts and had an option to reopen the plant in Dunmurry, Northern Ireland.

Measure is held unconstitutional

Illinois court overturns Sunday closing law

By Nancy I. Phillips
Staff Correspondent

CHICAGO.—The Illinois Sunday closing law for auto dealerships, which was passed by the Legislature and signed by the governor in July, has been declared unconstitutional in Chancery Court here.

The law was to have gone into effect Jan. 1, 1983.

The state is expected to appeal the court's ruling. The case has been turned over to the appeals division of the state attorney general's office.

The decision came in a case brought by five auto dealers and the Illinois Used Car Dealers Assn.

They maintained that the law was discriminatory, since only automobile dealers were required to close on Sundays and other retailers could continue to operate.

Gordon and Gordon, attorneys for the auto dealers, pointed out in their brief that similar legislation was declared unconstitutional by the Supreme Court of Illinois in 1961 in a suit brought by Jim Moran's Courtesy Motors.

The Illinois New Car & Truck Dealers Assn. and the Chicago Automobile Trade Assn. had intervened in the current case, filing briefs in behalf of the State of Illinois.

The dealer groups noted that the state constitution has been rewritten since 1961. They added that in the 1961 case, remaining open on Sunday was a misdemeanor, while the 1982 law gave the state the power to regulate this through the Secretary of State's licensing power.

They also argued that it was not convenient to be open on Sundays since banks and insurance companies are not open.

However, the judge's decision, according to Robert Gordon, of the plaintiffs' law firm, was based on the discriminatory aspect of the law rather than on the other items mentioned in the CATA and INCTDA briefs.

The CATA disagreed with the court's ruling.

Ross E. Kelsey, CATA executive vice president, said, "We are quite disappointed with the judge's decision and the way in which it was made. The hearing did not last six minutes, and the judge didn't hear any attorneys on either side."

The dealer association also is concerned because the International Brotherhood of Teamsters is again trying to organize salespersons at auto dealerships.

"They are sitting like vultures, waiting for this decision," commented a dealer representative. "Salesmen don't want to work Sundays."

The current target of the union is Ray Oldsmobile in Park Ridge, a northwest suburb of Chicago. A vote is expected in about 60 days.

Some dealers believe that the passage of the Sunday closing law was the result of action taken by dealers in an effort to prevent unionization.

No longer an Eldorado

American Custom Coachworks, Beverly Hills, Calif., extends the front end of the Cadillac Eldorado 2 feet to create its Paris Opera/Glamour Coupe. Other features are a reinforced chassis, landau top, fur carpeting and lacquer paint. Less than 100 are to be built in 1983, priced at $59,500.

Interac develops comprehensive system for dealerships

Computers ready to sell cars

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. — Imagine walking into an auto showroom and talking to a television set instead of a salesman.

By sitting down in front of a tube and touching the screen, customers could see the car of their choice in motion. Touch the screen again, and they would be given a list of optional equipment.

Touch again, and the price, along with a list of different financing plans, appears. Touch once more, and a salesman comes out of a back room to complete the sale.

Sound farfetched? Not to the people at Interac Corp. who have developed just such a system. George Rebane, chief executive officer of Interac, said his product is ready for use not only as a sales tool, but as a training and information-gathering source as well.

Called IVIS, which stands for Interactive Video Information System, the product is part of an emerging technology known as Interactive Video Disk System (IVDS).

In short, IVDS ties together the television, computer and video disk player to provide information on a two-way, interactive basis. The user talks to the system and, in turn, is provided as much or as little information as required.

IVIS is currently being used at Walt Disney's EPCOT Center in Florida in applications that range from information kiosks to audiovisual displays.

The system is capable of presenting computer-generated graphics, film or video sequences, text, slides, still photos and audio sequences recorded on a video disk. Each disk is capable of storing 55,000 frames of information.

When a user looks at the tele-

Seat to export Ronda despite pact with VW

MADRID.—Seat, Spain's state-owned auto maker, is going ahead with an ambitious plan to export its own cars, despite the recently signed agreement with Volkswagen of West Germany.

The first stage of Seat's own project begins this month with exports of its medium-sized Ronda hatchback to much of Western Europe, including the major national markets of West Germany, France and Italy.

In 1984, Seat will complete its European coverage, including, shipments to the United Kingdom.

During the same year Seat will begin production and exports of VW Polo/Derby and Passat/Santana models following the accord finally reached between the two companies last September.

But, say officials from Seat's marketing department, the link with VW does not impede Seat exports through the Fiat organization or Seat's own exports of the models it developed from Fiat designs following the divorce of the two companies in 1980.

The aim is to make Seat a 400,000-unit-a-year producer by 1985, with half going to the domestic market and half for export.

In 1981, it made 205,000 cars, a fall of 30 percent from the previous year. Last year, output rose by around 18 percent (175,600 to the end of September). Seat's record year was 1974, when volume reached nearly 365,000.

In addition to Germany, France and Italy, Seat will sell the Ronda in Austria, Belgium, Holland, Luxembourg, Greece and Israel. The company already has export links with Egypt, Chile, Cyprus, Sudan, Lebanon and Saudi Arabia.

The number of dealers per national market runs from 25 to 100, depending on the size of the market.

Under the terms of the VW-Seat link, Seat will supply around 50,000 Spanish-made Polos to the rest of Europe. The cars will have 65 percent local content. In addition, Seat will manufacture 40,000 Polo/Derby and 30,000 Passat/Santana models for the domestic market. The local content for the larger cars is put at 50 percent.

At the same time, Seat will import 11,000 other VW-Audi models. The VW network in Spain (38 dealers) and that of Seat (900) were merged at the beginning of this year.

Seat's third arm is with Fiat, whose cars it built since the Spanish company was founded—"to motorize the country" — in 1950. Thirty years later, amid Fiat's own internal problems, it withdrew its technical support.

But Seat continues to manufacture 80,000 cars (mostly Pandas) for sale by the Fiat organization in Europe. It will do so up to 1986.

Thus, by the mid-'80s, Seat will be exporting 80,000 Fiat Pandas, 50,000 VW Polos and up to 50,000 of its own Ronda. Up to 20,000 other Seat models will be exported to the Canary Islands and its other markets outside the Iberian peninsula.

Imports top '81 total; domestics down a bit

October registrations edge upward

By Jenny L. King
Staff Writer

Registrations of new domestic and imported cars in October exceeded both September's total and the year-ago level. According to statistics compiled by R. L. Polk & Co., U. S. registrations (domestic and import combined) climbed for the fourth consecutive month in October and were fourth best thus far in calendar year 1982.

October, 1982, registrations amounted to 654,806, up 4.83 percent over 624,640 in September, and up 0.07 percent from 654,330 in October of 1981. Registrations of domestic-built cars totaled 459,711, up 7.63 percent from 427,132 in September. They were down 2.59 percent from 471,920 a year earlier, however.

Import registrations reached 195,095 in October, up 6.95 percent from 182,410 a year earlier. Their share of the U. S. market climbed to 29.79 percent from 27.88 percent, the new penetration setting a record for the month.

In October, Chrysler Corp. and the combined imports made gains in shares of the total, while American Motors, Ford Motor Co., General Motors and miscellaneous domestics took back seats to the action. Chrysler gained 0.63 percentage points, climbing to 8.74 percent from 8.11 percent a year earlier. Imports were up 1.91 percentage points.

GM was down to 44.76 percent from 45.79 percent, a difference of 1.03 percentage points. Ford was off 0.94 percentage points, to 15.75 percent from 16.69 percent. AMC dropped to 0.93 percent of the total from 1.47 percent, and the miscellaneous domestics were down to 0.03 percent from 0.06 percent.

Of the domestics-only market, GM earned 63.75 percent this October, up from 63.49 percent in 1981. Ford slipped to 22.44 percent from 23.14 percent. Chrysler had 12.45 percent, up from 11.25 percent, AMC earned 1.32 percent compared with 2.04 percent and miscellaneous domestics claimed 0.04 percent, down from 0.08 percent.

The market-class breakdown

Birth of the 'baby Benz'

West Germans gush over new arrival

By Richard Feast
European Editor

On the day the new Mercedes-Benz 190/190E went on sale in West Germany it was easy to forget there was a recession. Showrooms were packed by people wanting to inspect the "baby Benz." Daimler-Benz shares on the Frankfurt stock exchange rose in anticipation of the big event.

Seldom in Europe has the launch of one car evoked so much public interest. It is part of D-B's mystique that it can stir such interest. Management likes to think of itself as a "quiet company," and clearly regards all the hype by its rivals as rather vulgar.

With little apparent motivation, the German public managed to work itself into a frenzy over the car that was developed under the code number W201. Previous new Mercedes models never had the same effect. This time it stems from the fact that it is a car in a new, smaller category, and from the company's amazing sales success through the most serious postwar recession.

But one part of the D-B myth does need correcting: that it is a small, specialist company. In 1981 it made 441,000 passenger cars and last year increased volume to 450,000. The total has gone steadily up throughout the past decade.

D-B volume may not be in the Toyota or General Motors league, but it is now a major car producer, with ambitious plans to reach 550,000 units a year when its Bremen factory is on stream.

The existence of the W201 has been an open secret for many years. According to Guntram Huber of D-B's research and development center, its origins date back to experimental models of 1960. Board Chairman Dr. Gerhard Prinz says the decision to go ahead with it came in early 1974, shortly after the 1973 (October) Middle East War.

Initial rumors suggested D-B would make a very small car in the Volkswagen Golf (Rabbit) category. But what D-B had in mind was not that small. The W201 emerges as 174 inches long, half an inch longer than Ford Sierra and 12 inches shorter than the Mercedes mid-range models. Its wheelbase is 105 inches, five less than the midsize.

It looks every bit a miniature S-class car, and the W123 mid-range looks old fashioned now. D-B's head of styling, Bruno Sacco, says the design for the midsize replacement is finished, although it is not expected to appear until the end of 1984; the car has been given the number W124.

Sacco also rejects questions about possible coupe, station wagon or other versions of the W201. It will last its entire life as a four-door, although he does not discount body variations for the car's successor in eight years' time.

The W201 is powered by a 2-liter four-cylinder, 90 HP engine with carburetor or a fuel-injected 122-HP version of the same engine. There will be other engine variations including diesels. When the car reaches the U. S. next October it will initially be as a 220E (gasoline) or 220D (diesel); neither model is currently available.

Weights of the European cars are only 2,380 to 2,425 pounds. Explains Guntram Huber: "Extensive use of high strength, low alloy sheet-metal and plastic material, new design methods and structural details to optimize body stiffness and extensive testing on the road and on the test rig made it possible to achieve weight savings of approximately 615 pounds compared with our middle class model."

Part of that weight saving—79 pounds—came from adoption of a complex multi-link independent rear suspension. Huber says the rear suspension was chosen only after extensive testing of eight different types and more than 70 individual variations. He says it provides comfort and handling qualities "which have not been achieved in this class before."

Great attention also was paid to air drag reduction; the 190 has a figure of 0.33. But Huber says, "We did not give the aerodynamicist the final word. We still retained the rain funnel in the A-pillar although it increased aerodynamic drag. But the additional safety of having a clean side window in rainy weather was considered to be much more important. Similarly, increasing the inclination of the windows decreases the aerodynamic drag, but at the same time increases the temperature in the interior when the sun is shining, thus decreasing the comfort for passengers."

The side windows are not fully flush as on the Audi 100, but the recess between frame and glass is only three millimeters.

At the end of 1982 the new car was being built at a rate of 160 a day in Sindelfingen, just outside Stuttgart. This will climb to 500 a day by April, for total production for the year of around 100,000.

Sindelfingen will be the home of the car until 1984, when production moves to Bremen. The factory in northern Germany, currently making the T-car version of the mid-range and van, will receive the major proportion of the company's $1.2 billion investment this year with fully modernized production facilities.

The delayed move to Bremen was caused in part by D-B's desire to use its facilities to the fullest. The company is aware that the new car will take sales from the mid-range, but is not saying to what degree.

Wolfgang Jacobi, Sindelfingen's plant manager, says the W201 production line features the full chassis tilting mechanism first pioneered with the S-class, to enable employes to assemble vehicles more easily. "It is an important human factor," he says.

Engines, gearboxes and all axles, including the complex rear unit, are built in highly automated plants at Unterturkheim, prior to final assembly at Sindelfingen.

In Germany the two new cars cost the equivalent of $10,500 and $11,500. Mercedes-Benz of North America officials say that cars destined for the U. S. will contain all the German extras as standard — air, automatic transmission, power steering, light alloy wheels, tinted glass—and will be priced around $25,000.

The 190/190E is a lighter, aerodynamic addition to the line-up of sedans with three-pointed stars. Its smooth exterior panels, windows and doors are almost completely flush with the overall body shape.

'No competitors in mind'

Dr. Gerhard Prinz, chairman of Daimler-Benz's board of management, says, "We have no particular competitors in mind for our new car. But we have no objections if our competitors have our car in mind."

The point had been made that the new 190/190E Mercedes-Benz occupies a market position similar to the new BMW 3-series.

Prinz says D-B has tried to bring S-class qualities to a compact car: "The suspicion was that we were able to produce only large cars — large cars by European standards. We wanted to prove that we could make a smaller car (with the same qualities)."

But he dismisses any suggestion D-B passenger cars will move into even smaller, more popular categories. "That would not be a Mercedes-Benz," he says.

Prinz says introducing the 190/190E is the biggest single step D-B has made. "No project in our history has demanded more expenditure," he says.

D-B production plans call for a slow, steady expansion rather than a sudden 100,000 capacity increase. Over the next few years the company will edge up output. "History shows we have always been anti-cyclical. We always increase production in spite of worldwide recessions," Prinz reflects.

D-B's investment program includes some $1 billion in Germany. It is part of a five-year investment program, which when announced in 1980 was estimated to amount to $4 billion.

The company—the biggest corporate tax payer in the EEC—has financial reserves to pay for such programs. One observer likens D-B to a bank rather than an auto company.

Dazzling display in a down market

German auto makers keep pumping out new products

By Richard Feast
European Editor

West Germany's auto industry knocked them in the aisles last fall with a dazzling display of new products.

First on stage was Ford Sierra, jointly developed in Germany and the UK. It was quickly followed by Audi 100 and Opel Corsa, the latter designed and developed in Germany, although made in Spain.

Now coming on stage are the new generation BMW 3-series, Daimler-Benz's long awaited 190/190E and Audi's four-wheel-drive 80 sedan. They arrive one year after the Opel Ascona (J-car), which improved General Motors' fortunes across Europe.

In the words of DRI Europe's latest forecast, "This record of product development has helped the industry to survive a very difficult domestic market in 1982."

West Germany's sales of passenger cars in the domestic market the first three-quarters of 1982 were 7.6 percent lower than a year earlier. They stood at 1.69 million and at one stage seemed to be heading below the 2 million mark for the year. As it turns out, the year-end figure is expected to be around 2.15 million, lowest total since 1975 and far short of the 2.62 million achieved only three years earlier.

With half a million sales taken out of the market in such a short space of time, the industry's only salvation was exports. Volkswagen's Audi Division is a good example. Its domestic market share fell from 9.4 percent in 1979 to 5.6 percent last year, but the Ingolstadt and Neckarsulm factories maintained reasonably constant production levels thanks to exports.

On the other hand, two German companies defied the downward trend by increasing output and lifting their presence in the domestic market. Daimler-Benz's share of German sales edged up to finish around 10.7 percent in 1982; the figure equals Ford's, whose products occupy a cheaper, larger market segment. BMW's 1982 market share rose to 5.9 percent.

Both companies are expanding passenger car capacity. In D-B's case it is with the W201 facility at the greatly expanded Breman factory. With BMW, a third auto making factory at Regensburg will ease production problems elsewhere.

While the German industry is

world news briefs

Opels get fresh faces

Adam Opel's top line Monza coupe (above) and Senator sedan go on sale in Europe early this year with aerodynamic body revisions similar to those of the West German company's recently announced Rekord sedan. In addition to the normal 3-liter six-cylinder engine, the latest generation will feature 2-liter four-cylinder engines with electronically controlled fuel injection.

Spanish sales up

After several years in the doldrums, new car sales in Spain edged up in the first nine months of 1982, totaling 360,098, a rise of 5.7 percent. Imports (up 19.2 percent) accounted for an unprecedented 12 percent (43,309) of what has until recently been a closed market.

Dutch Volvo output up

Volvo car, of Holland, made 90,600 300-series cars in 1982, up 16 percent over 1981. This year it hopes to make and sell 97,500. Key markets are the UK, Holland and Sweden. In recent months Volvo Car has been operating profitably, but the need to invest in a replacement for the 300-series at the end of the 1980s is a major financial burden.

Daf Trucks has new head

Aart van der Padt has been appointed chairman of the board of management of Daf Trucks, Eindhoven, Holland. He succeeds Piet van Doorne, second son of the company founder, who died suddenly last October. Van der Padt has been a board member for two years.

Peking point for Daimler-Benz

To care for the 1,200 Mercedes-Benz cars and 3,200 trucks in Red China, Daimler-Benz has opened a service shop and store in Peking. The agreement is with the Machimpex, the Chinese import organization.

Cars boost Volvo

Strong demand for Volvo cars contributed substantially to the Swedish company's almost doubled earnings ($260 million) in the first nine months of 1982. The company also noted growth in truck sales.

Volkswagen sees red

The Volkswagen group is expected to end 1982 in the red, the first time that's occurred since 1975. Problems in North and South America and with its Adler-Triumph office equipment subsidiary were compounded by the large fall in passenger car demand in West Germany, where VW is the leading retailer.

Scania gears up

Scandia has commissioned a new gearbox and rear axle gear assembly operation at its Sodertalje (Sweden) factory. It cost $9.5 million and is capable of producing 29,000 gearboxes and 36,000 axles annually.

Poland buys Isuzus

Poland's Pol Mot trade organization will buy 500 Isuzu diesel passenger cars. It is the first sale in an Eastern Bloc country by Isuzu, which also has been approached by Pol Mot to supply diesel engines, turbodiesel cars, light trucks, panel vans and four-wheel-drive vehicles. Poland's debt burden could present payment problems, however.

Gains in France

In France 1982 new car sales through October amounted to 1.65 million, an increase of 9.7 percent over a year earlier. Sales for the full year could break the 2 million barrier for the first time.

More Isuzus in Europe

Following introduction of the Isuzu KB pickup in Belgium, Isuzu Troopers have begun to appear in Switzerland. The Trooper, a four-seat 4x4, also will be shown at the Brussels truck show this month by GM Continental (Belgium). It is part of a GM/Isuzu agreement established last summer to introduce the Japanese vehicles into various European markets, quotas permitting.

Nissan's neat new supermini arrives

A March in Japan, a Micra in Europe

Japanese market version of Nissan's new hatchback.

By John Hartley
Staff Correspondent

TOKYO.—"We are aiming to open up a new market in Japan with the March," says Keiko Adachi, manager-domestic marketing for Nissan Motor Co. Ltd.

The March is Nissan's new 1-liter supermini, a neat three-door hatchback of modern front-wheel-drive design. At 144 inches long, 61.4 inches wide and weighing less than 1,450 pounds, it is the size of such European superminis as Volkswagen Polo, Fiat 127 and BL Mini Metro.

Not surprisingly, Nissan intends not only to break new ground in Japan with the new product, but in Europe, as well. It will reach the European market next spring under the name Micra.

Until recently the 1-liter class in Japan has been small, accounting for about six percent of the market. In fact, until the Daihatsu Charade and Toyota Starlet were introduced four years ago, there was no 1-liter segment of any consequence in Japan, mainly because of the taxation system and operating costs.

There is a class for midget cars of up to 550 cubic centimeters; they are economical to run and are subject to low tax rates and reduced costs for the compulsory inspection. Also, whereas a normal car must have a police-approved parking space before it can be registered, midgets are exempt from the rule.

On the other hand, tax and inspection costs of a 1-liter car barely differ from a 1.3 to 1.5-liter car. Therefore, Japanese people looking for a small, cheap car either have tended to buy a midget or something like a Nissan Sunny (Sentra) or Toyota Corolla.

Recently, midget sales have been increasing, mostly due to models registered as commercial vehicles. This situation is complex because some small hatchbacks can be registered as commercial vehicles, then used privately; the Suzuki Alto, which costs around $1,900, is an example. Many of these midgets are used by families and businesses as second cars.

Against this background, Honda introduced the City a year ago. Although it has a 1.2-liter engine, it is considered to be in the 1-liter class because of its small size—it is shorter than the March. The result has been an increase in sales of cars in the 1-1.2 liter class from 10,000 to 20,000 a month.

It's estimated that at least half the City buyers would have bought a slightly larger car otherwise (sales of the Civic have dropped from 8,000 to 4,000 a month since introduction of the City). Many other City buyers traded up from a midget, though, indicating there are prospects for a blossoming 1-liter market.

In Europe, the situation is different. The 1-liter class has been large for several years; its growth potential encouraged Ford to build a new plant in Spain to start producing the Fiesta in 1976, and now General Motors has followed suit with the Opel Corsa.

In the late 1970s, over 7 percent of passenger cars sold in West Germany, The Netherlands and Britain were 1-liter class, and last year the figure was 9.9 percent. Penetration is far higher in Italy and Spain, and in all of Europe the class is worth 1.4 million cars a year.

Because of the differences in the Japanese and European markets, Nissan's strategies differ as to potential buyers. In Japan Nissan has identified two main types of buyers. "The first," says Adachi, "is the family with more than one driver. These are middle-aged couples with the wife and one child both driving. The second market is for young unmarried people—mainly women."

In Europe there are three types of potential buyers, according to Shoji Abe, manager of exports to Europe. They are low-income young couples and single people who are looking for a cheap car; students and youngsters looking for something small and fashionable; and the second-car market. "Our main target is the low-income earner," says Abe; he adds that the "second-car market would be small for the Micra."

According to Abe, current sales in Europe are divided 10 percent for cars under 1-liter, 40 percent 1 to 1.5 liters, 40 percent 1.5 to 2 liters and 10 percent larger cars. Nissan expects the shares of the two smaller categories will increase in the future, at the expense of larger cars.

In Japan, though, Nissan's main target is the second-car family; currently about 12 percent of Japanese households have more than one car. These generally are people living in the country and small towns, according to Adachi. In those areas of Japan, the eldest son usually continues to live in his parents' house after getting married; however, that is changing and is less common in cities.

Theoretically, there are about three million potential buyers of second cars in Japan, although many buy used cars. New cars which are bought in Japan monthly as second cars are not a big market.

However, Adachi believes the market will expand as more people move out to the suburbs. "The man will use one car just for commuting to the station, leaving the other car at home," he says. At present the wife is the main user of the second car in 20 percent of households with two cars; the son is the main user in 40 percent, but the wife also is usually a driver. Therefore, the new March will be aimed at women—middle-aged in the case of the second-car market, and below 30's otherwise.

Adachi says styling of the March is orientated toward women, "but in the long run, it needs universal appeal—it might lack individuality, but this is better for sales." Many other features of the March are intended to appeal to women. The car is easy to drive — power steering and automatic transmission are options — and it is small. "Color schemes have been designed for women," Adachi says. "In particular they like red."

In Japan 70 percent of cars are white or silver, with beige next. Only recently have auto makers started using brighter colors such as red, yellow and strong blues. Adachi says young people seem to like the new bright colors.

Adachi says that in the first month, 50 percent of all Marches sold were red. In addition 50 percent were the most expensive models, 25 percent the next expensive and only 25 percent the two cheapest models; 36 percent of all sales are registered under women's names.

To promote the March, Nissan held a competition to find a name for the car. The advertising campaign featured a young singer, Masahiko Kondo, in TV commercials. Kondo is popular with teenagers; Adachi says the "aim was to use teenagers to influence their parents."

In Europe the marketing approach will be different. Says Abe: "The competitors are all well made. The biggest sales point of the Micra is its fuel economy and practical layout. Nissan has concentrated on getting good gas mileage under European conditions."

Abe pinpoints GM's new Corsa as "very strong competition," but says European distributors are "very happy to be getting the Micra" because many had been selling the original Cherry (310) in 1-liter form years before. At a meeting two years ago the distributors urged Nissan to get into this class, and stressed that gas mileage was of prime importance. "Our surveys confirm that," says Abe, who admits Nissan is a bit late with a 1-liter in Europe, "but we are trying hard."

Nissan has built a new engine plant at Yokohama, and a new body and assembly facility in the Murayama complex for the March/Micra. Current production capacity is 15,000 units a month, but it can easily be increased to 20,000 a month.

March/Micra production is starting at 10,000 a month, and soon will grow to 13,500 a month to meet export orders. Sales are expected to start next spring in Germany, Benelux, Denmark, Switzerland and Greece with Britain, Ireland and Scandinavia following soon afterward.

Abe says initial orders call for 5,000 units a month for export in the December 1982-February 1983 period, but plant capacity probably will limit shipments to only 3,500 a month. Nissan says over 10,000 Marches were sold in their first month on sale in Japan.

Adachi expects the market for cars under 1.5 liters to increase at about 10 percent a year in Japan, and is optimistic that a sales target of 10,000 units a month can be sustained for many months, if not increased.

If those sales gains are at the expense of midgets, Toyotas and Mazdas, then Nissan will do well. But if the March is bought by people who would have purchased Sunnys or Pulsars, then Nissan profits will suffer. It's a gamble that has to be taken to open a new market sector.

Dazzling

Continued from Page 10

strengthening its position as a manufacturer of top quality cars, recent events indicate a shift in small car production. Ford has sourced the majority of its small Fiestas from Spain since the mid 1970s. This summer General Motors' Opel Corsa—a car in the same category—began to roll at Zaragoza, Spain. In September Volkswagen and Seat reached agreement whereby a high proportion of Polo/Derby models will be assembled in Seat's Spanish factories; they will be sold not only in Spain, but exported to the rest of Western Europe.

Ford has not fully revealed its plans for a possible factory in Portugal. The company says it would represent an expansion of European capacity, but other auto makers are skeptical about Ford's requirement for extra production.

Such happenings make depressing reading to laid-off Volkswagen workers in Wolfsburg. Ford of Germany and Adam Opel now also face the prospect of reduced work as export orders begin to shrink and there is little likelihood of a major return of domestic demand. Volkswagen confirms it will sustain a loss on its worldwide activities in 1982, the first since 1975.

These are, indeed, troubled times for Germany. The jobless total shot up by more than a third during the past year. The more than 2 million unemployed are expected to be joined by another half-million more over the next 12 months.

Bankruptcies are at a record level. The virtual collapse of the AEG - Telefunken electrical machinery group was a severe blow to national morals, and a major dent in the shield of the post-war German economic miracle. German steel and shipbuilding are suffering.

German politics have moved to the right following the vote of no confidence in Chancellor Schmidt last year. At the same time, support for the ecology party (the Greens) has never been higher. "Capitalism is doomed," declares one of its leading figures.

But observers discount a repeat of events in Germany of half a century ago when social unrest and unemployment brought Hitler to power. They do agree, though, that the outlook is extremely bleak.

As a major employer, investor and exporter, the motor industry will play a vital part in the return to German stability.

Worst is over, predicts trade group president

Rubber makers see slow recovery

A spokesman for the tire and rubber industry says a gradual economic recovery is under way.

Donald G. Brotzman, president of the Rubber Manufacturers Assn., says, "Our statistical experts believe the worst is over, the recession has bottomed out, and that our industry has begun a slow recovery along with the automobile industry and business in general.

"We expect this gradual improvement to continue. We are not out of the woods yet, but at least we are headed in the right direction."

Brotzman based his guardedly optimistic forecast on three industry statistical reports by the RMA, covering tires, industrial products such as hose and belting, and mechanical rubber products such as molded, extruded and lathe cut goods.

"Our statistical committees predict slow but steady improvement over the next few years in all the main segments of our industry," Brotzman says.

The tire forecast shows U. S. demand for passenger tires growing from a total of 164.5 million units in 1982 to 172.5 million in 1983 and 181.3 million in 1984. Truck and bus tires are seen rising from 33.5 million, to 36.2 million in 1983 and 38.3 million in 1984.

The industrial products forecast, stated in dollar value instead of units, shows U. S. demand for hose growing from $845 million in 1982 to $870 million in 1983 and $915 million in 1984. The demand for flat belting is expected to grow from $335 million in 1982 to $345 million in 1983 and $360 million in 1984. The demand for V-belts is seen rising from $400 million in 1982 to $415 million in 1983 and $435 million in 1984.

The mechanical rubber products forecast, also in dollar value, shows U. S. demand for molded goods growing from $1.286 billion in 1982 to $1.429 billion in 1983. Demand for extruded goods is seen growing from $309 million in 1982 to $337 million in 1983. Demand for lathe-cut goods is seen rising from $54 million in 1982 to $59 million in 1983.

Forecast: Molded, Extruded and Lathe Cut Mechanical Rubber Products

	1982	1983
Total molded goods	$1,286,000,000	$1,429,000,000
Total extruded goods	309,000,000	337,000,000
Total lathe cut goods	54,000,000	59,000,000
GRAND TOTAL	$1,649,000,000	$1,825,000,000

Note: Forecast compiled by RMA Molded & Extruded Products Division Statistical Committee. Totals shown for each product represent U. S. demand. This includes domestic shipments less exports, plus imports. Figures based on 1981 dollars.

U. S. Tire Market

	1982	1983	1984
PASSENGER TIRES			
Shipments—Original Equipment	35.5	42.5	50.3
Replacement	129.0	130.0	131.0
TRUCK & BUS TIRES			
Shipments—Original Equipment	5.6	6.5	7.1
Replacement	27.9	29.7	31.2
TRACTOR-IMPLEMENT TIRES			
Shipments—Original Equipment	1.1	1.4	1.7
Replacement	2.1	2.5	2.8

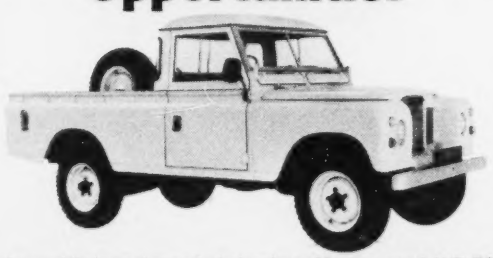
Note: Forecast compiled by RMA Tire Statistical Committee. Total for each product shows U. S. demand including shipments and imports. All figures are in millions of units.

Forecast: Industrial Products

	1982	1983	1984	1985	1986	1987
Hose	$845	$870	$915	$955	$990	$1,025
Flat Belting	$335	$345	$360	$370	$380	$ 390
V-Belts	$400	$415	$435	$450	$465	$ 475

Note: Forecast compiled by RMA Industrial Products Division Statistical Committee. Totals shown for each product (in millions of 1982 dollars) represent U. S. demand. This includes domestic shipments less exports, plus imports. Hose products are reinforced hose, rubber or plastic except garden hose. Flat belting is all conveyor, elevator and flat transmission belting of rubber or plastic. V-belts are all power transmission belts including industrial and automotive other than flat, of rubber or plastic, including belts made for original equipment and replacement.

Exceptional Dealer & Export Opportunities



We're the world's largest export wholesalers of factory-new LAND ROVERS & RANGE ROVERS. These are Europe's finest in utility and luxury 4WD vehicles, offering unlimited potential for high profit dealerships across the U.S. If you're ready for the challenge of dealing to government agencies, building & construction firms, oil exploration & geophysical companies, charitable organizations and others with such vehicular requirements, or if your organization has related vehicular needs, compare Transautex to other suppliers:

- Worldwide deliveries of all available factory models & options
- Vehicles customized to specific needs (performed by our own workshops in England)
- Quick and efficient delivery of supplies out of stock
- Expert handling of all necessary export documents, certification and bills of origin.

You'll find there's no comparison! Act now to investigate this unlimited market. Call or write for our brochure and more information.

Charles A. de Bie

Brotzman sees growth

Donald Brotzman, president of the Rubber Manufacturers Assn., sees slow growth in the automotive rubber sector for 1983 and 1984.

Ford Sierra wins 4 awards in U. S., Europe

DEARBORN. — Ford Motor Co. said its new Sierra, introduced in October as a replacement for the European Taunus/Cortina, has received four awards in Europe and the U. S.

Britain's 380-member Guild of Motoring Writers voted Sierra the "Top Car for 1983."

In Ireland, the Assn. of Irish Motoring Writers named Sierra "Irish Car of the Year."

The Spanish motoring journal Motor Mundial named Sierra its "Imported Car of the Year 1983," while in the U. S. the Society of Plastics Engineers recognized Sierra with an award for the research and technology necessary to produce the car's all-thermoplastic bumper system.

Strings tied to NHTSA funds; Seat-belt program questioned

WASHINGTON. — In the agreement reached between House and Senate conferees giving money for fiscal 1983 for NHTSA, the agency was banned from spending any more money on its program to promote use of safety belts.

Instead, the lawmakers told the agency to report to Congress on what increase in belt use can be achieved in what time frame and at what cost.

The conferees also called for a government - wide mandatory seat-belt-use policy to serve as an example to the private sector.

The report of the conferees told NHTSA to stop obligating money for the belt-use education program until both Appropriations Committees approve written submissions from NHTSA on how the three conditions have been met.

During House debate, Rep. John Dingell, the Michigan Democrat who chairs the House Energy and Commerce Committee, said he wants to be sure the same report is made to him and to Rep. Tim Wirth the Colorado Democrat who chairs the NHTSA oversight subcommittee.

While stressing his support of increased seat belt use, Dingell added he wants to be sure the "program is worthwhile and the funds not wasted."

In the conference report giving money—$74 million for fiscal 1983—to NHTSA, the lawmakers expressed their continuing concern over the $27 million seat-belt usage program.

"Over the past decade, NHTSA has undertaken numerous efforts at significant cost to promote safety belt usage," the report said. "These efforts have had no lasting effect. In fact, the national safety belt usage rate has steadily declined from 25 percent in 1974 to 11 percent in 1981.

"Although NHTSA contends that its new program is significantly different from past programs, the conferees have been presented with little evidence to support claims that it will have any better long-term results than past efforts."

As further evidence, the report cited a draft report by Congress' watchdog agency, the General Accounting Office, to the effect that NHTSA has not determined whether the benefits from the seat-belt program will outweigh costs.

Downs adds Pontiac to Chevy-Olds deal

PANA, Ill.—Charles E. Downs, of Downs Motor, Inc., has signed a Pontiac franchise.

Downs has been a Chevrolet-Oldsmobile dealer for 27 years. His father and grandfather preceded him as head of the dealership.

$40 million deal in works

Michigan firm to buy Flxible from Grumman

Continued from Page 16

tinued hassles over federal funding of municipal bus orders.

"An international manufacturing and marketing structure is necessary to compete successfully in the bus business today," said John C. Bierwirth, Grumman chairman.

He said General Automotive appears capable of running the bus subsidiary, Grumman Flxible Corp., which is headquartered in Delaware, O.

Under the agreement, Grumman will be responsible for completion of structural reinforcement of Flxible Model 870 buses already delivered, and General Automotive will manufacture and deliver new buses for current and future orders.

Moss and Obert left AM General, special-vehicle subsidiary of American Motors, in the late 1970s to join White Motor Corp.

Moss, who had been AM General's president, became chairman and chief executive of White after the retirement of Semon E. (Bunkie) Knudsen. Obert, who had headed AM General marketing activities, was marketing vice president at White.

General Automotive was established in 1979 after both Moss and Obert left White during federal bankruptcy proceedings.

A third AM General and White "alumnus," George Steggles, is president of International Trading Corp., a General Automotive wholly owned subsidiary

Air-suspension system built for light-duty Chevy trucks

Continued from Page 16

plications for pickup trucks, vans and eventually four-wheel-drive vehicles in both the original-equipment and replacement markets.

The "Reflex" system was designed for Chevrolet's light trucks because nearly nine million have been produced and many of them are used as campers, trailers, snowplows and other applications that lend themselves to air suspension, Woods said.

"Put a snowplow on the front of a typical truck and it'll droop because of the extra weight," Woods said. "With this system, the vehicle can be leveled by simply adding air."

• Woods predicts that air suspension also has "tremendous potential" in the import-truck market.

"We're assessing the marketplace now and will make decisions based on the popularity of the vehicle and consumer needs," he said. "Being an utilitarian vehicle, a truck especially needs the flexibility that an adaptive suspension system such as air can offer."

An air spring is a rubber, fabric and metal container that utilizes the compressibility of the confined air as a spring.

Originally developed for buses, Goodyear's Super-Cushion air springs are being used increasingly on heavy truck tractors and trailers.

Goodyear recently announced that its air springs will be featured on some U. S. luxury cars next year.

"Air suspension is the wave of the future," Woods said. "It's the sum of all the alternatives."

JEFFERSON CITY, Mont. — Pharis D. Fowler has been promoted to manager of the GMAC branch here.

He succeeds James C. Langan, who is retiring. Fowler had been assistant control branch manager in Jacksonville, Fla.

Imports top '81 total; domestics down a bit

October registrations edge upward

Continued from Page 3

for October revealed gains for imports, luxury U. S. models, standards and intermediates.

U. S. subcompacts slipped to 14.28 percent from 16.09 percent in 1981; compacts were down to 15.86 percent from 19.00 percent; intermediates climbed to 20.96 percent from 20.70 percent; standards were up to 12.78 percent from 10.55 percent; luxury cars went to 6.33 percent from 5.78 percent, and imports leaped to 29.79 percent from 27.88 percent.

Of the domestics alone, subcompacts accounted for 20.34 percent of the total, compacts had 22.58 percent, intermediates had 29.86 percent, standards had 18.20 percent and luxury models had 9.02 percent.

U. S. registrations for the first 10 months of 1982 totaled 6,311,250, down 12.57 percent from 7,218,659 in 1981. Domestics were down 14.04 percent, to 4,418,615 from 5,140,488, and imports were down 8.93 percent, to 1,892,635 from 2,078,171.

In 10-month shares of the total market, only Ford Motor Co. and the imports scored successes. Ford was up 0.35 percentage points, to 16.70 percent from 16.35 percent in 1981, while the imports gained 1.20 percentage points, edging to 29.99 percent from 28.79 percent.

For the 10 months, GM slipped to 43.63 percent from 44.48 percent; Chrysler was down to 8.52 percent from 8.75 percent; AMC was off 0.46 percentage points, to 1.13 percent from 1.59 percent, and miscellaneous domestics were off 0.01 to 0.03 percent.

GM helped itself to 62.32 percent of the domestic market for January through October, vs. 62.46 percent in 1981. Ford improved to 23.85 percent from 22.96 percent. Chrysler was down 12.17 percent from 12.29 percent, AMC dropped to 1.61 percent from 2.23 percent and miscellaneous domestics were down to 0.05 percent from 0.06 percent.

Weisman honored

NBC newscaster Jessica Savitch holds two of four awards presented to Frederick R. Weisman at a special tribute dinner in his honor in Washington. Weisman, owner of Mid-Atlantic Toyota Distributors, Inc., Glen Burnie, Md., was cited by the State of Maryland for his contributions to its economic development. He also received two awards for his work with exceptional children, presented by The Devereux Foundation, of Devon, Pa.

Herbie's high

Herbie Husker, a 25-foot cold-air inflatable giant, is a popular mascot at both University of Nebraska and Ford Motor Co. events.

In the silver

Joe S. Reed Jr., Lake Motors, Inc. (Chevrolet-Oldsmobile-Cadillac), Eagle Lake, Tex., receives a 25-year Cadillac dealer plaque from John R. Dudas, Cadillac district sales manager.

SVO Mustang

Performance pony car due next fall

Ford Motor's Special Vehicles Operation will offer this limited-production (about 8,000 copies), high-performance SVO Mustang model next fall. The SVO Mustang will be powered by Ford's 2.3-liter turbocharged and fuel-injected four-cylinder engine, tweaked even further with the addition of an intercooler and aluminum pistons. Note unique wheels and body work, including twin-tiered rear spoiler. Target price is said to be about $16,000.

'82 new-car sales lowest since '61 despite late rush

By Jenny L. King
Staff Writer

The domestic auto industry closed its 1982 sales year with seven consecutive periods of sales increases and a fourth-quarter gain of 16.69 percent, perhaps paving the way to a long-awaited economic recovery in 1983.

Behind the smokescreen created by these incentive-produced sales fires was a year that was the domestic industry's worst since 1961. Sales were off to a slow start last January and never really got moving until lower interest rates for customers were offered in November and December.

The amazing imports kept a fast pace in 1982, seldom losing stride, with five companies reporting record sales in the U. S. last year and the Japanese makers taking an ever-larger share of the import total and the industry total. Last August, imports chewed off a record 32.74 percent of the U. S. market.

In 1982, domestic auto makers retailed 5,756,660 new cars, down 7.24 percent from 6,206,296 in 1981 and down 12.49 percent from 6,578,275 in 1980. It was lowest for the domestic industry since the 5,556,102 figure of 1961.

Imported-car sales in 1982 were down 4.49 percent, to 2,220,910 from 2,325,218 in 1981. Their best year was 1980 when 2,395,036 passenger cars were sold in the U. S. Because the domestic competition was weak, imports earned a record share of the market in 1982: 27.84 percent, compared with 27.25 percent in 1981 and 26.69 percent in 1980.

The Japanese share of the import segment was 81.11 percent last year, up from 79.95 percent in 1981. Japanese-built passenger cars represented 22.58 percent of the total U. S. market in 1982, up from 21.79 percent a year earlier.

Total number of cars sold in the U. S. was 7,977,570 in 1982, down 6.49 percent from 8,531,514 in 1981. The industry's best year was 1973, when 11,427,478 domestics and imports were purchased.

None of the major U. S. auto makers reported a sales gain in 1982. Ford Motor Co. came the closest to meeting its year-earlier total—it was down 2.53 percent. Volkswagen of America suffered a disastrous sales year, tumbling 43.88 percent from its 1981 sales level.

In 1982, General Motors sales totaled 3,515,660, down 7.40 percent from 3,796,696 in 1981. Ford Motor Co. sales of 1,345,698 were down 2.53 percent from 1,380,600. Chrysler Corp. announced a total of 691,703 domestic sales, down 5.23 percent from 729,873 a year earlier.

American Motors dropepd to 112,433 from 136,682, a difference of 17.74 percent, and VWoA plunged to 91,166 from 162,445, a 43.88-percent drop.

GM slipped to 61.07 percent of the domestic market from 61.17 percent. Ford was up to 23.38 percent from 22.25 percent. Chrysler pushed ahead to 12.02 percent fro m11.76 percent. AMC was down to 1.95 percent from 2.20 percent, and VWoA picked up the remaining 1.58 percent, down from 2.62 percent.

The daily selling rate for the domestics averaged 18,751 in 1982, down 7.24 percent from 20,216 in 1981. There were 307 selling days both years.

Only four domestic makes finished the year ahead of their 1981 sales performances. Chrysler was up 87.89 percent, Lincoln was up 45.81 percent, Cadillac was up 8.08 percent and Buick just made it — up 0.05 percent, or 394 units.

Minus signs were chalked up by Plymouth, down 22.72 percent; Imperial, down 44.05 percent; Dodge, down 14.60 percent; Ford, down 5.29 percent and Mercury, down 3.65 percent. Also off were Chevrolet, down 12.60 percent; Oldsmobile, down 5.79 percent; Pontiac, down 12.54 percent; AMC, down 39.82 percent, and VWoA, down 43.88 percent. Renault Alliance, a new make, did not have a year-ago comparison.

In December, the domestic companies enjoyed a 25.30-percent sales increase, jumping to

Chrysler, Ford join GM with cut-rate interest

By Joseph Bohn
Marketing Editor

The auto companies lined up behind low-interest financing again after closing out a December which left most dealers in high spirits.

Ford Motor Co. and Chrysler Corp. pretty well matched General Motors' 11.9 percent financing program, with similar dates and rates. There are differences howere. All three programs continue until March. 31.

GM dealers give up 70 percent of their finance reserve, Chrysler dealers the whole th ng. At Ford, reserves are paid on a dollar basis, depending on the car line.

With recourse financing, Ford dealers get $85, for example, on Escort/Lynx, $130 on a Bronco and $115 on the new '83 LTD/Marquis. On without recourse, they receive $35, $80 and $65, respectively, for those lines.

GM's interest financing is available only through GMAC, while Ford and Chrysler offer it through their financial subsidiaries as well as participating banks.

Chrysler pays the difference between 11.9 percent and the net dealer rate or 16½ percent, whichever is less. Its payment rates to banks are 90 percent of the loan on 1-12-month contracts, 85 percent for 13-24 months and 75 percent for 25-to-48-month contracts.

Ford's payments are against flat dollar amounts, depending on the car, area of the country and whether it's recourse or non-recourse paper.

- In Florida, for example, banks get $425 on Escort/Lynx with recourse; $375 without; $675 on Bronco with recourse, $625 without; $575 on LTD/Marquis with recourse, $525 without.

In Texas/California, banks receive $475 on Escort/Lynx on recourse paper; $425 wihtout re-

breaking news

1983 to start in spring for Fiat

HASBROUCK HEIGHTS, N. J.—Fiat Motors of North America anticipates its rebates of $1,500 and $2,000 on 1982 models will clear out its U. S. inventory of some 5,000 units in about three months. In that case, 1983 models will start arriving at the end of April or early in May, a spokesman said. The fact that both the Spider and the X 1/9 are produced by coachbuilders will shorten the pipeline, he said.

23,000 orders for Thunderbird, Cougar

DETROIT.—Ford Motor Co. said last week that it has received more than 23,000 dealer orders for the new Ford

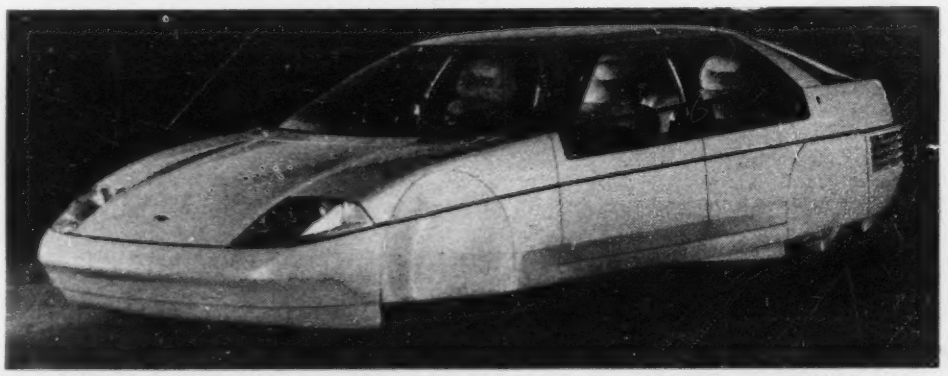
Probing the limits



Ford to unveil Probe IV at Detroit show

Ford will unveil a running experimental model, Probe IV, at the Detroit Auto Show this week. The aerodynamic sedan was designed in Dearborn and the mechanicals built by Ford. Body work was done in Turin by Ghia, a Ford subsidiary. Wheel fairings move to accommodate turns. A computer controls the pneumatic suspension to keep the car as close to the ground as possible. The running Probe IV is expected to have a drag coefficient below 0.20. Story on Page 2.

Average net rose 12 pct. through September

NADA reports rise in dealership profits

WASHINGTON. — Average dealership net profits increased 12.4 percent during the first nine months of 1982 compared with the year-earlier period, NADA reported.

In the same period, dealership gross profits increased 5 percent. NADA credited the increases to good expense controls and strong fixed operations.

Net profits before taxes averaged $70,510, a gain of 12.4 percent over the 1981 period, NADA said. Dealers also slightly increased net profits as a percentage of total sales, from 1.49 percent, to 1.58 percent.

Gross-profits averaged $660,030 in the 1982 period, a 5-percent increase over the $628,505 of the 1981 period. But grosses as a percentage of total sales declined — from 14.93 percent to 14.79 percent.

Expenses were held to a 4.2 percent increase, according to NADA.

The parts and service departments accounted for 40 percent of an average dealer's profits in the first nine months of 1982; the used-vehicle department, 31 percent, and the new-vehicle department, 29 percent.

The sales volume breakdown was new-vehicle department, 61.1 percent of total sales; used-vehicle department, 23 percent, and parts and service, 15.9 percent.

Average new-vehicle sales for the period were $2.73 million, up 4.5 percent from the $2.61 million average of the first nine months of 1981. Used-vehicle volume averaged $1.03 million, up 8.4 percent from the $947,181 of '81.

The biggest percentage increase was in service and parts volume, up 8.7 percent from an average of $652,503 to an average of $709,565 for the first nine months of 1982.

Dealers were able to reduce their floorplan costs $89 per vehicle during the first nine months of 1982, but more than half the gain was eroded by declines in new-vehicle gross profit rates, NADA said.

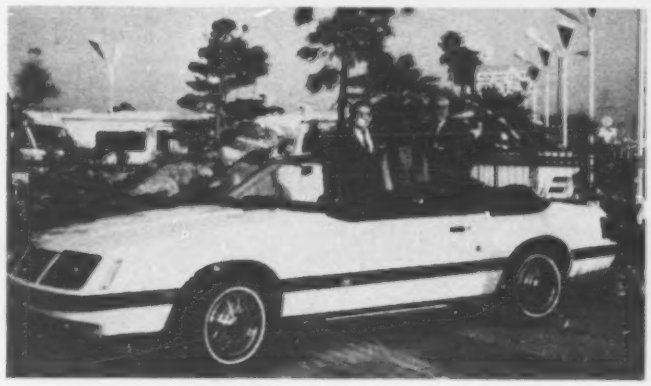
The average new car retailed for $9,800 during the first nine months of 1982, compared with $8,710 for the comparable 1981 period. That represented a 12.5-percent increase.

Grosses averaged $865 in the '82 period, or 8.8 percent of sales price, compared with $820, or 9.4 percent of sales price, in 1981.

• Lower interest rates, floorplan assistance and reduced inventories helped dealers cut their floorplan averages 32 percent, from an average of $278 per vehicle in early 1981 to $189 in the 1982 period.

NADA cautioned that rebates and increased holdbacks may mean that some of the profits are on paper only. But it said its data indicates the average dealer was in a better cash position at the end of September, compared with a year earlier, despite lags in payments from manufacturers.

Dealership sales averaged $4.46 million during the first nine months of 1982, a 6-percent gain over the $4.21 million of the year-earlier period.



It's the first for California

Burt Boeckmann, right, owner-president of Galpin Ford, Sepulveda, Calif., and John O'Donnell, Ford district manager, delivered California's first 1983 Mustang convertible to its new owner, Marcia Peterson, who is president of the local Chamber of Commerce. Peterson owned one of the original 1965 Mustang convertibles.

Firms rework diesel production strategy for Canada

Chrysler, Perkins trim engine plans

By Jim Plegue
Staff Writer

Chrysler Corp. and Perkins Engines, Inc., may eventually build both four- and six-cylinder diesel engines in a scaled-down operation in Trenton, Mich., following Chrysler's cancellation of an ambitious $367-million diesel production program in Windsor, Ont.

William Winemaster, president of Perkins Engines, said last week that his company is exploring the possibility of building 2.2-liter to 2.5-liter four-cylinder diesel engines at Chrysler's Trenton engine plant.

He said the engines could be built alongside Chrysler's 3.7-liter turbocharged six-cylinder truck diesel. Winemaster said negotiations with Chrysler will continue and "if it makes good business sense, we'll go ahead with it."

Perkins and Chrysler announced their original joint venture last August. Diesel engines were to have been built at Chrysler's idle Windsor engine plant, beginning with the truck diesel in 1984. Planned capacity was targeted at 240,000 engines per year. At that time, Chrysler said the Trenton plant would produce major components for Windsor assembly.

Last month, however, Chrysler said it was "deferring" its Canadian program "because of uncertain diesel sales" and last week, a Chrysler Canada spokesman confirmed a report that Chrysler's postponement had become a cancellation, again because of shrinking diesel sales.

• Although Chrysler scrapped the Windsor program and has put short-term diesel production plans on hold, a U. S. Chrysler spokesman admitted it is "likely" that Chrysler would eventually build a 3.7-liter six-cylinder turbo-diesel at Trenton.

A Canadian UAW official last week said Chrysler officials had told the union leaders of the company's intent to scrap the Windsor program and to build the 3.7-liter diesel in Trenton.

Perkins needs the new four-cylinder diesel engine to replace its current 20-year-old engine line, "which is coming to the end of its life," Winemaster said.

Perkins, he added, could sell 20,000 of the new diesel engines per year for non-automotive uses —fork lifts, welders, generators and construction equipment. He said the engine could also be used in future Chrysler vehicles, if the diesel market rebounds.

Meanwhile, Chrysler's cancellation of the Windsor program could force a review of its Canadian unit's eligibility for portions of a $25-million package of financial aid from federal, provincial and city governments.

The lion's share of that package is $200 million in (Canadian) federal loan guarantees provided to Chrysler in a 1981 agreement

T-Bird Turbo Coupe to debut at $11,790

Ford's sleek new Thunderbird Turbo Coupe, a European-style luxury tourer, will debut this spring with a suggested retail price of $11,790.

The heart of the Turbo Coupe is Ford's new turbocharged 2.3-liter four-cylinder engine with port injection, mated to a five-speed manual overdrive transmission. First through fourth gears of the transmission are performance ratios, Ford said, while fifth gear is a 0.86:1 overdrive ratio.

Ford said its new powerteam can move the T-Bird from 0 to 60 MPH in about nine seconds, while yielding projected fuel-economy figures of 33 MPG highway, 21 city.

The coupe's turbocharged engine differs from Ford's earlier — and short lived — attempt (with the 1979 Mustang) in that it uses a "blow-through" design, is fuel-injected and is governed by Ford's sophisticated fourth-generation Elecontric Engine Control (EEC-VI) unit.

The blow-through design places the turbocharger ahead of the throttle, thereby providing crisper throttle response by keeping a slight pressure in the inlet system to overcome low-speed drag.

Ford's EEC-IV not only controls fuel-injection but also directs the exhaust-gas recirculating system, the ignition system and other functions.

The Thunderbird's aerodynamic body — Ford said it has a drag coefficient of 0.35 — has been enhanced in the Turbo Coupe by the addition of fog lamps and by eliminating most chrome trim.

The Turbo Coupe features a new rear suspension called Quadra Shock, a special four-bar link coil-spring system that uses two hydraulic axle dampers mounted horizontally between brackets on the axle and the body rail.

Ford said these dampers help maintain the dynamic stability of the rear axle during cornering and acceleration.

Inside, the Turbo Coupe has new articulated front bucket seats. The buckets have five separate adjustments — fore and aft, seat-back adjustment, adjustable thigh support, adjustable thigh cushions and inflatable lumbar support.

Other standard features include dual electric remote-control mirrors, tachometer, a light group, and leather-wrapped sport steering wheel and leather-wrapped shift knob.

Georgia dealership adds fifth GM franchise

ARMERCUS, Ga. — Oxford Motor Co. has added a Buick franchise and now handles five of the six General Motors vehicle lines. The dealership also has Pontiac, Cadillac, Oldsmobile and GMC.

AMC alters some prices on Eagle options, Jeeps

SOUTHFIELD, Mich.—American Motors has announced equipment revisions and price changes on vehicles and options in its Eagle and Jeep lines.

For Eagle, the six-cylinder engine and the California emissions package have been increased $10 each. The engine now is $165, and the emissions package is $75.

Base sticker prices of Eagles are unchanged, and there are no changes on Concord, Spirit or Renault models. AMC said the option hikes boosted the prices of average-equipped AMC cars $8, or 0.1 percent.

Steel-belted radial tires (black sidewalls) have been made standard equipment on Jeep CJ-5, CJ-7 and Scrambler models with no increase in the base vehicle price. The tires formerly were optional at $175 extra.

Steel-belted radial whitewalls ($175) were made standard equipment on the Jeep Wagoneer Brougham and the price was boosted $250. It now is $13,423.

Prices of three other Jeeps were raised $150 to $250 with no equipment changes.

The Cherokee four-door wagon jumped $150 and now is $12,156. The Sportside pickup rose $250 and now is $10,210, and the Wagoneer Limited climbed $250 and now is $17,139.

AMC said the net effect of the changes was an average decrease of $61, or 0.5 percent, when applied to the entire Jeep lineup.

There were no changes in dealer discounts or destination charges.

1982 AMCs, Jeeps recalled for fluid

SOUTHFIELD, Mich.—American Motors is recalling some 23,000 early-model 1982 AMC cars, Eagles and Jeeps equipped with four-speed or five-speed manual transmissions to replace the original transmission fluid with an improved lubricant.

AMC said the original fluid could cause the transmission to become damaged and inoperative.

AMC said it is aware of two accidents involving personal injuries which may be related to this condition.

Plan to streamline operations going to Ford board

DEARBORN. — A Ford Motor Co. 20-member blue-ribbon committee soon will offer Ford directors a plan to streamline operations associated with car product development. One anticipated result will be the elimination and downgrading of some management positions and other salaried positions.

It is expected that proposals from the year-old committee will be presented to directors at their meeting Thursday (Jan. 13).

No massive layoffs are involved and top brass is not affected, Ford said. It said changes are being induced by the state of the economy.

However, in the chassis engineering department here, for example, demotions by one or two classifications will be given to 46 of 93 entry-level managers, and 20 of 26 second-level supervisors will be reduced to entry level.

One level of management is being abolished by combining some supervisors with managers at the next higher level. That will mean there are four levels of management instead of five, the company said.

Reductions in staff size will come from attrition, the company said.

Since 1980, Ford has cut its white-collar forces by about one-quarter to a current level of around 54,000.

Plans firming up for Feb. 12-15 sessions

Iacocca, Koppel at NADA confab

WASHINGTON.—Chrysler Corp. Chairman Lee Iacocca will open the 66th annual NADA Convention and Exposition Saturday, Feb. 12, in Las Vegas.

The convention will continue through Tuesday, Feb. 15, at the Las Vegas Convention Center.

The annual Time Magazine Quality Dealer Awards will be presented at the opening session on Saturday (Feb. 12). Joining keynoter Iacocca on the rostrum will be George W. Lyles, outgoing NADA president, and Dr. Tom Haggai, who will give the invocation.

Ted Koppel, ABC News Nightline anchorman, and Dr. Heartsill Wilson, poet and author, will be featured speakers at Tuesday afternoon's general session. During that session, incoming NADA president William C. Turnbull will accept the gavel.

Turnbull is a GMC-International Harvester dealer in Huntington, W. Va.

Oral Roberts will lead the worship service Sunday in the Las Vegas Convention Center Rotunda.

The equipment exposition will be open Saturday, 8:30 a.m. to 2:45 p.m.; Sunday, 11:30 a.m. to 5 p.m.; Monday, 9 a.m. to 5 p.m., and Tuesday, 9 a.m. to noon.

NADA will host its Diamond Dinner and Reception honoring Dealer Election Action Committee contributors on Tuesday (Feb. 15) at 7 p.m. in the Riviera Hotel Convention Center. Les Brown and His Band of Renown will play.

Beginning on Sunday, 27 workshops will be held. Attendees are eligible to earn Continuing Education Units, convertible to college credit at Northwood Institute.

The workshops will cover four categories: Business; dealer-employe; service, parts and body, and sales-lease.

Workshop topics in the business category include: Chain Operations—How to Get Three or More; The Effect of Recent Tax Rules on Dealerships; Expense and Internal Control; Smart Money Management, and F&I: Profit or Loss.

• In the dealer-employe category: Eliminating Management Burnout; Franchise Succession Rights; the Psychology of Change; Dealer Image in the Community, and Common Pitfalls of Estate Planning.

Service/parts/body workshops: Body Shop Building; Parts Marketing and Control; Service Management — NADA Service Systems, and Service Merchandising.

In the sales-lease category will be Advertising Dollars and Sense; Managing the New-Vehicle Department; Opportunities in Leasing; Professional Selling, and The Best Used Vehicle Ideas from NADA 20 Groups.

The Life Style Center, in the Las Vegas Convention Center, will be open the same hours as the exposition. The program will feature a fashion show Monday at 10 a.m.

Other Life Style attractions include the Las Vegas Adventure Tour and Conni Gordon's Paint Party—a popular attraction at the 1982 Atlanta convention.

Early registration begins Friday, Feb. 11, at 1:30 p.m. Registrations will also be taken during the hours the exposition is open. The headquarters hotel for the convention is the Las Vegas Hilton.

Auto dismantlers elect Spalding president

WASHINGTON.—Max Spalding, owner of Spalding Auto Parts, Spokane, Wash., is the new president of the Automotive Dismantlers and Recyclers of America. He succeeds Thomas J. Hankamp, Hankamp Auto Parts, Pleasant Valley, N. Y.

Other officers are Bruce Parsons, Parsons Auto Recyclers, Brigham City, Utah, first vice president; Frank W. Webber Jr., Chesterfield Auto, Richmond, Va., treasurer; Kennie Andersen, Andersen's Sales & Salvage, Inc., Greeley, Colo., second vice president, and Howard Veneklasen, Veneklasen Auto Parts, Holland, Mich., secretary.

'82 new-car sales lowest since '61

Continued from Page 1

448,048 units from 357,580 in 1981. Daily selling rate for the month was 17,233, up 25.30 percent from 13,753 a year earlier. There were 26 December selling days both years.

For the month, GM was up 17.40 percent, to 256,728 from 218,670. Ford was up 53.50 percent, to 110,578 from 72,036. Chrysler climbed 26.87 percent, to 60,954 from 48,045. AMC soared 77.72 percent above 1981, to 13,757 from 7,741, and VWoA plummetted to 6,031 from 11,088.

GM earned 57.30 percent of the domestic market in the twelfth month, down from 61.15 percent a year earlier. Ford gained more than four percentage points, expanding to 24.68 percent from 20.15 percent. Chrysler held 13.60 percent, up from 13.44 percent, VWoA dropped to 1.35 percent from 3.10 percent, and AMC had its best month of the year, earning 3.07 percent, up from 2.16 percent.

In December, Imperial and AMC were the only makes to miss their year-ago totals. Imperial was off 28.68 percent and AMC was down 32.63 percent. AMC's 77.72-percent (corporate) gain was due to Renault Alliance sales of 8,542 during the month.

• Import sales in 1982 included record returns for five companies: Jaguar, Mercedes-Benz, BMW, Volvo and Saab. Jaguar more than doubled its 1981 sales, BMW was up 25.46 percent with an any-month best in December (6,215 sales), Saab was up 26.35 percent, Volvo was up 12.25 percent and Mercedes was up 4.61 percent.

Other highlights included sales increases for Nissan (up 1.17 percent), Porsche (up 28.16 percent) and Renault (up 21.61 percent). Top-selling Toyota was down 8.02 percent in 1982, Honda was down 1.31 percent, Mazda was down 1.77 percent and Subaru was down 1.14 percent. Volkswagen plunged 18.04 percent and Audi was down 9.57 percent.

Import sales were up for the fifth consecutive month in December, climbing 11.26 percent to 183,827 from 165,219 in 1981. During the month, Toyota was up 10.47 percent, Nissan was up 20.33 percent, Honda was up 3.71 percent, Mazda was up 29.26 percent and Subaru was up 3.45 percent.

Industry sales in December were up 20.86 percent, advancing to 631,875 from 522,799 in 1981.

Fourth quarter domestic sales were up an encouraging 16.69 percent, to 1,494,065 from 1,280,413 in 1981. Late-December sales were up 25.52 percent, to 158,466 from 126,251. The annualized domestic rate based on Dec. 21-31 sales was about 6.1 million. The daily selling rate in late December averaged 17,607, up 25.52 percent from 14,027. There were nine days in the period each year.

In the final 10 days of 1982, four of the five U. S. auto makers reported sales improvements. Ford was up 58.41 percent, GM was up 17.61 percent, Chrysler was up 29.85 percent and AMC was up an estimated 40 percent. VWoA fell 47.56 percent below its 1981 sales level.

Market-share distribution during the last period revealed 54.97 percent to GM, 26.35 percent to Ford, 14.68 percent to Chrysler, 2.21 percent to AMC and 1.79 percent to VWoA.

Ford ordered to explain withholding of franchise

ELIZABETH, N. J.—Ford Motor Co. will have to show cause Thursday (Jan. 13) why it has not named the partner in a Lincoln-Mercury dealership the dealer principal since he assumed control of the operation.

The action stems from a suit filed by Robert Beisser, who operates Fletcher Motor Co., a Lincoln-Mercury dealership in Summit, N. J.

Beisser claims in his suit that Ford's failure to name him the dealer principal after his partner left the operation cost him a Datsun franchise and $700,000 in personal funds he invested in the dealership.

In addition, Beisser claims he is unable to restructure the operation and has lost $2 million in funding from potential investors because of the delay.

According to Beisser's suit, he and Edward Mayer, of Rahway, N. J., took control of the dealership in November, 1980, with Mayer having 51 percent of the stock and Beisser 49 percent.

This made the dealership a minority-owned outlet since Mayer is black.

Mayer resigned his position in July of last year and his stock reverted to the company.

Beisser and his financial consultant, Avram Apter, attempted to restructure the company. Over two years, the dealership, once a profitable business, was $1.2 million in debt. In the court papers, Beisser said he invested the funds and Mayer ran the day-to-day business operations.

Beisser alleges in his suit that the reason Ford is not granting him the franchise is because the dealership had been designated a "minority" franchise by Ford, the only one in the state. Beisser claims this has prevented him from being named the dealer principal.

Beisser is asking the State Superior Court to restrain Ford from transferring the franchise and to show cause why he should not be named.

In Detroit, an L-M spokesman said: "Ford Motor Co. does not have minority points, and we do not believe there is any merit to the lawsuit."

No plans to build cars in California, Petersen says

LOS ANGELES. — Donald E. Petersen, president of Ford Motor Co., told a Los Angeles news conference Ford has no plans to build cars in California. Ford's last plant in the state—Milpitas—is scheduled to close this spring.

Petersen said plants on both coasts were justified in the days of the "1-million-a-year Ford," when seven or eight plants were producing one body style.

"There was enough total volume then to sell out the volume in a coast plant," he said. "However, the market has changed dramatically. Now we build a wider range of products."

He said Ford gave the Milpitas plant its best shot by building its two highest volume units—the Escort and F-series pickup—but that the company was unable to make a go of it.

"I'm afraid that with the major changes coupled with Californians buying foreign cars in massive numbers, there is no economic way to be a manufacturer here," he said.

General Motors closed two California assembly plants last year. It still operates one at Van Nuys.

Bankruptcy filing

BERNE, Ind. — Kinard Rudd, doing business as Kinard Rudd Pontiac, Chevrolet and Buick, Inc., and Irene Rudd, both of Berne, have filed a bankruptcy claim in district court in Fort Wayne, Ind. They claim debts of $642,937 and assets of $72,625. Rudd recently closed his dealership.

*—AMC does not issue a nameplate breakdown for 10-day periods.

Makers schedule 77,187 cars

1st week's auto production tops '82

By Patricia Hoffman
Staff Writer

The domestic auto makers were off to a stronger start than in 1982 as the first week of 1983 production showed a sizeable gain over the total for the year-ago period.

Last week's output was estimated at 77,187 units, a 51.62 percent gain from 50,908 built the same week last year. But output fell 18.10 percent from the 94,262 cars built during the final week of production last month. Downtime at 10 facilities was the reason.

Breakdown for last week by company was: General Motors, 75.15 percent; Ford Motor, 16.60 percent; American Motors, 3.88 percent; Volkswagen of America, 4.21 percent, and Honda Motor, 0.16 percent. All of Chrysler Corp.'s facilities were idle last week.

The makers wrapped up the 1982 calendar year with 5,096,771 units, down 18.84 percent from 6,280,045 built in 1981. It was the lowest total since 1958 when only 4,244,045 cars were completed.

AMC showed the only gain for 1982 with 110,050 units, up from 109,319 built in 1981. Of AMC's 1982 total, 57,752 were Renault Alliance models.

VWoA suffered the largest decline last year with 84,246 units, down 49.78 perecnt from 167,755 in 1981.

Totals for the Big Three were: Chrysler, 600,502, down 19.90 percent from 749,687; GM, 3,195,126, down 18.70 percent from 3,930,176, and Ford, 1,104,074, down 16.37 percent from 1,320,198.

Checker Motors, which closed operations in July, built 2,163 units in 1982, down 25.67 percent from 2,910 during a full year of production in 1981.

Honda has built 610 units in the U. S. since production began Nov. 1.

In December, the manufacturers assembled 386,032 cars, up 8.83 percent from 354,697 in the comparable 1981 month.

Despite a favorable December, the fourth-quarter total was only 1,208,217 units, down 7.68 percent from 1,308,774 built during the final three months of assembly cars in 1981. It was the lowest fourth-quarter output since 1951 when only 1,058,390 cars were completed.

Extended holiday closings were scheduled last week at Ford's Dearborn, Metuchen, San Jose and Wayne facilities due to overstocked inventories. Ford's Atlanta and Lorain points remain closed for model changeover.

Also closed last week were all four of Chrysler's assembly points plus GM's Tarrytown facility. GM's Bowling Green plant remained idle for model changeover.

All U. S. car facilities were idle December 23 for the Christmas/New Year holidays. Most resumed operations last week.

Canada's, car, truck makers start year ahead of 1982

Canadian auto and truck production for the first week of 1983 showed substantial gains over the comparable 1982 period when five car and truck facilities remained idle for extended holiday downtime.

The car makers targeted 14,221 units last week, a 34.14 percent gain from 10,602 built during the final week of asembly in 1982 which was shortened due to the Christmas/New Year's holiday. Output was also up from 3,875 cars built in the first week of production last year.

During the 1982 calendar year, the car manufacturers assembled 806,822 units, an 8.51 percent gain from last year's 743,570. The total was below the 846,777 built in 1980.

There were 83,943 cars produced in December of last year, up 65.25 percent from 50,799 in the comparable 1981 period. It was the highest output for that month since 85,377 units were completed in 1978.

During the final three months of assembly in 1982, the car manufacturers built 195,304 units, a 10.52 percent gain from last year's 176,711. In the final quarter of 1980, 227,352 cars were completed.

• The truck makers assembled 6,600 units last week, up 27.49 percent from 5,177 units built during the final week of assembly last year. Output also rose from 2,412 trucks built in the first week of 1982.

There were 466,495 trucks built during the 1982 calendar year, down 24.43 percent from 617,264 in 1981. It was the lowest yearly output for the makers since 389,827 units were assembled in 1975.

Although the December truck total of 40,962 units was higher than November's output, it fell 2.95 percent from 42,207 built in the comparable 1981 period. It was the lowest total for that month since 1979 when 40,104 trucks were assembled.

During the fourth quarter last year, 106,462 trucks were assembled, a 26.48 percent decline from 144,801 built in the final three months of 1981. It was the lowest fourth-quarter total since 89,123 units were built in 1974.

Ford Motor's car and truck facilities, idled Dec. 20 for an early holiday close, remained down last week (Jan. 3) for inventory adjustments.

Also closed last week for inventory control were International Harvester's Chatham and Vancouver truck points.

All other car and truck facilities, idled Dec. 23 for holiday downtime, resumed operations last week.

Arizona Chevy group elects Fitzgerald

PHOENIX. — Ed Fitzgerald, president of Courtesy Chevrolet here, has been elected president of the Valley Chevy Dealers Assn., succeeding Henry Chapman, president of Chapman Chevrolet, in Tempe, Ariz.

Ray Korte, Jr., president of Korte Chevrolet, Scottsdale, Ariz., was elected treasurer.

Downtime trims truck output to 19,974 for week

Extended holiday downtime at 12 truck facilities last week puled domestic truck production for the first week of 1983 down 39.50 percent from the final four days of assembly last year. Output was also down 1.54 percent from the comparable 1982 period when there were 13 assembly points idle for extended holiday period.

The truck makers estimated 19,974 units last week, down from 33,017 built during the final week of production last year which was shortened due to the Christmas/New Year's holiday. Output was also below the 20,286 units assembled during the first week of 1982.

There were 1,908,725 trucks assembled in 1922, a 12.20 percent gain from 1,701,122 in 1981. It was the highest yearly output since 2,973,498 units were completed in 1979.

The December total of 116,552 units just about broke even with the 116,716 units assembled in the comparable 1981 month, although it was the lowest output for the period since 1962 when only 111,031 units were completed.

The fourth-quarter total, however, showed a fractional gain with 401,726 units from the 400,548 trucks built during the last three months of 1981. It was the highest output for that quarter since 1980 when 469,651 units were completed.

A look into the future

Electronics cram Continental Concept 100

Ford Motor Co. says this concept car has the largest number of functioning advanced electronic features ever contained in a single vehicle. The Continental Concept 100, incidentally, bears a very strong resemblance to the 1984 Continental due to debut in March, 1984. Such a vehicle lets Ford engineers and customers dream a bit, gives a look at what's possible and dispels consumer concern over electronic complexity, says Ford President Donald E. Petersen.

Number of cars in stock falls but supply climbs to 65 days

By Richard A. Wright
Assistant Managing Editor

The domestic new-car inventory jumped during December to a 65-day supply from a 52-day stockpile at the beginning of the month.

The Jan. 1 stockpile totaled 1,125,989 units, which was actually down from 1,164,338 on Dec. 1. The higher days-supply figure Jan. 1 was the result of a sharply lower selling rate during December.

Table on Page 42

While the supply of new cars was up compared with a month earlier, a 65-day stock is not really heavy for that time of year and is certainly not alarming when compared with Jan. 1 a year earlier, when the industry had a record 107-day supply.

The unit count of 1,125,989 continues a downward trend which has held since the beginning of the '83 model year and is the lowest since Dec. 1, 1970.

While the general health of the auto industry is not particularly good, the inventory situation must be considered one of the brighter spots. Any sudden outburst of sales would quickly result in shortages in a number of lines, but that kind of problem would clearly be welcomed by the industry.

While all the corporate makers reduced their unit counts during December, only Chrysler Corp. and American Motors went into January with a lighter days-supply figure.

General Motors led the increase in supply, boosting its inventory from 47 days Dec. 1 to 66 days Jan. 1. Heaviest supplies were in small cars, while Cadillac stocks dwindled.

Ford Motor Co. entered 1983 with a 63-day supply, up from 57 days a month earlier. Ford's inventory was also heavier in small cars than large, but the gap was not as great as at GM.

Chrysler Corp. trimmed its supply during the month from 69 to 62 days and reversed the general industry trend by being lightest in small cars.

AMC opened January with a 78-day supply, compared with a 79-day stock a month earlier. Volkswagen of America had an 87-day supply of U. S.-built Rabbits Jan. 1, up from 67 days a month earlier.

The Jan. 1 domestic inventory was divided this way: GM, 57.68 percent; Ford Motor Co., 23.93 percent; Chrysler Corp., 12.95 percent; AMC, 3.65 percent, and VWoA, 1.79 percent.

A month earlier, the domestic inventory was divided as follows: GM, 57.58 percent; Ford Motor Co., 23.93 percent; Chrysler Corp., 13.29 percent; AMC,

Fiat to withdraw from U.S.; sales going to Bricklin

Copyright, 1983, Automotive News

TURIN. — Fiat plans a corporate withdrawal from the U. S. car market within 90 days, according to European sources.

Only two Fiat models — the X 1/9 and Spider 2000 — are now actively marketed in the U. S. and sales of these will continue under a new company headed by Malcolm Bricklin, Fiat insiders say.

Fiat executives were unavailable for comment, but a formal announcement is expected shortly.

Bricklin, who has been operating on the fringes of the auto industry since the demise of his own auto-making project involving the gull-winged Bricklin SV-1, plans to establish a network of distributors to handle the X 1/9 and Spider.

Although those two cars originally were built by Fiat, the Spider is now produced by Pininfarina and the X 1/9 by Bertone. They are marketed in some European countries as Fiats and others as the Pininfarina 2000 and the Bertone X 1/9. It is believed the cars will be sold in the U. S. by Bricklin as the Pininfarina 2000 and Bertone X 1/9.

Fiat Motors of North America, meanwhile, is making an effort to clear the decks of about 5,000 leftover 1982 models by offering rebates of up to $2,000.

Sources here say it is likely Bricklin will retail cars through the approximately 400 dealerships now holding Fiat franchises.

It is believed likely also that Bricklin will take over parts support of other Fiat models now on the road in the U. S. Negotiations reportedly are continuing with an aim toward Bricklin assuming the warranty obligation for Fiats in the U. S.

Ironically, the news that Fiat had thrown in the towel on U. S. sales emerged as Fiat prepared to bring 700 European auto writers to Florida for the press introduction of a new model, the Fiat Uno. The Uno is about to be marketed in Europe, but Fiat has made no plans to sell it in the U. S.—obviously a result of its plan to retreat from the American market.

Fiat's decision to abandon the U. S. caps a long and fitful effort to become a major part of the American automotive scene.

Fiat was one of the pioneer car firms in the U. S. before World War I, but then pulled out of the market until the 1940s, when a few Topolinos were exported to the U. S.

It made a serious effort to become a market force in the U.S. with the beginning of the "import boom" in the 1950s. Fiat

breaking news

Shakeup at VWoA

WARREN, Mich. — Volkswagen of America was putting the final touches on a realignment of its organization and a reduction in workforce as AUTOMOTIVE NEWS went to press. All departments — including styling, body engineering, finance and personnel—are involved, but the realignment is not expected to affect VWoA's product engineering program.

One of the jobs eliminated in the reorganization was that of director of styling design. William H. Maypole had held that position. Design activity may be continued under another department.

Avanti to race

LOS ANGELES. — Stephen Blake, chairman and chief executive officer of his newly acquired Avanti Motor Car Co., announced that the company will field a car in the 24

FDA and CDA unite to form Dealers Alliance

Ford, Chevy dealer groups merge

By John A. Russell
New York Staff Writer

PORT CHESTER, N. Y.—The Ford Dealers Alliance and the Chevrolet Dealers Alliance have merged into one association called the Dealers Alliance.

In proposals approved last week by the boards of directors of both groups, the two organizations will now be divisions of the newly formed parent association.

The FDA has 1,700 members nationwide, while the CDA, still in its development stage, has 244 members concentrated in the Northeast.

According to the resolutions passed last week, the FDA board becomes the board of directors of the new Dealers Alliance. The CDA board will become an advisory board. The FDA officers will be the officers of the Dealers Alliance.

Larry Tynan, president of CDA, told AUTOMOTIVE NEWS that the two divisions will still fight their respective make battles separately, but the common problems confronting all auto dealers will be handled by the one alliance.

Another distinction of the motions passed at the annual meetings of the groups is that financial matters and future income will be kept separate.

• The two organizations formed a coalition last spring to work together on their common problems.

This unprecedented move saw the two groups specify the areas in which they would be working together, which included pricing, overdealering, product identification and financing. Since then, the issue of fleet incentives has come to the forefront.

Tynan said there is a need for an alliance approach to bring about change and noted that the CDA has "weathered its growing pains" and is still in existence.

Since the coalition of the two groups was announced, he said, the CDA membership has increased from 125 to 244 and more interest has been expressed in the group.

The legal unification of the two organizations will help the CDA in its growing stages since the FDA has its operational systems in place.

The formation of this new umbrella organization also signifies a move to broaden the base of the once-considered-radical FDA.

For both, there is another benefit to the move. Apparently, during recent months, the groups have been told that for tax purposes they must broaden their representation to retain nonprofit status.

As he lifts curtain on new product lines

Iacocca rips government 'disarray'

By John A. Russell
New York Correspondent

NEW YORK. — Laying the blame for the slumping economy entirely on the federal government's doorstep, Lee Iacocca, chairman of Chrysler Corp., said that while his company is "ready to go," the "incredible disarray in Washington is holding the economy in limbo."

Speaking at a news conference here last week, Iacocca was presenting new product lines for '83 and into '84 with the goal in mind of showing that Chrysler has pulled itself through its financial disasters and can successfully compete in the marketplace.

Chrysler will compete in several market segments, he said, including performance vehicles, sports cars and the market for its full line from subcompacts to family sedans and wagons.

But while Chrysler is ready, the economy is not and Iacocca said flatly, "our government has failed to develop consistent and realistic policies on interest rates, energy and trade. And all the while the deficits grow."

He singled out four areas that he said need action by the federal government. First, he said, the prime interest rate has to fall below the 10 percent level.

Iacocca said that there is proof in the actions by the auto companies with 11.9 percent consumer financing that lower rates spark sales.

Cutting federal deficits by trimming defense spending and matching the cut in that area with the same in social programs is necessary, he said.

• Iacocca advocated adding 25 cents per gallon to the gasoline tax rather than the one that currently passed at 5 cents per gallon to bring the price of gasoline to the range of $1.40 to $1.50 per gallon to prevent a sharp upturn in usage.

He launched a blistering attack on the federal government's policies regarding Japan.

"A $20-billion trade deficit every year will crucify our economy," he said, adding, "it's time we told the Japanese to knock off their unfair trade practices."

He said it is also time for the Japanese to bring the valuation of the yen into line with the dollar as well as noting that U. S. companies should have the same tax breaks on exports as the Japanese get.

"And until those things happen, it's time we told the Japanese to set a voluntary quota of an honest 1.5 million vehicles coming into this country."

Iacocca doesn't think that the Japanese are moving toward manufacturing in the U. S. with any enthusiasm. He said he thought it was "reasonable for the U. S. to say this is our market and you (the Japanese) can have 1.5 million units, that's all."

As for his company, he said he was holding the conference to "dispel some myths."

• One of those is that Chrysler has not pulled itself out of its financial difficulties. Losses have been turned into profits, he said, and Chrysler has doubled productivity and has built a cash cushion.

"We've cut our fixed costs by $1.2 billion and cut our breakeven point in half since 1979," he said.

But the thrust of this meeting was product from Chrysler, which Iacocca says proves the company is here to stay and can compete. He introduced the sports car the company will have for 1984 — the Dodge Daytona and Chrysler Laser.

These two models, he said, mate fuel efficiency with performance. They have a five-speed transmission designed and manufactured by an American car company. This was an obvious reference to the fact that both General Motors and Ford Motor Co. import their five-speed gearboxes.

Running down the list, Iacocca divided the products into several groupings. Under performance, he listed the Shelby Charger and the Dodge ES.

Convertibles were represented by the LeBaron, including a rumble-seat version.

Along with these models he showed a model not slated for introduction yet, but which is being test marketed. It was a two-seater convertible designed to compete with the Mercedes-Benz 380 SL. Iacocca referred to it as "our answer" to the Mercedes two-seater.

• Iacocca said this group of models cost the company more than $1 billion and added that by 1986, Chrysler will have spent another $6.6 billion on future products. He claimed that Chrysler puts a larger percentage of its budget into product and added that because of the company's efficiency, that amount was the equivalent of $12 billion for the competition.

Iacocca said the company anticipated it would keep its 10 percent share of market in both cars and trucks for 1983.

The company would show a total profit, for 1982, he said, despite a fourth-quarter loss caused by the strike in Canada.

Two-person turbo

Chrysler's two-place turbo convertible prototype, a 90-inch-wheelbase LeBaron derivative, is being shown at selected 1983 auto shows to measure consumer interest in small specialty cars. It features a new 2.2-liter turbocharged engine with five-speed gearbox and Eurosport suspension.

Performance sports car

The Chrysler Laser turbo sports car is planned for 1984-model introduction. Designed on a 97-inch wheelbase, it will offer room for four and will use a 2.2-liter turbocharged engine with electronic fuel injection.

Ford, on TV show, favors local content

By Joseph Bohn
Marketing Editor

Henry Ford II said he personally favored some kind of automotive local-content protection, that Ford Motor would offer "larger cars" until '86 and that his 1971 meeting with President Nixon was "proper."

Speaking on PBS Late Night TV, Ford said that, as a director of Ford Motor, he officially supported the company's stand against local-content laws — but personally "I don't agree with it, totally."

"Every country in the world has local-content laws of one kind or another," he said. "The Japanese are as bad as anybody . . . The Japanese do not trade fairly. Until they do, we've got to take a strong position in this country and make them stand up and do things the way we do them — or do something to protect our local businesses."

Ford's main objection to the content law passed in the House of Representatives late last year was that it was "inadequate and badly drafted."

He felt that with current improvements in U. S. autos, the Japanese share of market could be reduced to 15 percent in three to five years, if the industry can keep its wage costs down and improve productivity.

He added that "we've got to work out some way with our labor unions, so they don't have plant restrictions and other kinds of things within a plant that have nothing to do with how much you pay an employe. It's how he performs in the plant. If we can't have freedom in that area, we've got some difficult problems."

• He said Ford Motor would continue offering "larger cars at least until the '86 model year," even then continuing its larger Lincoln Town Car, although big Ford and Mercury nameplates would be downsized.

Defending his 1971 meeting with President Nixon and John Erlichman, Ford said, "It is proper for any manufacturer in any industry in any kind of business to talk to their congressman, to anybody in the administrative branch, right up to the President of the United States.

"If we don't have that privilege — take it over, socialism . . . I've visited with every President right up until the present one on automotive problems, privately and in relatively small meetings."

The Reagan Administration, he added, has not made life any easier for the industry, but "at least they have not made it more difficult."

Ford said he'd like to see a three-year suspension or hiatus in Consumer Price Index indexing to control inflation, interest rates, wages and the escalating government deficit.

"I feel the cost of living (index), whether it's in the auto industry or steel industry or in government or wherever has been a disaster for all of us because it just created more inflation than we would have had otherwise," Ford said.

Social Security increases, taxes, etc., are all geared to CPI increases.

Ford predicted that 1984 car sales will improve to 8.8 million industrywide, from 7.9 million in 1983.

Ford said he would soon retire to Florida full-time, and had just about completed an earlier plan of visiting the company's worldwide locations which he began upon his retirement as chairman.

AMC says UAW holds key to Canadian future

By Edward Lapham
Senior Editor

LOS ANGELES. — American Motors would like to continue building vehicles in Canada if it can secure cost-lowering "cooperation" from its UAW local there, AMC President Jose J. Dedeurwaerder told Automotive News last week.

"We don't want to leave Canada, but we need a cooperative attitude on the part of the union," Dedeurwaerder said following a luncheon here.

"The Brampton local is the only one which is not cooperating with us on the matter of lowering costs. They told us they don't even want to talk to us. I don't know what's the matter with them. What can we do?" he said.

Last spring, Canadian workers refused to participate in a new AMC/UAW contract which involves an employe investment plan. The plan was negotiated in the U. S. Hourly workers invested between $110 million and $115 million. That money was earmarked for AMC's $1 billion new-product program.

At the Automotive News World Congress last August, Dedeurwaerder said the Canadian segment of the UAW took a destructive stance when it refused to negotiate an employe investment plan for Canadian AMC workers.

UAW Secretary-Treasurer Raymond Majerus, director of the AMC department, said that without the U. S. agreement, Renault would not have put any additional money into the company. He said without that money, the new Jeep XJ and other future products would have been in danger of cancellation.

AMC announced last month it would close its Canadian plant indefinitely in April. Since that time, there have been discussions with Chrysler about the possibility of assembling Chrysler rear-wheel-drive cars in the small AMC plant on the outskirts of Toronto.

Dedeurwaerder declined to say which vehicles the auto maker would like to assemble in Brampton or when it might consider reactivating the plant or if the April closing could become permanent.

He also criticized the U. S.-Canada Automotive Trade Agreement (Auto Pact) and the restrictions it puts on car makers.

"The whole Auto Pact needs to be changed, renegotiated," he said. "It is outdated protectionism. There are other, better ways to protect jobs."

The Brampton plant was opened in December, 1960. In the 1970s, it produced Hornet and Gremlin models, largely for distribution in the Eastern areas of the U. S. and Canada, until June, 1978.

In September, 1978, the plant was converted to Jeep CJ production. In mid-1980, output was switched to Eagle and Concord models, which have a relatively short life expectancy in the AMC-Renault North American game plan.

Some analysts have speculated the plant could be converted to Alliance output.

Straight-time capacity for the plant, small by North American standards, is about 65,000 units annually.

Scania testing transit bus in U. S.

Buses like this one are being tested by Saab-Scania in Norwalk, Conn., and the results have been good, according to Ralph Millet, director of the Scania Division in the U. S. The company plans to decide in March on whether to produce the transit vehicles in the U. S.

Scania studies U.S. as truck, bus market

By Marjorie Sorge

SODERTALJE, Sweden. — Saab-Scania is testing the waters in the U. S. and there's a possibility that bus operations could begin next year — a move which could lead to U. S. truck production in the future.

Kaj Lindgren, head of internal information for Scania, told AUTOMOTIVE NEWS the decision on bus production will be made in March. He said the buses probably will be built in the Greater Newark area.

A site hasn't been chosen, but both Maryland and Connecticut have offered Scania incentives to operate a plant in their states.

The company has not decided whether to purchase an existing plant or build from scratch.

But Scania is leaning toward either building the plant itself or on a lease-back basis, according to Ralph Millet, director of the Scania Division in the U. S.

If the bus operation becomes reality, a separate company could be established — Scania Bus Co., Lindgren said.

Millet said the company hopes to get the Scania name known in the U. S. through bus production.

• Then, if the market allows, he said, Scania could begin producing trucks in the U. S. However, he emphasized that Scania has

Davis, Bowie elected Mack Trucks directors

Garner L. Davis, executive vice president-marketing, and **Donald S. Bowie Jr.,** executive vice president, general counsel and secretary, have been elected directors of Mack Trucks, Inc.

Davis has been with Mack since 1946, starting as a sales trainee at the Houston factory branch. Bowie joined the firm's legal staff in 1956 and is a member of the Executive Committee and a director of Mack Financial Corp.

Mack also announced the election of **Richard F. Murphy** as vice president-marketing distribution. Since 1978, he had been vice president-Mid-Liner marketing and sales.

Murphy replaces **Paul D. Cantrell,** who has been elected vice president-international operations. He will be responsible for overseas distribution, production and service operations.

Garner L. Davis

Richard F. Murphy

W. W. (Skip) Hall, district manager-Atlantic region since 1981, has been named vice president-Central region, an area covering 11 states with headquarters in Chicago.

Perkins names Mooney field sales manager

Perkins Engine Co. has appointed **Paul D. Mooney** to the newly created post of field sales manager, automotive and fleet accounts. He will be responsible for sales of the Perkins T6.3544, a 140-HP, turbocharged diesel certified by the EPA for applications in 49 states.

Mooney joined Perkins last year as a national accounts sales manager in the industrial-equipment industry. He previously was with the Detroit Diesel Allison Division in truck fleet sales and with Brockway and White Motor in sales.

Ford Tractor moves Bechler to engine post

Robert C. Bechler has been appointed engine manager in the newly formed truck and industrial programs office at Ford Tractor Operations.

He joined Ford Motor Co. in 1953 and prior to the new appointment, he had been marketing plans manager for equipment and consumer products, Ford Tractor & Implement Operations-North America.

truck industry news

Chevy is No. 1 for first time since '76

'82 sales rise 13.6 pct.

Retail sales of new trucks of all types in the U. S. in 1982 were the highest since 1979, the year of the Iranian revolution, oil embargo, soaring fuel prices and widespread gasoline shortages.

During the year, according to preliminary reports, franchised dealers and factory outlets sold 2,559,218 units, an increase of 13.6 percent over the previous year's 2,251,921. In 1979, sales totaled 3,476,086 units, both domestic and imports.

The introduction of its S-10 compact pickup truck early in the 1982 model year enabled Chevrolet to regain truck-sales leadership from Ford in 1982 for the first time since 1976.

Chevrolet dealers retailed 808,805 new trucks in calendar 1982, and 185,919 of them were S-10s. Ford, which did not introduce its compact Ranger pickup until mid-way in the first quarter, reported 791,547 sales during the year. The total included 104,396 Rangers.

Light trucks were the only market segment to prosper in 1982, with the compacts leading the way. Big trucks, hard hit by the recession and deregulation, dropped considerably below year-earlier levels.

• Sales of light trucks last year were 17.3 percent higher, climbing from 2,026,264 units in 1981 to 2,375,923. There were increases in all three weight classifications in the light-truck segment.

With the entry of the Big Three domestic compacts, sales of the small pickups hit an all-time high in 1982. The 12-month total soared to 766,628 units, a gain of 53.7 percent from the previous year's 498,677.

At the end of the year, the Japanese-built pickups still led the domestics in retail sales, but their share of the market dropped dramatically during the year—from almost 90 percent in 1981 to a little more than 50 percent.

Sales of the imports—Toyota, Datsun, Mazda, Isuzu, Mitsubishi, Ford Courier, Chevrolet LUV, Dodge Ram 50 and Plymouth Arrow — totaled 407,450 units in 1982, and accounted for 53.1 percent of the calendar-year count for small pickups.

In 1981, on the other hand, import deliveries hit a record 439,171 units and took 88.1 percent of the industry total. Imports were down 7.2 percent in 1982, while sales of the domestic entries were more than six times higher than the 1981 total, 359,178 units versus 59,506.

Sales of big trucks, both mediums and heavies, were down 18.8 percent in 1982 to 183,295 units, compared with 225,657 the previous year.

Medium trucks were the big losers in 1982. Sales dropped

Grand jury indicts 3 in diesel-Soviet deal

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — A federal grand jury here indicted three men for allegedly attempting to sell, to the Soviet Union, a $5-million diesel engine assembly line for use in the giant Kama River truck complex.

The engine assembly line is considered by the federal government to be a controlled high technology commodity that would be of more than industrial interest to the Soviets.

Under "Operation Exodus," a program inaugurated in October, 1981, to prevent the export of advanced technology to the USSR and its allies, its export without government permission is considered illegal.

Named in the 11-count indictment were Stephen G. Carter, a Chicago-area businessman involved in the export business; Paul Sakwa, a Virginia export broker and Gerald F. McCall, a Canadian citizen.

According to William V. Von Raab, commissioner of the U. S. Customs Service, the three allegedly conspired to sell the assembly line to the Soviets by way of a dummy French connection.

Carter and the others were going to arrange for a European corporation to provide a false shippers' export declaration showing the ultimate destination of the engine line as France, Von Raab said. Then from there they would ship it to the Kama River plant, he said.

• Von Raab said Customs learned of the plan from tips and nabbed the alleged perpetrators by way of a dummy corporation of its own. Known as Arinfi Export Corp., the dummy company was contacted by Carter and the others to aid in getting the false shippers' declaration, Von Raab said.

The diesel engine assembly line was built by Ingersoll-Rand Corp. to Kama River specifications a number of years ago when relations between the

Keynoter at TRX-83 to be Mack's Curcio

McLEAN, Va. — John B. Curcio, president, Mack Trucks, Inc., will be the keynote speaker at the 20th annual convention of NADA's American Truck Division in Boston, April 9-12. The theme for TRX-83 is "A Beacon for Success."

Curcio joined Mack in 1967 as assistant to the sales vice president, left in 1971 to become chairman and president of Crane Carrier Co., and returned to Mack in 1976 as marketing distribution vice president.

Mitsubishi cuts truck prices; leader is $5,749

FOUNTAIN VALLEY, Calif. — Mitsubishi Motor Sales of America has jumped into the small-truck price war by cutting the base price of its Mighty Max pickup $240 to a MSRP of $5,749.

The company also reduced prices on its two- and four-wheel drive turbodiesel trucks.

"We are offering Mitsubishi dealers factory pricing revisions on trucks already in their inventory so that reduced prices can be passed on to buyers immediately," said Robert Stallsmith, MMSA vice president - general manager, sales.

The new price on the Mighty Max beats Mazda's $5,795 on the B-2000 and Datsun's $5,858 on its Li'l Hustler.

Mitsubishi turbodiesel price reductions average $210, with two-wheel-drive versions lowered $180 to $7,879 and 4WD versions cut $240 for a base sticker of $9,938.

Weathershields for big trucks

Cyplas (N.A.), Ltd., North East, Pa., has introduced "Big Rig" weathershields for all makes of large trucks. The firm said they provide draft-free ventilation while preventing rain, dust, dirt and snow from entering the cab. The shields, made of cast sheet optical-grade acrylic, are mounted to the door frame with clips, eliminating the need to drill holes.

Bricklin to distribute Spider and X 1/9

Fiat plans to withdraw from U. S.

Continued from Page 1

distribution in the U. S. was put in the charge of Vincent Garibaldi, an able Fiat veteran executive, and the entire range of vehicles was offered to American buyers.

At that time, Garibaldi said his aim was "never to grow large enough to be noticed by General Motors."

As it turned out, Garibaldi had nothing to worry about. Fiat got into market difficulty, sales nosedived and in a reorganization of its distribution system in the early 1960s, Fiat-Roosevelt Motors was formed with Franklin D. Roosevelt Jr.

In 1971, Fiat S.p.A. bought out Fiat-Roosevelt and changed the name to Fiat Distributors, Inc. In 1976, this was reformed as Fiat Motors of North America.

Some optimistic sales targets were established—targets which the company was never able to reach. One of those goals was 200,000 sales in 1980. Later the 1980 goal was revised to 130,000. Fiat actually sold some 59,000 in the U. S. that year.

Although Fiat officials in the past put its potential as high as 300,000 a year, Fiat's best year in the U. S. was 1975, when registrations reached 110,511. No other year has seen Fiat's U. S. sales top 70,000.

In 1982, Fiat's U. S. sales shrank to 14,113, the lowest total recorded in 15 years and in December the tally was a minuscule 573.

• Fiat's efforts to market Lancia in the U. S. in the late 1970s was less than successful and Ferrari never formed a major piece of business. Ferrari sales will remain in the hands of Fiat in the U. S.

Fiat had scaled back its U. S. operations quite drastically in recent years.

Currently, it occupies modest headquarters in Hasbrouck Heights, N. J.

Relations between Fiat and its dealers frequently have been strained in recent years. Dealers have been unhappy with warranty fulfillment and anger reached a peak early in 1981 when Fiat Motors of North America sold 4,300 left-over 1980 Stradas and Bravas to a liquidator.

• In a 1978 interview with AUTOMOTIVE NEWS, Fiat Chairman Giovanni Agnelli said there were too many ups and downs in the U. S. market and that the company would be "cautious and conservative" with its U. S. marketing program.

That raised the hackles of Fiat officials in the U. S., who still talked bravely about topping 100,000 a year. In actuality, in no year following Agnelli's remarks was Fiat able to sell as many as 38,000 in the U. S.

And it was Agnelli in that interview who said that 100,000 to 110,000 sales a year is the "minimum size you need to maintain an organization, pay for marketing and provide for service."

Survival of the Spider in the U. S. market would seem essential to the success of the Pininfarina operation.

Pininfarina originally only made bodies for the Spider, but several years ago it took over entire production of the car. The Spider accounts for some 80 percent of Pininfarina's automotive manufacturing business and the U. S., in turn, accounts for about 80 percent of worldwide Spider sales.

Bricklin, known for his success in promotion and sales, most recently has been active in the aftermarket. He formed Thermo-Guard Bricklin, Inc., last summer to market and distribute Thermo-Guard sealants and rustproofing products.

Bricklin got his start in the auto business importing the Subaru 360. He later designed a sleek and sporty car bearing his name and put it into production in New Brunswick, Canada, in 1974. The cars were built by General Vehicle Corp. and marketed in the U. S. by Bricklin Vehicle Corp. A subsidiary of Bricklin Vehicle, Bricklin of Canada, operated the New Brunswick factory.

When the Bricklin enterprise went belly up in 1975, some 2,900 cars had been produced.

New-car stock dips but supply rises to 65 days

Continued from Page 1

3.65 percent, and VWoA, 1.55 percent.

By size class, the small-car end of the inventory ballooned during December, subcompacts much more than compacts.

The industry had a 73-day supply of subcompacts Jan. 1, up from 59½ days a month earlier, while compacts were in 65-day supply, up from 57 days.

The industry had a 66-day supply of intermediates, up from 49 days a month earlier; a 59-day supply of standards, up from 49½ days, and a 47-day stock of luxury cars, up from 41 days.

The Jan. 1 inventory was divided this way by market segment: Subcompact, 19.62 percent; compact, 24.12 percent; intermediate, 34.65 percent; standard, 15.30 percent, and luxury, 6.31 percent.

The Jan. 1 days-supply figures by market class were:

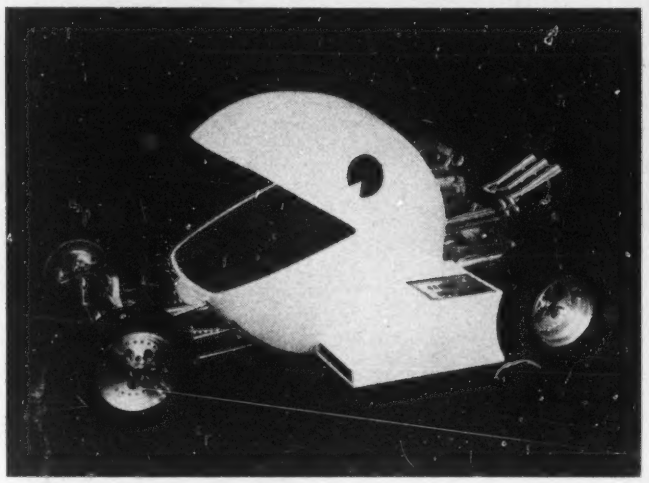
Subcompact—Omni, 43; Horizon, 51; Charger, 55; Turismo, 57; Alliance, 61; LN7, 61; EXP, 77; Escort, 78; Pontiac 1000, 78; Eagle SX/4, 81; Lynx, 87; Rabbit, 87; Chevette, 95, and Spirit, 99.

Compact — Fairmont, 30; Zephyr, 37; Cimarron, 54; Firebird, 56; Aries, 59; Reliant, 67; Camaro, 68; LeBaron, 70; Pontiac 2000, 72; Cavalier, 75; Dodge 400, 77; Capri, 84; Skyhawk, 101; Firenza, 102, and Mustang, 103.

Intermediate—XR-7, 28; Granada, 29; Cougar, 29; Thunderbird, 37; Century, 45; Pontiac 6000, 55; Celebrity, 56; Dodge 600, 57; Bonneville, 57; New Yorker E, 57; Cutlass Supreme four-door, 59; Chrysler E Class, 63; Cutlass Ciera, 63; LTD, 65; Malibu, 66½; Regal four-door, 68; Citation, 70; Cutlass Supreme two-door, 70; Phoenix, 74; Marquis, 74; Omega, 75; Grand Prix, 86½; Skylark, 91; Regal two-door, 91; Monte Carlo, 91; Concord, 93, and Eagle, 136½.

Standard — Olds 88, 44; LTD Crown Victoria, 52; Olds 98, 54; LeSabre, 62; Grand Marquis, 64; Chevrolet, 67; Electra, 70; New Yorker Fifth Avenue, 72; Cordoba, 73; Diplomat, 73; Gran Fury, 115, and Mirada, 126.

Luxury — Seville, 30; Eldorado, 34; Lincoln, 41; Cadillac, 41; Mark VI, 46; Imperial, 53; Continental, 56; Toronado, 68; Corvette, 95, and Riviera, 96.



The Pac Man cometh

This custom car patterned after one of the most popular of the video game heroes is on the show circuit this year. Pac Man Street Rod was first seen at the Detroit Autorama along with some 400 other custom cars, trucks, buggies and boats. The bright yellow rod was built under license from Bally Mfg., owner of Pac Man. It featured hand-formed top panels from a Volkswagen Beetle, fenders from a Peterbilt truck and a gold-plated Buick V-6 engine.

Fiat-NHTSA battle on rust finally nearing completion

WASHINGTON. — The successful government suit against Fiat over excessive rust and corrosion on underbodies of 1970-74 Fiat 124s and 850s finally is winding down a little over two years after it was launched.

In retrospect, the rust problems were so serious—and Fiat delayed correction for so long—that the episode is thought to have very adversely affected the company's image and, subsequently, its sales.

What appears to be the closing chapter in the case is a court order dated Dec. 6, 1982, which says Fiat must have its dealers post notices offering to repurchase vehicles from some 34 owners and to reinspect vehicles belonging to 16 other owners. In addition, the notice warns owners whose addresses are not available they have 60 days to bring in their claims. After that 60-day period, Fiat will have no legal obligation although the federal court says Fiat should still exercise discretion to provide dealer inspection and advice "without free remedy" to owners asking for help.

Then Fiat is to notify and certify to NHTSA that it has fulfilled its part of the modified consent settlement, ending the 1980 suit.

Thus within a few weeks will end a hard-fought battle between the government and the huge Italian company. It was January 16, 1979, that NHTSA told Fiat it had made an initial finding of a safety-related defect because the rust problem was so serious that it affected structural and steering components.

Two months later, that finding was suspended because Fiat said the problem was limited to 850 Spyders, which Fiat would recall and repair. Later, NHTSA found the problem extended to 124s. Moreover, it started receiving complaints that owners of Spiders were not receiving adequate prices for repurchased vehicles and in some instances owners were being pressured to sell back their cars instead of having parts replaced. In addition, NHTSA reinstated its initial finding of a safety-related defect in the 70-74 Fiat 124s. By October, 1979, NHTSA estimated that Fiat had sold more than 180,000 of the affected vehicles and over 100,000 were still on the road. The cars are now between nine and 13 years old.

By the time NHTSA had reached a final finding of defect—a position that automatically triggers mandatory recall and free repair—it knew that Fiat would go to court and so the Justice Department, on behalf of NHTSA, filed suit against Fiat. NHTSA was now not only asking for repair but insisting that if repurchase was agreed to, Fiat would have to offer owners the average of "blue" or "red" book values in the used-car guides.

The agreements reached with Fiat after strenuous litigation not only told Fiat to send warning letters to owners and to recall and repair but specified the amounts of money to be offered to owners and/or amounts of rebates toward purchase of newer Fiat vehicles. The first agreement occurred in July, 1981, and the second in December, 1981.

The third—a year later—deals with the relatively few 1970-74 Fiats still left on the road.

IVECO unaffected by Fiat withdrawal

BLUE HILL, Pa. — Fiat's plans to pull out of the U. S. car market will have no effect on the future of IVECO light trucks and Magirus medium trucks in this country, according to James R. Bostic, president, IVECO Trucks of North America, Inc.

Although Fiat is the parent of Netherlands-based IVECO B.C., of which ITONA is a subsidiary, there is no official connection between the two firms, Bostic said. ITONA is continuing plans to expand its product line in the U. S., he added.

Chevrolet is No. 1 for first time since '76

'82 truck sales gain 13.6 percent

Continued from Page 14

38.3 percent, from 73,921 units in 1981 to 45,642. Heavies were down 9.3 percent to 137,653 units, compared with the year-earlier 151,736.

In the final month of the year, an estimated 206,518 new trucks of all types were retailed in the U. S., an increase of 37.9 percent over the 149,800 units sold in December, 1981.

The Motor Vehicle Manufacturers Assn. reported that its members' retail outlets sold 2,247,045 new trucks in 1982, an increase of 13.9 percent over the previous year's 1,972,301 units.

In December, according to MVMA, domestic truck makers reported 176,517 retail sales, up 40.5 percent from the year-earlier 125,673 units.

On Jan. 1, the MVMA said, the number of unsold new trucks in retailers' hands totaled 559,366 units, an increase of 3.6 percent over the 539,755 in inventory on the first day of 1981.

Light-truck stocks at the start of the year totaled 503,410 units, up 1.3 percent from the year-earlier 497,017. Mediums were up 72.4 percent, from 10,577 on Jan. 1, 1981, to 18,234. Heavies totaled 37,722 units, 17.3 percent higher than the previous year's 32,161.

• Big Three truck manufacturers reported that their dealers retailed 2,075,231 new units in calendar 1982, an increase of 18.5 percent over the year-earlier 1,750,649.

December deliveries were 48.9 percent higher than those in 1981, soaring from 108,910 units to 162,175.

Chevrolet dealers sold 58,636 trucks in the final month of the year, up 38.5 percent from the previous year's 42,347. Ford's December sales totaled 65,747 units, a gain of 70.5 percent over the year-earlier 38,570.

Dodge and Plymouth dealers retailed 245,945 light trucks during the year, up 31.8 percent from the 186,849 sold in 1981. December sales were 29.5 percent higher, from 15,292 units in 1981 to 19,805.

GMC's 12-month total was 228,934 units, an increase of 33.4 percent over the previous year's 171,551. In December, dealers retailed 17,987 new trucks, 41.6 percent higher than the year-earlier 12,701 units.

Sales of four-wheel-drive Jeep vehicles were up for both the year and the month. The 12-month count of 63,761 units was eight-tenths of one percent higher than the year-earlier 63,275. In December, 5,392 units were sold, up 16.3 percent from the previous year's 4,636.

Volkswagen dealers sold 12,770 new compact pickups during the year, a decline of 62.3 units from the year-earlier 33,879. December sales were off 75.4 percent, from 2,833 in the final month of 1981 to 698 units.

During the year, Toyota sales totaled 144,308 units, an increase of 4.9 percent over the previous year's 137,529. December deliveries were 12.7 percent higher, from 11,624 units in 1981 to 13,096.

Datsun dealers retailed 107,927 new compacts in calendar 1982, a decline of 6.4 percent from the year-earlier 115,334. The December total, however, was up 2.3 percent to 10,600 units, compared with 10,424 in 1981.

Mazda sales were dramatically higher for both the year and the month. The 12-month count soared to 41,005 units, an increase of 144.1 percent over the year-earlier 16,798. In December, the total was 4,269, up 377 percent over the 895 units sold in the same month in 1981.

Isuzu dealers sold 17,669 compacts during the year, an increase of 77.4 percent over the previous year's 9,959 units. The December total was 18.8 percent higher than the year earlier, from 1,184 units in 1981 to 1,406.

Mitsubishi, which began distribution late in the year, said its dealers sold 570 units in December, bringing the 1982 total to 1,264 vehicles.

Fuel-system rule called effective for cost, safety

WASHINGTON. — A government evaluation of safety standard 301 (fuel system integrity) as upgraded in 1975 on orders from Congress shows it to be cost effective and successful in reducing the number of fires in highway accidents and lowering the number of fire-related deaths and related injuries.

The evaluation uses statistical analysis of crash fire data from five states, with most stress given to Michigan data. Cost estimates are from the manufacturers.

There are about 20,600 car crash fires a year, associated with 1,100 deaths, 3,200 serious injuries and more than 3,300 moderate to minor injuries, not counting occupants of any other vehicles.

The upgraded standard was found effective not only for post-crash fires but for post-crash fuel leakage. The drop in crash fire rates has meant: 400 fewer deaths, 520 fewer serious injuries, 110 fewer moderate injuries and 6,500 fewer car crash fires.

Total cost to meet the standard is estimated at $8.50 per car or a total of $85 million a year. These are preliminary findings.

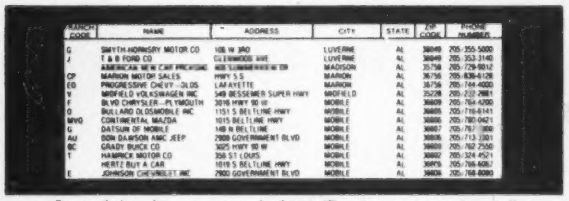
NEW CAR DEALER DIRECTORY
27,910 names - $295

The New Car Dealer Directory has been compiled from the Yellow Pages of approximately 4,800 telephone directories. It covers virtually every city and town all across the country; and includes name of dealership, address, zip code, telephone number and the major brand sold by the dealer.

This directory can be a perfect tool for Market Planning, Sales Prospect identification, Direct mail list, Telephone sales or as a reference directory. Brand information lets you select Chevrolet dealers or Toyota dealers or any other major franchise in any sales territory. The potential use of this directory is limited only by your imagination.



Cost of this directory is only $295. To place your order, call (402)331-7169 or mail your order today.

Up 40 pct. from last year

Week's car output reaches 105,322

By Patricia Hoffman
Staff Writer

The domestic auto makers continued their early-1983 comeback last week. Production was up considerably from a week ago and a year ago.

Last week, the manufacturers estimated 105,322 cars, up 39.82 percent from the previous week's 75,328, and a 77.06 percent gain over last year's 59,485 units.

The cumulative two-week total for 1983 reached 180,650 units, 53.16 percent ahead of the 117,945 cars produced in the comparable 1982 period.

Breakdown for the year to date by company was: General Motors, 69.78 percent; Ford Motor, 16.99 percent; Chrysler Corp., 5.84 percent; American Motor's, 3.75 percent; Volkswagen of America, 3.53 percent and Honda, 0.11 percent.

Six assembly plants were idle last week, continuing downtime that began before the Christmas/New Year's holidays.

General Motors' Willow Run point, Ford Motor's Metuchen, San Jose and Wayne facilities and Chrysler Corp.'s Belvidere plant remained closed due to overstocked inventory.

The Ford Atlanta facility continued down last week for model changeover. Atlanta, which produces the LTD and Marquis, is currently retooling for the addition of the 1983 Thunderbird, which is slated to go into production later this month.

Back last week following inventory control were Ford's Dearborn, and Lorain facilities, Chrysler's Jefferson, Newark and St. Louis points, and American Motors' Kenosha plant.

Truck production jumps for week; 29,868 assembled

The return of five plants helped boost last week's domestic truck production substantially from the previous week's total, but the cumulative output so far this year lagged slightly behind the comparable 1982 period.

Last week, the makers estimated 29,868 units, a 50.67 percent gain from the previous week's 19,824, and up 6.52 percent from 28,041 built the same week last year.

During the first two weeks of assembly this year, the manufacturers produced 49,692 trucks, 2.19 percent behind the 50,804 units finished in the same period in 1982.

Eight assembly plants remained idle last week (Jan. 10) changeover. Ford Motor's Kansas City, Kentucky, Norfolk, San Jose and Twin Cities plants plus Chrysler Corp.'s Belvidere and Warren facilities, all idle since the holidays break, continued down last week due to overstocked inventory.

Closed for model changeover was Volkswagen of America's Westmoreland point. The plant, idle since June 28, is slated to return Feb. 7.

Back last week from inventory control down time were the full-size pickup lines at General Motors' Flint, Janesville, Pontiac and St. Louis facilities. Also back was American Motors' Toledo truck point.

Pontiac sales reorganized; six regions established

PONTIAC. — Pontiac has restructured its sales organization, adding four new regional offices and new executive appointments.

W. H. (Bill) Ross, former assistant general sales manager, became assistant general sales manager - administration, working directly with General Sales Manager William W. Lane on all administrative matters.

Pontiac's 26 zones were formed into six regions: Central, Southeast, Midwest and Southwest were added to the existing Northeast and Western regions.

The regions are served by an Assistant General Sales Manager-East and West, reporting directly to Lane. H. S. (Howard) Christie, formerly sales manager-Central, is the new assistant general sales manager-East. A Western manager has yet to be named.

Reporting to Christie are the Northeast region, under J. P. (Jim) LaClede, headquartered in New York; Central, under R. J. (Rich) Sherman, headquartered in Detroit, and Southeast, under J. W. (John) Johnston, headquartered in Atlanta.

The West area includes the Midwest region under J. L. (Jack) Losch, in Chicago; Southwest, under S. A. (Steve) Hoostal, in Dallas, and Western, under C. W. Thomson, in Los Angeles.

J. G. (John) Middlebrook, former director of car distribution, becomes general director of distribution, sales analysis and strategic planning.

R. L. (Bob) Brown is the new Cleveland zone manager; T. J. (Tim) Maloney is the New York zone manager. T. L. (Tom) King, Jr. is the Northwest zone manager.

R. T. (Dick) Hartzell becomes general service manager of the Service Department. Byron Strausser becomes assistant staff engineer / design evaluation.

AMC deal formed

THORNTON, Colo.—Sal Caeti and Gene Osborn have formed Osborn AMC/Jeep / Renault here.

Auto production in Canada continues big lead over 1982

The Canadian auto makers have built 2½ times as many cars thus far this year as they did in the comparable 1982 period.

The return of one Ford Motor car facility offset downtime at American Motors' Brampton plant last week, bringing the estimated output up to 17,502 units, a 21.58 percent gain from the previous week's build of 14,396. The total was up substantially from 8,594 units built in the year-ago week.

The auto makers have assembled 31,898 units so far this year, compared with 12,789 through Jan. 16, 1982.

Truck production last week was targeted at only 5,283 units, down 21.0 percent from the previous week's 6,687, and down 34.27 percent from 8,038 units built the same week last year. However, the year-to-date total of 11,970 units was up 9.54 percent from 10,928 built the first two weeks of 1982.

Ford's Oakville car point resumed operations last week (Jan. 10) after being idle since Dec. 20 for holiday downtime.

The Ford St. Thomas car plant and Oakville truck facility remained closed last week for inventory control. Oakville is slated to return today (Jan. 17) while St. Thomas will remain down until Jan. 24.

International Harvester's Chatham and Vancouver facilities remained closed last week to control inventory.

AMC's Brampton plant also was idle last week for inventory adjustment.

All other car and truck facilities were reported operating last week.

58th year—$40 per year, $1.00 per copy

380,000 units good for 54 days

Import stocks edge higher

By Richard A. Wright
Assistant Managing Editor

The inventory of new imported cars in the U. S. climbed moderately during December and the industry opened the new year with a 54-day supply, up from 51 days a month earlier, but still on the lean side.

The inventory of new imported cars Jan. 1 totaled 380,316, compared with 365,467 a month earlier.

Despite the increase, a number of nameplates remained in very short supply, several of them shorter than a month earlier.

The inventory of new imported pickup trucks was also up a bit to a 78½-day stockpile Jan. 1, compared with a 75-day supply Dec. 1. The unit count of trucks in stock was 107,535, which was actually down from the month-earlier total of 117,184.

The combined imported car and truck inventory Jan. 1 totaled 487,851 units, a 58-day supply, compared with 491,959 units Dec. 1, a 55-day stock.

The increase in imported-car stocks during December was entirely accounted for by Japanese makes, which jumped from 261,874 units, a 43½-day supply Dec. 1, to 274,372 units Jan. 1, a 48-day stockpile.

But despite the Japanese buildup, shortages persisted in some lines. Shortest were Honda, 24 days, and Toyota, 28 days.

Other Japanese lines and their Jan. 1 days-supply figures were: Subaru, 58; Mazda, 60; Nissan, 68; Isuzu, 114, and Mitsubishi, 167. In addition, Chrysler Corp. had an 87-day supply of Mitsubishi-built cars, including Plymouth Colt, 84; Dodge Colt, 87; Sapporo, 70, and Challenger, 120.

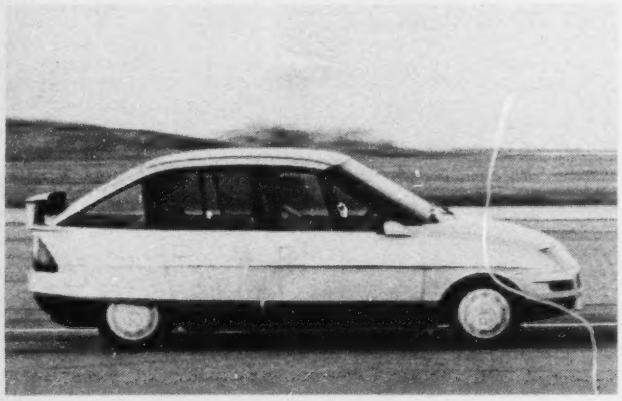
The stockpile of West German-built new cars Jan. 1 totaled 65,129 units, a 68-day supply, down from 71,850 Dec. 1, an 85-day supply.

Mercedes-Benz had the leanest inventory of any import at 21 days, while Porsche at 30 days and BMW at 32 days were also very short. Volkswagen had a 142-day supply of German-built VWs, along with an 87-day stock of U. S.-built Rabbits and a 112-day supply of Audis.

Days-supply figures for other European lines Jan. 1 included Jaguar, 42½; Volvo, 69; Saab, 80; Peugeot, 106; Alfa Romeo, 111; Renault, 185, and Fiat-Lancia, 185.

Days-supply figures for new imported pickup trucks in inventory Jan. 1 were: Toyota, 49; Nissan, 52; Mazda, 70; Chrysler Corp. Ram 50 and Arrow, 71; Mitsubishi, 153; Ford Courier, 206; Isuzu, 262, and Chevrolet LUV, 340.

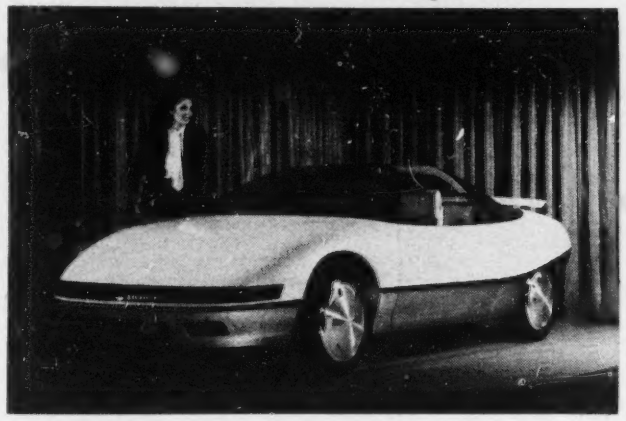
Slippery and plastic



BL's third-generation fuel miser

BL has developed the ECV 3, its third-generation Energy Conservation Vehicle, built with an aluminum structure and plastic body panels and fitted with a lightweight alloy three-cylinder engine. Combined with a drag coefficient of 0.25, the 1,464-pound car is said to get 40.8 MPG in the ECE urban test cycle. Story on Page 13.

The concept is computers



Buick Questor strong on electronics

Buick unveiled its 14-computer concept car, the Questor, at the Detroit Auto Show. A laser key replaces door handles. A hand-held control box opens the door, raises the car for easy entry and adjusts seats, pedals and stereo to each driver's setting. Rear-view mirrors are replaced with television monitors. A computer raises the flush rear spoiler and the rear end as the car accelerates, to reduce wind drag. Story on Page 3.

Chrysler chops prices on line of convertibles

Chrysler Corp. last week reduced convertible prices $995 to $2,505 and now offers a ragtop with a sticker of $9,995.

That model is the Dodge 400, which was cut from $12,500. Some $520 worth of equipment was removed from the car — power steering, wheel covers and steel-belted-radial whitewall tires.

Tom Pappert, Chrysler vice president, U. S. automotive sales, said the company is "passing along the efficiencies we achieved by manufacturing our convertibles in-house at one of our plants."

Chrysler now makes its convertibles at its St. Louis assembly plant. When the soft tops were introduced last year, the conversion was done by Cars & Concepts, Brighton, Mich. Conversion work on other domestic convertibles (Ford Mustang and Buick Riviera) is handled by outside firms.

There were no equipment deletions on Chrysler's other three convertibles. The LeBaron dropped to $10,995 from $12,800, a cut of $1,805.

The LeBaron Mark Cross now is $14,595, down $1,000. The new Town and Country is $15,595, down $995. The Town and Country convertible has all the Mark Cross equipment plus a simulated wood-grain exterior and a deck-lid luggage rack.

On models in inventory, dealers will be compensated for the difference between the old and the new wholesale prices. Dealers will receive revised price stickers and must display both the old and the new stickers on the cars.

Chrysler is giving purchasers of '82 convertibles a $300 rebate certificate. This applies to cars in dealers' hands as of Jan. 17, 1983.

Market share is reduced, too

Diesel-car sales plunge 37.6 pct.

By Jim Plegue
Staff Writer

Sales of diesel-powered passenger cars plummeted 37.6 percent during calendar year 1982 while market penetration skidded to below 4 percent of total industry sales.

Domestic and import manufacturers sold 318,648 diesel cars during 1982, a substantial drop from the 510,679 sales of calendar 1981.

Likewise, diesel market share took a beating last year. Diesel sales accounted for only 3.99 percent of total domestic and import deliveries during '82, down from a 5.99-percent diesel share in 1981.

Diesel sales had been one of the few bright spots in the otherwise discouraging sales year of 1981. Both the calendar-year diesel total and the 536,440 diesel sales of model-year 1981 established records.

But the boom became a bust shortly after the '81 model year ended as consumers reacted swiftly to stable or falling gasoline prices, steady gasoline supply and the higher price tags put on diesel-engine options. Diesel sales have been flat ever since.

Most of the smaller manufacturers, however, posted diesel sales gains during '82, while giants General Motors and Volkswagen saw shrinking volumes and market share throughout the year.

GM's sales of 173,944 diesel cars during 1982 represented a 42.96-percent dip from the 304,960 sold during 1981. GM still accounts for more than half of the diesel market in the U. S., but the company lost 5.12-percentage points last year—from 59.71 percent in 1981 to 54.59 percent in 1982.

All GM divisions except Chevrolet registered sales losses during 1982. Chevrolet diesel sales increased 73.82 percent during 1982, bolstered by strong sales of diesel-powered Chevette (17,102 units) and Impala/Caprice (18,868). Chevy's share of the diesel market almost tripled last year—from 5.40 percent in '81 to 15.06 percent last year.

• Volkswagen reported whopping losses in both volume and market share. The company sold 48,091 diesel cars during 1982, down 59.44 percent from 118,585 in 1981. VW's diesel share dropped 8.13 percentage points to 15.09 percent.

Sales of VW's bread-and-butter diesel model, the Rabbit, plunged 62.03 percent last year. The company sold 37,705 diesel Rabbits during 1982, down from 99,308 during '81.

Audi's lineup of higher-priced luxury diesel cars fared better.

breaking news

Chrysler to drop push-pull

HIGHLAND PARK, Mich. — John Naughton, Chrysler Corp. executive vice president of sales and marketing, wired dealers last week, officially promising to eliminate push-pull "from all future programs." He acknowledged that the company had had "five consecutive quarters" of push-pull, but said Chrysler's position had improved to where it no longer needed them. There are reports of February overtime at several plants and the E-class cars being put on allocation because of demand.

Hyundai to enter Canadian market

TORONTO.—Hyundai Motor Co. of Seoul, Republic of Korea, will enter the Canadian market this summer with its Pony four-door hatchback model, a rear-drive subcompact with 1,439-cc engine. The company, which will probably be

Fewer but more-distinct models, and lots of electronics

Reuss maps new strategy at Buick

By Kathleen Hamilton
Financial Editor

General Motors divisions will begin to differentiate while they lop off overlapping car lines, Buick General Manager Lloyd E. Reuss said.

One way Buick is planning to distinguish itself from its sister divisions is through widespread use of electronics, both in its products and in its operations.

The division has already begun the move into computerization in an attempt to provide customers with an unusual degree of service, according to Reuss.

But Buick products will be looking unique, too — especially front ends, he said.

Like many of its sister divisions, Buick is studying the profit possibilities of producing cars it can call its own — part of a decentralizing trend at GM, Reuss told the Detroit Auto Writers Group.

But, he also pointed out that the fate of a luxury two-seater hinges on corporate cash flow. It is now in clay form, unapproved as yet for production. In the best-case scenario, it could be in production in 1986, Reuss said.

• Reuss cited the Riviera convertible and T-Type as other examples of the path toward distinctiveness Buick is following.

Other "discriminators" Buick will be trying: Fuel injection (for both Regal and Riviera in '84), turbocharging and diesels.

Buick held back on advertising the diesel and the turbocharger for two years, "trying to get the turbo a hot car. Now it is," Reuss said.

The result is steady diesel sales and a marked increase in orders for the turbocharged Regal -- more for the first four months of 1983 than Buick had expected for the year, he said.

Other models will be turbocharged in 1984. A 3.8-liter turbocharged engine will bow then. Another lightweight 3.0-liter plant is due in '85.

Reuss said the downsized Electra for 1984 will have a distinctive Buick face, seat six passengers and weigh less than its predecessor. He predicted its sales will double those of the current model.

In 1987, the division will be producing only front-drive cars and will have a thinner lineup, eliminating the overlap between Century and Regal and between Skylark and Century, Reuss said.

Although Buick has trimmed back its forecast for 1983 model year sales (from 850,000 to 820,000), Reuss was bullish on the division's medium-range prospects. One reason is that the baby boomers are aging, and their children soon won't fit in the back seats of subcompacts. These families will soon become potential Buick customers.

Per capita income is also on the rise. The closing of the fuel-economy gap between small and large cars is yet another bonus for Buick, according to Reuss.

• Buick's new customer satisfaction advances also promise to boost the division's sales.

A toll-free customer service number for technical assistance, tied to the division's data base in Flint, promises to dramatically increase the number of repeat customers: Reuss said in non-automotive markets, a similar service has increased repeat customers as much as 2½ times.

Buick now provides such technical assistance to 60,000 customers a year; Reuss said the computerized system with 40 stations that is being installed this year will allow 150,000 contacts a year.

In another move into the computer age, Buick has already tied two-thirds of its zones into a similar technical assistance service. The rest will be tied in by the end of February, he said.

In a year-long pilot program, Buick found it could answer 85

No more stalks

Transmission selector, turn signal switches, windshield wipers, washers and horn are in the center of the Questor's steering wheel. So is a voice-actuated radiotelephone and traction monitor.

No more navigators

The center console shows the driver where the car is on a map of the state, area or city. Below, a screen gives data on radio station, climate control, elapsed time, date, MPG, average speed, fuel remaining, estimated time of arrival and hotel reservations. A printer provides a hard copy.

Checker Motors sells taxi unit to former employe

WASHINGTON. — Checker Motors Corp. has sold its Yellow Cab Co. of Pittsburgh subsidiary to a longtime Yellow Cab executive for $290,000.

In a filing with the Securities and Exchange Commission, Checker reported the subsidiary has been sold to Alfred L. Krupp, who has been treasurer of Yellow Cab for 17 years. Krupp has been associated with Checker 31 years, a company spokeswoman said.

Checker received $100,000 and a promissory note for $190,000, according to SEC papers. In addition, Yellow Cab will lease two parcels in Pittsburgh owned by another Checker subsidiary.

Checker built taxicabs until last year and owned a number of taxicab firms. Its Kalamazoo (Mich.) plant now builds steel parts for other auto makers. Its last taxi company is Yellow Cab of Chicago.

Dodge undercuts import rivals with $5,665 truck

DETROIT.—In pricing its '83 imported trucks, Dodge went for a lowest-price-in-industry strategy with its base Ram 50.

At $5,665, the base Ram is below Mitsubishi's $5,749 model, the former price leader. The Ram unit is down $450 from its 1982 tag of $6,199. The Mitsubishi model is the one sold by Mitsubishi Motor Sales of America. Dodge Ram 50 trucks also are imported from Mitsubishi.

The Ram 50 Custom is $6,266, down from $6,408, and the Ram 50 Royal, at $7,135, is up from $6,892. The Ram 50 Sport, at $7,-732 is up from $7,474.

The Power Ram 4x4 Custom, at $8,424, is up from $8,361. The Power Ram Royal, at $9,565, is a new entry, and the Power Ram Sport, at $9,333, is up from $9,245.

VW offering rebates, aid on floorplanning

By Joseph Bohn
Marketing Editor

TROY, Mich. — Volkswagen has opted for consumer rebates, dealer floorplanning assistance and sharply higher promotional emphasis — particularly on several turbo diesel and special spring models—for its winter/spring marketing drive.

Meanwhile, officials flatly denied published reports of a possible low-interest-rate finance program on '83 models, and said they were sticking to policy in signing up new dealers.

Volkswagen, a reluctant rebater, nonetheless turned to costly "consumer benefits," as James R. Fuller, vice president of Volkswagen Division, termed them, to solve a short-term inventory problem on '82s.

The Jan. 11-April 30 program covers '82 imports and selected '82 domestic Rabbits. Announced retroactively last weekend, on imports it pays: $1,000 on Rabbit convertible; $700 on Jetta diesel; $1,200 on Vanagon diesel; $1,600 on Camper diesel; $1,000 on Quantum coupe and station wagon; $1,200 on Scirocco; $500 on Jetta gasoline engine model; $1,000 on Vanagon gasoline engine model; $1,000 on Camper gasoline engine model and $1,000 on Quantum sedan.

Also, on domestic models, it pays $525 on Rabbit diesels and $645 on diesel pickups. In essence, this is tantamount to offering the diesel engine option for free.

Fuller said it is "not our style" to overbuild cars, then incentivize them to sell off the inventory. However, because of leadtimes "here and in Germany" VW had not been able to adjust production fast enough to counter dropping demand in the small-car and diesel-engine market segments.

• To assist its "dealer partners," VW is paying 50 percent of dealers' wholesale floorplan expenditures "within our regions" on '82 import units purchased between Jan. 11 and April 30. It will pay the cost for a maximum of 180 days.

Although VW lost about 70 dealers within the past year, it has not loosened its basic policy of not signing up dual dealers in major metro areas.

"You don't make long-term decisions, like dealer representation, based upon a year or two of bad sales," Fuller said. "Once you make a change (in dealer representation) that's the bed you sleep in for the rest of your life."

About one-third of VW's dealers are exclusives, and they sell more than 50 percent of its volume, making the ratio of exclusives "important to us," Fuller said.

Despite its sales falloff, he added, dealers are still making good money servicing the sizeable VW owner body.

For the 1983 calendar year,

The right stuff

At Detroit Auto Show, Chrysler Corp. Vice Chairman Gerald Greenwald and Carroll Shelby are all smiles after checking out the high-performance Shelby Charger in the Chrysler exhibit.

3 GM units to sponsor new grid league on TV

By Joseph Bohn
Marketing Editor

DETROIT. — Buick, Chevrolet truck and GMAC have signed on as sponsors in the new United States Football League (USFL), with a couple more automotive participants to be added.

Datsun, Chevy truck and Buick got first crack at sponsoring the new football league's games on TV, beginning March 6, but Datsun declined. All three are Monday Night Football sponsors.

Datsun's decision opened the door to other participants.

Chevrolet truck and Buick each have about three minutes of TV time per game on 10 of the 20 regular season games, plus 1½ minutes apiece on the championship playoff, July 17.

At $30,000 per 30 seconds, they are investing something over $2 million each. GMAC has an undisclosed number of minutes per game on every game in the season. Playoff games go for over $30,000.

ABC is still talking to other automotive companies and is expected to add a couple of car divisions on alternate weeks when Buick and Chevy truck aren't in.

It's also expected that auto component supplier divisions, such as at GM, for example, will get into the games.

The new football league holds a certain amount of risk, but also a lot of attraction for car companies because of the high concentration of anticipated male viewership.

It's uncertain yet how strong the ratings for spring/summer football games will be. But generally if the games don't deliver the expected audiences, the network is expected to make it up to sponsors with extra time elsewhere in its TV scheduling.

A number of Detroit car companies have expressed interest in the new league, and it is anticipated that the remaining available time will be sold on a sponsorship, rather than participation or scatter buy, basis.

Boston Subaru opens

BOSTON. — Boston Subaru has opened here.

Industry has suffered structural damage, he says

Agee expects auto recovery, but...

By Roger Rowand
Engineering Editor

DETROIT. — Bendix Corp. Chairman William M. Agee views the auto industry as a microcosm of all industry and says prospects for an auto turnaround are promising.

Speaking here to some 1,200 members of the Economic Club of Detroit, Agee said small but encouraging signs are seen from time to time. He cited success of a new model or an incentive program as examples.

"I do believe the automotive industry is on the slow road to recovery. We will see increased car production in 1983 when compared to 1982 and further improvement in 1984," Agee said.

But, he continued, "Indulging in such forecasts distracts us somewhat from the hard reality of what has happened already. For the fact is, the industry has suffered the structural damage we have feared for so long.

"The U. S. automotive industry will have serious difficulties in recovering to its former strength. The same unfortunate prospects are in store for many of the country's basic industries," the supplier firm executive said.

Among reasons are foreign competition, old plants and lagging productivity, he said. But he added another, more surprising reason:

"Some companies have gone along the route of vertical integration without the growth rate to support such a luxury.

"Vertical integration is appropriate only under the right circumstances — during periods of rapid growth and when it joins complementary manufacturing capabilities that lead to greater competitive advantages," he said.

• He worked into his remarks a plug for the supplier companies by saying:

"Many industries, including the automotive, do need to place greater reliance on a healthy supplier sector, whose special strengths are creativity, the agility to respond quickly to special needs and intense competition which produces a high level of efficiency."

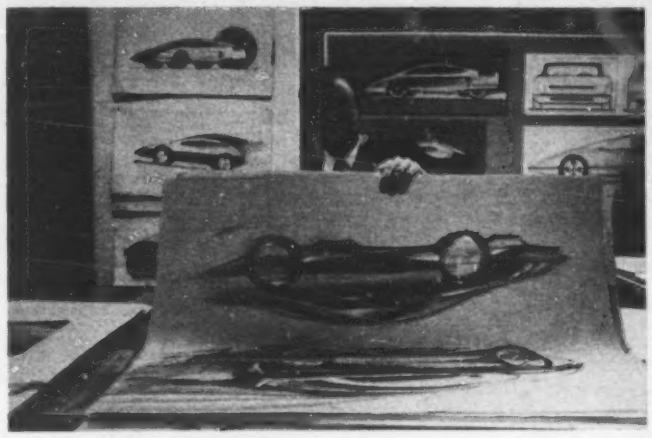
Agee had several suggestions for getting the U. S. back on a path to what he termed lasting economic stability.

He suggested building support for creation of a high-level commission to recommend programs for revitalizing mature industries. Such a commission would also redirect efforts toward more promising sectors of the economy such as high technology.

Agee also suggested expanded training of the unemployed, economic education of the public, tax incentives for new ventures and expanded exports.

"Above all, we need a change in attitude characterized by a new spirit of cooperation," he said.

"As terrible and awful as the recession is, it has created a new awareness of the common good. The separate interests of labor, industry and government are inextricably linked. This is the hard lesson of these hard times," Agee said.



Professionalism's fine eye

Preston Bruning, of the General Motors Design Staff, examines drawings made by students at the Center for Creative Studies/College of Art and Design in Detroit. Recently, five teams of three students each developed a design theme for a two-plus-two sports coupe or compact sedan using sketches, full-size tape renderings and foamcore mock-ups. Among those taking close looks at completed projects were top-echelon designers from Detroit-area auto makers and their suppliers. Bruning also teaches an introductory course in automotive design.

Olds to push six specials in early spring promotion

By Joseph Bohn
Marketing Editor

DETROIT. — Oldsmobile will run a special dealer/factory promotion from Feb. 28 to April 9, "The Great Olds Road Show Rally," promoting six special models.

The models are Firenza GT, 15th Anniversary Hurst Olds, Omega ES, Cutlass Ciera Holiday coupe, Cutlass Cierra ES and Cutlass Supreme.

James Mattox, general sales manager, anticipated 50,000 of the specially outfitted models would be sold, with 50 percent of the volume in the Cutlass Ciera ES and Holiday coupe models. Only 3,000 Hurst Oldsmobiles will be produced.

On the heels of a heady 10.1 percent market penetration in 1982, Oldsmobile officials projected a big sales increase — from just short of 800,000 units in calendar 1982 to 900,000 in 1983.

Olds' market penetration climbed to 10.9 percent for the first 10 days of January.

Officials acknowledged the decline in diesel demand, anticipating about 8-9 percent of their volume in diesel cars for 1983, down from 11 percent last year.

They had no timetable for when the V-8 diesel would be phased out, adding only it would be the same time as the phaseout of V-8 gasoline engines.

They said they were pretty content with their current product lineup. They felt no compelling need to push for a unique vehicle, such as the two-seater Pontiac is getting.

If Olds were to get a sporty model like Pontiac's, it would most likely be a 2 plus 2. Generally, officials said, their image is one of an intermediate and full-size producer, and they were not pushing for an entry below the Firenza.

There are no plans for a convertible "in the works," Mattox added.

Dealers' service volume up sharply for November

By Francis J. Gawronski
Service Editor

With all indicators registering impressive gains, new-car dealers' service and parts business in Novemer recorded its third biggest gain of 1982.

As measured by the Automotive News Service Index, shop volume in November amounted to 112.3 percent of the business posted in the same month of 1981.

November's showing in service and parts volume was the best since August when the Service Index was 113.8 percent of the volume the year before.

The biggest increase of the year was recorded in March when shop business amounted to 114.6 percent of the volume of March, 1981. In October, shop volume amounted to 103.2 percent of the year-earlier business.

November also marked the 21st consecutive month in which service and parts business bettered the volume achieved in the year-earlier month.

The leading indicator in November was the sale of all parts and accessories, up 19.7 percent, followed by shop parts sales (customer-paid and warranty), up 16.2 percent.

Total labor sales climbed 13.9 percent in November, while gross profit—the most important indicator from the dealer's viewpoint — increased 12.9 percent. Repair orders written jumped 6.1 percent in November.

Figures used in the Service Index are averages compiled from replies on shop business from a cross-section of the nation's new-car dealers.

For the first 11 months of 1982, dealers' shop volume amounted to 108.3 percent of the volume reported for the corresponding period of 1981. Volume for the first 10 months was 108.0 percent of the year-earlier figure.

The leading indicator for the January-November period was shop parts sales, up 12.2 percent, followed by sales of all parts and accessories, up 12 percent, and gross profit, up 10.3 percent.

Labor sales increased 8.7 percent for the year-to-date period, while repair orders written were down 4.1 percent.

SERVICE INDEX
112.3*

	Nov., '82 vs. Nov., '81	9 mos., '82 vs. 9 mos., '81
Gross Profit on All Labor and P&A Sales	+12.9%	+10.3%
Repair Orders Written	+ 6.1%	— 4.1%
Total Labor Sales (Customer & Warranty)	+13.9%	+ 8.7%
Shop Parts Sales (Customer & Warranty)	+16.2%	+12.2%
Sales of All Parts and P&A	+19.7%	+12.0%

*—Survey by Automotive News shows that dealers' service and parts business in Nov., 1982, was 112.3 percent of business in Nov., 1981. Service business in the nine months of 1982 was 108.3 percent of business in the corresponding period in 1981.

Microdot offers $200 to employes to 'Buy American'

DETROIT. — Microdot, Inc., a Darien (Conn.)-based supplier of the auto industry, has started a national campaign to promote domestic car sales. The company coupled its push with what it perceived as strengthening auto sales.

Lawrence G. Blackmon, president, is offering $200 company bonuses to any of the firm's 4,000 employes who buy a domestic car or truck "in the next 90 days."

Blackmon also sent letters to 200-300 corporate leaders, urging similar incentive programs for their employes.

The company is a supplier of fasteners and fastener systems, oil seals and sealing devices and electronic sub-systems for auto, aerospace and industrial markets.

It has 32 plants in 11 states.

Ephlin takes Ford to task for letters to its suppliers

By Marjorie Sorge
Labor Editor

DETROIT. — In his first appearance before the Ford Motor Co. board of directors, UAW Vice President Donald Ephlin criticized the company for offering to give its suppliers long-term contracts if they could control labor costs and productivity.

Ephlin, who is also director of the union's Ford department, told the board Ford's action was "not appropriate." He said the company has the right to bargain price on purchases but not on the wages and productivity of its suppliers.

"I think the people in that plant should handle their own affairs," he said. "I think Ford officials here have their hands full handling labor relations at Ford."

Ford sent letters to its suppliers in November offering them the long-contract deal if they could maintain a constant labor cost and increase productivity.

In his address before the board, Ephlin also encouraged a permanent and expanded Employe Involvement (EI) program. He said Ford workers are pleased with the EI program. But, he said, more managers should be trained in EI at the shop level.

In addition, Ephlin challenged the board to limit outsourcing, keeping more jobs in-house. In the past year, Ford has announced the closing of both its Sheffield aluminum plant and San Jose assembly plant.

Ephlin's appearance before the Ford directors resulted from a provision in the labor agreement that was negotiated last year. It gives UAW officials the right to address the board twice a year.

• Meanwhile, Ephlin and Peter J. Pestillo, Ford labor relations vice president, and representatives of Ford's Rouge Steel operations spent last week in Japan exploring union-management relations in the steel industry.

Ford has been negotiating to sell Rouge Steel to Nippon Kokan (NKK) since last July.

While the Ford-UAW group visited NKK plants, both Ephlin and Pestillo said before leaving that they would not be making any effort to close the Ford/NKK deal.

"The whole purpose of our trip is to help facilitate the sale but we're not going over there to enter into negotiations," Ephlin said. "We want to get to know each other."

The UAW represents the 4,700 active and 500 laid-off workers at the Rouge Steel plant. According to Ephlin, there is a successor clause in the current contract which would make the UAW the representative even if NKK buys the facility.

He said he does not expect the Japanese company to ask the workers for any concessions, but if there are any changes negotiated they must be "quid pro quo."

While Pestillo said there is no date set for the sale of the Rouge Steel plant, he indicated that the modernization needed in that facility would make it difficult for Ford to continue its operation on its own.

He said the modernization program for the plant could be about $1 billion in capital expenditures. Ford is currently embarking on a $3 billion new-product program.

The Rouge Steel plant is currently operating at 50 to 60 percent of capacity and 30 percent of that output goes into the Ford system.

Safety council slates traffic records forum

CHICAGO.—The National Safety Council's Traffic Records Committee will sponsor its Ninth International Forum on Traffic Records Systems, July 18-21, 1983, with emphasis on microcomputers and advancements in the use of traffic records for urban applications.

In addition, current developments in enforcement, engineering, public health and motor vehicle administration will be discussed. The forum will be held at the Radisson St. Paul Hotel in St. Paul.

ATA to fight rails' entry into trucking

WASHINGTON. — Railroads have been given the green light by the Interstate Commerce Commission to go into the commercial trucking business, and the move has drawn the fire of the American Trucking Assns.

"We will challenge it (the ICC decision) by asking the ICC to reconsider its action, or go to the U. S. Court of Appeals," said Nelson Cooney, general counsel for ATA, national association for the trucking industry.

Trucking companies, he noted, have suffered heavy losses as a result of the recession and increasing competition from newly formed trucking ventures since the deregulation of the industry two years ago.

"The railroads are so big and control so much that they will be an enormous competitive factor," Cooney said. "At the rate they are moving, this could be a real free-for-all."

The ICC, in a report accompanying its decision, rejected trucking's contention that it would suffer competitively.

• "The relative economic positions of today's truck and rail industries, as well as the ability of motor carriage to compete successfully with other forms of transportation, undercuts the basic protective rationale for the 'special circumstances' doctrine," the ICC said.

The agency noted that the trucking industry today generates about 75 percent of total transportation revenues, and that the once-dominant railroad industry now accounts for only 36 percent of intercity ton-miles of freight.

"Earnings by the railroad industry are the lowest of any transportation mode and are insufficient to generate funds for necessary capital improvements," the ICC added. "Under these circumstances, the trucking industry should easily survive any new parries by the railroads."

For almost 50 years, the ICC has barred railroads from get-

Trailers used to haul extra loads

Freihofer Baking Co., Troy, N. Y., uses trailers to haul extra loads, eliminating the need for a second truck and driver. The trailers, called Kurbmite, are manufactured by Grumman Olson, which also supplies Freihofer with Kurbmaster aluminum route vans.

Bakery tests trailer to cut delivery costs

TROY, N. Y. — In a move to reduce future capital expenditures and operating expenses, Freihofer Baking Co. is testing the use of light-weight aluminum trailers coupled to delivery vans when additional load space is required for seasonal trade, special events and other peak volume periods.

Previously, explained Ralph Stockmayer, Freihofer distribution manager, a second truck and driver were used whenever there was an increase in volume deliveries on certain routes.

Freihofer, based in Troy, bakes and delivers more than 200 items to thousands of outlets in the Northeast. The territory runs from Bath and Victor, N. Y., to Acton, Mass., and from Yonkers to Westport, Conn.

Included in the company's 500 vehicles are 360 delivery vans. For the test, three aluminum trailers, called Kurbmite, were acquired. They're manufactured by Grumman Olson, which also supplies Freihofer with Kurbmaster aluminum route vans.

Stockmayer said the decision to use trailers to haul extra loads was based on economic considerations.

"Given the dramatic increase in the cost of equipment, fuel and labor over the years, we started to discuss various alternatives for reducing overhead and operating costs," he said.

• Stockmayer and Frank Marshall, Freihofer general sales manager, came up with the concept of using trailers.

If trailers are eventually integrated into the operations, Stockmayer said, they could result in significant savings. The difference in price between a van and a trailer alone can run upwards of $10,000 if a fleet has to be increased, he added.

After analyzing the sales territories, it was decided that the trailers would be stationed at depots in Troy, New Paltz and Verona, three New York regions

Bronco II wins feminine approval

Ford Motor Co.'s Women's Product Evaluation Panel has given its OK to the downsized Bronco II, scheduled for public introduction March 10. The panel is made up of female Ford employes from various job applications. The number of women as principal drivers of such vehicles has nearly tripled in six years, Ford said.

HD tallies down for 11 months and November

Heavy-truck registrations in the U. S. dropped almost 28 percent below year-earlier levels in November, and the 11-month total was a little more than 20 percent under that for the like period in 1981.

R. L. Polk & Co. reported 9,565 new-truck tallies during the month, off 27.9 percent from the previous year's 13,264 units. Through November, the count was 116,606, a decline of 20.7 percent from the year-earlier 147,005 units.

The totals for both Groups 7 and 8 trucks were down from 1981 for both the month and the January-November period.

In November, there were 3,738 Group 7 registrations, down 15.4 percent from the year-earlier 4,419. The Group 8 count was off 34.1 percent, from 8,845 units in 1981 to 5,827.

Through November, the Group 7 total was 50,268 units, a decline of 16.9 percent from the year-earlier 60,458. There were 66,338 Group 8 tallies, down 23.4 percent from the previous year's 86,547 units.

Ford continues to hold a slim lead over International in Groups 7 and 8 tallies. Through November, Ford had 27,511 and International had 26,305. However, Ford's share of industry total for the 11 months was 2.59 percentage points higher than the previous year, while International's was down 3.02 points.

truck industry news

215,220 tallies top October by 11.4 pct.

Registration gains continue in November

The upturn in new-truck registrations that occurred in October continued in November, further reflecting a light-truck recovery from a mild slump during the summer months of 1982.

During the month, according to R. L. Polk & Co. statistics, there were 215,220 registrations of trucks of all types, an increase of 27 percent over the year-earlier 169,423 units and 11.4 percent higher than October's 193,243.

The 11-month total was up 8.9 percent over the previous year, 2,184,378 versus 2,005,683. Light trucks were the only vehicles to show a gain during the period over the 1981 registrations.

In November, both light and medium tallies were higher than those in the same month in 1981. It also was the first month in 1982 in which registrations of medium trucks exceeded the year-earlier count.

During the month, there were 201,381 light-truck tallies, an increase of 32.1 percent over the year-earlier 152,411 units. Registrations were higher in all three light-truck weight classifications.

Medium-truck registrations for November totaled 4,274 units, up 14 percent over the previous year's 3,748. Again, the count was up in all three groups comprising this market segment.

Registrations of heavy trucks in November were down 27.9 percent to 9,565 units, compared with 13,264 in the same month in 1981. The totals were lower in both heavy weight classifications.

Through November, light-truck tallies were 12 percent higher than the previous year, with increases in all three weight groups. The 11-month count was 2,026,193, compared with 1,808,591 units in 1981.

Registrations were down for the January-November period for both medium and heavy trucks, with declines in all weight classifications.

Through November, there were 41,579 medium-truck tallies, down 14 percent from the year-earlier 50,087 units. Heavies were off 20.7 percent, from 147,005 units in 1981 to 116,606.

Chevrolet increased its lead over Ford by almost 7,000 units in November, bringing the 11-month total to 680,925 tallies. Ford, which has been No. 1 in truck registrations since 1977, had 656,365 registrations through November.

Chevrolet was one of only three truck nameplates with a higher share of total industry registrations than the previous year. Its 11-month penetration was up 1.53 percentage points, from 29.64 percent in 1981 to 31.17 percent.

The biggest increase in penetration was achieved by Dodge. Its share through November was 9.13 percent of the industry

Import registrations hit Oct. peak

By Jenny L. King
Staff Writer

Registrations of new imported cars set a record for October and earned their fourth deepest market penetration of 1982, accerding to figures compiled by R. L. Polk & Co.

During the month, 195,095 new imports were officially registered in 49 states (figures are not available for Oklahoma), an increase of 6.95 percent over 182,410 a year earlier.

Market penetration climbed past the record set in 1981 to 29.79 percent from 27.88 percent. Imports' share was down from September, however, when it reached 31.62 percent, and down from the any-month wedge of 34.16 percent in August.

Import registrations for the first 10 months of 1982 totaled 1,892,635, down 8.93 percent from 2,078,171 a year earlier. Year-to-date penetration pushed ahead to 29.99 percent from 28.79 percent as the number of domestic cars continued to slide at a faster clip.

Among the major importers, Toyota, Honda, Mazda, Mercedes and BMW increased their shares of the market in October compared with 1981 segments. Toyota was up 1.55 percentage points, to 21.19 percent from 19.64 percent, reclaiming first place from arch-rival Nissan.

Honda was up 1.38 percentage points, to 15.37 percent from 13.99 percent. Mazda was up 0.50 percentage points, to 7.66 percent from 7.16 percent; Mercedes was up 0.40 percentage points, to 2.87 percent from 2.47 percent, and BMW was up 0.32 percentage points, to 2.33 percent from 2.01 percent.

• On the downside in October were Volkswagen, Nissan, Subaru and Volvo. VW was off a hefty 3.84 percentage points, to 6.75 from 10.59. Nissan was off 0.84 percentage points, Subaru was down 0.13 percentage points and Volvo was down 0.41 percentage points.

Audi slipped from the top-10 chart this year and Renault gained a spot in October, boosted by Alliance's performance in its first two months on the market.

The top 10 sold 87.73 percent of the October import total, down from 88.32 percent a year earlier.

On a year-to-date basis, six importers improved their positions compared with 1981. Nissan was up 1.59 percentage points; Honda was up 1.03 percentage points; Subaru was up 0.33 percentage points; Volvo was up 0.66 percentage points; Mercedes was up 0.46 percentage points, and Audi was up 0.06 percentage points.

Toyota was off 0.21 percentage points, Mazda was down 0.14 percentage points and Volkswagen was down 2.94 percentage points for the first 10 months.

The top 10 imports claimed 89.57 percent of the import total through October, up from 88.27 percent.

Japanese passenger cars comprised 75.95 percent of October's imports, up from 74.18 percent a year earlier. German products were a far-distant second, accounting for 14.69 percent this year compared with 17.98 percent in 1981.

Registrations by country of origin in October were:

	Oct., 1982	Oct., 1981
Japan	148,184	135,310
West Germany	28,656	32,798
France	9,570	4,197
Sweden	6,305	6,214
Italy	1,060	2,318
United Kingdom	1,014	1,024
Ireland	306	549

Registrations year-to-date for 10 months were:

	10 mos., 1982	10 mos., 1981
Japan	1,473,149	1,563,244
West Germany	267,984	361,627

Hoglund sees California pacing Pontiac sales gains

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES.—Citing a resurgence in Pontiac's California sales as evidence that the division's new marketing plans are on target, William E. Hoglund, Pontiac general manager, predicted sales would continue to improve through the first quarter of 1983.

"California has always been a key barometer for us and we have seen a marked upswing in sales here since the beginning of the '83 model year," he said at a news conference held in conjunction with the Los Angeles Auto Show.

Hoglund reported that sales in the Los Angeles zone were continuing well ahead of the national sales resurgence for the auto maker, with December sales up 76 percent locally, compared with 50 percent nationally.

For the first three months of the '83 model year, local sales increased 42 percent, compared with the 21 percent gain nationally. Pontiac has embarked on a program to attract more youthful buyers.

Hoglund attributed the sales increase in part to attractive financing offered by GMAC.

"December saw significant numbers of new car buyers back in the market taking advantage of the excellent product availability and the 10.9-percent financing rate," he said.

• "Building on the last three months' increases and with our new 11.9-percent GMAC financing on 1983 as well as 1982 models, we are optimistic that the current sales momentum, which is being paced by the California market, will definitely continue.

"Leading indicators are showing that as consumer confidence moves up, interest rates and inflation are continuing to go down, which are positive signs for sustaining the sales recovery into 1983," he said.

Hoglund is optimistic that the momentum will continue in the spring selling cycle even after the subsidized finance rates expire. When asked if the banks will follow the manufacturers in lowering their lending rates on cars, Hoglund said that retail financing rates are slower on the down size and that it may take some time for them to drop further.

On the possibility of price increases sometime during 1983, Hoglund said that the market is "very price sensitive" right down and that even a one-percent increase could be disastrous.

More than seven million Ladas have been built.

Delay for new Lada

Soviets put project on back burner

By Richard Feast
European Editor

It seems unlikely that the Soviet Union's long-awaited front-wheel-drive Lada will appear in the west before 1986.

Details of the car—designated the 2108—first emerged in late 1979, when a 1983 introduction date was discussed. Latest reports, however, suggest that after various delays the Russians will be unable to start producing the car until the next five-year plan begins in 1986.

Under the present five-year plan the Soviet auto industry's financial resources were stretched to meet targets established for the Kamaz heavy truck plant on the Kama River.

This proved very demanding in terms of finance, manpower, resources and raw materials. The Russians decided to go it alone at Kamaz in the early 1970s when political pressures prevented western truck manufacturers from participating. Ford and Mack in the U. S. and Daimler-Benz and Fiat in Europe, among others, were involved in early discussions.

The result is the new Lada project is on the back burner, although development work by Porsche's contract engineering department in West Germany is well along.

Meanwhile, the VAZ factory at Togliatti continues to manufacture the original Lada, a derivative of the Fiat 124 sedan; even when the first model came off the production line in 1970 it was considered an outdated design.

Togliatti has produced more than seven million cars since then. Peak production was around 750,000 in 1980. Output in 1981 was 715,000.

The factory has the size to build twice that number, and western observers believe the necessary investment for capacity expansion will coincide with introduction of the 2108. Observers believe that's the earliest Satra Industrial Corp., a division of Satra Corp. of New York, will exercise its option to begin importing Ladas into the U. S.

Meanwhile, Satra has suffered another setback. Last October it lost the Lada concession it had in West Germany, largest national market in Europe. The Hamburg-based concern is now in the hands of the Soviet trading organization Avtoexport, which also controls or jointly controls Lada concessions in Belgium, Sweden, Norway and Finland.

Satra still retains the UK deal for Ladas; it sold 17,000 units there last year. The only market to take more was France where Poch SA sold 20,000.

The UK and French markets have always been high volume areas for Lada sales, but Lada's market share is highest in Finland at over nine percent.

Total Lada sales in Western Europe in 1981—the latest year for which full figures are available—were 88,300, about 1.3 percent of the market available to them.

In addition some 150,000 Ladas were sold to Russia's Eastern block allies, and around 15,000 in the rest of the world. That left around two-thirds of production for sale on the Soviet domestic market.

• Here is the unusual numbering system the factory uses for various Lada models: 2101 — 1200 sedan, 1970; 2102 — 1200, 1971; 2103 — 1500 sedan, 1974; 2104 — not allocated to a production vehicle; 21011 — 1300 sedan, 1976; 21026 — 1500 wagon, 1976; 2106 — 1600 sedan, 1977; 2105 — revised 1300 sedan, 1981; 2107 — larger engine, more luxurious versions of 2105 to be launched in 1984; 2108 — front-drive hatchback, expected 1985; 2109 — sedan version of 2108, expected 1986.

Bleak outlook for European truck sales

Too much capacity, too many competitors

Truck sales in Europe during 1982 slumped to their lowest level in 22 years, according to DRI Europe's latest *European Truck Forecasts*.

With exports from Europe declining as OPEC markets weaken, the short term outlook for the industry remains bleak this year.

The industry has too much production capacity and too many manufacturers for current market conditions. Adjustments will be made, hastened by the current strain on industry finances, the report predicts.

DRI believes truck sales will improve this year but recovery from the recession will prove much slower than from the last one. Demand will remain depressed after that, and industrial production will not surpass its previous peak until 1985, DRI says.

DRI expects only four of 15 European manufacturers will report a profit for 1982 truck-making operations. They are Daimler-Benz, Volvo, Scania and MAN, with Daf making small profits largely through non-automotive business. Two makers, IVECO and Renault Industrial Vehicles, are expected to post heavy losses.

Poor results from South American subsidiaries, high costs from attempted expansion in the U. S. and reduced export earnings will depress results from industry leaders, according to the report.

Present depressed truck prices, resulting from too many sellers chasing too few buyers, pose a serious short term problem, with heavy discounting in the European market contributing to the overall lack of profitability.

Vehicle prices, along with average capacity utilization, will not begin to rise until 1984, the report says.

Demand for medium and heavy commercial vehicles in the eight major European countries covered by the report will rise by eight percent this year to 219,000, with light trucks falling by nine percent to 762,000, DRI says.

It's predicted that over the longer term (1987) heavy truck registrations will expand by 16 percent to 255,000, still less than in peak years 1979-80. Similarly, light commercial demand will improve by 11 percent in 1987 (848,000), but will still be short of the 1979-80 levels.

VW builds pickup in Yugoslavia

The Volkswagen Pickup, designed in the U. S., has been modified for production in Yugoslavia. The new VW is called the Caddy there, and will be sold in many European countries. Engine options are 1.6-liter gasoline or diesel plant. Soft and hard cab covers are options.

Lotus

Continued from Page 35

maintains that development work is not being held up by lack of working capital.

The Lotus factory has never produced that kind of volume, and to do so will need considerable additional capital and a bigger payroll. At present it employs 450, with extra labor required the first quarter of this year.

Even conservative estimates indicate Lotus will need some $5 million for capital equipment to get production lines rolling in 1984-85.

The new coupe, a Porsche 924 challenger, will use many key components from Toyota mass production cars including engine, driveline and brakes. Kirwin-Taylor describes it as "the most fascinating bit of Chapman I've seen."

Lotus undoubtedly is up to the job from an engineering standpoint. The real key to the company's future, however, lies with the bankers.

Lotus talks of selling 315 Esprit Turbos in the U.S. this year.

The factory in England will reach higher production volumes than ever before if Lotus can come up with capital requirements.

Cobra output continues in United Kingdom

For those who missed the Shelby Cobra, a nearly identical car has been resurrected for production in England and offered for sale in the U. S.

The A.C. Cobra is built from the original tooling, with body panels still hand-formed of 16-gauge aluminum over the original bucks. Frame and suspension follow the original design. — as do just about every component except the engine. Slight modifications have also been made to make bumpers comply with DOT specifications.

The engine is a 351-CID Ford V-8 installed in the U. S. The rest of the car is built by C. P. Autokraft in England.

Class Motors, with facilities in Beverly Hills, Calif. and in Chicago, has sole U. S. distribution rights. The A.C. Cobra is priced at $62,500.

European car sales heading upward

General Motors and Renault are major winners

New car sales in Europe for 1982 were heading for a small increase over the previous year, latest statistics from industry sources indicate. If that happens, it will mark a much-needed upturn after years of steady decline from the 1979 peak of 10.33 million units.

Sales in the first 10 months of 1982 were 8,392,700 in Western Europe, a half percentage point above the same period a year earlier.

The unofficial statistics are marked by some wide variations in sales trends nationally and by individual manufacturers. The only real winners among the volume producers are General Motors (Opel and Vauxhall) and Renault.

While being an auto dealer in France last year was a comfortable existence, it was doom and gloom across the Rhine in West Germany. The two countries, the largest national markets in Europe, recorded completely opposite sales trends.

The French market climbed 145,700 units in the first 10 months of 1982 to over 1.65 million, with a possibility of topping 2 million annually for the first time.

In Germany at one stage it looked as if full-year sales could fall to as low as 2 million for the first time in years. At the end of October they totaled 1.81 million, down 151,800 from a year earlier.

The second half of 1982 brought a change in the other two major markets, Italy and the UK. After some surprisingly good years, Italy's sales began to taper off. At the end of October they were 59,300 below the previous year at 1.44 million.

In the UK a change in credit regulations resulted in a 10-month total of 1.37 million, up 50,400 from the year-earlier period.

New-car sales in Europe

	10 Mos., 1982 (units)	Change From '81 (%)
Austria	171,100	− 0.4
Belgium/Lux.	327,300	− 1.1
Denmark	76,200	+19.4
Finland	109,700	+18.1
France	1,651,500	+ 9.7
Holland	364,600	+ 2.6
Ireland	68,400	−32.3
Italy	1,436,700	− 4.0
Norway	99,700	+12.0
Portugal	61,100	+ 8.3
Spain	415,000	+ 4.9

Total	8,392,700	+ 0.5

New car sales winners and losers (market shares)

	10 mos., 1982	10 mos., 1981
BL	3.7	3.8
Daimler-Benz	3.2	3.3
Fiat Auto	12.6	12.8
Ford	12.4	12.4
General Motors	9.7	8.3
Japanese (all)	9.1	9.6
Peugeot SA	12.1	13.0
Renault	14.3	13.8
VAG	12.0	12.5
Total sales (units)	8,393,000	8,349,000

There were gains in all four Nordic countries—Sweden, Finland, Norway and Denmark. Combined sales rose by more than 15 percent to 459,500. There also was a long overdue increase in Spain to 415,000.

The two main Alpine countries, Austria and Switzerland, showed sales stability. A major sales fall in the Republic of Ireland resulted from a sales tax increase.

Renault remained Europe's leading auto retailer in 1982. Bolstered by a bouyant domestic market, it increased its European share a half percent to 14.3 percent. But this was small compared to GM's substantial improvement from 8.3 percent in the first 10 months of 1981 to 9.7 percent in the same period last year; it was achieved on the strength of the new J-car (Ascona/Cavalier) and introduction of modern high-speed diesel engines.

Introduction of Opel Corsa (S-car) late in 1982 is expected to lift GM fortunes further this year.

Ford maintained its 12.4 percent market share, but the recent introduction of the Sierra is expected to increase its sales in a market where it was weak in mainland Europe. Few expect Sierra to improve Ford's standing in the segment in the UK where Cortina, its predecessor, was a best seller.

All other volume makers lost share, most notably France's Peugeot group and Volkswagen-Audi of West Germany.

World auto industry set for recovery

DRI spells out reasons for confidence

The world automobile industry stumbled in 1982 but will pick itself up this year and next year, according to the latest report from DRI Europe.

The main reasons behind the confidence in a market recovery are:

• Deferred demand. Car populations of the world have aged significantly since 1979 and their replacement will produce a boost in new car demand, particularly in North America.

• Increased prosperity. The continued rise in real incomes of those working will grow, since inflation rates are forecast to remain low in 1983-84.

• Stable energy prices. Although energy prices may gradually rise as world economic activity recovers, DRI does not foresee a sudden spiral in prices of any supply shortage.

The DRI report, titled *World Automobile Industry to 1986*, says last year was another poor one for the industry, with the anticipated recovery pushed back to the first half of this year.

It identifies exceptions in Europe where auto industries of West Germany, Spain and Sweden showed gains over 1981. The situation in North America is described as "desperately bad." In Japan, rising domestic sales failed to compensate for a severe drop in exports.

DRI attributes the scattered signs of optimism in Europe to gains in market share achieved by a few producers rather than to any firm recovery in the markets as a whole.

The revival in West German car production was entirely due to exports, as companies took advantage of the better car markets in France and elsewhere. Swedish producers gained share, notably in the U. S.

DRI warns that while car markets in Europe, Japan and North America are forecast to increase in 1983-84, car production will grow at a lower rate.

While expecting growth over the medium term, DRI does not anticipate improvement in the industry's poor financial situation. It cites five main causes:

• The scale of the financial problem. This is vast and still growing. In Europe alone, DRI believes, the difference in industry's ability to generate cash and its cash requirement will approximate $4.8 billion annually.

• Fundamental marketing changes. The sector of the market which normally generates most profit will be the focus of very severe competition over the next five years. Volume producers are moving into specialist territory. In response, the specialists, notably Daimler-Benz, have developed cars to compete directly against volume products.

• Increased investments. As the industry becomes more competitive, additional and expensive product changes will be required. The search for greater fuel efficiency will lead companies into substantial expenditures on engine and aerodynamic developments, new construction and assembly techniques.

• European overcapacity. This will be aggravated by the increase in capital intensity. Variable costs will be lower, creating incentives to boost production to levels which cannot be justified in terms of overall industry profitability.

• External financing. The industry's cash shortfall will force it into greater reliance on external financing. So far those providing financing have not attempted to influence the structure and organization of the borrowing companies because a market recovery was expected to solve the fundamental financial problems of the industry.

"This optimism will prove to be misplaced," says DRI.

Source: Swedish Motor Vehicle Inspection Authority.

Sweden's annual analysis of automobile life expectancy indicates cars are lasting much longer than they did in the mid-1960s. Back then the average life of a car was 9.4 years. The latest survey indicates an average of 15.4 years.

The survey is conducted by the Swedish Motor Vehicle Inspection Authority which is responsible for 12-month checks on all vehicles registered for use in the country. It is based on the average age at which 50 percent of a given car make are scrapped.

Firm enters $20,000 luxury class in U. S.

Volvo 760 brings new market slant

By John A. Russell
News Staff Writer

ROCKLEIGH, N. J.—With the introduction of the 760-GLE, Volvo of America is embarking on a new marketing strategy with what the company considers a second family of cars.

The 760 is Volvo's breakthrough into the $20,000 luxury-car market. According to William J. Hoover, vice president of marketing, the planning for the 760-GLE introduction started in 1979 when Volvo began to make subtle changes in its approach to the market.

While the 760 was still on the drawing boards, the company here began to move slowly from its traditional "family sedan" approach to the U. S. market into two other distinct areas: Personal luxury and performance sedan.

Those first efforts were the 262 Bertone Coupe, since discontinued, and the 242 GT, also discontinued. Those two models were the spearhead of the evolution into the new market areas which now include turbocharged performance sedans and the 760.

At the same time, the model mix began to change into more upscale product offerings.

As Hoover noted, in 1978, 80 percent of the company's car sales were the DL series, the base version. Today, fewer than 50 percent of the sales are in this category. He added that this positioning was done with moderate price increases and without fanfare while retaining the ownership body.

• Hoover said the first-year goal for the 760 is to establish Volvo as a credible contender in the $20,000 price category for the longterm which, he said, "points the direction where Volvo is going."

A separate advertising campaign has been developed for the upscale buyer, while maintaining the family identification.

Present owners, he said, have to be reassured that the features for which they bought Volvos in the past have not changed, and the company has to assure potential new owners that the quality is there. As Hoover said, "people have been burned before" and in 10 years 38 nameplates have come and gone from the auto scene.

Consequently, stressing that the car took "10 years to develop" and that "mistakes end up in the waste basket not in someone's garage" has been a thrust of the advertising.

• Pricing also became a critical part of the long-term development approach for the 760. The V-6 with a four-speed automatic transmission has been priced at $18,785 while the turbo diesel with a four-speed manual transmission with overdrive is priced at $19,595.

Hoover said this is a credible price. He added that there is always a temptation in pricing to "take the price to whatever the market would bear."

He said that would work for the first year, but for the long term that philosophy would put the company in a poor position when other versions are introduced.

The company hopes to sell about 10,000 units of the 760 in 1983, and the 760 has become a symbol for other areas of the Volvo operation.

The 760 is the first new car the company has introduced in 16 years and it replaces the 264 GLE as the flagship.

Joseph L. Nicolato, senior vice president of the Volvo Car Division, said the thrust of his meetings with dealers at the 760 introduction was customer satisfaction and encouraging dealers to become active in all aspects of their businesses — from parts and service to daily rentals.

Materials given to dealers in conjunction with the 760 provided information on dealer advertising, leasing, parts and service and sales.

Nicolato stressed that it was the total business in all profit centers that the company was encouraging dealers to become more active in.

Truck market continues to rise

Continued from Page 16

total, up 1.62 points from the previous year's 7.51 percent.

GMC's 11-month share was 8.78 percent of the total, an increase of 1.48 points over the year-earlier 7.30 percent.

Ford suffered the biggest decline in penetration with a drop of 2.20 points. Through November, it accounted for 30.05 percent of the industry total, compared with 32.25 percent in the like period in 1981.

Phoenix eyes car-pool plan as cost cutter

PHOENIX.—The Phoenix City Council is expected to prevent the purchase of 12 new Jeeps for water meter readers in an attempt to save the city at least $84,000.

Instead of purchasing the vehicles to replace old Jeeps, the city plans a six-month experiment with car pooling to get meter readers into neighborhoods.

The plan calls for a city van or two compact cars to transport eight meter readers into a neighborhood for them to walk their routes, instead of driving individually in Jeeps.

Not only would the plan save $84,000, but the costs of operating and maintaining the smaller fleet would slash up to $20,000 in expenses a year.

The Arizona Public Service Co. is using a similar car-pooling project which it said is saving money and boosting its meter readers' productivity.

Site preparation begins for Subaru headquarters

CHERRY HILL, N. J.—Wrecking crews are tearing down the former Latin Casino nightclub here to make way for the new national headquarters for Subaru of America, currently based in neighboring Pennsauken, N. J.

The 10-acre site was purchased by Subaru for a reported $13 million.

Toyota Data Centre is hub of communications in U. S.

TORRANCE, Calif. — Toyota Motor Sales, U.S.A., has opened a Data Centre that utilizes computer equipment to link Toyota's headquarters complex with its regional offices, parts centers, ports and dealerships throughout the U. S.

The Data Centre is the hub of a communications network that includes satellite and microwave transmissions, mini - computers and regional computer centers. The equipment can process all of Toyota's computerized information 24 hours a day.

"Although the new Data Centre has been open for only a few months, our investment in the facility is already paying off through improved service to our dealers and of course, to our customers," says Robert A. Best, Toyota senior vice president, data systems.

The Data Centre is the brain center for the company's new national headquarters complex. It handles communications, including vehicle allocations, parts distribution and corporate financing.

Two IBM 3033-U12 computers serve as primary information stations. Computer operations are monitored by operators in the control center, an octagonal glass - enclosed area situated in the middle of the 12,-500-square-foot computer room.

Data storage function is provided by 72 rotating storage devices that provide on-line storage of up to 20 billion characters.

The Toyota Dealer Network, a computerized communications system utilized by Toyota dealers, shortens the communications cycle between the dealer and Toyota to a matter of seconds.

Using this system, a dealer can order a part through a computer hookup at his dealership. The part can be located quickly at a parts depot by the system, processed overnight and shipped out.

The Data Centre has 50 computer room employes and another 140 working in systems design and programming. The Centre's computer equipment is valued at more than $25 million.

Penetration rises despite restraints

MVMA wants Japan to cut exports

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — The domestic auto industry wants the Reagan Administration to ask Japan not only to continue its "voluntary" restraint on car exports to the U. S. but to adjust for a weakened market so the Japanese share does not balloon — despite lower sales — as it has in the past.

MVMA President V. J. Adduci, in a letter to Trade Representative William E. Brock, noted that when Japan started its export restraints, U. S. unemployment was at 7.3 percent, laid-off auto workers numbered 185,000 and a "sharp recovery in car demand" was anticipated in 1981.

But in spite of the U. S. government's expectations — 9.5 million car sales in 1981, 11 million in 1982 and 12 million in 1983 — car demand slumped to 8.5 million in 1981 and fewer than 8 million in 1982.

"By adhering to the unit export commitment, Japanese auto producers have been able to raise their car share to 21 percent or more in the intervening two years," Adduci said. "In the months of January-November, 1982, Japanese penetration has averaged 22.5 percent and in August reached 27 percent."

The agreement was for 1.68 million units and the intent was a 16.5 percent share. Japan's Minister of International Trade and Industry divided this up among the Japanese auto makers, who bitterly resented this forced harnessing of competition.

But as Aducci said, the "voluntary" action to some extent did defuse protectionist pressure in early 1981 and might do so again when the pressure is even greater.

• Meanwhile, Adduci pointed out, the domestic industry has kept its promises: In 1981 and 1982 investing more than $18 billion in new products and facilities; introducing 29 new models and making great strides in fuel economy.

"The average EPA test results of domestic cars in the 1982 model year equal or exceed the average mileage of imports in 12 out of 16 weight classes where both compete — exactly the reverse of the 1980 model position," Adduci said.

Additionally, the domestic industry improved productivity, renegotiated labor contracts and saved several billions of dollars in operating costs and inventory, he said.

Nonetheless, MVMA told Brock, the industry still has not recovered its financial strength and is "considerably more depressed" than in early 1981 when the original Japanese restraints were imposed.

Contributing factors include high interest rates, general malaise in the U. S. economy and a "disparate yen-dollar exchange rate" that has given an "enormous windfall advantage for the Japanese producers, generating massive funds for new products, improved productivity and extensive marketing programs to strengthen their positions in the U. S. market," Adduci said.

Once again, said Adduci, the industry expects an upturn in car demand but most anaylsts feel it will be "a lower and much more gradual strengthening of the market than was forecast in early 1981."

In the interim, while domestic sales have suffered, Japanese companies have prospered and MVMA finds it "not surprising" that protectionist pressure has grown "dramatically." It is even suggested it may be reaction to the current "ineffectual" Japanese restraint.

• MVMA suggested setting up a restraint that will take into account weakened sales of domestic vehicles and correcting "the disequilibrium between the value of the yen and the dollar." Both would "assist greatly in reducing demands for restrictive legislation," MVMA said.

In the closing days of the 97th Congress, Adduci, speaking for all MVMA members except Chrysyer Corp., told the Senate Commerce Committee of a consensus that convincing more Japanese auto makers to manufacture in the U. S. was a good idea, but he said the industry raised "serious questions" about the concept of domestic content legislation.

These included the "feasibility of implementing" content requirements, the "possible adverse impacts" on domestic manufacturers and consumers and the "broader ramifications for U. S. international competitiveness and the structure of the world trading system."

Not mentioned specifically was the effect that limits on outsourcing of the domestic multinationals might have on production costs and pricing of domestic models.

Clowning around at dealership kick-off

Jim Limbaugh, hoping to see sales at his Birmingham (Ala.) Chrysler-Plymouth dealership balloon, hosted a community party at its opening. With Limbaugh, left, are: Bill Klingler, Chrysler zone manager, Memphis; John Redman, district manager, and Bo Bo.

Volkswagen offers rebates and aid on floorplanning

Continued from Page 3

VW's sales planning calls for 226,000 vehicles—120,000-125,000 domestics (up from 103,936 in 1982) and 101,000-106,000 imports (up from 67,349). Much of the increase is expected to be in Quantum sedans, which arrived late in 1982.

The Rabbit GTI is selling well. Dealers have about a 30-day turnover in GTIs, but GTI "by itself, won't carry the mail for us," Fuller added.

• VW, which is spending a "lot more" on promotion this year, will begin pushing the upper series Quantum GL, which has a standard five-cylinder engine, and the turbo diesel Quantum, heavily, beginning in late February/early March.

The turbo diesel Quantum, along with turbo diesel Rabbit and Jetta, in fact, will be featured in multi-line ads—one showing the three racing toward the edge of an aircraft carrier, to make the analogy between jet engines and turbo diesels.

In April, VW is also planning to introduce some specially equipped spring models — versions of Scirocco, Jetta, and Rabbit, with special trim and upgraded performance, officials confirmed.

Scirocco is expected to get the higher-performance 1.8-liter engine and special suspension, currently offered in the GTI.

Meanwhile, VW's ad agency move is on target. Doyle Dane Bernbach will come to Detroit "a little or before" VW's own sales/marketing organization on March 15.

It will not be a puppet agency for New York.

"The agency and ourselves agreed to have a full-service office. They will have the complete account group here as well as some creative staff and media support," Fuller said.

"There will also be another group in New York who will face off against the people here, but the main thrust of the account group, particularly, will be here."

Diesel-car sales plunge 37 pct.; share is pared

Continued from Page 1

The company increased both its volume and diesel penetration last year behind sales of its new 4000 diesel and 5000 turbodiesel models.

Mercedes-Benz reported another strong sales year. The German maker sold 52,051 diesel cars during '82, up 5.46 percent from 49,354 sold during '81. Mercedes' market penetration jumped 6.66 percentage points to 16.33 percent.

Sales of diesel-powered Peugeots dropped 33.87 percent during 1982—to 9,483 last year from 14,341 during 1981. Despite that increase, the company's market share edged upward.

Volvo, Datsun and Isuzu all recorded volume and market-share gains during 1982; however, an accurate year-to-year comparison cannot be made because those companies did not sell diesel models during all 12 months of 1981.

Sales of diesel-powered new cars in the U. S.

	1982 Sales	Percent Share of Market	1981 Sales	Percent Share of Market

Reuss' Buick strategy tied to fewer models, electronics

Continued from Page 3

percent of all technical questions from dealerships on the first telephone call. Eventually, Buick hopes its major suppliers will contribute data.

A vehicle inspection system, implemented this model year at all dealerships, requires sales and service personnel to check all vehicles with customers before delivery.

Another attempt to improve product quality and customer satisfaction comes by tracking warranty and non-warranty repairs made by 80 key dealerships in differing climates and altitudes.

The newest computer marvel at Buick is a videotex marketing system which uses a dealership computer to give product and sales information.

Called Electronic Product Information Center (EPIC), the system is being tested in six dealerships. Terminals give potential buyers up-to-date information on Buick and its competition, especially imports.

Options, promotional and incentive information, warranty and maintenance data and product information are updated regularly from Flint.

Reuss also outlined plans for Buick to generate data for its dealers on potential buyers by zip code. Their product purchases, reading material and demographic information are to be listed.

• Buick showed off its EPIC computer system and an electronics-laden concept car called Questor at the recent Detroit Auto Show.

The Questor is equipped with 14 microcomputers that control the car's attitude and spoilers for fuel efficiency, as well as a navigation system and theft-deterrent system. Computers also aim the headlamps and monitor road surface traction.

The Questor is operated by a "laser key," similar in shape and function to an automatic garage-door opener.

The laser key raises the car six inches for easy entry, unlocks and opens the door, turns on the car's system and adjusts seat, floor pedals, steering column and entertainment and interior systems to the personal settings of each driver.

If the Questor were a running model, the laser key also would start the car. The car was developed by Buick, GM's Delco Electronics Division and the GM Design Staff.

Company offers $200 to employes buying new cars

SHEBOYGAN, Wis. — K. W. Muth Co., which makes parts for the auto industry, is trying to increase car sales by giving its employes a rebate for purchasing a new 1983 car.

Employes buying a car for which Muth Co. makes parts will receive a $200 rebate.

The firm makes a variety of parts, mainly insulation, padding and firewall protection, for cars and light trucks made by American Motors / Renault, Chrysler, Ford and General Motors.

"The program indicates our support for the American automobile industry — our customers," said Mike Muth, company chairman.

Joe Van Horn, of Joe Van Horn Chevrolet, Plymouth, Wis., said he will match Muth's $200 rebate on any qualified vehicle that Muth employes purchase from him.

Van Horn's offer to match the rebate will bring the combined savings on Muth employes' purchases at Joe Van Horn Chevrolet to $400.

NADA breakfast is scheduled for women executives

WASHINGTON. — Women executives will learn fine points of "networking" at a Feb. 13 breakfast at the NADA convention.

The breakfast, which begins at 8 a.m. in Conference Room 7-8-9 in the Las Vegas Hilton, will explore success techniques for female executives, explains hostess Sue Seidman, executive vice president of Honda Cars of Cleveland, Bedford Toyota Volvo and Bedford Porsche Audi.

While the NADA staff has made a special effort to locate and invite women dealers and managers to the breakfast, women who did not receive an invitation are encouraged to call (703) 821-7227 for reservations.

3 plants return, 2 others work overtime

Auto production rises to 117,318

By Patricia Hoffman
Staff Writer

The return of three plants and overtime schedules at two assembly points helped boost last week's domestic auto production from the previous week's total. Output also was substantially better than in the comparable 1982 period.

The makers targeted output last week at 117,318 cars, a 15.77 percent gain from the prior week's 101,336, and up 29.03 percent from 90,925 in the year-ago week.

Year-to-date, the manufacturers have assembled 293,982 autos, a 44.67 percent gain from 203,208 finished in the same 1982 period.

Breakdown for the year to date by company was: General Motors, 65.58 percent; Ford Motor, 19.25 percent; Chrysler Corp., 8.52 percent; American Motors, 3.35 percent; Volkswagen of America, 3.20 percent, and Honda, 0.10 percent.

Only the Alliance was produced last week (Jan. 17) at AMC's Kenosha facility. Eagle output was halted due to overstocked inventory.

Still down for inventory control was Ford's San Jose point. Operations, idled Dec. 23, are slated to resume today (Jan. 24).

Also at Ford, the Atlanta facility remains closed for model changeover. The plant, which currently assembles LTD and Marquis models, is scheduled to begin production of 1983 Thunderbirds later this month.

GM's Detroit point operated daily and Saturday overtime last week. Also working Saturday was Ford's St. Louis plant.

Operations resumed last week at GM's Willow Run point, Ford's Wayne facility and Chrysler's Belvidere plant. All three were idled Dec. 23 for holiday downtime/inventory control.

Truck production climbs, but week's total trails 1982

The domestic truck makers scheduled a 17.24 percent gain last week from the previous week's output as production resumed at four Ford Motor facilities and at Chrysler Corp.'s Belvidere and Warren plants. Also helping boost last week's total was daily overtime at General Motors' Moraine point.

The manufacturers estimated output last week at 34,199 units, up from 29,171 built the previous week, but down 9.19 percent from 37,658 units assembled in the comparable 1982 period.

Year-to-date there have been 83,194 trucks produced, down 3.41 percent from 86,127 completed in the same period last year.

Ford's Louisville facility and American Motors' Toledo truck point were idle last week (Jan. 17) for inventory control.

Still down last week for inventory adjustment was Ford's San Jose plant. Operations there halted Dec. 23.

Volkswagen of America's Westmoreland facility, idle since June 28, remains closed. Assembly of 1983 pickups is scheduled to begin at the plant Feb. 7.

GM's Moraine point operated four hours of overtime each day last week.

The Ford Kansas City, Kentucky, Norfolk and Twin Cities plants, plus Chrysler's Belvidere and Warren facilities resumed operations last week. All six plants were idle last Dec. 23 for holiday downtime/inventory control.

25-year plaque

Pontiac dealer George L. Meaux, right, of Crowley, La., receives a 25-year anniversary plaque from Memphis zone manager John J. Jahoda.

Dealer adds limo service

SHELTON, Conn. — Mario D'Addario Buick has opened Mario D'Addario Limo Service, Inc., to provide chauffeur-driven limousine service for weddings, airport commutes and other needs.

Canadian output holds steady for cars; trucks up

While Canadian auto production last week fell 1.91 percent short of the previous week's total, truck output jumped a substantial 44.05 percent with the return of Ford Motor's Oakville and International Harvester's Chatham truck facilities.

Last week, the auto makers estimated 17,167 units, down from 17,502 built the previous week and the total dropped 7.87 percent from 18,633 units in the comparable 1982 period.

So far this year, the car manufacturers have assembled 49,065 units, up 53.36 percent from last year's 31,993.

Truck output last week was targeted at 9,872 units, up from the previous week's 6,853, but down 7.38 percent from 10,659 units built in the same 1982 week.

Year-to-date, there have been 23,412 trucks completed, a 10.31 percent gain from 21,223 finished in the comparable period last year.

Ford's St. Thomas car facility remained closed last week (Jan. 17) due to overstocked inventory. Operations at the plant, idled Dec. 20, are scheduled to resume today (Jan. 24).

The Ford Oakville truck point returned last week following downtime for inventory control. Also back from inventory-adjustment idleness was International Harvester's Chatham plant. Both facilities were idled before the Christmas/New Year's holidays.

Second-shift operations will resume today at General Motors' St. Therese car point, calling back about 1,500 workers from indefinite layoffs. St. Therese assembles the Oldsmobile, Cutlass Supreme and Grand Prix models.

U.S. rules out blade fuses from Taiwan

WASHINGTON. — The International Trade Commission has voted unanimously to exclude the importation of miniature automotive plug-in blade fuses from Taiwan.

The ITC began its investigation in January, 1982, after Littlefuse, Inc., of Des Plaines, Ill., a subsidiary of Tractor Inc. of Austin, Tex., made a formal complaint about Taiwanese blade fuse imports.

Those imports, the commision has now determined, are a substantial cause of injury to the U. S. blade fuse industry and must be banned.

The President now has 60 days to review the exclusion order and either approve or veto it. During this time, the Taiwanese importers may still bring blade fuses into this country, but only after paying a bond equal to 90 percent of the entered value of the fuses.

'Interest war' draws crowds, pumps up sales in Detroit area

By Jim Plegue
Staff Writer

Detroit-area auto dealers, spurred by fierce competition for rare January sales, waged a cut-rate financing battle this month with rates as low as 6.9 percent on new-car purchases.

At least three Detroit-area dealers were offering to sell cars on 6.9-percent APR contracts. Several others offered 9.9 percent contracts, and one import dealer offered 7.5 percent on truck purchases.

The current rate being offered through factory incentive programs is 11.9 percent.

For some dealers, the results were phenomenal.

"I had 200 people in the dealership. I couldn't move," said Jim Seavitt, owner of Village Ford, a large dealership (1,740 new vehicles in 1982) in suburban Dearborn and the first dealership to offer the 6.9-percent financing.

• Impetus for Village Ford's cut-rate financing was a 350-vehicle inventory, a floorplanning burden. The program started Jan. 19 and was preceded by a day of advertising in local newspapers and on local radio.

The following day, Seavitt found himself elbow-deep in potential customers. He sold 80 vehicles in two days. At one point, he said, customers faced a three-hour wait to see a salesman. Customers were given numbers to ensure their spot in line.

Seavitt's 12 new-car and three used-car salespersons were overwhelmed. He recruited his parts and service and his clerical workers to help. Eventually, he got family and friends involved.

"I brought in my wife, my sister, my brother and 12 of my friends," Seavitt said. "My

Peugeot's progress

New French minicar ready for debut

Peugeot plans to introduce its new Peugeot 205 in France at the end of February. This is the car insiders say will replace the Omni/Horizon in Chrysler Corp.'s U. S. lineup in 1985. The 205, caught here unofficially, offers front-wheel drive with 1.1 and 1.3-liter engines. A diesel is planned for summer introduction.

breaking news

Chrysler to sell South African holding

DETROIT.—Chrysler Corp. will sell one of its few remaining foreign holdings, its 24.9 percent equity in Sigma Motor Corp., Ltd., of South Africa. Sigma, which assembles Mitsubishi, Peugeot-Citroen and Toyo Kogyo cars in South Africa, will be purchased by Anglo American Corp. of South Africa. Chrysler's foreign holdings will then be limited to its wholly owned Chrysler Canada, 99.4 percent ownership of Chrysler Mexico and 15 percent holdings in Peugeot-Citroen and Mitsubishi.

IH extends deadline on debt swap

CHICAGO.—International Harvester has extended until Feb. 8 its offering of new 18-percent debentures plus stock warrants for $140 million worth of old debt. This is the third time IH has extended the deadline. About $71 million of the old debt has been tendered.

GM to recall 21,400 workers at seven plants

DETROIT.—General Motors will recall more than 21,400 indefinitely laid-off workers during the next three months when it reopens one plant, increases hourly production at four plants, and adds a second shift at two facilities. Framingham, the plant to reopen, has been closed since October.

OPEC's stalemate seen as break for GM's larger autos

By Kathleen Hamilton
Financial Editor

The failure of OPEC to reach an accord on oil pricing last week could prove a boon to General Motors and yet another blow to small-car specialists American Motors/Renault and Volkswagen of America.

The Japanese car makers, already exporting more mid-size and performance models to the U. S. because of quotas, are expected to be unfazed by any declines in oil prices.

"GM stands to gain the most, with 85 percent of the intermediate and full-size car output," said Mike Luckey, manager of automotive services for Merrill Lynch Economics, New York.

European cars, which cater to higher-income buyers, won't experience much of an impact from any slide in gasoline prices, predicted John Hammond, director of automotive services at Data Resources, Inc.

"The trends we have seen in the last six to 12 months are likely to continue," he said, listing "really sluggish diesel sales, lethargy in the small and some midsize-car sales and improved sales of large cars, especially in the second half of 1983."

• The impact of sudden drops in pump prices should prove volatile in the auto market, but the sharp movements should be confined to 1983, Hammond said.

DRI doesn't expect gasoline prices to fall all that much. The five-cents-a-gallon gasoline tax will be added this year and any sudden plunge in oil prices would likely be offset by additional taxes, he said.

It will be easy for U. S. auto makers to keep the big rear-drive cars around for another year or two, waiting for some certainty in fuel prices, Hammond said. But decisions will have to be made after that time on lineup.

Merrill Lynch's Luckey pointed out that the general auto sales slump should keep big and intermediate-car capacity ahead of demand this year. His forecast calls for OPEC's woes to keep diesel sales dead at least through 1984.

If the current trend toward larger cars indeed intensifies—and there is doubt in some quar-

U.S. won't ask tighter curbs on Japanese

By Jake Kelderman
and Helen Kahn
Washington Bureau Staff

WASHINGTON.—The Reagan Administration, rejecting a plea by its ambassador for trade for a tougher attitude towards the Japanese on auto exports, will ask the Japanese government for no more than one year of voluntary export restrictions when the matter comes up early in February in the trade talks scheduled between the two countries.

According to government and industry sources, the decision to seek no more than a simple extension of the current voluntary trade restrictions came at a January meeting of the subcabinet on trade. Cabinet members rejected a proposal by U. S. Trade Representative William Brock to press the Japanese for a 25-percent reduction in the current 1.68 million auto export limit and an extension

Makers consolidating position after a tough but not terrible 1982

Japan auto industry poised for anticipated year of recovery

By John Hartley
Staff Correspondent

TOKYO. — With the combination of the prolonged recession and intensifying protectionism, Japan's auto industry is now involved in consolidation rather than expansion.

But last year was by no means as bad as it might have been. The domestic market responded well to an influx of new models, while in overseas markets, windfall profits came from the low value of the Japanese yen against the U. S. dollar.

In Europe, though, the Japanese did not fare quite so well, not the least because of the fall of the value of the deutschmark.

In 1983, there is some hope of an upturn in the world economy, and the Japanese are poised to take advantage of any increase in sales volumes. However, as far as the U. S. is concerned, they are worried lest the Japanese government agrees to too low a level of voluntary restraint.

For the last few years, production in Japan has outstripped that of the U. S., and this situation continued in 1982, although total production fell by about 3 percent from 1981 to 10.8 million vehicles. Actual production of passenger cars in Japan is around 7 million a year, of which 3 million are sold domestically.

• But there were a number of shifts in the fortunes of the car companies last year, with Toyota, Honda and Toyo Kogyo on the rise, and Nissan, Mitsubishi, Daihatsu and Fuji (Subaru) finding the going tough.

With its ambitious international plans, Nissan started 1982 in a strong position, but its internal management problems, some unfortunate marketing and the vagaries of the international scene all threw it off balance. True, the new front-wheel Sunny (Sentra) became an instant hit in Japan and elsewhere so that sales began to challenge those of the Toyota Corolla, which was by now getting old.

However, the new Stanza range, which should have been a big seller, turned out to be a failure in Japan, with sales of 1,000 to 2,000 a month, instead of the target of 5,000 a month. One reason for this was that Nissan pitched the price far too close to that of the Bluebird (810), and it was also alleged that the styling was not rectangular enough to appeal to the Japanese.

Fortunately, Nissan was rescued by the Sunny and the successful new Pulsar sold in Japan as three ranges — the Pulsar, the Liberta Villa and Langley. Thus, there are a sporty coupe, three- and five-door hatchbacks and three-box four-door sedan to choose from, with minor variations between different versions.

Although the failure of the Stanza did not have a serious

Ninth consecutive advance

Mid-January sales post 11-pct. increase

By Jenny L. King
Staff Writer

For the ninth consecutive 10-day period, domestic new-car sales were up Jan. 11-20: Up 11.38 percent from the same period a year earlier and up 28.24 percent over the early-January total.

Retail sales in mid-January, 1983, totaled 144,678, yielding a 16,075 daily selling rate. A year earlier, the total was 129,894, with a daily average of 14,433. There were nine selling days in the period both years.

Mid-January sales were up 28.24 percent over the 112,822 units sold the preceding 10-day period. Year-to-date sales numbered 257,500, up 11.43 percent from 231,093 in 1982.

Annualized sales moved at a pace to produce a 6.1 million domestic year-end total.

Everyone, even Volkswagen of America, beat out year-ago sales in mid-January. VWoA, in a continuous slump in 1982, reported an 8.61-percent increase, climbing to 2,068 from 1,904 last year.

General Motors was up 14.21 percent, to 88,222 from 77,247. Ford Motor Co. squeaked by last year's 33,397 by a few hundred units, and was up 1.02 percent to 33,738.

Chrysler Corp. dealers retailed 16,650 new cars, up 12.15 percent from 14,846 last year, and estimated sales of American Motors passenger cars were up 60 percent, to 4,000 from 2,500.

• GM sales accounted for 60.98 percent of the mid-month domestic market, up from 59.47 percent last year. Ford dropped to 23.32 percent from 25.71 percent. Chrysler edged up to 11.51 percent from 11.43 percent. American Motors earned 2.76 percent, advancing from 1.92 percent, and VWoA slipped to 1.43 percent from 1.47 percent.

Four Big Three makes failed to match or surpass their year-ago sales during the period. Imperial was down 49.38 percent; Plymouth was down 20.15 percent; Pontiac was down 11.85 percent, and Ford missed by 3.18 percent.

Chrysler was up 82.46 percent: Dodge was up 10.93 percent; Mercury was up 4.50 percent, and Lincoln was up 37.80 percent.

Buick was up 38.94 percent; Cadillac was up 31.71 percent; Oldsmobile was up 18.10 percent, and Chevrolet was up 6.72 percent.

Whittey family now sole owners of dealership

BISMARCK, N. D. — Charles J. Whittey, 1972 NADA president, and his family have become the sole owners of Corwin-Churchill Motors, Inc., a downtown Chrysler - Plymouth-AM-Jeep dealership.

According to Whittey, Corwin-Churchill Motors is the oldest auto concern in the state and the sale of the Corwin stock to the Whitteys ends 69 years of the Corwin family's involvement in the dealership.

Whittey said the dealership's name and operations will remain the same.

The only changes are in the corporation's officers, he said. He has become board chairman, and his son Bruce, former operations vice-president, has taken over as company president. Audrey M. Whittey, Charles' wife, has become secretary-treasurer.

The transaction has resulted in promotions of two managers at the dealership. Al M. Rott is now vice-president and general manager and John Birkholz is general sales manager.

58th year — No. 4952

AUTOMOTIVE NEWS (ISSN 0005-1551) is published weekly except semiweekly the fourth week in April at 965 E. Jefferson Avenue, Detroit, MI 48207. Second-class postage is paid at Detroit, MI and at additional mailing offices. Postmaster: Send address changes to AUTOMOTIVE NEWS, Circulation Department, 740 Rush Street, Chicago, IL 60611.

Seville roadster turbo

American Custom Coachworks has unveiled this turbo-charged Seville Convertible Roadster for the buyer who wants something a little different. It will feature "ultra-phonic" stereo, special suspension and furry carpets. Only 25 will be built during the '83 model run.

Dealers confident of upturn, Lyles tells Cleveland group

CLEVELAND.—George Lyles, president of NADA, told the Cleveland Automobile Dealers Assn. that this year will see a "slight upturn" and that "lower interest rates and the inflation slowdown have improved consumer confidence."

But he warned that "what happens to the general economy will be the controlling factor in how far sales will climb."

After Lyles' speech, in which he also mentioned Cleveland's upcoming autoshow, the CADA installed new officers.

The leaders for the group's 67th year are: William Ragg (Chevrolet), president; James W. Garrett (Oldsmobile), first vice-president; Robert Fairchild (Chevrolet), second vice-president, and Patrick Kane (Ford), treasurer.

Jim Garfield II was reelected executive vice-president and secretary for a 22nd year and his 32nd year with CADA.

Cleveland's auto show, under the auspices of the Automobile Dealers Educational Assistance Foundation, Inc., will be held in the Convention Center, Feb. 12-20, and is expected to top last year's attendance of 275,000.

The show's chairman is Steve Barry, a Buick dealer, and the co-chairman is G. Vincent DiVincenzo, a Volkswagen dealer who is past president of CADA.

Lyles told CADA that a survey of dealers, taken nationally, showed they are more confident than ever of an upturn, and "nowhere in the country is that more evident than in Cleveland.

"We see signs of improvement," he said, "and if the voluntary restrictions by the Japanese on exports continue, the improvement will be mostly in domestic products."

Noting present conditions, Lyles told the dealers that in order to survive they may have to take on additional lines so that "if a particular make isn't selling well, there's hope that another will."

He also said dealers are putting added emphasis on used cars, service, parts and leasing, noting the trend toward vehicle leasing throughout the nation is increasing.

Lyles said that "sticker shock" has apparently run its course unless another round of hikes takes place.

"Often the customer comes in expecting the price to be higher, and he is shocked when it is under $10,000," he said.

Lyles said the average dealer's service business was up 8 to 10 percent last year, helping the profit picture. The past year's comeback of the full-sized car, he said, was due to declining fuel prices and a hesitancy of traditional big-car owners to move into downsized cars, a trend also noted by Cleveland-area dealers.

Cleveland dealers get new officers

The Cleveland Automobile Dealers Assn.'s new officers, gathered around a Packard Phaeton, are, from left, James W. Garrett, first vice-president; Robert Fairchild, second vice-president; Patrick Kane, treasurer, and William Ragg, president.

Open to talks with AMC in Canada—UAW

TORONTO. — The UAW is willing to sit down and talk with American Motors about work rule changes at its Brampton plant, but the company has never approached the union, according to Basil (Buzz) Hargrove, administrative assistant to the UAW director for Canada.

Hargrove made the statement in a reply to an AUTOMOTIVE NEWS article (Jan. 17) in which AMC President Jose J. Dedeurwaerder said the union had refused to talk about changes.

He said AMC has never asked the union to discuss the changes. "In fact," he said, "AMC has ignored since December union requests for a meeting to discuss the future of the Brampton plant."

AMC has announced that the Brampton plant will be closed indefinitely in April. The company has declined to comment on its reopening or its possible future products.

Brampton was in the running to build the 1984 rear-wheel-drive cars for Chrysler, but that work has been given to Chrysler's mothballed truck plant in St. Louis.

In the AUTOMOTIVE NEWS article, Dedeurwaerder said AMC needs a cooperative attitude from the union to continue building cars in Canada.

Last spring, the union refused to participate in a new AMC-UAW contract which involves an employe investment plan.

"My understanding was that it was a voluntary plan in which workers had an opportunity to invest in the company, if they so desired," Hargrove said. "The workers in Brampton voted almost unanimously to reject the investment proposal. Workers in the U. S. voted in favor of the investment in the corporation."

Bi-lingual challenge

COWANSVILLE, Que.—Corry Motors, a used-car dealership in West Brome, will challenge the legality of Quebec's language law under Canada's new constitution. The dealership has refused to translate two business signs into French.

Workers reject pay cut; 300 at Budd to lose jobs

By Marjorie Sorge
Labor Editor

DETROIT.—Workers at Budd Co.'s Charlevoix-Connor plant here last week rejected a $2.12 an hour wage cut that would have saved 300 jobs.

The UAW-represented workers at the facility rejected the concessions by a vote of 948 to 77 in its three units. That package would have saved 300 of the 1,500 jobs at the plant, according to a Budd spokesman.

Budd announced the closing of the truck-wheel-producing portion of Charlevoix-Connor plant about three weeks ago. Norman Tunesi, president of UAW Local 306, said the union went to the company to try to work out a package that would save the jobs involved.

Tunesi said he was surprised that the company wanted $2.12 in concessions but said "Budd gave us an opportunity to save our jobs and we blew it."

In addition to saving the 300 jobs, Budd also offered to reinstate recall rights for 700 laid-off workers. There are currently 1,400 on layoff from the plant and about 800 have lost their recall right.

That plant employed 3,000 workers in May, 1979.

Three weeks ago, Budd also announced the closing of its wheel products machining plant in Clinton, Mich., affecting 130 employes.

"These closings will align our facilities more closely to current and expected truck wheel products' markets," said James J. McNeal Jr., Budd president.

Both plants will close in 1983. Heavy-truck wheel production will be shifted to Frankfort, O. Production usually done at the Clinton facility will be shifted to other Budd facilities in Johnson City, Tenn., and Ashland, O.

Imports up too, but November market share slips

Domestics pace registration gain

By Jenny L. King
Staff Writer

Registrations of new cars in November were at their highest level since June. They reflected the domestic industry's various sales incentives effective at the end of 1982, which were responsible for a two-month sales surge.

According to figures compiled by R. L. Polk & Co., registrations of new cars in the U. S. totaled 677,639 in November, up 3.49 percent from 654,806 in October, and up 10.41 percent over 613,740 in November, 1981.

Table on Page 30

June registrations numbered 717,358.

Domestic new-car registrations of 497,081 were up 8.13 percent above October's 459,711. They were up 11.83 percent from 444,513 reported for November a year earlier.

Imports climbed 6.70 percent in November compared with a year ago, to 180,558 from 169,227. Because of the strong domestic showing, however, the imports share of the total market dropped to 26.64 percent from 27.57 percent.

For the 11 months, January through November, total new-car registrations were down 10.77 percent, to 6,988,889 from 7,832,399. Domestic registrations dropped 11.98 percent, to 4,915,696 from 5,585,001, while imports were down 7.75 percent, to 2,073,193 from 2,247,398.

Imports' share of market year to date was up 0.96 percentage points, to 29.66 percent from 28.70 percent.

• Among the domestic corporations, Chrysler and General Motors increased their presence on the market in November as the competition faded. Chrysler Corp. was up 0.41 percentage points, to 8.97 percent from 8.56 percent; its registrations climbed to 60,751 from 52,541. GM was up to 47.06 percent from 44.99 percent, with registrations of 318,911 this year compared with 276,141 in 1981.

Ford Motor Co. slipped to 16.39 percent of the market from 17.31 percent; American Motors was down to 0.92 percent from 1.51 percent; imports claimed 26.64 percent, down from 27.57 percent, and miscellaneous domestics had 0.02 percent, down from 0.06 percent in November, 1981.

Of the domestics-only market, GM cars accounted for 64.16 percent in November compared with 62.12 percent 12 months earlier. Ford had 22.34 percent, down from 23.90 percent. Chrysler claimed 12.22 percent, up from 11.82 percent. AMC dropped to 1.25 percent from 2.08 percent and miscellaneous domestics were down to 0.03 percent from 0.08 percent.

The domestic makes, ranked in order of their shares of the market in November, 1982, were headed by Chevrolet. Ford was second, followed by Oldsmobile, Buick, Pontiac, Mercury, Cadillac, Dodge, Plymouth, Chrysler, Lincoln and AMC. In October, Oldsmobile was second and Ford third.

A year earlier, the November ranking was as follows: Chevrolet, Ford, Oldsmobile, Buick, Pontiac, Mercury, Dodge, Plymouth, Cadillac, AMC, Chrysler and Lincoln.

• The market-class spectrum in November featured a shift toward intermediates, standards and luxury cars. Intermediates jumped to 27.13 percent of the market from 20.46 percent a year earlier. Standards claimed 12.43 percent, up from 10.55 percent, and luxuries claimed 6.30 percent, up from 5.79 percent.

Subcompacts dropped to 11.49 percent from 15.69 percent, compacts were down to 16.01 percent from 19.94 percent and imports dipped to 26.64 percent from 27.57 percent.

The domestics-only classification was: Subcompacts down to 15.66 percent from 21.66 percent; compacts down to 21.82 percent from 27.53 percent; intermediates up to 36.99 percent from 28.25 percent; standards up to 16.94 percent from 14.56 percent, and luxury models up to 8.59 percent from 8.00 percent.

Registrations by corporation for the 11 months, 1982, compared with the preceding year showed Ford Motor Co. and the combined imports gaining slightly as their competition moved back. Ford was up 0.25 percentage points, to 16.67 percent from 16.42 percent, and imports were up 0.96 percentage points, to 29.66 percent from 28.70 percent.

GM dipped to 43.96 percent from 44.52 percent; Chrysler was down to 8.57 percent from 8.74 percent; AMC was off 0.47 percentage points, to 1.11 percent from 1.58 percent, and miscellaneous domestics dropped to 0.03 percent from 0.04 percent.

Designer Clenet teams up with Cars and Concepts

DETROIT. — Alain Clenet, founder of the Goleta (Calif.) company that built high-priced 1920s-style cars with Mercury mechanicals, said he is working with Cars and Concepts on an automotive project for an unnamed maker.

Meanwhile, an offer has been received for the shuttered Clenet Coachworks minus the plant. The firm's creditors statement is expected to be filed with U. S. Bankruptcy Court officials in Los Angeles in early February.

25 years for Puckett

Luther D. Puckett Sr., left, Luther Chevrolet, Pendleton, Ind., was presented recently with a 25-year dealer award by G. Neil Perkins, Indianapolis zone manager for Chevrolet. Puckett retired a few weeks before the presentation and the dealership is now Boles Chevrolet, headed by Willie F. Boles.

Automotive News analysis of new-car registrations based on R. L. Polk & Co. statistical report.

Are auto makers playing electronic games with EPA?

By Roger Rowand
Engineering Editor

ANN ARBOR, Mich. — The EPA is getting a little jumpy over games that can be played with engine-control black boxes, namely knock sensors.

Games in the EPA park consist mainly of dodge ball with Uncle Sam throwing rules and regulations—overarm. Car makers bend and twist and put on a sometimes-startling exhibition of ability and footwork.

This is how the next game may be played:

Knock sensors are installed to retard spark when low-octane fuel causes an engine to ping or hammer.

If an engine were designed for regular low-lead fuel and no sensor, it would hammer and knock itself out of the marketplace. The EPA doesn't worry about such engines.

But if an engine is designed to run on premium fuel, unleaded, of course, and customers are not told of that need, Uncle Sam warms up with another rule or regulation.

Also, if an engine is designed to run on regular with a sensor, another rule may be needed.

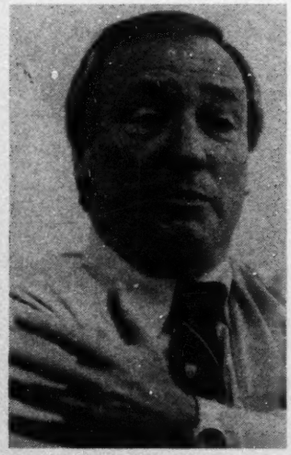
Such an engine would start to knock, the sensor would retard the spark and fuel economy would deteriorate.

The engine would pass EPA tests because of the agency's high-octane fuel. In customer hands, however, the sensor would function over a wide range, with serious degradation of mileage.

A car maker might go through such machinations to avoid telling customers of the need for high-priced premium.

Premium fuel averages around 96 octane and sometimes is hard to find. Regular is about 91 octane. A motorist conditioned to using premium could at times be forced to use low-octane. The black box would work overtime and fuel economy would be hurt.

The EPA told makers it will make sure sensors don't operate on 91-octane fuel by either design analysis or in a driving test.



Anderson on red ink

"We lost a lot of money in 1982; it will be a great deal worse than 1981 . . . ours was a very serious loss."

Sales and profits down; hopes high

Anderson discusses VW transition

By Al Fleming
Industry Editor

TROY, Mich.—He's known in the trade as a tough interview.

First, he doesn't give many of them.

Second, he doesn't like the limelight, much preferring the shadow role of behind-the-scenes operative.

Finally, he's a financial man—a bean counter — and everyone knows they're as tight-lipped as they are tight-fisted.

That makes interviewing Iain M. Anderson all the more intriguing, especially in an exclusive one-on-one session here at Volkswagen of America headquarters, where a whole lot of shaking's going on.

We hadn't gotten together with the VWoA executive vice president-finance and administration, and treasurer, since the heady days of 1979 when the company confidently predicted it would be operating profitably by the end of the 1980 model year — less than three years after its assembly plant in Westmoreland County, Pa., got under way — and selling 600,000 vehicles a year, good for 5 percent of the U. S. market, by 1985.

Now here it was, three years later, at the tail end of 1982, as we exchanged hellos and sat down at a conference table in his office on the penthouse floor of the modern building 20 miles north of downtown Detroit.

Anderson folded his arms, sat back and smiled. "I'm not sure why you want an interview," the 51-year-old executive said. "I'm just a surrogate mother around here."

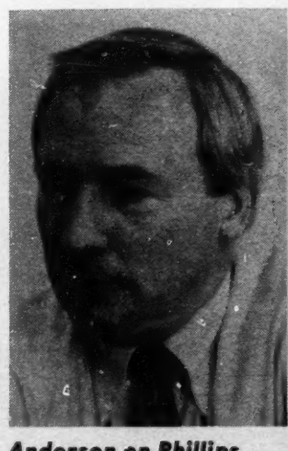
Surrogate? Well, maybe, but a very special one serving at a very special time — a time between shifts of power at VWoA.

James W. McLernon, ex-president and chief executive officer of the U. S. subsidiary of West Germany's giant Volkswagenwerk AG, had resigned under pressure last September.

His successor, Noel Phillips, had not yet arrived from South Africa, where he was winding up the chores of leaving his job as managing director of the McCarthy Group, an automotive distributor, and moving home and family to the Detroit area, where he would try to pick up the pieces of a VWoA battered by sales and profit losses. (Phillips has now taken over his new post.)

VWoA sales in 1982? How about just over 200,000 units and less than 3 percent of the U. S.

Continued on Page 22, Col. 3



Anderson on Phillips

"We all look forward very enthusiastically to his return . . . he cannot be strictly categorized as a marketing executive."

Industry minutiae

Answers to Auto Trivia quiz

1. 1897, Olds Motor Works.
2. All were names of Chevrolet "dream cars" before they were applied to production models.
3. Tuba.
4. Metta U. Woodward.
5. Amelia Earhart.
6. A '57 Plymouth hardtop.
7. It will be awarded to the person who in 1957 made the closest prediction of Tulsa's population in 2007.
8. Aug. 27, 1925, in New York.
9. 1938.
10. Manager of the Detroit bureau.
11. Brooks Stevens (Excalibur).
12. The Tucker 48.
13. DeSoto.
14. Ford Motor Co., 1907.
15. Ernest R. Breech joined Ford Motor Co. as chairman.
16. Less than 5 cents a barrel.
17. Walter P. Chrysler started the Chrysler Institute in 1931 in reaction to graduates of engineering schools who didn't "think cars," in his opinion. The institute featured a two-year program leading to a master's degree.
18. Zhiguli (named for a mountain range near the Togliatti assembly plant).
19. Skoda, Czechoslovakia; Wartburg, East Germany.
20. 1961. The order was made in late 1960, but there was a 1961 DeSoto. In fact, Chrysler paid a $300 rebate on '61 and '60 models in stock when the stop order was given.
21. Nine.
22. Two.
23. Lee Iacocca (Ford and Chrysler), Bunkie Knudsen (Ford and White), Ed Cole (GM and Checker) and Gene Cafiero (Chrysler and DeLorean).
24. David D. Buick.
25. William Steinway, whose plant on Long Island built the Daimler.
26. Oct. 1, 1940.
27. Chrysler Corp. had no chairman from 1940 to 1950, when K. T. Keller became chairman, or from 1956 to 1960, when L. L. (Tex) Colbert became chairman. So the correct answer is no one.
28. Adams, Carter, Cleveland, Ford, Harding, Harrison, Jackson, Lincoln, Monroe, Pierce, Roosevelt, Taft, Washington, Madison, Johnson, Wilson, Kennedy, Hoover.
29. King (William R., 1853), Hamlin-Holmes (Hannibal Hamlin, 1861-65), Fairbanks-Morse (Charles W. Fairbanks, 1905-09), Wilson (Henry Wilson, 1873-75), Curtis (Charles, 1929-33), Marshall (Thomas R., 1913-21), Bush (George, 1981-present).
30. Vice President Richard M. Nixon, who delivered a major foreign policy address, first ever by a vice president.
31. Stout Scarab, 1935.
32. Plymouth, 1937.
33. New York and Ohio Co., Warren, O.
34. 1949; two.
35. A pelican, an ancient symbol of the Christian church and used in coats of arms (including Packard's) where it is called a pious pelican. After objections from some people whose coats of arms bore the pelican, Packard set the record straight in 1949 in a staff memo which stated the correct identification was pelican, not cormorant.
36. 1933, in Dayton, O.
37. Flint, Mich.
38. British sculptor Charles Sykes, a member of the Royal Academy, in 1911.
39. He was the first Englishman to die in an air crash.
40. H. O. Koller, Reading, Pa., who was franchised to sell Winton cars in 1898.
41. Joseph W. Jones; 1901 Oldsmobile.
42. Packard; Albert Kahn; Detroit.
43. 1915; $50.
44. 1923; Dayton, O.; General Motors Research Corp.
45. Wills-St. Clair, 1921.
46. The St. Louis Southwestern (Cotton Belt) Railroad and the Cherokee Indian Nation.
47. W. H. Van Tine.
48. Addison Ford cemetery, a small family plot at Greenfield and Joy Road in Detroit.
49. Enger, 1916.
50. Thomas B. Jeffery, whose company later became Nash Motor Co., and Edward (Ned) Jordan, who entered the auto business with the Jeffery Co. after marrying the owner's daughter, then left to organize his own company to build the Jordan Playboy, of "somewhere west of Laramie" fame.

Photos

A. Hispano-Suiza.

B. 1937 Austin Bantam, built in Butler, Pa. The car was built from 1930 to 1941. After 1937, it was called the American Bantam.

C. 1927 LaSalle, said to be the first car completely designed by a stylist, Harley Earl.

D. 1923 Rolls-Royce American Ghost which belonged to President Woodrow Wilson.

E. It was the first Chrysler New Yorker, a series still in production today.

F. A 1967 Lamborghini P-400 and a 1927 Bugatti Royale with body by Kellner.

G. Pontiac Banshee, which was widely rumored to be the name of Pontiac's 1967 answer to the Ford Mustang. The production car was, however, named the Firebird.

H. Liz Carmichael, a Dale prototype, 20th Century Motor Car Corp.

Captain Trivia wishes to acknowledge the valued assistance of these experts in automotive minutiae: Jim Wren, patents department, MVMA, Detroit; David L. Lewis, professor of business history, University of Michigan, Ann Arbor; B. J. Hartford, corporate affairs manager, and Herman L. Smith, historical consultant, Ford Motor Co. of Canada, Ltd.; David R. Crippen, Ford Archives, Edison Institute, Dearborn, and William T. Simpson, 1982 Automotive News Trivia Quiz winner, Richmond, Va.

Tom Nick signs with Pontiac

Thomas F. Nick, seated, of Tom Nick Motors, Inc., Boonville, Mo., signs his Pontiac sales and service agreement while H. T. Ridsdale, left, manager of Pontiac's St. Louis zone, and Raymond M. Johnson, Pontiac district sales manager, look on.

Pfeiffer donates electric car to Northwood

MIDLAND, Mich.—Dan Pfeiffer, president of Pfeiffer Lincoln-Mercury, Grand Rapids, Mich., and past president of the Michigan Automobile Dealers Assn., donated an electric car to Northwood Institute.

The Lectric Leopard, which was displayed at Northwood's 19th Annual Auto, Truck and Parts Show, will be used in the school's auto marketing courses and as a showpiece, a school spokesman said.

Study looks at job gains and losses

Michigan seen as robotics leader

LANSING. — Michigan has a chance to be a worldwide leader in robotics and may become an important training center for robotics technicians and engineers, according to a State of Michigan study.

Robotics: Human Resource Implications for Michigan is the first study to consider both job creation and job displacement. The study, conducted by the W. E. Upjohn Institute for Employment Research, of Kalamazoo, said that by 1990 about 13,500 to 24,000 jobs in Michigan would be lost to robotics.

However, the study said that depending on sales and the state's market share of the robot industry, another 5,000 to 18,000 new jobs could be created in the state.

The study suggested that current perceptions of both the robot population and robotics employment are vastly exaggerated. Conducted for the Michigan Occupational Information Coordinating Committee (MOICC), the study said there are about 6,800 robots in use in U. S. industry and only 2,000 workers producing new robots.

By 1990, U. S. robot population is expected to be 50,000 to 100,000 units with approximately 7,000 to 12,000 robots in use in Michigan.

Generally, current workers are not expected to be put out of work by robots. Reductions in force will be achieved through attrition.

• The study said the auto industry, the biggest user of robots, will lose 75 percent of all jobs lost to industrial robots in Michigan. However, it is expected that most of the robotics-related jobs in the auto industry would go to those already employed, since recent contracts emphasize job security.

Even though the authors expect a 30 to 40 percent annual growth rate for the robotics industry, they said expansion could be compromised by a shortage of electrical, industrial and mechanical engineers.

The study cautioned that if training of technicians is not monitored carefully, an oversupply may emerge. Excluding the auto industry, only 750 to 2,700 robotics technicians will be needed in Michigan by 1990.

MOICC Chairperson and State Labor Director S. Martin Taylor said the study was conducted to counteract some of the confusing information on how many jobs would be lost or created through the introduction of robotics.

"In spite of all the scientific and media attention robotics has received, there was very little good information available to counsel jobseekers and students, and to advise training program administrators," Taylor said.

The Upjohn Institute is continuing its study of the impact of robots, focusing more on the entire U. S. economy.

MOICC is a federally funded interagency program responsible for improving occupational information.

GM restructures its component works in UK

MILTON KEYNES, England. —General Motors has changed the organizational structure of its UK automotive component operations.

GM said the move is in line with its efforts in recent years to more fully integrate its worldwide component operations.

The operations involved include four GM, Ltd., plants in England: AC Spark Plug Operations in Liverpool and Southampton, Delco Products in Dunstable and Saginaw Steering Gear in Hendon; and two Fisher Body, Ltd., plants in Northern Ireland in Dundonald and Kennedy Way, Belfast.

These units are now divisions of newly formed U. S. corporations that fall under the overall responsibility of GM Overseas Corp. and are directly affiliated with GM's respective component divisions.

This change is expected to improve the long-term viability of the UK component operations by strengthening their capital base and creating new market and product opportunities, GM said.

In line with the restructuring of the manufacturing operations, those central administrative activities provided by GM, Ltd., in England are now supplied by a division of GMOC Administrative Services Corp.

Other marketing activities, including Detroit Diesel Allison, which were not represented by a component division, are part of GMOC Administrative Services Corp.

South Carolina dealers boost dues for 1983

COLUMBIA, S. C.—The South Carolina Automobile and Truck Dealers Assn. has increased its dues for 1983. The new fees are $1.25 per new vehicle sold at retail with an annual minimum of $125 and a maximum of $750. For exclusive heavy-duty truck dealers, the rates are $2 per unit sold with a minimum of $144 and a maximum of $750.

The old structure was $1 per unit with a $96 minimum and a $500 maximum. For heavy-truck exclusives, it was $2 per unit with a maximum of $500.

Japanese launch electric-vehicle project

TOKYO.—A campaign to develop a practical electric car by 1986 has been launched in Japan by two government agencies and 11 private firms.

Prime target, according to the Japan Economic Journal, will be the development of a truck that can carry heavy loads 55 to 65 miles at a top speed of 40 miles per hour.

The newspaper said it is hoped that the research project also will develop a passenger car with a range of 125 miles that could reach a top speed of 60 MPH.

Participating in the program will be the Ministry of International Trade and Industry, the Agency of Industrial Science and Technology; Toyo Kogyo Co.; Daihatsu Motor Co., and nine battery and electric firms.

Adequate development of a storage battery for the proposed vehicles is considered a key to success of the project. The project is expected to work on the development of either nickel-zinc or nickel-ferrochrome.

Industry consolidates after a tough year

Japanese makers poised for upturn

Continued from Page 1

effect on Nissan's sales worldwide, it did affect Nissan's plan to build a factory in Britain.

Nissan's plan to become a multinational was — and is — the dream of president Takashi Ishihara, who does not expect Nissan to reap the rewards until 1990. But opposition to the British project came from chairman Katsuji Kawamata and middle managers who are close to the trade union movement.

Ishihara admitted that there had been opposition to the project from the unions in January when he said, "The unions were against the UK project because they lack information from Nissan management. I intend to have more dialog with the unions, and most of the information from the UK will be passed to them."

It was argued by those opposed to the project that because Nissan was losing market share in Japan it should concentrate on building a better sales network there. Then, it is expected that Nissan will need to put some more money into Fuji Heavy Industries, in which it has some equity, in the future — it is just a question of when.

Fuji is too small a car maker to be able to sell at competitive prices — it already assembles some Nissans — and it has been losing market share with its now-dated 1.6-1.8-liter models in Japan. So, Nissan needs to have capital available to boost its domestic sales network, and to take a bigger stake in Fuji.

On top of that came the failure of the Stanza, the car Nissan had earmarked for UK production. Demand is such that to produce it in Britain would leave virtually none to be produced in Japan.

While Nissan has suffered, Toyota has gone from strength to strength. In July, Toyota Motor Sales and Toyota Motor Co were merged into Toyota Motor Corp. (TMC), which is strengthening the organization. That will lead to a more cohesive model policy.

But more important, Toyota got its marketing right. Instead of switching wholeheartedly to front-wheel drive in the 1.6-2.0 liter class, it introduced new rear-drive Corona and Carina models. These continued to be big sellers, whereas the front-drive Camry/Vista models sell in lower volumes.

With the Cressida, these models dominate the 1.5-2.0 liter class in Japan in a very profitable way. In fact, in 1982, Toyota sold 493,000 cars in this class in Japan, whereas Nissan's models accounted for about 330,000 units.

• In the smaller class, Toyota's new Tercel range, sold as Tercels, Corsas and Corolla IIs in Japan, were also far more successful than the old ones, and helped boost sales in this class in the same way as the new Pulsar range has for Nissan.

Toyo Kogyo continues to sell the Mazda GLC in incredible numbers worldwide, and in a few months it topped the sales charts in Japan, too, although over the year it remained in third place. On the other hand, the big 929, sold as the Luce and Cosmo, was less successful, although it has sold better than the old models.

In the autumn, TK launched the new front-wheel drive 626, an excellent front-wheel range of sedan, coupe and hatchback. In Japan, sales started strongly, and are likely to receive an extra boost from the fact that the 626 was chosen as Japan's Car of the Year (only Japanese cars are eligible).

Honda, which has set itself the target of increasing sales in Japan by 50 percent, seems well set to achieving that target, thanks mainly to the City. Now that it is available in turbocharged form, the City is selling at well over 10,000 units a month, and in December, 1983, shocked Nissan and Toyota with sales of over 16,000.

Soon, Honda wil start to export the City at about 3,000 units a month, with both Europe and the U. S. being eyed as big markets.

• The new Accord — also sold as the Vigor in Japan — started off well, but in the middle of the year, sales fell back. Demand in export markets, though, is still very strong.

Whether the all-new Prelude, an intelligent attempt at producing an interesting coupe with usable performance, will boost sales as Honda plans, is not certain. The sales target of 2,000/month in Japan seems optimistic in view of the fact that the car is being sold by Honda's Verno sales chain, which is very small.

If Honda stayed on course, Mitsubishi did not. In Japan, none of its new models except the Pajero 4WD has been a success. The Starion, Tredia and Cordia all suffered from styling that did not appeal.

Ironically, the Starion's styling is too aggressive — and its interior too cramped — for most Japanese.

The other two models suffered from being grown-up Colt hatchbacks mechanically, and from dullness. Thus, together, these cars, which are also reported to have suffered some quality problems in Europe, have been selling at the rate of about 2,500 a month altogether in Japan — about 25 percent of the planned rate.

But 1983 should be a completely different year. True, sales in Japan are expected to rise by 2-3 percent at most. But there is little doubt that over the past couple of years, the competitiveness of the Japanese industry has increased enormously, with wider model ranges and with more modern factories.

They are continually installing modern automated equipment, with robots being used now for most body welding. They are starting to use robots for paint spraying — but some men are still needed — and for one or two simple assembly jobs, such as fitting front seats into cars, and installing the spare wheel in the trunk.

• Then, there are the new factories. Toyota started operating its new Tahara factory a couple of years ago, TK has just opened its Hofu plant to build the 626 — with a claimed 40 percent reduction in manhours/car.

Nissan built a new factory within the Murayama complex for the March/Micra, and has completely remodeled plants to build the new range of engines. Clearly, it is ready for any turnaround in sales.

With a number of projects due to come on stream this year, Nissan is optimistic. In the U. S., it will start to produce pickup trucks at the Smyrna (Tenn.) plant. The plan is to build 15,000/month, and despite some fall-off in sales recently, as the Big Three's trucks started to take sales, Nissan is optimistic that demand will meet output.

In Europe, ARNA, the joint venture between Nissan and Alfa Romeo will start to build Pulsar bodies for a new small car — called Cherry Europe — to be assembled by Alfa Romeo, and powered by the Alfasud engine. The planned production rate is 60,000 a year. Some of these cars will be sold in Europe by Alfa Romeo as well as Nissan dealers.

In addition, Nissan will start to build the Volkswagen Santana in Japan in the fall. The plan calls for about 4,000 to be sold in Japan monthly, to open up a new market sector.

Also, this year, Nissan is hoping for big things from the March/Micra. Demand from the European dealers is well in excess of the 3,000/month the company plans to export, while in the first month in Japan, sales exceeded the 14,000 mark — against a target of 10,000.

Nissan will mark its 50th anniversary in 1983, so the company is planning a spectacular sales attack. A lot of new models are promised, including a new 280-ZX, with aluminum V-6 3-liter engine, and a new Bluebird.

Against that, Toyota will be introducing a new Corolla, expected to be built on the underbody of the Tercel, so that front-, rear- and four-wheel drive models can be produced. There are rumors of a small mid-engined sports car, while the Starlet is also likely to be rebodied.

Daihatsu, Toyota's affiliate, which has been facing a tough time recently, is just introducing a new Charade. With a much more roomy, square body, and the option of a one-liter diesel engine, this should offer strong competition to the Nissan Micra and Honda City.

Mitsubishi will also introduce a replacement for the Colt 1400 hatchback — larger than the present model — and a dual-purpose vehicle similar to the Nissan Prairie.

Honda is facing a testing year, as production of the Accord at Marysville, O., gets into full swing, but at least this will give it much needed extra production capacity. This year, Honda plans to build 65,000 Accords at Marysville, but is not expecting to increase the number of exports of fully built-up cars to the U. S.

Also, on the international front, Honda's deal with BL to produce the XX car starting in 1985 should make a lot of progress this year.

Meanwhile, TK seems to be

Continued on Page 52, Col. 4

Japan's car of the year

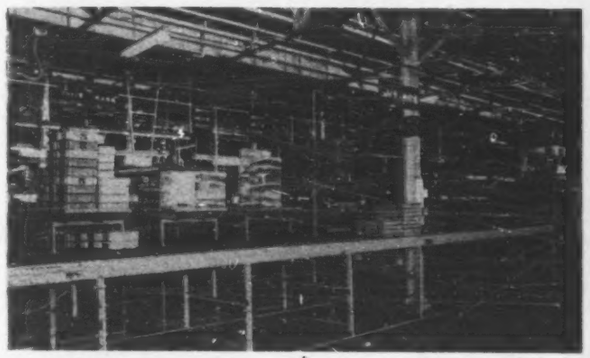
Mazda Capella (626), Japan's Car of the Year, is expected to help increase sales of front-drive cars in Japan.

Nissan's market leader

Nissan Sunny (Sentra) was the second-biggest seller in Japan in 1982. Strong sales of Sunny made up for disappointment in the Stanza range.

On the line in Japan

Kawasaki Unimate robots are used extensively in Japan to weld up bodies. No human workers are visible as these bodies move down the line.



Just in time

Japanese auto factories gain efficiency from low stocks and frequent deliveries of parts. Here, suppliers can drive their trucks into the plant and unload so that parts are stored near the assembly line. Note the scanty supplies on hand.

A leader at home

The Toyota Corona is one of Toyota's biggest sellers in the two-liter class in Japan.

To sustain sales momentum

Buick, Olds revamp ad strategy

By Joseph Bohn
Marketing Editor

Buick and Oldsmobile have reworked second-quarter advertising and media strategy to sustain momentum.

Buick, as previously reported, will be a United States Football League sponsor, with three minutes' time in 10 of 20 regular season games beginning March 6 and 1½ minutes in the playoff.

Buick is also using a "combination of split runs" in some of its news weekly ads. Essentially, it still buys the full national page, but that page might carry LeSabre in one area of the country, Century in another, Skylark in a third.

Different print ads and copy come off the same national page to display products in areas where "they have the greatest sales potential," said Ned Sale, vice president-account supervisor at McCann-Erickson, Buick's agency.

Ford Division did something similar in the second quarter of 1982, according to industry sources. Ford had four or five versions of ads.

Advertisers pay a premium for such a run because of extra production costs, but apparently find it worth the expense because of the more precise audience targeting.

Meanwhile, Buick created four new commercials.

One for Skyhawk teams Buick's hawk symbol with the car. There is a road shot of the Skyhawk maneuvering through mountain roads, with the bird superimposed flying above the car.

"Hawks are known for power and maneuverability, and their form enables them to move through the air with great ease," says the voiceover, pointing up Skyhawk's "certain indefineable spirit of freedom."

• A humorous new high-tech Century commercial features a "high-tech" man, using his wall full of computers to punch out stock market reports, etc.

Periodically, a robot hands him a cup of coffee, straightens his tie, etc., as the analogy between the high-tech individual and the state of the art Century ("advanced electronics, computer-design, front-drive") continues.

A voiceover concludes, "Happily, one human quality today's technology never replaces . . . the sheer pleasure of driving a Buick," as the high-tech man turns down the robot's offer to be of assistance in driving.

LeSabre's popularity, derived from traditional value and full-sized comfort, is touted in a commercial showing different examples of garages all over America.

"A comfortable full-size auto . . . with considerable class is why . . . every morning in garages across America, people start their day by starting their Buicks," says commercial.

"Buick LeSabre. It's earned its way into the hearts and garages of America for good reason."

As part of its marketing effort, Buick is supplying the Indy 500 pace car—a twin turbo Riviera convertible. It will sponsor the Indy 500 on network radio and do print ads on the pace car for various Indy 500 publications, Sale said.

Buick is also working on a new technology ad which is part of its generic campaign on Buick as the "high-technology division" at General Motors, Sale added.

In media, Buick will sponsor the Academy Awards for the fifth year in a row.

Meanwhile, at Oldsmobile, January-May includes a heavy schedule of national network prime-time TV and news spots and a "series of TV programming which concludes with the final M*A*S*H episode," expected to attract 97 million viewers in a two-hour special in February, said Palmer E. (Butch) Bunker, ad manager.

Oldsmobile is also running a heavy schedule in mass circulation and special interest magazines and in the Wall Street Journal and Barron's, Bunker added.

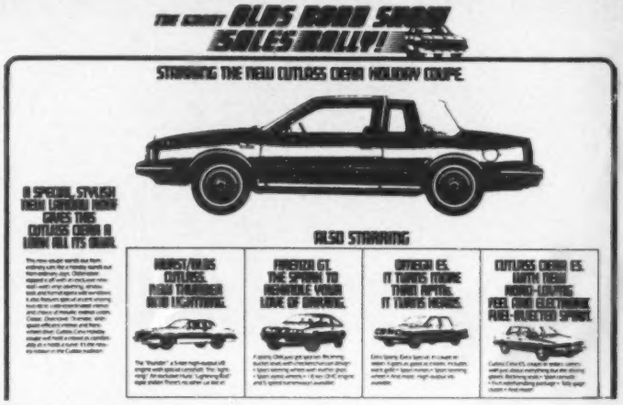
Oldsmobile received rousing 70 percent dealer sign-up for its "Great Olds Road Show Sales Rally" drive which offers cooperative advertising for dealers in newspaper and TV.

Essentially, Olds pays for one 1,200-line newspaper ad for every two bought by the dealer, with a 4,800-line dealer maximum; also, 250 gross rating points of TV for every 500 GRPs bought by the dealer.

Advertising spending for 1983 is expected to increase 12 percent from last year, according to Oldsmobile.

Olds has two new commercials for Cutlass Ciera. Other Cutlass Ciera, Cutlass Supreme and Olds 88 commercials continue unchanged on TV.

Cars such as the Olds 98 and Toronado, described as belonging to Olds' "high group," are "better received in magazine than TV," Bunker added, and will continue to be heavily promoted in print.



Olds Road Show

Oldsmobile had a strong 70 percent dealer sign-up for its "Olds Road Show Sales Rally" which touts specially equipped Olds models. It supplies co-op funds—one TV or newspaper ad for every two run by dealers—as part of the drive.

Seventh class from dealer school

NADA Academy graduates 18

NEW ORLEANS.—The NADA Dealer Candidate Academy graduated 18 people in December from its Class VII, which was held here.

The Academy, which was developed in 1979 to teach people to profitably operate a dealership, has had over 150 participants. In less than four years, 14 dealers have elected to sponsor a second student in the program.

Participation figures show that 37 percent of Academy graduates are now either the dealer, president or general manager of their own dealership. An additional 35 percent are department managers in dealerships for which they will one day assume responsibility.

The one-year program consists of six one-week group seminars at various locations across the country, followed by seven to eleven weeks of dealership work experience.

Each Academy student must be sponsored by a new-vehicle franchised dealer. The program requires a great deal of commitment from both the sponsoring dealer and the student.

The sponsoring dealer agrees to provide the rotating work experience required to complete the program, and the sponsor ensures that the candidate's dealership performance is adequately supervised.

• The dealer must make the monthly financial statement for the dealership available to the candidate and to the Academy for analysis. The dealer must recognize that the student will be away from the dealership for seven weeks of classes during the one-year program.

Finally, the sponsoring dealer guarantees payment of tuition and travel expenses to the classroom sessions. Classes are rotated to equalize travel expenses as much as possible.

Academy personnel are available to visit the dealership to discuss progress and to make recommendations.

Franklin (Bert) Saylor is the newly appointed administrator for the Academy. Working with him are NADA instructors Forrest (Woody) Miller and Allen Joppa.

Three new classes are scheduled to begin in 1983: Class X met for its first seminar Jan. 17. Class XI begins May 23 in Kansas City, Kans., and Class XII is slated for Sept. 12 in Washington. Space is still available in Classes XI and XII.

For more information, contact NADA Dealer Candidate Academy, 8400 Westpark Drive, McLean, Va. 22102, (703) 821-7227.

Mass. revises tax value base on private U.C. sales

BOSTON. — The stated price on the sale of a used car between individuals is to no longer be accepted, for sales tax purposes, by the Massachusetts Registry of Motor Vehicles and Department of Revenue.

Estimating that at least $500,000 a year is lost to Massachusetts in revenue because of individual falsification of true sales price of a car on a bill of sale (this to reduce the sales tax), Revenue Commissioner L. Joyce Hampers said the sales tax is now being calculated on basis of value assigned to the vehicle by the New England edition of the NADA Used-Car Guide.

Use of the guide is not expected to trigger generally higher prices or sales taxes on used-cars, according to a Revenue Department spokesman.

"We realize that there are a lot of clunkers, damaged and high-mileage cars not worth the book value," said the Revenue Department's Myron Auflero, "and so we have an abatement procedure."

Japanese makers poised for anticipated recovery

Continued from Page 50

gaining tremendous strength from its liaison with Ford. The Americans are buying manual and automatic transmissions for the U. S.-built Escorts, and will also buy larger transaxles for the Topaz models, thus giving TK economy of scale.

Then, TK is supplying Ford's operations in Australia and South East Asia with GLCs and 626s to replace Escort and Cortina kits. Finally, in Japan some Mazdas are being sold as Fords. It is also still possible that TK may supply Ford with the one-liter minicar it is currently developing. All this is good news for TK, if not for Ford.

One of the big questions on the international front concerns the triangle of GM, Isuzu and Toyota. Since GM owns a 34 percent stake in Isuzu, and has lent it a lot of money, a strong bond exists. Without its deals with GM, Isuzu would be in big trouble.

This spring, of course, Isuzu will introduce its J-car, which it hopes to sell at around 5,000 a month — optimistic in view of its weak sales network and the severe competition.

GM has already agreed to buy 200,000 of the new Isuzu 1.3-1.5 liter R-car annually starting in late 1984, and has since been negotiating to build this car in the U. S. as well in even larger volumes. For this reason, doubts about the plan for GM and Toyota to build new Corollas jointly in the U. S. are growing stronger.

Talks have dragged on far longer than expected, and now it has been announced that Toyota is to set up a big factory in Taiwan, with 50 percent of the output to be exported. This project is likely to dull Toyota's interest in the U. S. plan.

Indeed, Toyota has yet to show that it is an international company, and the recent negotiations, first with Ford and then with GM, emphasize the point.

But Toyota is very strong and once it makes up its mind to produce cars in the U. S. or Europe it will do so in a wholehearted way.

Meanwhile, Honda, and to a lesser extent, Nissan, are setting the pace in internationalism.

1983 Production and sales plans Japan

(Fully built up)

	Production (in millions)	Domestic sales	Exports
Toyota	3.25 (+3%)	1.6 (+5%)	1.65 (−0.6%)
Nissan	2.55 (+6%)	1.18 (+7%)	1.37 (+1.7%)
Toyo Kogyo	1.05 (+13.6%)	.420 (+6%)	.630 (+0.5%)
Mitsubishi	1.13 (+6%)	.550 (+7%)	.580 (+5.8%)
Honda	1.07 (+6%)	.450 (+15%)	.616 (+0.5%)

SEVILLE "ROADSTER" CONVERTIBLE

"AMERICAN CUSTOM COACHWORKS, LTD."

Very sporty and very elegant. The Seville "Paris" Roadster Convertible is a personalized 2 passenger touring car designed and styled for individuality and excellent roadability. The top mechanism is fully powered for ease of raising and lowering. Base units can be drop shipped to one of several manufacturing plants, or there are open factory (post cars) presently in build that are available.

Year's total is 411,299

Auto output 46 pct. ahead of 1982

By Patricia Hoffman
Staff Writer

Operations at all but two car facilities and overtime at General Motors' Detroit point and Ford Motor's St. Louis plant upped last week's domestic auto production 1.20 percent from the previous week's total.

The makers estimated output last week at 118,020 cars, up from the previous week's 116,615, and up 53.29 percent from last year's 76,993 units.

Year-to-date, there have been 411,299 cars assembled, a 46.13 percent gain from the 281,459 units built in the comparable 1982 period.

Breakdown for the year-to-date by company was: GM, 63.58 percent; Ford, 20.93 percent; Chrysler Corp., 9.77 percent; American Motors, 3.33 percent; Volkswagen of America, 2.29 percent, and Honda, 0.10 percent.

VWoA's Westmoreland facility closed last week (Jan. 24) for two weeks of inventory control. Only one of the two shifts will operate when production resumes Feb. 7, cutting output in half to 470 units a day.

According to a VWoA spokesman, the production cut is due to a weakness in the diesel and small-car markets. About 1,500 workers will be placed on indefinite layoff as a result.

Ford's Atlanta facility remained idle last week for model changeover. Assembly of 1983 Thunderbirds is slated to begin at the plant next month. The LTD and Marquis models are also produced there.

GM's Detroit plant operated 1.6 hours of daily overtime last week, plus two normal eight-hour shifts on Saturday (Jan. 29). Also working Saturday was Ford's St. Louis facility.

Eagle assembly resumed last week at AMC's Kenosha plant, following a one-week shutdown for inventory control.

The Ford San Jose plant, idle since the Christmas/New Year's holiday, returned last week after downtime due to overstocked inventory.

End of line for X-car in sight; Omega, Phoenix to go first

DETROIT. — General Motors is expected to begin phasing out its X-body cars in about 1½ years, with the last of the lines gone after '86.

The Oldsmobile Omega and Pontiac Phoenix will be the first to go. They are expected to be dropped after the '84 model year. Two years later, the Chevrolet Citation and Buick Skylark will be phased out.

The B-O-P divisions will pick up a new line of front-drive "N" series of cars in '85, close to X-car size.

The X-cars, introduced in the spring of 1979 as '80 models, served GM fairly well.

They chalked up 1,429,571 sales during their first two model years and provided GM engineers with front-drive design experience and the company with some componentry, later used in building the updated J and A-body lines.

X-car sales have tapered off of late, partially because of unfavorable publicity associated with recalls and safety defects and partially because of their market positioning.

Wedged between the slightly smaller J-cars and slightly larger A-bodies, the X-cars have been cannibalized by both.

Dealers have complained there is too much overlapping between the X cars and their sister J and A-car lines to make a strong sales case with prospective buyers.

As a body style, though, the X-cars will have had a fairly long run by the time they're gone. They'll have been on the market over five model years at two divisions and seven years at two more by the time they're phased out—hardly an untimely death, in Detroit's normal product life cycles.

Mazda East promotes Harcum, Reich, McCabe

JACKSONVILLE, Fla.—James T. Harcum and Charles Reich have been appointed vice presidents, and George McCabe has been named general sales manager of Mazda Motors of America (East), Inc. The firm is the Mazda importer for 18 states.

Harcum now is vice president service, and Reich is vice president parts. They formerly were service and parts managers, respectively. McCabe had been sales manager.

Year's car output in Canada shows gain of 35 pct.

The return of Ford Motor's St. Thomas car plant and the resumption of second-shift operations at General Motors' St. Therese facility helped boost last week's Canadian auto production 17.46 percent from the previous week's total.

The car manufacturer estimated 20,471 units last week, up from 17,428 the previous week, but output fell 1.71 percent from 20,827 units built in the comparable 1982 period.

Year-to-date, 69,797 cars have been assembled, a 35.51 percent gain over last year's 51,508.

Truck production last week was targeted at 9,500 units, down 5.39 percent from the previous week's 10,041, but up 4.83 percent from 9,062 units assembled the same week last year.

So far this year, 33,081 trucks have been completed, a 10.06 percent gain from 30,056 built in the comparable 1982 period.

American Motors' Brampton facility was idle last week (Jan. 24) due to overstocked inventory.

Back last week from inventory control was Ford's St. Thomas point. Operations were idled there last Dec. 20 for holiday downtime/inventory adjustment.

The second shift at GM's St. Therese car point returned last week, calling back about 1,500 workers from indefinite layoff. Full-sized Oldsmobile, Cutlass Supreme and Grand Prix models are assembled there.

Truck production climbs to 46,785; '83 now tops '82

Domestic truck production last week jumped 40.58 percent from the previous week's total as Ford Motor's Louisville and San Jose points and American Motors' Toledo (Jeep) facility returned following downtime due to overstocked inventory.

The manufacturers estimated 46,785 units last week, up from 33,279 the previous week, and up 16.71 percent from 40,088 units built in the comparable 1982 period.

For the year-to-date, the makers have assembled 129,059 trucks, a 3.62 percent gain over last year's 124,548.

Only one assembly point was idle last week (Jan. 24). Volkswagen of America's Westmoreland facility, remained closed. The plant has been down since June 28. Operations were slated to resume Feb. 7, but the start-up has been delayed until Feb. 21.

AMC's Toledo (Jeep) point and Ford's Louisville facility, both idle the week of Jan. 17, plus the Ford San Jose plant, idle since the Christmas/New Year's holiday break, resumed production last week following downtime for inventory control.

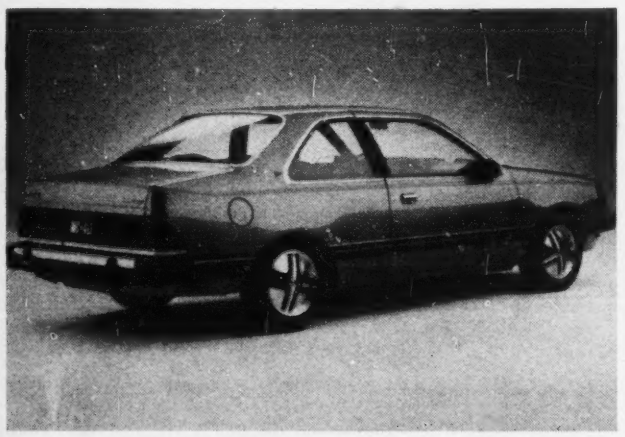
Compacts from Ford

Tempo is upbeat

Ford Division's new compact Tempo, heir to the Fairmont bread-and-butter sales role, sports Ford's new aerodynamic styling. It is powered by a new High Swirl Combustion 2.3-liter engine, which is similar to the current Ford 2.3 only in its displacement. The new engine uses PROCO technology and is Ford's first "fast-burn" powerplant. Story on Page 65.



Mercury's jewel—the Topaz

Mercury's version of the new-generation compact is the Topaz, which features somewhat different styling than the Tempo, but shares the "fast-burn" 2.3-liter engine. Ford figures the car's EPA mileage rating will be 28 city and 43 highway. The good numbers are largely a function of the shape, which is as functionally aerodynamic as it looks.

GM's car divisions to lose their home-plant identity

By Marjorie Sorge
Labor Editor

The home plants of General Motors car divisions will no longer have exclusive assembly rights by the mid-1980s, according to F. James McDonald, GM president.

"Eventually home plants will be building more than their own cars," he said. "They will be home plants in that they will probably be managed by the (divisional) people there."

He emphasized that the divisions will still have their own engineering, sales, personnel and financial capabilities and in many cases component operations.

During this change, GM is also aiming at a greater specialization of its car divisions—giving each group a special look for its products.

For example, Chevrolet has long been known as the entry level division for buyers. It also represents GM's high-volume competition against imports, McDonald said. Those two characteristics will be even further emphasized in the future, he said.

GM will tend to pull Chevrolet even further away from the other divisions, he said.

While it will basically return to the entry-level arena, he said Chevrolet will have some higher-priced vehicles. But it will not be in the luxury business. However, Chevrolet will "always have the Corvette," McDonald said.

"The market has gotten so that there is more opportunity for specialized things and I think you are going to see more ideas coming from the divisions in the specialty markets, the convertibles, those types of things."

• One of the big questions is which divisions will sell the new GM/Toyota car if that deal is consummated. According to McDonald, the decision will be based on which divisions want it, the size of the car, which division has worked the hardest, where the car fits in the marketplace and which division is covering that end of the market.

As the new GM strategy of specialization goes into effect, the divisions will be serving different market segments, McDonald indicated. In design, the cars could be vastly different, depending on the specific components involved, he said. The criterion will be that the buyers can recognize the difference between each division's products. Many observers feel that that is not the case today.

"From a marketing standpoint, the more specifics we can give a division, the more competitive we will be in the marketplace," McDonald said.

It has been rumored that GM will phase out the Pontiac division or perhaps merge it with a sister unit. According to McDonald, that is not in GM's future plans.

"We have been asked 'Can you afford to have all of those divisions? Wouldn't you be better off to drop a division?'" he said. "Perhaps if we were starting with a clean sheet of paper on everything, we might look at things differently. But if you take Pontiac right now . . . you can't take that Pontiac franchise away and make it an Olds or Chevrolet. You can't assume that you are going to get that business back (at the Chevrolet or Olds dealership) and that is a heck of a gamble we sure wouldn't want to take."

At Oldsmobile, changes are also taking place. The home plant in Lansing will build the new front-wheel-drive N-car at both assembly facilities but the car will belong to more than one division.

Oldsmobile has two assembly plants at its complex in Lansing both capable of producing 60

Cut-rate car financing draws federal probe

By Jim Plegue
Staff Writer

The recent wave of cut-rate financing plans—some with advertised interest rates as low as 4.9 percent — has prompted a federal probe to determine if some programs are in violation of Truth in Lending laws.

The Federal Trade Commission, which enforces Truth in Lending, and the Federal Reserve Board, which interprets the laws, began the investigation after receiving inquiries through regional offices in many parts of the U. S.

Most of the dealer promotions appeared last month — and ran for short periods of one to eight days—with interest rates ranging from 4.9 to 9.9 percent, compared with current factory-subsidized financing programs of 11.9 percent.

The promotions appeared in the South, Midwest and North Central parts of the U. S. in several major cities such as Chicago, Detroit, Minneapolis/St. Paul, Toledo and Omaha.

The majority of the dealer plans required a large down-payment—in either cash or trade equity—of 20 to 25 percent, and contracts were limited to 36 months. Many programs required conditional purchases of extended service contracts, rust-proofing and other options.

Some dealers offered the financing on trucks only.

In most cases, financing was arranged through a local bank by buying down from the bank's current rate. Some Ford dealers convinced banks to accept factory subvention money to lower the rate to 11.9 per-

FTC keeping close eye on any GM-Toyota deal

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Antitrust experts knowledgeable about the auto industry have been on standby alert for some months now awaiting an announcement that General Motors and Toyota have reached agreement on a joint venture to produce a front-wheel-drive car similar to the Corolla in GM's idle Fremont assembly plant in California.

Although not a merger or acquisition, this kind of getting together by two such huge companies would be examined almost routinely either by the Justice Department or the Federal Trade Commission, both of which have jurisdiction over matters automotive.

In this case, however, the FTC gets the job. After staff has made recommendations, the commissioners themselves — ex-

breaking news

Central Foundry to control all GM foundries

DETROIT.—General Motors has announced that effective immediately its Central Foundry Division based in Saginaw will have operational responsibility for all major GM foundry operations in the U. S. This includes the transfer of Chevrolet Grey Iron and Nodular Casting plant in Saginaw, and the Chevrolet Metal Casting plant in Tonawanda, N. Y., to the Central Foundry.

Tempo/Topaz to debut May 26

DETROIT.—Ford Motor has pushed its Tempo/Topaz introduction date back to May 26 from May 5. The delay is to work all the pre-production bugs out of the system and ensure higher quality on early models, a spokesman said.

Mitsubishi Montero to be unveiled Feb. 26

CHICAGO.—The '83½ Mitsubishi Montero, a four-wheel-drive sports utility vehicle, will make its U. S. debut Feb. 26 at the Chicago Auto Show.

4WD Eagle to be Alliance-based in 1985

DETROIT. — American Motors will replace its current Eagle four-wheel-drive series with an Alliance-based 4WD Eagle in 1985. The Alliance-Eagle will be in the vein of a Subaru-type vehicle. AMC will drop its Spirit/Concord lines this fall.

Coming: Cadillac Cimarron D'Oro

Cadillac will begin production in late February of a special-edition Cimarron, called the D'Oro. It will feature black paint and trim with gold-tone grille, accent stripes and ornaments. Aluminum alloy wheels also have gold-tone accents and steering wheel spokes are gold tinted. Option package is $350.

A gleam of hope for industry: 27,000 workers called back

By Marjorie Sorge
Labor Editor

There is a glimmer of optimism in the auto business as the Big Three have announced the recall of more than 27,000 hourly workers since the first of the year. However, at the end of January, there were still 265,400 hourly workers on indefinite layoff.

The two smallest auto makers, American Motors and Volkswagen of America, have not announced any callbacks. VWoA, caught in the middle of a severe sales famine, has indefinitely laid off 1,150 workers since the beginning of the year, bringing its indefinite total to 2,750 last week.

Of those laid off 2,420 have been cut at the Westmoreland (Pa.) assembly plant, 170 at the South Charleston (W. Virginia) stamping plant and 160 at the Fort Worth component plant.

AMC, boosted by good Alliance sales, has kept its layoff total around 2,700 at the Toledo and Kenosha operations.

The largest recall by far is at General Motors which will call back more than 21,400 workers during the next three months. Besides component plants, most will be recalled at facilities building mid-size and compact cars and commercial vehicles.

"The assembly plant schedule increases are being made in response to current dealers' orders, which result from positive customer reaction to the 11.9 percent GMAC finance rate program," said F. James McDonald, GM president.

GM also said the increased employment will have a positive effect on outside supplier employment.

About 9,000 of the workers will be recalled at assembly plants and another 12,000 will be called back at component operations. Seven assembly plants will be effected.

On March 7, GM will increase production at its Arlington, (Tex.) plant, source of Malibu, Monte Carlo and Regal, adding 600 people.

The Oklahoma City plant, building the Century, Celebrity and Citation, will also increase production beginning April 25, recalling 2,800 workers.

The Lordstown (O.) car plant will up output beginning March 7, returning 2,500 workers.

The Framingham (Mass.) plant, closed since last October, will reopen on one shift March 14, calling back 1,800 hourly workers. It will build Celebrity and Cutlass Ciera.

In addition, GM said, adding a second shift at the Van Nuys (Calif.) plant is "under study," but GM Chairman Roger Smith has said the shift will be added, recalling about 1,000 workers, although no timeframe has been decided. GM said a decision will be reached in about 30 days.

GM will also increase production at three truck plants. The van operation in Lordstown will up output on April 11, recalling about 300 workers. The St. Louis plant will resume second-shift operations for commercial vehicles on Feb. 28, returning 900. And the Detroit plant will also increase production on Feb. 7, adding 80 workers.

Other callbacks have occurred at various GM assembly and components plants. GM's indefinite layoff total at the end of 1982 was 172,000 and that had dropped to 168,000 the week of Jan. 24.

Chrysler Corp. has recalled 818 workers at its component plants since the beginning of the year.

Twinsburg (O.) Stamping has recalled 450; Sterling Stamping (Sterling Heights, Mich.), 184; Warren (Mich.) Stamping, 30; Amplex VanWert (Van Wert, O.), 19; Trenton (Mich.) Chemical, 13, and Huntsville (Ala.) Electronics, 122.

All those workers have returned to the job. In addition, 700 hourly workers have been called back to jobs at various component and assembly plants. Chrysler has now lowered its indefinite layoff total from 43,500 at the end of 1982 to 42,000 the week ended Jan. 21.

• Besides the current callbacks, Chrysler has announced it will reopen its St. Louis truck plant, mothballed in 1980, to build its rear-wheel-drive cars for 1984. The rebirth will provide about 1,500 jobs.

Chrysler will also build the new sporty G-24 at the car operation in St. Louis, adding between 1,400 and 1,700 jobs.

Ford Motor Co. has added 2,300 to its rolls. It will add a second shift at the Wixom (Mich.) plant, source of Lincoln, Mark VI, and Continental, on May 2. About 900 workers will be recalled beginning in mid-March.

Ford has also returned 550 at the Lorain (O.) car plant, source of Thunderbird and Cougar; 300 at the two Cleveland engine plants; 190 at Chicago Heights Stamping; 114 at Buffalo Stamping and 240 at Indianapolis Steering Gear.

Most of those recalls begin this week.

Ford has maintained a steady indefinite layoff rate of around 50,000 since the end of 1982.

Data 7 times worse than Camaro

Fuego numbers high in crash at 35

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Crucial crash data on a 1982 Renault Fuego is about seven times worse than the competing 1982 Chevrolet Camaro, more than five times worse than the competing 1982 Toyota Celica and more than three times worse than what is believed to be survivable by even a hardheaded, healthy young person in an actual crash.

The test—run last September by Dynamic Science, Inc., a Phoenix-based contractor to NHTSA—was a high-speed one (almost 35 MPH into barrier or about one-third tougher than the usual compliance speed of 30-MPH barrier).

And while pass/fail may not be an accurate description, it is fair to say that no driver—however sober and buckled-up — could survive a reading of 3768 Head Injury Criteria (HIC) and no passenger could survive a HIC of 2484, when a HIC of 1000 is generally taken to mean survivability.

Although this is a test of only one Fuego and NHTSA is doing research to find out if a single test is reasonably fair, the results are so dramatic and the car is selling so well (9,880 units in 1982) that it is surprising that NHTSA has not retested the vehicle with instrumented dummies.

But NHTSA has done no more testing, although it has reviewed, analyzed and studied the test itself—one that was attended by a Renault official — and has validated the results.

Renault was given the opportunity to question the test results and did not.

An AMC spokesman said, "Fuego complies with all applicable federal safety standards.

"In reference to NHTSA's high-speed crash program," he said, "we agree with NHTSA's own description which says, 'It is important to emphasize that the program is experimental and only one model of each car was crashed in a specific test. Subsequent crash test results for any vehicle may vary due to differences in the way the cars are manufactured and equipped or due to slight variations in test conditions.'"

Even if NHTSA believed the Fuego to be the most dangerous car on the road, it could not take it off the road because the only test under what remains of standard 208—occupant protection — is the part having to do with active belt systems where the only compliance test is a pull-and-stretch one.

Mandatory recall and correction applies only to noncomplying vehicles or to safety-related defects.

Apparently, the Fuego, whose readings exceeded the calibrated instrument's capacity and had to be estimated, has no discernible "defect" although the entire front structure folded up, the steering column was pushed into the driver's head and the passenger's head hit the dashboard so hard it was thrown back with so much force that it pushed the seat into the recline position.

Chest deceleration on the driver dummy was 50.1 Gs (below the acceptable level of 60 Gs) and the passenger dummy chest registered between 72 and 75 Gs.

There was some uncertainty as to whether the Fuego met safety Standard 212—windshield mounting — so another Fuego was tested.

This time — at 30-MPH barrier—the standard was met, but NHTSA did not use instrumented dummies in that test al-

Chrysler eying new hatchback for 1984 intro

DETROIT. — Chrysler Corp. tentatively plans to build a new hatchback sedan at its Jefferson plant here in 1984.

Charles Cook, president of UAW Local 7, said the company has shown the union sketches of the new car, but he emphasized that the introduction of the new H-body is tentative.

He said if it is built, production is about 15 months down the road.

The Jefferson plant currently builds the Reliant. Aries, Dodge 400, LeBaron, Dodge 600, Caravelle and Chrysler E-class cars.

According to a report in the Detroit Free Press last week, the new car is designed to compete head on with the Honda Accord. The paper said it will be sold as a 1985 model under both Dodge and Chrysler nameplates.

Company insiders also say Chrysler is looking at the new Peugeot 205, to be introduced in France at the end of this month, as a replacement for the Omni and Horizon in 1985.

A Chrysler spokesman said the company has no comment on 1985 products.

But, he said, the Jefferson Ave. plant is a key facility in Chrysler's long-term plans. It is the biggest single plant the company has, employing 4,200 hourly workers.

Iacocca speech at NADA parley on phone lines

DETROIT. — Chrysler Corp. has arranged with AT&T to make Chairman Lee Iacocca's keynote address to the NADA convention available for live listening by dialing 1-900-410-NADA.

AT&T has set lines so that as many as 8,000 callers simultaneously can hear Iacocca giving his talk on Feb. 12. He will speak at 1 p.m. Eastern Standard Time (4 p.m. Pacific Standard Time) at the NADA convention in Las Vegas.

The rate for a 45-minute call is about $15.90 from anywhere in the country. AT&T said this was a first for the auto industry. It will enable Chrysler dealers, employes and others to hear the speech live.

Built by American Pullman

American Pullman Coachbuilders, Inc., Brooklyn, N. Y., builds 36-inch and 46-inch stretch Cadillac-based limousines. This 46-inch model features color television and illuminated bar on the inside, air-shock suspension and exterior transmission - oil cooler on the outside. Options include trunk-mounted refrigerator, video-tape player and handset intercom system.

Shhhhh!

HARTFORD. — The Connecticut Legislature is considering a proposal that would ban lawnmowers, snow-blowers and other equipment from producing more noise than is now allowed for automobiles.

New president of NADA sees sales upturn

Continued from Page 24

board, and four regional vice presidents, and I believe in letting them all participate.

"If there's a function I should attend, I'll be there. If it's a function someone else might serve as well as better, then they should be there. The people standing behind you will never develop if you don't let them do things."

Like auto manufacturers, who view their operations as global, Turnbull sees the retail auto trade as a world marketplace. Noting that 38 percent of NADA members sell imported vehicles, either exclusively or as duals, Turnbull said, "Imports have been a great asset to many dealers, and in some instances have been the difference between profit and loss.

"They're (imports) here to stay whether we like it or not," he said, "and we have an international product market, whether we like it or not. We'll see more of it."

He said also that it's been "very good for dealers that they've been able to dual (domestic and import makes)." In his own case, Turnbull said, when Buick decided to stop merchandising the Japanese-made Opel in the U. S., he wrote Buick management and told them he was going to take on the Subaru line.

"We took on Subaru to gain a market segment not covered by Buick, which didn't have a product that hit the low-price buyer," he said.

• When he's not overseeing dealerships or attending NADA functions, Turnbull said he likes to "try to play golf," and he and his wife, Sydney, enjoy playing bridge very much. "It's relaxing."

As for vacations, he said, "I haven't taken a week off, in I don't know when. In our business there are always a number of meetings somewhere, someplace, and you get into the practice of taking an extra day on one side or the other. But a real vacation? I can't even remember."

Besides son Bill Jr., the Turnbulls have two daughters (Mrs. Charlotte Deligne and Mrs. Sally Atkins), five granddaughters and a grandson. Would the veteran retail vehicle seller, who started out as a gas pump jockey in the small West Virginia town in the late '40s, ever want his grandson, Lane, to work at a grease rack?

"Sure, no qualms about that at all. It's a good way to learn the business," said Gramps. "Sure, it's a business that changed a lot in my time, it's changing now and there'll be a lot more changes down the road.

"But if you like the automobile business, if you work at it and get personal satisfaction from it, then it's worthwhile. It has been for me," said the man who takes over the NADA president's gavel next week.

Wells to run SAMA

WALLINGFORD, Conn.—The Specialty Automotive Manufacturers Assn. is now under the management direction of Dick Wells & Associates, Newport Beach, Calif.

Note: Figures are generally based on U. S. production. However, some Canadian-only sourced cars, or those where U. S. production does not give an accurate reading of the figures, are included.

Specific models include Chrysler's Gran Fury, Cordoba, New Yorker, Diplomat and Mirada; Ford's standard-sized Ford, EXP, and LN7.

Figures are based on production of 5,712,297 U. S. models during 1982 model year, including 70,898 American Motors car; 724,548 Chrysler Corp. cars; 1,308,516 Ford Motor cars; 3,505,671 General Motors cars and 102,664 Volkswagen cars.

* Eagle includes Eagle SX-4.

Dealers sell cars with 6.9 pct. rate and 25 pct. down

FORT WAYNE, Ind. — Two auto dealers here have slashed their financing rates to 6.9 percent, claiming they would rather sell cars at little or no profit than not sell them.

Most area auto dealers offer an 11.9 financing rate. Dealers said the 6.9 financing rates is the lowest in a decade.

Fort Wayne Datsun cut its rate from 13 percent to 6.9 percent and sales have increased 30 percent, according to Dean Ball, vice president and general manager.

The 6.9 rate is also being offered at Paul Ealing Ford, Chrysler, Dodge and Plymouth in Ossian, Ind. Both dealerships require a 25 percent downpayment and a 36-month contract to receive the interest discount.

Ball and Ealing said their dealerships will make up the difference between the interest rates they charge their customers and the higher interest rates they must pay their finance sources.

Company shifting costs to dealers, he charges

Mullane rips Ford on service plan

By John A. Russell
New York Staff Writer

HACKENSACK, N. J. — A "Lifetime Service Guarantee" planned by Ford Motor Co. was attacked by Ed Mullane, president of the Ford Dealers Alliance.

Charging that the company is shifting its costs to the dealer, Mullane said that while he realizes there are problems in parts and service, this program has the potential to open dealers to liabilities and that dealers should not warrant any part since they don't have control of parts manufacturing.

According to a Ford spokesman, this program has been test-marketed at 74 dealerships in six cities. He stressed that the company was now "exposing dealers to the program" and that Ford was not at the point of announcing any introduction dates for it.

He added that company officials have not decided whether to make this a national effort, though he did admit that dealers were being signed up for it at meetings throughout the country.

Ford conducted its test-marketing in Washington; Cleveland; Kansas City; Chattanooga, Tenn.; Bakersfield, Calif., and Macon, Ga.

According to Ford literature, the customer pays for the initial repair, but if that initial repair should fail, the customer returns to the original repairing dealer and receives "free parts and labor."

The dealer's responsibilities under the program would be to extend the lifetime guarantee on eligible repairs, absorb labor costs should this type of repair fail beyond 90 days or 4,000 miles, contribute to the national advertising and "recognize the need for local advertising support and point-of-purchase merchandising."

Ford's responsibilities under the program are to reimburse dealers for parts at the published dealer prices for eligible claims, match the dealer advertising contribution, provide an ad planner and provide initial point-of-purchase material.

Specifically excluded from the program are maintenance repairs such as points, spark plugs, condensers, filters, lubricants, fluids, chemicals and windshield wiper blades, brake linings and clutch facings as well as paint, sheet metal, bright metal or trim.

In a letter to FDA members, Mullane said there are many complicated repairs of associated parts involving major assemblies that the dealer exposure escalates. He also noted that the program applies only to Ford and Motorcraft parts on all repairs and that most dealers often use comparable parts at greatly reduced prices.

He told dealers to calculate the advertising costs, pegged by Ford at 0.5 percent of all repair shop parts and service sales.

In an interview with AUTOMOTIVE NEWS, Mullane termed the program as "hocking one's future."

He added that the dealer is expected to contribute the "lion's share" since labor averages 60 percent of a repair bill.

Saab names Kaplanian

ORANGE, Conn.—Edward N. Kaplanian has been appointed marketing manager for parts and accessories for Saab-Scania of America. He formerly was with Peugeot in Torrance, Calif.

WHY RENT WHEN YOU CAN OWN?

Meet Jane, Miss Build-All, at Booth #1204, NADA, Las Vegas, for a Free Autographed Poster.

If we thought your renting a parts washer was more beneficial to you than owning, we would be in the rental business. Build-All Corporation builds and SELLS high quality parts washers along with full strength solvents for almost all of your automotive and industrial cleaning needs—and we will tell you why. Just call Toll Free or write for full details and our full line catalogue. Let us show you the benefits of owning a Build-All parts washer.

BUILD-ALL CORPORATION
N59 W14508 BOBOLINK AVENUE
MENOMONEE FALLS, WI 53051

Battery buyers: PIEs, SAPs or SAEs?

By Nancy I. Phillips
Staff Correspondent

CHICAGO. — If auto dealers are ever going to get battery business, it's from a segment of the market which GNB Batteries terms the Service Above Price buyer.

According to J. Norman Allen, director of new product development for what used to be called the Gould Automotive Battery Division and now is called GNB Batteries, market research the firm has done divides the battery market into three groups.

The first are the buyers to whom Price Is Everything, and they are called the PIEs.

The second group is Service Above Price, the professional who really wants to make a buying decision based on the expert's information and have the work done for him or her. They are called the SAPs.

The third group is the Self-styled Automotive Experts, who have think they know everything and are inclined to be do-it-yourselfers. Allen thinks of them as the SAEs.

The new-car dealer is most likely to meet the needs of the SAP buyer, 35 percent of the total consumer population, and 72 percent of whom are women. They're worried about getting stuck or not starting their cars in the early, cold mornings, according to Allen.

While Allen is aware that dealers don't usually sell batteries, or at least don't aggressively go after the business, he thinks that when they realize that they are serving this important market segment, they might well go after the business, since these buyers depend on them for advice and service. Allen believes GNB's new Cathanode battery is ideal for the SAP market, since it provides extra power — 40 percent more amps — for cold starts.

Because fewer units are needed to fit more cars, dealers don't need as many units in stock as they would in normal battery stocking, Allen said.

Predicts deliveries of 8.8 million cars; 2.9 million trucks

Lataif sees sales increase in 1983

GRAND RAPIDS, Mich.—The long-awaited improvement in car and truck sales appears to have begun and should continue on an upward trend for the remainder of the year, a Ford Motor Co. executive said here.

Louis E. Lataif, Ford Division general manager, told the Grand Rapids Economic Club that he is optimistic about the outlook for the auto industry and the nation's economy in general.

"I foresee a real improvement in automotive sales and 1983 should be the start of the long-term recovery of the industry," he said.

Lataif projected sales of 8.8 million cars and 2.9 million trucks for the industry in 1983, up from 8 million cars and 2.6 million trucks in 1982.

Confidence in the sales outlook is being expressed by the industry's production hikes of 30 percent on cars and 6 percent on trucks in the first quarter of 1983, he said.

Lataif cited several sales facts that indicate the industry "bottomed out" toward the end of 1982 and began gaining momentum.

"There was strong industry growth in the final three quarters of last year, especially the fourth quarter, which had a 17 percent increase in car sales and a 27 percent jump in truck sales," he said. "In the November-December period alone, car and truck sales were up 22 and 38 percent, respectively.

"And Ford sales were ahead of that rate in those two months with sales increases of 35 and 55 percent on cars and trucks. Sales reports show the momentum was carried over into early January—although we still expect a few valleys along with the peaks throughout the year," he said.

Lataif said various economic indicators and the results of consumer research surveys provide more encouragement for the car-buying climate.

"For the first time since August, 1980, surveys show that more people are saying now is a good time to buy a car than are saying it's a bad time for them to buy a car," he said.

"There's a lot of buying power because auto installment debt is the lowest in modern history," Lataif said. "There is the financial capacity to buy automobiles in greater numbers, but until recently, consumer confidence has been lacking.

"When people are asked which items they own would be the toughest to give up if they had to, 94 percent of them say their car would be the hardest possession to part with," he said. "In fact, 90 percent of the general public still drive to work. All of this is strong proof that private cars are not apt to lose their role as America's mass transit system."

Lataif said Ford plans to solidify leadership in product, quality, aerodynamics, electronics and labor-management cooperation.

Using his company as an example of the quality progress being made in the domestic industry, Lataif noted that the quality of Ford's 1983 model cars has increased 59 percent from 1980 and truck quality is up 47 percent — based on independent third-party surveys of consumers.

"The timing of the introduction of our 1983 products is perfect for the recovery," he said. "We're spending nearly $3 billion to bring products to market this year."

R-2000 CHEMOTEX™ CAR CARE

R-2000* ANTI-RUST COMPOUND PROVIDES THE MOST EFFECTIVE AND EASIEST APPLICATION AVAILABLE IN TODAY'S MARKET.

R-2000* ANTI-RUST COMPOUND
A superior anti-rust compound of wax and white spirit base. This unique compound is non-toxic, odorless, and does not require special facilities for proper application.

R-2000* Anti-Rust Compound offers tremendous advantages over common bitumen and tar-based rustproofers, plus insured lifetime rust protection coverage.

NO AFTER-SALES PROBLEMS
The effectiveness of R-2000* Anti-Rust Compound is backed with an insured lifetime rust protection service agreement when applied to new cars, and is transferable. In the event of a claim, service is direct and uncomplicated.

AVAILABLE FOR USED CARS, TOO.
R-2000* Anti-Rust Compound will effectively halt the rusting process on used cars, and carries up to 5 years of insured rust protection coverage.

UNIQUE ADVANTAGES

- **Clean and odor-free, no mess, no clean up time.**
- **Requires no protective clothing.**
- **Cars need no masking.**
- **No separation walls necessary, may be used next to other cars.**
- **High capillary action allows thorough coverage to all recessed seams and corners.**
- **Requires no hole drilling.**
- **May be used on any car lift.**
- **New car transfer able insured lifetime rust protection coverage.**
- **Used car up to 5 years insured coverage.**
- **Direct and uncomplicated claims procedures.**

THIS 360° MULTI-DIRECTIONAL LANCE APPLICATOR DISTRIBUTES AN ATOMIZED FOG OF R-2000* ANTI-RUST COMPOUND EVENLY INTO ALL RECESSED AREAS.

ADDITIONAL R-2000* CAR CARE PRODUCTS
Now R-2000* Car Care Products offers you a line of fine products for the protection of the paint and interiors of new and used cars.

R-2000* PAINT SEALANT WITH BIXOL™
Produces a no maintenance, high gloss finish backed by a 5-year written agreement.

R-2000* FABRIC PROTECTOR
Repels dirt and inhibits staining of car interiors. Backed by a New Vehicle Owners Limited Five-Year Service Agreement.

R-2000* FABRIC CLEANER
A safe, sudsless cleaner for velour and cloth upholstery, vinyl, plastics, and carpets.

After year of record earnings

New Subaru strategy: Finance, investment

PENNSAUKEN, N. J. — For the seventh consecutive year, Subaru of America reported record earnings and net sales in 1982 despite the import restrictions imposed by the Japanese government, which caused lower vehicle sales.

Net income for the company's fiscal year ended Oct. 31, 1982, increased by 50 percent to $39.5 million compared with $26.3 million in 1981.

Net sales for the company in 1982 were $978 million, up from the $916 million reported in the previous fiscal year.

Total vehicle sales in 1982 were 150,335, compared with 152,062 in 1981. The sales decline was directly attributed to the import restrictions.

The growth of SoA, a U. S. company traded over the counter, has been strong, but according to Robert L. Reich, executive vice president for finance and treasurer, it is directly attributable to the "hands-on" approach to business and developing business opportunities.

While other companies do diversify, maintain investment portfolios and other methods, SoA has made finance and investment part of its business to the point where it is part of its financial growth pattern.

A conscious decision was made, he said, that the company must develop those areas where it has expertise. It had expertise in the marketing of automobiles; it also had expertise in finance.

Rather than diversify into entirely different businesses where it had little expertise, and which required high capital investment, SoA moved into "investment as a business."

• Third-quarter figures running through July, 1982, show the company has $94 million in short term investment, up by slightly over $73.2 million from the previous year.

Reich said the tactic SoA is taking has far less risk than establishing a new business venture and again is within the realm of the corporate expertise.

It was not always like that, he explained. When the company began, the major concentration was on increasing unit sales of cars to develop cash to go into investments.

Part of the strategy to build the cash position was the use of letters of credit. SoA issues a letter of credit to Fuji Heavy Industries, the manufacturer of the vehicles, but prior to this, the company's distributors issue letters of credit to SoA for payment at the port.

Reich said the maximum exposure the company has is between five and 15 days, depending on the port of entry.

• This system, which was developed in the early days of the company, was designed to reinforce the company's financial strength. It also meant greater credit availability to the fledgling company with secured bank lines of credit, though today the company has $300 million in bank lines of credit which are unsecured.

This financial strength created the basis for the company to make several developmental moves. It has purchased five wholly-owned subsidiaries, which it operates, and has developed a parts and accessories business.

In addition, it has formed Subaru Financial Services with a partner, Borg-Warner, to offer financing and insurance.

Reich had previously said SFS is looked to as being a strong contributor to corporate profits in future years. During fiscal 1982, the new operation was running in the black. Rceivables outstanding at the end of October reached $30 million and Reich has projected this would reach $60 million, with $40 million coming in retail paper and $20 million in wholesale paper.

Two areas which Reich is examining are safe harbour leases and leverage leases.

The company ventured into safe harbour leases, Reich said, because it was the finance department's responsibility to minimize the company's tax exposure.

Subaru recently announced an increase in its quarterly dividend rate to $.92, a 77 percent increase.

Reich says the common stock of the company has been trading well. When this year began, it was trading in the $60 range. Two years ago that same stock was trading at a high of 21⅝ (bid price).

"Our business isn't stock," Reich said. "The stock takes care of itself if we do our business."

Weyel reaches 25

Rodger Weyel, right, Buick dealer in Sequin, Tex., receives a 25-year silver tray award from Wally Edgar, Buick assistant general sales manager-West.

Bankers say they're hurting from makers' cut-rate loans

BOSTON. — The discount-rate auto loans offered by the finance arms of the American manufacturers and some imports, are having an effect on regional banks.

They're hurting.

The discounted loans began as an instrument to help dealers clear up hangovers from 1982 models. But the auto finance companies and dealers have continued the practice to generate momentum in the sales of 1983 models.

Big banks, such as Boston's Shawmut, where the auto rate has been 16 percent on new cars for qualified customers, have seen auto loan business drop off as much as 50 percent. Smaller banks, like Brookline Savings, in a Boston suburb, has been charging 17 percent and things are dead there, according to a bank official.

But some banks that have been able to keep their interest rates more modest — 14 percent — are still doing business. Quincy Savings is one. Auto loans have been processed in recent months at about the same rate as this time last year.

However, one bank, Braintree Cooperative, with a rate of 13.5 percent, is down about 50 percent in auto loan business. Executives of the bank feel that this news of lower rate has not got through to the public.

Other banks, like Union Warren Savings in Boston, worked up a number of gimmicks to be able to offer 13.5-percent auto loans and a one percent discount, provided the customer coupled this with a super NOW account in the same bank, or have a payroll savings plan.

South Shore Bank, whose parent company is Multibank, did 82 percent more business in the last four months of 1982 than in the previous year — a factor unexplainable by bank officials.

A bank officer said that going to a bank for car financing can be a "demeaning experience," while financing with a dealer may be more comfortable.

Pontiac honors

E. J. Selland, right, Selland Motors Co., Fargo, N.D., is presented with his 25-year dealer award plaque by Max W. Dajnowicz, Minneapolis zone manager for Pontiac.

Note: Figures are generally based on U. S. production. However, some Canadian-only sourced cars, or those where U. S. production does not give an accurate reading of the figures, are included in some instances. Specific models include Chrysler's Gran Fury, Cordoba, New Yorker, Diplomat and Mirada; Standard-size Ford, EXP and LN7.

Figures are based on production of 5,712,297 '82 models, including 3,505,671 GM cars, 1,308,516 Ford cars, 724,548 Chrysler models, 70,896 AMC and 102,664 Volkswagens.

GM's total includes 739,984 Buicks, 235,584 Cadillacs, 1,297,357 Chevrolets, 702,340 Oldsmobiles and 530,406 Pontiacs. Ford's total includes 885,350 Ford Division and 423,166 Lincoln-Mercury models. Chrysler's total includes 448,419 Chrysler-Plymouth and 276,129 Dodge cars.

But 435,455 total trails 1981 count

January's output 55 pct. above '82

By Patricia Hoffman
Staff Writer

Domestic auto makers wrapped up the first month of 1983 with a 55.42 percent production increase over the total for January, 1982.

Last month, the manufacturers produced 435,455 cars, up from 280,179 built in the comparable month last year. The total compared with 459,862 in January, 1981.

January breakdown by company was: General Motors, 63.58 percent; Ford Motor, 20.89 percent; Chrysler Corp., 9.98 percent; American Motors, 3.28 percent; Volkswagen of America, 2.17 percent and Honda, 0.10 percent.

Last week, the makers scheduled 114,717 cars, down 3.93 percent from the previous week's 119,409, but output more than doubled the 52,389 units built in the comparable 1982 period.

To date, there have been 527,405 cars assembled, a 55.07 percent gain over last year's 340,102.

Ford's San Jose facility was idle last week (Jan. 31) due to overstocked inventory.

Also down for inventory control was VWoA's Westmoreland point. Westmoreland, idled Jan. 24, is slated to return today (Feb. 7) minus second-shift operations. Output will be cut in half to 470 units a day on one shift, placing about 1,500 workers on indefinite layoff.

The Eagle line at AMC's Kenosha plant was down last week for inventory adjustment, while output of Alliance increased from 600 units a day on two shifts to 632 units a day.

• Production of 1983 Thunderbirds began its second week last week at Ford's Atlanta point. Output is set at a rate of 37.5 units an hour on one shift. The facility also builds the LTD and Marquis models.

Daily overtime was scheduled last week at Chrysler's Jefferson and Newark plants. Each operated two nine-hour shifts.

GM will call back an estimated 7,700 indefinitely laid-off workers beginning in March as a result of production increases at four assembly points.

Starting March 7, production of Buick Regal and Chevrolet Monte Carlo and Malibu at GM's Arlington point will be upped from 45 to 56 units per hour on each of two shifts. An estimated 600 workers will return.

Also on that date, output of Chevrolet Cavalier and Pontiac 2000 at the Lordstown facility will be increased from 68 units an hour on one shift to 68 units an hour on two shifts. About 2,500 workers will return.

On March 14, the GM Framingham plant, closed since last October, will resume operations on one shift at the rate of 45 cars per hour. The plant will build Chevrolet Celebrity and Oldsmobile Cutlass Ciera models. An estimated 1,800 employes will be called back.

Beginning April 25, production of Buick Century, Chevrolet Celebrity and Chevrolet Citation at the Oklahoma City plant will be upped from 75 units an hour on one shift to 75 units an hour on two shifts. About 2,800 workers will be recalled from indefinite layoff.

January truck production slightly above 1982 total

Domestic truck production in January rose 1.07 percent above the comparable 1982 period.

Last month, the makers produced 128,563 units, up from 127,201 built in January of last year. However, the total was 12.49 percent below the 146,913 trucks completed in January, 1981.

Output last week was targeted at 40,643 units, down slightly from the previous week's 40,654, but up a substantial 72.09 percent from 23,617 trucks built in the comparable 1982 week.

Year-to-date, there have been 163,571 trucks produced, up 6.16 percent from last year's 154,082 units.

The heavy and medium-duty truck lines at General Motors' Pontiac plant were idle last week (Jan. 31) due to overstocked inventory.

Also down last week for inventory control was the Jeep CJ line at American Motors' Toledo plant.

Volkswagen of America's Westmoreland facility remains closed. Operations halted last June 28 and are slated to resume Feb. 21.

Chrysler Corp.'s Warren point operated a daily nine-hour shift last week.

Output of specialty commercial vehicles at GM's Detroit facility will be upped from 17 units per hour on one shift, to 20 per hour, also on one shift starting today (Feb. 7). The increase will result in about 60 workers returning from indefinite layoff.

Also at GM, second-shift operations on commercial vehicles at the company's St. Louis facility are scheduled to resume Feb. 28, with both shifts operating at the rate of 28 units per hour. The second-shift return will result in the recall of about 900 workers.

Van production at GM's Lordstown facility will be increased from 24 units an hour on two shifts, to 29 units an hour effective April 11. This will result in 300 employes being called back.

Bean elected president of Utah auto dealers

SALT LAKE CITY. — Merrill Bean, Merrill Bean Chevrolet-Saab, Inc., Ogden, has been elected president of the Utah Automobile Dealers Assn.

Norm Garrett, Spartan AMC-Jeep-Renault, Murray, is first vice president; Jay McQuivey, Tri-City Ford, Inc., American Fork, second vice president; Clarence Knight, Clarence Knight, Inc., Layton, third vice president, and Jim Wagstaff, Wagstaff's House of Toyota, Salt Lake City, secretary-treasurer.

Car-truck output slows in Canada, but tops 1982

While Canadian auto production last week fell 7.68 percent below the previous week's total, output more than doubled that of the comparable 1982 week.

Marred by downtime at Ford Motor's St. Thomas facility, the auto makers scheduled only 19,199 units last week, down from 20,796 built the previous week, but up substantially from 9,088 units produced in the comparable week last year.

Year-to-date, there have been 89,321 autos assembled, a 38.84 percent gain from last year's 64,333.

Truck output for the week was slated at 7,511 units, a 25.31 percent decline from the previous week's 10,056, but up 85.96 percent from 4,039 units assembled in the same period last year.

So far this year, the truck makers have finished 41,148 units, up 18.18 percent from 34,818 built in the comparable 1982 period.

Two Ford facilities were idled last week (Jan. 31) due to overstocked inventory. The Ford St. Thomas car point is slated to resume Feb. 14, and the Oakville truck plant is scheduled to return today (Feb. 7).

American Motors' Brampton facility resumed production last week following downtime for inventory control.

General Motors' car output continued to climb last week as second-shift operations at the company's St. Therese plant reached full speed after returning Jan. 24.

Also at GM, second-shift operations are slated to resume at the Oshawa car point next week (Feb. 14).

Pontiac pet

Topless Sunbird bows in May

The Pontiac 2000 Sunbird convertible will be available in limited production at Pontiac dealers in May. It is equipped with a standard 1.8-liter overhead cam electronic fuel injected four-cylinder engine with a five-speed manual transmission. Other standard features include dual sport mirrors, custom interior with a luxury steering wheel and full reclining bucket seats, power windows, added body acoustics, power steering, handling package and steel-belted black tires.

Auto uptick raises hopes as convention opens

Optimism swells at NADA

LAS VEGAS. — NADA's 66th convention and exposition opened here with what appeared to be a swelling of optimism and some scattered signs that better times lie ahead.

This is a welcome development, considering that the two most recent annual NADA conventions have been affairs of sombre nature.

Problems that have bedeviled the industry in recent years have not been solved, but there is a growing conviction that relief may be just around the corner.

In 1982 in Atlanta and in 1981 in Los Angeles, the convention watchword was "survival." This year it is "recovery."

The market has shown some signs of reawakening in recent weeks. Interest rates have moderated. The inflation spiral has slowed. There are some exciting new models on tap. Showroom traffic is trickling upward.

Dealers — the eternal optimists — are telling each other that the industry has started its long haul back.

Early registrations indicate that convention attendance will be up 20 percent or more from last year. Some 12,000 persons, including 3,500 dealers, are expected to register before the convention closes. Las Vegas normally is one of NADA's more popular convention cities.

• George W. Lyles, who will be succeeded as NADA president during the convention by William C. Turnbull, is one of those who expects better times ahead.

"Dealer optimism is very obvious," Lyles said on the eve of the convention. "We think there will be a gradual increase (in business) all year long."

Lyles termed factory rehiring an indication that the comeback has started, although he said that, geographically, business improvement has been a bit spotty.

William E. Hancock Jr., a Buick dealer in Columbia, S. C., 1975 NADA president and founder and chairman of DEAC, is one of the industry's optimists here.

"We are not in recession or depression," Hancock said. "We are in a period of transition in selling cars and in the economy.

"This is a time of restructuring."

Dealers are off the golf course and back in the showroom, Hancock said, and there "may be a few more shakeouts to come, but not many."

"We are really in for a turnaround," he said.

• Turnbull, in chatting with Automotive News just prior to the convention opening, said he is concerned about protection of the dealers' profit potential and long-range planning to ensure dealer survival in the '80s and '90s.

As for the immediate outlook, Turnbull said, "I talk to a lot of dealers around the country and some are up, and some are down.

"But I get the feeling we are about to start upward again."

Dealers, he said, must keep a close eye on the factory, which can exert pressure in its efforts to get back into the black. He mentioned pared discounts, copay plans and the possible elimination of holdbacks.

In general, corridor conversations have a brighter tone this year. Perhaps it is because those

Domestic dealer count drops for 27th year; total is 20,799

By John K. Teahen Jr.
Managing Editor

Another year of depressed sales and slim—if any—profits brought another major decline in the number of dealers handling domestic makes of passenger cars.

The annual Automotive News census found 20,799 dealers selling U. S. - built cars on Jan. 1, 1983, compared with 21,680 at the beginning of 1982.

That is a decline of 881 outlets, or 4.06 percent of the year-earlier population.

The drop would have been greater if Renault had not joined the ranks of the domestics. The Alliance, which accounts for the bulk of Renault's sales in this country, arrived at the beginning of the 1983 model year. It is produced by American Motors in Kenosha, Wis.

Although Renault has 1,322 outlets, it added only 107 to the overall domestic total. That is because of the intricate structure of intracorporate and intercorporate dualing. Virtually all of the Renault points are twinned with other domestic makes (principally AMC) and thus were already counted in the dealer census.

Without Renault, the current tally would be 20,692, down 988 from last year's 21,680. That is the decline for the Big Three, AMC and Volkswagen. In 1981, the Big Three and AMC lost 984 outlets. In 1980, the decline was a staggering 1,607.

Last year marked the 27th consecutive decline in the domestic dealer count. During that period, the total has dipped from 41,018 to the current 20,799.

• From a standpoint of dealer totals, Chrysler Corp. is the only domestic maker that will remember 1982 with any degree of fondness. The company was down only 47 for the year,

Time names Cooper Quality Dealer of Year

LAS VEGAS. — Time Magazine has named John Haggin Cooper, manager of Logan, Haggin & Cooper (Ford), Georgetown, Ky., as the 1983 Time Magazine Quality Dealer of the Year.

He will serve as official national spokesman during the year for all 62 recipients of the Time Magazine Quality Dealer Award (TMQDA) and represent them at meetings in Washington with Cabinet members and his congressional delegation.

Cooper's award was announced at the NADA convention here. Cooper and the other recipients were honored at the opening business meeting.

Cooper was one of 20 franchised new-car dealers who were finalists in the 14th annual TMQDA program.

Sponsored by Time in cooperation with NADA, the TMQDA program annually honors outstanding franchised new-car dealers, both domestic and imported, for exceptional performance in their dealerships combined with distinguished community service.

Recognition for all finalists includes publication of their names and pictures in Time Magazine.

Director of the TMQDA program is Michael M. Carey, divi-

Ford changing corporate ad setup

DETROIT.—Young & Rubicam will lose the Ford North American Automotive Operations (NAAO) account this summer because of a management shift at Ford. NAAO will no longer be an advertising administrative entity within Ford. The "Quality is Job 1" campaign, handled by Y&R but initiated by Wells Rich Greene, will be administered out of central staff through WRG. It will be melded with "Ford in Your Future" into one corporate campaign. Jackie Stewart will cease being a corporate spokesman, but will return to become a Ford Division spokesman.

GM recruiting South Gate workers

DETROIT.—General Motors has begun recruiting workers from its closed South Gate (Calif.) assembly plant to work at the company's Oklahoma City facility. According to GM, the Oklahoma City plant cannot find enough workers to fill spots on the second shift. The company said about 400 addi-

Ford chairman is keynoter for Automotive News Week

Caldwell to open World Congress

Philip Caldwell, chairman of Ford Motor Co., will kick off Automotive News Week in Detroit by delivering keynote remarks at the eighth annual Automotive News World Congress.

Automotive News Week will be observed July 10-14, with the Automotive News World Congress in session July 10-13 at the Westin Hotel in the Renaissance Center and the Automotive News World Expo open July 11-14 at nearby Cobo Hall, Detroit's main exhibition center.

Caldwell, as keynoter of the World Congress, is expected to deliver a "state of the industry" report to those attending the opening of the 3½-day affair.

"With the difficulties and challenges now facing the domestic industry, we feel certain this year that Automotive News Week will be more valuable than ever before to participants," said Keith E. Crain, publisher and editorial director of Automotive News.

There will be a strong international flavor to both portions of Automotive News Week, as has been the case in the past.

• Participants in the World Congress will get a close-up look at the industry's promises, needs and problems, with emphasis on future impact. Presentations will be made by 34 industry leaders.

At World Expo, suppliers and would-be suppliers from around the world will exhibit automo-

More competition between divisions, suppliers is sought

GM centralizing, decentralizing

By Marjorie Sorge
Labor Editor

General Motors is traveling in two directions at once.

It is moving back to Alfred P. Sloan's "coordinated decentralization" and at the same time heading toward "coordinated centralization" as it merges its manufacturing operations and individualizes its car divisions.

In an interview with AUTOMOTIVE NEWS, GM President F. James McDonald said the new GM direction will result in:

1. Paying suppliers by the car. They have been paid on a parts-unit basis.
2. More competition among the car divisions.
3. More competition among the internal and external suppliers, with some internal suppliers competing on a plant-to-plant basis.
4. Longer-term contracts for suppliers.
5. Little change in GMAD — it remains a contract assembler.
6. Little further change in Fisher Body Division which will be reduced by four plants by 1985, leaving it with 21 domestic facilities.
7. Excess capacity in press operations and iron foundries.

According to McDonald, one big change could be that suppliers will be paid on a per-car basis. For example, if a supplier's part is on each car and GM builds 800 of those cars a day at a specific plant, the supplier would be paid for 800 parts. Any scrap would be shipped back to the supplier, he said, but if GM creates that scrap, then "it's our baby and we have to pay them (suppliers)."

"We envision working with suppliers that are good, solid suppliers that have proven themselves over a period of time," he said. "You don't have to count (the number of parts shipped in) or check their quality."

As the car divisions become more independent, specialized and competitive with each other, their supplier networks will be affected. According to McDonald, items like steel and tires will still be centralized and the divisions will continue to choose their suppliers for other materials. But the way suppliers are chosen will be different.

GM has indicated that most suppliers must have facilities within a 100-mile radius of the plants they are supplying, but McDonald said that distance could be stretched.

"You can go 150 or 200 miles and provide a ship-back for the carrier, then you cut your costs, too," he said.

Basically, suppliers must be able to deliver parts within one day, but McDonald emphasized that suppliers with heavy investments would not be axed simply because they could not meet the one-day criterion.

However, the number of suppliers will be cut. In the past, GM executives have indicated that the number will be reduced by 50 percent within the next few years. GM has about 20,000 suppliers.

At the same time, GM plans to make long-term agreements with its suppliers based on their delivery ability and quality.

"We look at car lines to pay off over a three, four or five-year period," McDonald said. "A supplier certainly can't make a major capital investment and only know that he is going to have the business a year."

Unlike Ford Motor Co., GM has no plan to base its long-term contracts on a supplier's ability to control labor costs and productivity, McDonald said. The Ford plan was introduced a few months ago and has generated a great deal of criticism from the UAW.

"Suppliers have got to be cost competitive, but I don't think cost or price are the only criteria," McDonald said. "High quality, good products, good service and good performance over a long period of time — that's worth paying for."

While outside suppliers will become more competitive, so will GM's internal suppliers. According to McDonald, plants will be able to make themselves more competitive by agreeing to work-rule changes and other cost-cutting measures. He said workers must be made aware of the reason a plant stands to lose business and be given the opportunity to adjust costs.

"If the workforce can do something about it, then fine; but if they can't, then I guess they have to face the consequences," he said. "But we (management) have got to help. We can't walk away. But we can't continue to run plants that aren't competitive in the marketplace."

• GM has done a great deal of consolidating over the past year and has closed some plants it judged to be non-competitive. But, McDonald said, the company does not plan to close a lot more operations. He indicated there will be excess capacity in press operations and iron foundries because of the smaller cars and engines.

Last week, GM announced it was putting all foundry operations under the Central Foundry Division. Company insiders say consolidating these kinds of operations makes it easier to close plants with excess capacity. In the past when the divisions had control of manufacturing operations, they were reluctant to close the plants, not wanting to lose their parental influence.

According to one GM insider, the company plans to close another foundry this year. Given the excess capacity in iron foundries, the closing would more than likely be one of those operations. There are currently eight iron foundries in five cities: Danville, Ill.; Defiance, O.; Pontiac; Saginaw, and Tonawanda, N. Y.

GM has also consolidated its transmission assembly under the Hydra-matic Division. Automatic transmission engineering has been under that division for quite some time. When the 440 transmission, a four-speed automatic, was developed, GM decided to assign its assembly to Hydra-matic, according to McDonald. That transmission will be used in the A-cars beginning this spring, he said.

The old transmission assem-

GM-Toyota deal on U.S. assembly reported reached

General Motors and Toyota have agreed to joint production of a car in the U. S., according to a report issued last week by a Japanese news agency.

The industry was waiting for confirmation as AUTOMOTIVE NEWS went to press.

Although the report said an agreement had been "reached," officials in the U. S. said it had not yet been "signed."

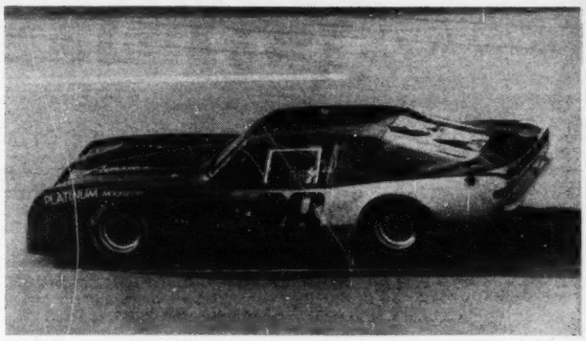
A signing and an official announcement is expected today (Feb. 14) or tomorrow (Feb. 15).

According to the Japanese report, the agreement will establish a jointly owned company to produce 200,000 small cars a year, beginning late next year, in a now-idle GM plant in Fremont, Calif.

The report said the venture would be capitalized at $300 million initially, and that the car would have 50 percent U. S. content.

GM and Toyota have been dickering for nearly a year on a proposal for joint production in the U. S.

GM reportedly will begin annual imports of an additional 300,000 small cars from Isuzu and Suzuki in 1984.



Avanti at speed

An Avanti was entered in this year's Daytona 24-Hour Pepsi Challenge by Steve Blake, new owner of Avanti Motor Corp. The Avanti finished in 27th position. Of the 79 starters, 30 cars finished the 24-hour enduro.

GM profits for 1982 climb to $962.7 million

By Kathleen Hamilton
Financial Editor

General Motors' earnings for both the fourth quarter and all of 1982 increased compared with 1981 but — depending on one's outlook — the auto and truck manufacturing operations either lost money or showed a small profit for the year.

GM's operating income—from its manufacturing operations — was listed in the black. But better than a third of the income was garnered by accounting credits given for currency exchange.

If those credits and GM's long-term interest charges for the year are subtracted, the only money-makers for GM in 1982 were financing and insurance.

Tax credits and cost reductions — including labor reductions — also figured strongly in the 1982 net income of $962.7 million ($3.09 a share).

That compares favorably with the $333.4 million ($1.07 a share) earned in 1981 and the 1980 loss of $762.5 million (-$2.65 a share).

But it falls far short of GM's pre-recession earnings of $2.89

Dealer shop volume gains 8.5 pct. in '82

By Francis J. Gawronski
Service Editor

Cushioned by a good month of shop volume in December, new-car dealers' service and parts business for all of 1982 recorded its sixth best showing in the 22-year history of the Automotive News Service Index.

Service and parts business new-car dealerships across the country for 1982 amounted to 108.5 percent of the volume recorded for all of 1981. The record was posted in 1978, when shop volume rose 12.0 percent above the shop business done in all of 1977.

In 1981, dealer shop business amounted to 105.5 percent of the volume done in the previous 12-month period, and in 1980, it was 98.3 percent of the year-earlier volume.

According to the Service Index, service and parts business in December amounted to 108.7 percent of the volume achieved in the same month of 1981.

December also marked the 22nd consecutive month that the Service Index has shown an increase over the year-earlier month.

All indicators used in the Service Index, except repair orders written, made good gains in the 12-month period of 1982. In December, all five indicators registered good increases.

Gross profit on all labor, parts and accessory sales — the most important indicator to dealers — gained a healthy 10.6 percent over the previous 12-month period. In December, profits were up 13.6 percent.

Repair orders written declined 3.4 percent for the full year, while they showed a gain of 4.8 percent in December over the year-earlier figure.

Total labor sales — customer-paid and warranty — were up 8.6 percent for the year and up 6.9 percent in December.

Shop parts sales (customer-paid and warranty) advanced 11.8 percent in 1982 and 10.1 percent in December.

Sales of all parts and accessories jumped 11.7 percent for the year, while December's business increased 9.1 percent over the volume recorded in the same month of 1981.

Figures used in the Service Index are compiled from monthly reports on service and parts business from a cross-section of the nation's new-car dealers.

SERVICE INDEX
108.7*

	Dec. '82 vs. Dec., '81	12 mos., '82 vs. 12 mos., '81
Gross Profit on All Labor and P&A Sales	+13.6%	+10.6%
Repair Orders Written	+ 4.8%	− 3.4%
Total Labor Sales (Customer & Warranty)	+ 6.9%	+ 8.6%
Shop Parts Sales (Customer & Warranty)	+10.1%	+11.8%
Sales of All Parts and P&A	+ 9.1%	+11.7%

*—Survey by Automotive News shows that dealers' service and parts business in Dec., 1982, was 108.7 percent of business in Dec., 1981. Service business in the 12 months of 1982 was 108.5 percent of business in the corresponding period in 1981.

Bricklin to market Spider 2000; sales goal is 5,000 in '83

Pininfarina to use U.S. distribution

Pininfarina announced last week it would market its Spider 2000 in the U. S. through a distributor, International Automobile Importers, Inc.

Although the Pininfarina statement, issued in Europe, did not mention Malcolm Bricklin, IAII is Bricklin's firm.

On Jan. 17, AUTOMOTIVE NEWS reported that Fiat intended to withdraw from the U. S. car market and that the only two models Fiat sold in this country, the Bertone X1/9 and the Spider 2000, would be marketed by a new company headed by Bricklin.

In last week's statement, Pininfarina said the U. S. sales goal for 1983 is 5,000 cars, but that the company hopes to double that within a few years.

Pininfarina said it recognizes the U. S. as an important market.

Bertone last month said the X 1/9 would be marketed in the U. S. by an independent distributor, but Bertone has not yet identified the distributor.

Fiat Motors of North America, in a statement issued in the wake of the Jan. 17 AUTOMOTIVE NEWS story, said it would maintain technical, warranty and service departments in the U. S. to support Fiats now on the road. It said it would continue to sell parts and accessories.

Pininfarina's sales goal for 1983 seems modest in view of the fact that Fiat sold 4,824 Spiders here in 1982.

Pininfarina manufactured 26,000 bodies in 1982, including 3,500 Spiders.

"As you see," President Sergio Pininfarina told AUTOMOTIVE NEWS last week, "the Spider 2000 is relatively small business for Pininfarina."

Pohanka discovers they're hard to find, even in high-unemployment area

Maryland dealer visits Michigan to recruit technicians

By Francis J. Gawronski
Service Editor

It's not an easy task to find, let alone hire, qualified automotive technicians even in a depressed, high-unemployment area such as Detroit.

John J. Pohanka, head of Pohanka Oldsmobile-Fiat-Honda, found this out in recent visits—the most recent a week ago—to the Motor City in search of technicians for his dealership in Marlow Heights, Md.

For qualified auto technicians, Pohanka said he is offering moving expenses, $15 an hour, a retirement plan and profit sharing.

Considering Detroit's unemployment rate of 17.7 percent, Pohanka figured he would have little trouble finding enough people to fill the 19 service positions he hopes to fill in the next few months.

On his first trip several months ago, Pohanka struck out in his quest for technicians. On the second trip, although some 400 people called and 75 came in for interviews, Pohanka said he managed to "come up with 10 really good prospects, four or five good C-type mechanics and two good apprentice prospects."

On hand to answer telephones and conduct interviews were Mike Sopjack, general service director; Joe Schipono, service manager; and Pohanka's son, Geoffrey, dealership service coordinator.

"It was an exhaustive experience," said Pohanka, 1976 NADA president and founder and former chairman of the National Institute for Automotive Service Excellence. "Because of the many phone calls, we stayed two days instead of the one we planned.

"In all our phone conversations we stressed the standards we were looking for—experienced auto technicians who have passed the NIASE national certification tests," Pohanka said.

"Many of the applicants were certified by the State of Michigan but the state doesn't require the high standards of NIASE," he said. "A technician can be qualified in Michigan and still not be a good technician."

Pohanka said that many of the applicants didn't even know about the NIASE.

"In many cases, even when the technicians were certified in Michigan, we suggested they take the NIASE tests and told them how to go about it," Pohanka said.

"We also described the team concept we use in our service operation and some of the other things we are doing," Pohanka said. "Three or four said they were coming to the dealership to see what we are doing."

Pohanka said he has no trouble hiring technicians in the Washington area to work on Hondas and other imports.

"People in the Washington area are very import-oriented. The young people are driving and working on imports, especially Japanese cars," he said. "The median age of GM's J-car buyers is five years older than Honda buyers.

"In Detroit, it is just the opposite," Pohanka said. "Kids seem more oriented to the domestic cars.

"We weren't looking for it but we found two bright youngsters just out of trade school who probably will come to our dealership on their own and start as apprentices," he said.

"They have passed all the NIASE tests upon finishing school but are just waiting to get the practical experience to get their certifications," Pohanka said.

Pohanka said he thought there was a message from his Detroit trips.

"The message is that qualified technicians are employed, even in high-unemployment areas," he said. "What's more, their pay is good enough that they are not even thinking about relocating to some other part of the country."

Pohanka also expressed concern about the shortage of qualified technicians and the lack of high-quality training programs for automotive technicians. He said that technicians who worked on cars several years ago can't work on today's sophisticated, computerized vehicles.

"I think the real message," he said, "is in the retraining area."

Lawmakers give their views to White House

More curbs on Japanese cars urged

By Jake Kelderman
Washington Staff Writer

WASHINGTON.—In the wake of conflicting reports about what the Reagan Administration will seek of the Japanese in regard to extending current auto export restrictions, congressmen and senators from the nation's auto producing states have begun flooding the White House with recommendations.

Some are specific, some are vague, but in the main they ask the President to consider the plight of the auto industry and act with commensurate resolve in dealing with the Japanese.

Rep. John Dingell, Michigan Democrat, cited an AUTOMOTIVE NEWS report that the Administration would ask for no more than a one-year extension of the current accord.

Dingell urged the President to "heed the advice of the auto industry, labor and U. S. Ambassador for Trade William Brock and instruct him to stand firm in seeking a longer extension of the voluntary agreement and a reduction in the current 1.68 million export limit."

"Dingell says he favors fair trade and fair competition but fears that the Administration is leaning too heavily in favor of the development of high technology, while ignoring or even writing off the nation's basic industries.

"A strong public statement by you would certainly help," Dingell said.

Dingell's senatorial counterparts, Senators Carl Levin and Don Riegle, Michigan Democrats, took a stronger stance and asked Ambassador Brock to request a 25 percent reduction in the current level and an extension of the agreement for two years, e.g. 1.28 million units annually and a March, 1985 expiration date.

The request was made on the eve of Brock's departure for Japan for trade talks.

They were joined by 10 of their colleagues: Senators Joseph R. Biden, Delaware Democrat; Alan J. Dixon, Illinois Democrat; Thomas F. Eagleton, Missouri Democrat; John Heinz, Pennsylvania Republican; Robert W. Kasten Jr., Wisconsin Republican; Richard G. Lugar, Indiana Republican; Howard M. Metzenbaum, Ohio Democrat; William Proxmire, Wisconsin Democrat; William V. Roth Jr., Delaware Republican, and Arlen Specter, Pennsylvania Republican.

They told the President that a cutback to the magnitude they were talking about is equal to "the units and jobs involved in two assembly plants."

In more general terms, 85 House members, led by Rep. Bud Hillis, Indiana Republican, and Rep. Bob Traxler, Michigan Democrat, urged Brock to "hold firm" when negotiating with the Japanese on a new agreement, pointing out that the domestic industry is still "vulnerable."

The Japanese must understand the "importance of becoming more reasonable in their approach" to trade issues, their letter said.

The current level of 1.68 million units is "unacceptably high," they said and warned that unless Japan opens its domestic market and revalues its yen, protectionist sentiment in the Congress will grow.

The only opinion expressed by the domestic industry, via a letter from the MVMA to Brock, said the agreement should be continued with allowances made if the market continues falling and that the dollar-yen relationship should be studied. The MVMA letter did not ask for a two-year extension.

Meanwhile, Tadayoshi Nakazawa, director general of Japan's Ministry of International Trade and Industry, told reporters last week on the eve of Brock's visit that a fourth year of restraint was "out of the question."

Buick's marvelous machine

Buick's new Electronic Product Information Center (EPIC) is designed to display for dealers and customers up-to-the-minute product and sales information in showrooms. A terminal in a dealership is linked to a main computer at Buick in Flint by phone. Buick's EPIC system provides product comparisons, latest option changes, competitive product comparisons, promotional and incentive program information and warranty and maintenance information. It includes a special section for communicating with the dealer sales staff. Buick is pilot testing EPIC, a Telidon-type videotex system, in six dealerships. At upper left, a customer and salesman look over the EPIC system; upper right shows EPIC's main computer menu; lower left depicts the menu of information on the Buick LeSabre; and the lower right photo shows a competitive comparison list for the Century.

1,180,291-unit total Feb. 1 is well below year-earlier level

U. S. new-car inventory climbs to 71½ days

By Richard A. Wright
Assistant Managing Editor

The domestic new-car inventory began climbing again during January and the industry opened February with a 71½-day supply, compared with a 65-day stockpile Jan. 1.

The Feb. 1 stockpile totaled 1,180,291 units, up from 1,125,989 a month earlier. In addition to the higher unit count Feb. 1, a slower sales rate in January than December contributed to the higher days-supply figure.

Growth in the inventory is not unusual for this time of year and compared with a year earlier, when the industry had 1,431,915 new cars in stock Feb. 1, a 97-day supply, the current situation is not alarming.

In fact, many dealers say that should a strong recovery come with spring, they could quickly be short of cars.

• All the corporate makers increased their unit counts during January and all but American Motors boosted their days-supply figures. AMC held steady at a 78-day supply.

General Motors opened February with a 67-day supply, up a bit from 66 days a month earlier. GM continued to be heavier in the smaller-car lines, but was able to build up its big-car stock, which were lean a month earlier.

Ford Motor Co. had a 76-day supply Feb. 1, compared with a 63-day stock a month earlier. Ford dealers were just about out of some of the lines soon to be replaced.

Chrysler Corp. boosted its inventory to an 81-day supply Feb. 1 from a 62-day stock Jan. 1. Volkswagen of America's stockpile advanced from 87 days on Jan. 1 to 100 days Feb. 1.

The Feb. 1 domestic inventory was divided this way: GM, 57.84 percent; Ford Motor Co., 23.65 percent; Chrysler Corp., 12.94 percent; AMC, 3.68 percent, and VWoA, 1.89 percent.

A month earlier, the domestic inventory was divided as follows: GM, 57.68 percent; Ford Motor Co., 23.93 percent; Chrysler Corp., 12.95 percent; AMC, 3.65 percent, and VWoA, 1.79 percent.

By size class, the domestic new-car inventory was in somewhat better balance Feb. 1.

The industry had a 79-day supply of subcompacts, up from 73; a 76-day supply of compacts, up from 65; a 69-day stock of intermediates, up from 66; a 64-day supply of standards, up from 59, and a 65-day stock of luxury cars, up from 47.

The Feb. 1 inventory was divided this way by market segment: Subcompact, 18.85 percent; compact, 22.95 percent; intermediate, 34.52 percent; standard, 16.66 percent, and luxury, 7.02 percent.

A month earlier, the inventory was divided as follows: Subcompact, 19.62 percent; com-

Domestic dealer total declines for 27th year

Continued from Page 1

about one-third of its 1981 loss.

Elsewhere, there were dips of 271 for Ford Motor Co., 495 for General Motors and 72 for Volkswagen. The AMC-Renault count is up 42 from the AMC-only total of a year ago, but that is because of the addition of the non-dualed Renault locations. Without Renault, the AMC figure slipped for the year.

Putting all the numbers together shows a decline of 843 dealerships. A change in the number of intercorporate duals increased the net loss to 881.

All figures in this article and in the accompanying tables refer to the net change in the dealership population, both for the individual corporations and car lines and for the domestic industry as a whole.

A word about Honda is in order. Honda builds cars in the U. S., but production is confined to a single model (the Accord four-door sedan) and is limited — about 300-400 units a week, which is only a fraction of Honda sales. Honda dealers are not counted as domestic dealers in this census.

The heavy loss in 1982 was concentrated in the first nine months of the year, which saw 859 dealerships fade away—276 in the first quarter, 280 in the second and 303 in the third.

The fourth quarter showed a definite moderation with a dip of 129 establishments. (Counting the arrival of Renault, it was only 22.)

Here are the changes in the domestic dealer population by quarters during the year:

Jan. 1, 1982	21,680
April 1, 1982	21,404
July 1, 1982	21,124
Oct. 1, 1982	20,821
Jan. 1, 1983	20,799

The Jan. 1, 1983, figure includes Renault; the others do not.

• A check of franchise totals shows gains for all Chrysler Corp. makes and Lincoln and declines for AMC, VW, Ford, Mercury and all the GM makes.

Plymouth, up 50 franchises, recorded the biggest gain, followed by Dodge, 39; Chrysler, 26; Lincoln, 13, and Imperial, 4.

The two largest dealer organizations suffered the biggest drops. Ford was down 238 franchises for the year, and Chevrolet was down 235.

Also on the downside were Pontiac, off 95; AMC, 90; Mercury, 82; Volkswagen, 72; Oldsmobile, 55; Buick, 40, and Cadillac, 20.

Chrysler Corp. opened 1983 with 3,637 car dealerships, down 47 from 3,684 a year earlier. That compared with a dip of 139 in 1981 and was Chrysler's best showing since 1978.

In the second and fourth quarters, Chrysler Corp. was on the plus side with gains of 10 and 8, respectively. The other two periods — down 29 in the first quarter and down 36 in the third—resulted in the deficit for the year.

Franchise totals at the beginning of 1983 were Chrysler, 2,665; Plymouth, 2,587; Dodge, 2,492, and Imperial, 425.

In addition to its 3,637 car dealerships, Chrysler Corp. has eight that handle only Dodge trucks. They are not included in the corporation's car-dealership total or in the Dodge car-franchise total.

• Ford Motor Co.'s 1982 experience was similar to that of 1981. The company had a decline of 271 dealers last year and 276 the year before. The car-outlet total at the beginning of 1983 was 5,414.

Franchise totals for the three makes at the start of this year were Ford, 4,596; Mercury, 2,581, and Lincoln, 1,478.

Ford Motor has 100 dealers that handle only Ford heavy-duty trucks. They are not included in the company's car-dealership total or in the Ford Division car-franchise total.

General Motors had a rougher year in 1982 than in 1981 from a standpoint of dealer mortality. The 1982 slip of 495 outlets followed a 1981 drop of 405.

The fourth quarter was GM's most favorable of 1982 with a dip of 70. It followed declines of 145 - 140 - 140 earlier in the year. GM had 10,160 car dealers as this year opened.

Franchise totals by make were Chevrolet, 5,195; Oldsmobile, 3,135; Pontiac, 2,945; Buick, 2,910, and Cadillac, 1,575.

American Motors and Renault are considered as a single corporate entity in this census. There were 1,589 dealers at the beginning of this year, 1,457 of whom handle AMC cars.

There are 1,322 Renault outlets, and 1,190 of them are twinned with AMC. About half of those 1,190 also handle a Big Three make and some also have VW.

Some 720 AMC dealers are dualed with Big Three makes (Renault is included in most of those combinations) and about 40 have VW.

The 1,457 AMC dealerships on Jan. 1 compared with 1,547 a year earlier.

Volkswagen reported 934 dealers handling the domestic-built Rabbit (and other VW lines) at the beginning of this year, down from 1,006 at the start of 1982. VW has 118 duals with other domestics.

Agee, McDonald lose jobs at Bendix, Allied

SOUTHFIELD, Mich.—As the pieces began to fall into place after the Allied Corp. acquisition of Bendix Corp., Bendix Chairman William Agee and President Alonzo L. McDonald Jr., found themselves on the outside looking in.

Bendix announced that McDonald will step aside as president effective March 1, while Agee is resigning as chairman of Bendix and president of Allied by June 1. Agee said he will seek a seat on the board of directors, however.

Agee acquired celebrity status two years ago when his relationship with Mary Cunningham and her rapid rise at Bendix attracted national attention. As a result of the publicity, Cunningham left Bendix and joined Joseph E. Seagram & Sons. Cunningham and Agee have since married.

Last year, Bendix tried to acquire Martin Marietta Corp., but an impasse developed when the two companies acquired control of each other. Agee agreed to sell Bendix to Allied Corp. as a way out of the impasse.

Edward L. Hennessy Jr., chairman of Allied, told McDonald that his services were not needed and accepted his resignation. Agee resigned after he was told he was not in the running to become chief operating officer of Allied.

Agee could receive up to $4 million in severance pay and McDonald up to $2.2 million.

GMAC denies lower-rate U.C. financing

DETROIT.—GMAC last week denied strong reports that it would offer low-interest financing on used cars—reportedly 12.9 percent on 1981-82 models and 13.9 percent on 1979-80 cars. Dealers want such a program because 11.9 percent financing on new cars has hurt sales of their one and two-year-old used models.

GM schedules 440 transmission for spring

DETROIT.—General Motors will introduce the new 440 transmission, a four-speed automatic overdrive, in its A-cars this spring, according to GM President F. James McDonald.

Trial date set in lawsuit over Noble Toyota franchise

HOUSTON. — Trial has been scheduled for May 3 in U. S. District Court here in a lawsuit filed by Noble Toyota against Gulf States Toyota, Inc., and Toyota Motor Sales, U.S.A., charging unlawful attempt to terminate the dealership's franchise.

Attorney for Lyn Noble, owner of the dealership and a Houston-area businessman who also operates a long-distance telephone business, said the trial will be a test of "who's running things here, Toyota's rules or the law of Texas."

Mrs. Noble was awarded the dealership in April last year in a divorce settlement after showing that she used her own funds to purchase the dealership even though it was operated under her husband's name as David Gavin Toyota.

A few days later, she said, she was notified by Gulf States Toyota that she had not been approved to take over the franchise — the six-year franchise agreement runs to July, 1984— that the franchise was being terminated and she would have to apply for a new one.

Mrs. Noble went to the Texas Motor Vehicle Commission arguing that the termination was unlawful because no cause for termination had been shown.

Before the case was finally settled, however, Gulf States said it would withdraw its letter of termination and acknowledge that the dealership is operating under the name Noble Toyota, so the commission ruled the proceeding moot.

But Mrs. Noble said that Gulf States has since tried to pressure her to accept a one-year contract instead of the standard six-year franchise agreement which could be terminated without cause at the end of the year. The standard franchise is automatically renewable unless cause to terminate is shown.

Her attorney said she applied for a new franchise without relinquishing her claim under the current agreement, "to see what would happen."

Gulf States approved it, he said, but Toyota Motor Sales did not, saying that it would violate its own rule against granting a franchise to anyone without retail automobile experience.

He said evidence of Mrs. Noble's management talents and availability of capital were shown, but Toyota took the position that its rule must stand. So, he said, Mrs. Noble proceeded with a federal action charging Gulf States and Toyota Motor with violations of the Federal Dealer Day in Court Act, breach of contract and violations of Texas law.

The suit asks for $1 million actual damages, twice that in exemplary damages and also seeks treble damages under Texas law.

GM recalling 1980 X-cars for brake fix

WASHINGTON. — 1980 General Motors X-body cars are being recalled to correct braking problems.

Potentially affected are some 240,000 units. The action occurred on the eve of a public hearing called by NHTSA which had made an initial finding of safety defect Jan. 14.

NHTSA said the alleged problem of rear-brake lockup may cause cars to spin out of control without warning.

Cars covered by the recall include Chevrolet Citation, Pontiac Phoenix, Oldsmobile Omega and Buick Skylark with manual transmissions and those built early in the model year with automatic transmissions.

NHTSA said it had received more than 364 complaints of rear-wheel lockup, including reports of more than 100 accidents involving 22 injuries and at least one fatality.

Earlier, Colorado Rep. Timothy Wirth, Colorado Democrat, postponed until March a hearing scheduled before his House subcommittee on the allegedly defective X-bodies and other vehicles.

Informed of the GM recall, Wirth said he was still interested in knowing why it took NHTSA so long to make its finding.

Wirth is waiting for the General Accounting Office — the Congressional watchdog agency —to report to him on NHTSA's conduct in making defect investigations and forcing recalls and corrections.

November total is 180,558

Import registrations up, share dips

By Jenny L. King
Staff Writer

Registrations of new imported cars last November climbed 6.70 percent from their 1981 level but claimed a smaller share of the total for the month. According to statistics compiled by R. L. Polk & Co., new imported cars accounted for 26.64 percent of the November, 1982, market, down from the month's record, 27.57 percent, a year earlier.

In November, 180,558 new imports were registered in 49 states, down from 169,227 the preceding year. Year-to-date registrations totaled 2,073,193, down 7.75 percent from 2,247,398. Share of the market was up to 29.66 percent from 28.70 percent for the 11 months.

In November, five of the top makes improved their penetration of the import market, three stayed in the best 10 but lost ground and two were replaced by stronger makes. First-place Toyota was up 0.67 percentage points, to 21.42 percent from 20.75 percent in 1981, Nissan was up 0.26 percentage points, to 20.11 percent from 19.85 percent, and Honda was up 1.36 percentage points, to 15.13 percent from 13.77 percent.

Mazda captured fourth place although its share was down 0.38 percentage points, Subaru moved into fifth place and was up 0.08 percentage points, and Volkswagen tumbled from fourth to sixth place with a plunge of 3.60 percentage points.

Renault Alliance, with 4.10 percent of the total, moved into seventh place in its first November on the market, followed by Volvo and BMW. Audi and Colt dropped from the top 10 ranking in November, 1982.

Ten imports accounted for 88.67 percent of the November market, up from 88.50 percent in November of 1981.

For January through November, six imports increased their shares of the import market: Nissan, up 1.50 percentage points; Honda, up 1.03 percentage points; Subaru, up 0.32 percentage points; Volvo, up 0.59 percentage points; Mercedes-Benz, up 0.44 percentage points, and Audi, up 0.02 percentage points.

Toyota was down 0.16 percentage points, Mazda was off 0.15 percentage points and VW fell 3.00 percentage points. The top 10 imports captured 89.31 percent of the year-to-date market, up from 88.29 percent in 1981.

Japanese-built passenger cars represented 74.81 percent of the imports in November, up slightly from 74.80 percent the preceding year. German products, a distant second at 14.13 percent, were down from 17.37 percent in 1981.

Registrations by country of origin in November were:

	Nov., 1982	Nov., 1981
Japan	135,080	126,578
West Germany	25,505	29,393
France	11,437	3,929
Sweden	6,394	5,968
United Kingdom	966	924
Italy	810	1,882
Ireland	366	553

Japanese imports represented 77.57 percent of the 11-month market, up from 75.19 percent in 1981. Registrations by country of origin January through November were:

	11 mos., 1982	11 mos., 1981
Japan	1,608,229	1,689,822
West Germany	293,489	391,020
Sweden	83,794	71,815
France	61,253	41,497
Italy	14,169	34,446
United Kingdom	9,077	17,010
Ireland	3,182	1,788

Registrations of imported trucks in November totaled 40,942, up 12.50 percent from 36,392 in 1981. Makers and totals were as follows:

	Nov., 1982	Nov., 1981
Nissan	13,099	8,961
Toyota	12,906	9,936
Mazda	3,332	.....
Dodge Ram 50	2,816	.....
Ford Courier	.....	5,023
Volkswagen	.....	3,445
Others	8,789	9,027
TOTAL	40,942	36,392

The truck import total for the first 11 months of 1982 was 394,661, down an even 12.00 percent from 448,502 a year earlier. Numbers were as follows:

Alfa Romeo dealer financing offered through Borg-Warner

ENGLEWOOD CLIFFS, N. J. —Alfa Romeo has introduced a wholesale, retail and lease financing and insurance package for its U. S. dealers.

The program is offered through an agreement with Borg-Warner Acceptance Corp., which is underwriting the plan.

Alfa Romeo, Inc., has no capital in the project, according to Marcel Kole, director of finance. This is the first time the importer has offered dealers a total finance package, he said.

Although the retail loans through Borg-Warner will be for Alfa cars only, floorplanning will be available on other lines Alfa Romeo dealers carry. Rates will not necessarily be the same, Kole said.

The arrangement calls for financing at "competitive" rates. The importer may also subsidize rates should free-market rates soar, according to Luigi Zucchet, president of the U. S. importer.

About half of Alfa's 117 U. S. dealers have signed up for the new program, Kole said.

Zucchet projected 1983 Alfa Romeo sales at 2,800 units, up 20 percent from 1982 levels. Alfa Romeo sells two models in the U. S., the performance GTV-6 and the two-seat Spider Veloce.

Wheelbase is lengthened

Charade gets redesign, diesel engine

By John Hartley
Staff Correspondent

TOKYO. — Daihatsu, suffering under the attack on its Charade minicar by the Honda City and Nissan March, has come up with a miserly answer —a diesel version of its existing three-cylinder, one-liter engine.

Also completely new is the body, which is square and boxy, rather than curved and cramped-looking.

To increase internal space, Daihatsu has lengthened the wheelbase by almost an inch. Thus, internal space should be slightly more than in the new Nissan March, although with an overall length of just under 140 inches, the Charade is slightly shorter.

In line with the current trend, Daihatsu has raised the roof. The tallboy approach, pioneered by Honda on the City, is now becoming a hallmark of Japanese small cars. The Charade is 55 inches tall, compared with 53.5 inches for the old model.

Because the styling is much squarer than before, and the seating position is more upright, passenger space is increased. An unusual feature is an optional raised "Dolphin" roof, which can accommodate a sunshine roof without reducing internal headroom. This increases overall height by 1.5 inches to 56.5 inches.

Daihatsu quotes a power output of 38 horsepower at 4,800 RPM for the diesel, against 55 and 60 HP for the gasoline unit. Maximum torque is 45 pounds-feet at 3,500 RPM.

The cylinder block is similar to that of the gasoline engine, except that it is slightly taller, and has longer water jackets. There is the usual toothed belt drive to the overhead camshaft, which actuates the valves through inverted bucket tappets. Biscuits in the tops of the tappets are used to adjust valve clearance.

An extra toothed belt drive runs from the other end of the camshaft to drive the Bosch-type rotary injection diesel pump.

Apart from the option of the diesel, the new Charade is basically similar to the old model, although the suspension and steering have been modified to improve handling.

Power steering and automatic transmission are among the options.

There are three- and five-door hatchback models available, and the curb weights are virtually the same as before at 1,450-1,-500 pounds.

• Daihatsu sorely needs this new Charade, because the old one became very uncompetitive last year against the Honda City and Nissan March. In Japan, sales fell from 43,000 units in 1981 to about 26,000 in 1982. For 1983, Daihatsu has set itself the ambitious monthly sales targets of 8,000 in Japan, and 6,000 overseas. Exports are starting immediately, so that sales can start in most countries by April, but the diesel will not be exported for some time.

In Japan, prices are competitive with the Nissan March at $2,700-$3,700 with the diesel costing an extra $300. Since the diesel achieves a gas mileage of no less than 81-87 U. S. MPG at 37 MPH, it is bound to attract economy-conscious buyers.

Nevertheless, Daihatsu's small sales force will have its work cut out to achieve these sales levels, since they represent a fourfold increase over the 1982 average, and double the 1981 average, and the Honda City and Nissan March offer very strong competition.

Schwartz quits as vice president of AMC sales

SOUTHFIELD, Mich.—Robert Schwartz has resigned as vice president of North American sales for American Motors.

He had held the post since February, 1982, when he moved up from managing director of North American sales and distribution.

No replacement was named. AMC said the executives who had reported to Schwartz will now report to Joseph E. Cappy, marketing group vice president. Schwartz had reported to Cappy.

Under Schwartz's jurisdiction were the regional sales managers for the Central, Eastern and Western areas, the director of fleet operations, the director of dealer investment and the director of sales operations.

Schwartz joined AMC in 1971. He was named general manager of U. S. sales in 1977 and managing director of North American sales and distribution in 1981.

Saab names top seller; it's Colorado dealer

ORANGE, Conn.—Tom Heydman Pontiac-Saab, Inc., in Littleton, Col., was the top-selling U. S. dealer of Saab cars during 1982, according to Sten O. Helling, vice president of sales and marketing for Saab-Scania of America.

In 1982, the second year in a row that the Littleton dealership has held the top sales position, Heydman Pontiac-Saab retailed 292 new Saab cars.

A diesel three

Daihatsu's Charade, suffering in the Japanese market under the onslaughts of Honda City and Nissan March, has been redesigned to a similar tallboy configuration. A diesel version of its three-cylinder, one liter engine delivers up to 97 miles per gallon.

Four programs under way in bid to bolster sales

Chrysler sets incentives on pickups

By Joseph Bohn
Marketing Editor

Chrysler Corp. is throwing a lot of money behind its pickups to bolster sales.

It has instituted four new consumer rebate/dealer/sales/manager/salesmen incentives on pickups, which run in tandem with its 11.9 percent financing program and Prospector discount value packages offering $200 to $1,000 off on equipment.

Chrysler's pickup sales have been off, partially because of downsized S-10 and Ranger compact competition from Chevrolet and Ford.

The new Chrysler programs are complicated and involve sales quotas of various kinds.

In one program, running from Feb. 4 to March 31, Chrysler is paying consumer rebates of $300 to $750 as follows: $300 on '82/'83 Ram Miser 4x2 pickups; $300 on '82/'83 Rampage pickups; $500 on '82/'83 D150 (4x2) and W150 (4x4) pickups (except Miser 4x2); $750 on '82/'83 D250 (4x2) and W250 (4x4) pickups; $750 on '82/'83 D350 (4x2) and W350 (4x4) pickups, and $500 on '82 Ram 50 (import) and Power Ram 50 (4x4 import).

Customers must take delivery during the February/March period to receive the rebates. Chrysler pays the full rebates on '82 models, but dealers pay anywhere from zero to 50 percent of '83 model rebates, depending on how they hit an assigned sales objective.

If a dealer hits 0-49 percent of his objective, he splits '83 rebates 50/50 with the factory; 50-74.9 percent, and he pays 25 percent, the factory 75 percent; 75 percent or more and the factory pays the whole rebate. Objectives on '83 models range from a minimum of three units on up.

• There is also a non-retroactive dealer cash incentive running from Feb. 1 to March 31.

If a dealer hits 0-99.9 percent of the objective (which is based on the rebate-eligible vehicles), he receives nothing. On 100-119.9 percent, he receives $100 per unit, and on 120 percent and over, he receives $300 per unit.

The dealer must sell a minimum of four units to qualify. While Chrysler has no rebate on '83 import trucks, these models do qualify for the dealer cash incentive.

In another "Bucks for Trucks" program, running from Feb. 1 to March 31, there are separate cash payments for sales managers and salespeople.

Managers have a retail incentive objective the same as the dealer's cash incentive. The first three units (there is a four-unit qualifying minimum) pay nothing. Managers get $25 per vehicle up to 99.9 percent of objective, and $50 retroactively back to the fourth unit they sell (no payment on the first three) for 100 percent and over.

Dealers contribute $25 per unit to the sales manager's earnings for 0-99.9 percent of his objective. If the manager hits 100 percent the dealer is reimbursed 100 percent from the factory.

Salesmen receive a flat $50 per sale. The cost is shared equally by Chrysler and the dealer.

There is also a pickup demo program from Feb. 4 to Feb. 21. Dealers must order fresh units (limit is six) of the D150, D250 or D350 variety and put them into demo service for 60 days to earn a $170 wholesale credit off invoice on D150 and $595 wholesale credit off invoice on D250 and D350.

But domestics' total declines

Car sales post 10th gain in row

By Jenny L. King
Staff Writer

Domestic new-car sales developed the sort of momentum by the end of January that they hadn't demonstrated in four years: 10 consecutive periods of sales increases and two full months with totals ahead of year-ago levels.

January sales were up 12.16 percent for domestic retail units, and imported cars climbed 9.90 percent during the first month of 1983. Lest anyone get too excited, though, the January domestic total of 412,893 was down 12.12 percent from the January, 1981, sum of 469,832 and it was (except for last year's 368,138) lowest for the month since 1958, when 381,335 new cars were sold.

It also was down from December's 448,048 by some 35,000 units.

Speculation suggests sales will continue to grow, mushrooming in March as the March 31 deadline approaches for the lower interest rates now offered by domestic dealers. Some say the manufacturers will choose not to let go of this recovery and that there will follow more incentives to take the places of these.

Import sales in January numbered 182,853, up 9.90 percent from 166,375 a year earlier. Imports accounted for 30.69 percent of the market, down from the 31.08-percent record established in 1982.

Combined domestics and imports totaled 595,746, up 11.46 percent from 534,513.

• All five major U. S. auto makers reported improved sales in January, with increases ranging from 3.36 percent at Ford Motor Co. to 14.35 percent for General Motors.

GM sales totaled 254,470, up from 222,544. Ford Motor Co. sales climbed to 91,789 from 88,806.

Chrysler Corp. was up 4.01 percent, to 47,105 from 45,290. American Motors, helped by more than 9,000 Alliance sales, was up 126.23 percent, to 13,965 from 6,173. Volkswagen of America posted a 4.49-percent January increase, to 5,564 from 5,325.

VWoA had its last monthly sales gain in October, 1981.

GM claimed 61.63 percent of the domestic market for the month, up from 60.45 percent. Ford dropped to 22.23 percent from 24.12 percent. Chrysler was back to 11.41 percent from 12.30 percent. AMC came away with 3.38 percent, compared with 1.68 percent a year earlier, and VWoA held 1.35 percent, down from 1.45 percent.

Eight U. S. makes reported sales increases. Chrysler was up 44.38 percent; VW, 4.49 percent; Mercury, 6.42 percent, and Lincoln, 43.93 percent. Buick was up 33.25 percent; Cadillac, 16.06 percent; Chevrolet, 1.06 percent, and Oldsmobile, 32.77 percent.

Imperial suffered the largest decline, falling 43.54 percent. Other makes with minus signs were: Plymouth, down 10.31 percent; Dodge, 2.86 percent; Ford, 1.04 percent; Pontiac, 4.03 percent, and AMC, down 25.21 percent. Renault Alliance had no year-ago sales.

• Import sales in January included generous increases for: Toyota, 11.86 percent; Nissan, 25.81 percent; Mazda, 33.86 percent; Porsche, 97.47 percent; BMW, 20.70 percent; Volkswagen, 20.12 percent, and Subaru, 6.78 percent.

Volvo finished the month with a record 8,261 sales, Saab was up 80.94 percent to a record 2,070 and Isuzu sales of 1,646 also was a record.

The market class breakdown in January included: Imports, 30.69 percent; intermediates, 24.67 percent; compacts, 14.97 percent; standards, 12.98 percent; subcompacts, 11.32 percent, and luxury models, 5.37 percent.

A year earlier, the breakdown showed: Imports, 31.08 percent; intermediates, 19.95 percent; compacts, 17.31 percent; standards, 10.15 percent; subcompacts, 16.22 percent, and luxury models, 5.29 percent.

Of the domestics alone, 35.60 percent were intermediates, 21.59 percent were compacts, 18.73 percent were standards, 16.34 percent were subcompacts and 7.74 percent were luxury models in January, 1983.

Third-period domestic sales totaled 153,428, up 11.61 percent from 137,472. With nine selling days this year and last, the daily rate was 17,048 compared with 15,275.

During the final period, GM was up 18.20 percent, Ford was down 7.91 percent, Chrysler was up 12.38 percent, AMC was up an estimated 125 percent and VWoA was up 6.82 percent.

There were 25 selling days in January, yielding a 16,516 daily average, up 12.16 percent from 14,726 a year ago when there also were 25 days.

Annualized domestic sales based on third-period results, were 5.3 million.

Where auto market was in January

Smog compromise reached on Calif. vehicle inspection

EL MONTE, Calif.—Auto repair facilities will be allowed to offer either idle mode or dynamometer testing of emissions in the South Coast Air Basin as part of the new state-mandated biennial vehicle inspection program scheduled to go into effect next year.

The South Coast Air Quality Management District (AQMD) decided on the compromise for the first four years of the program following testimony from proponents of each test method.

Proponents of the dynamometer or "loaded mode" test included environmentalists, dynamometer manufacturers and garages and tune-up chains who already have the equipment.

Idle mode advocates included owners of garages and shops that did not have the money or the space for dynamometers.

Backers of the loaded mode test contended that their method checks not only hydrocarbons and carbon monoxide at idle and cruising speed, but also gives a more accurate reading of NOx, which occurs in greater amounts under load.

Those favoring the idle mode and even AQMD officials themselves expressed concern that by requiring the more expensive equipment the program could be jeopardized because not enough outlets would have the equipment to adequately serve the five-county South Coast Air Basin.

The AQMD further believes that either test mode will enable the district to meet its clean air objectives.

The biennial program was passed by the legislature last year in order to head off sanctions against California from EPA.

The AQMD's view was shared by EPA Regional Administrator Sonia Crow, who appeared at the meeting to say that either mode was acceptable to EPA.

The compromise reached by the AQMD allows Los Angeles-area garages to use either test in the first four years and then requires the use of the loaded mode test in subsequent years if the equipment is readily available and the program is extended by law until 1994.

Currently, the test program is scheduled to expire in 1990.

As a result of the move, motorists will be able to "shop around" for either test in order to obtain a smog compliance certificate.

*—AMC does not issue a nameplate breakdown for 10-day periods.

Overtime at 7 assembly plants brings 8 pct. gain

Auto production rises to 119,303

By Patricia Hoffman
Staff Writer

The domestic auto makers scheduled an 8.24 percent production gain last week over the previous week's total as overtime at seven assembly points and the return of Volkswagen of America's Westmoreland facility offset downtime at General Motors' Willow Run plant.

Last week's production was slated at 119,303 cars, up from 110,223 the previous week, and up 60.35 percent from the 74,403 built in the comparable 1982 period.

So far this year, there have been 642,927 cars produced, a 56.02 percent over the 412,069 units finished at the same time last year.

Breakdown for the week by company was: GM, 54.75 percent; Ford Motors, 26.43 percent; Chrysler Corp., 13.20 percent; American Motors, 3.32 percent; VWoA, 1.97 percent and Honda, 0.33 percent.

Last week (Feb. 7), GM's Willow Run facility plant was idle due to overstocked inventory. Production there is scheduled to resume today (Feb. 14).

Still down last week for inventory control was Ford's San Jose point.

The GM Baltimore, Doraville, Janesville and Lordstown plants, plus Ford's St. Louis facility, operated six days last week.

Chrysler's Jefferson and Newark points worked nine hours on each of two shifts during five days of assembly last week.

Operations resumed at VWoA's Westmoreland point following a two-week downtime for inventory control.

Production of the Alliance at AMC's Kenosha plant continues at an increased rate of 632 units a day on two shifts, up from the previous 600 units a day on two shifts.

January output in Canada is highest total since 1979

The Canadian auto makers wrapped up January production 41.27 percent above the comparable 1982 period. It was the most for that month in four years.

Last month, the manufacturers produced 73,345 units, up substantially from 51,920 built in January last year. It was the highest build for January since 99,731 units were completed in 1979.

The truck makers finished 35,257 units in January, a 16.86 percent gain from 30,171 built in the comparable 1982 month. It was the most for that month since 57,798 units were assembled in 1981.

Last week's car output was estimated at 14,149 units, down 19.40 percent from the previous week's 17,554, and down 18.81 percent from 17,427 built in the comparable period last year.

Year-to-date, the manufacturers have completed 101,825 cars, up 30.08 percent from 78,276 built through Feb. 13, 1982.

Truck production last week was targeted at 10,052 units, up 40.82 percent from the previous week's 7,138, and up 25.21 percent from 8,028 units assembled in the same week last year.

So far this year, the truck makers have finished 50,827 units, a 19.98 percent gain over the 42,364 completed in the same period last year.

Laine elected to head Chicago C-P dealers

CHICAGO. — Jerry Laine, Grant Motor Sales, Inc., (Chrysler-Plymouth), Barrington, Ill., has been elected president of the Chrysler-Plymouth Dealers Assn.

Vice president is William Ahrens, Central Motors, Evanston, Ill.; secretary is Sandy McKie, Sandy McKie & Sons, Inc., Fox Lake, Ill., and treasurer is John Schultz, Center Garage, Cedar Lake, Ind.

Central foundry takes over three Chevy operations

DETROIT. — General Motors' Central Foundry Division has assumed operational responsibility for all major GM foundry operations in the U. S.

Included in the transfer to Central Foundry are the two Chevrolet Grey Iron and Nodular Iron casting plants in Saginaw, Mich., and the Chevrolet Metal Casting plant in Tonawanda, N. Y.

According to GM President F. James McDonald, the move is to further streamline GM's organization and improve efficiency.

The consolidation of foundries began in September, 1977, when the Pontiac iron foundry in Pontiac became part of Central Foundry. The Chevrolet aluminum foundry in Massena, N. Y., followed in June, 1978.

In addition, Central Foundry also operates iron foundry facilities in Danville, Ill.; Defiance, O.; Pontiac and Saginaw. It also operates aluminum foundries in Bedford, Ind., and Massena, N. Y.

Central Foundry operates as part of GM's Mechanical Components Group.

Downtime by Ford slices last week's truck production

Overtime at four assembly points, the return of General Motors' heavy-duty and medium-duty lines at Pontiac, Mich., plus an added shift at GM's Detroit point last week weren't enough to offset downtime at Ford Motor's Louisville facility. Domestic-truck production fell slightly from the previous week's total.

The makers targeted output last week at 41,396 units, down from 41,598 built the previous week, but up 14.66 percent from 36,104 produced in the comparable 1982 period.

Year-to-date, the manufacturers have finished 205,922 units, a 10.21 percent gain over last year's 186,847.

Ford's Louisville facility closed last week (Feb. 7) due to overstocked inventory.

Volkswagen of America's Westmoreland point remains idle. Production at the plant, down since last June 28, are slated to resume Feb. 21.

Operations resumed last week at GM's Pontiac facility. The heavy-duty and medium-duty lines at the plant were idle one week for inventory control.

GM's Pontiac S-truck line and its Janesville and St. Louis facilities worked six days last week.

Daily overtime was scheduled at Chrysler Corp.'s Warren point. The plant operated a daily nine-hour shift last week.

Production of specialty commercial vehicles at the GM Detroit facility was upped last week from 17 units an hour on one shift to 20 units an hour on two shifts. About 60 workers will be called back from indefinite layoff.

Also at GM, a second shift at the company's St. Louis point is scheduled to resume Feb. 28, with a production rate of 28 commercial vehicles per hour on both shifts. About 900 workers will return from indefinite layoff.

Beginning March 11, van assembly at GM's Lordstown facility will be upped from 24 units an hour on two shifts, to 29 units an hour on two shifts. About 300 employes will return as a result.

58th year—$40 per year, $1.00 per copy

Joint venture to build subcompacts in California plant

GM-Toyota auto to bow as a 1985 model

By Jim Plegue
Staff Writer

Automotive giants General Motors and Toyota Motor Co., after more than 11 months of secret negotiations, inked an agreement last week to jointly produce 200,000 subcompact cars per year for Chevrolet at GM's idle Fremont (Calif.) assembly plant.

The pact, signed by representatives of both firms at the Fremont facility late last week, calls for the establishment of a jointly owned company to build front-drive cars during the 1985 model year, which begins in late 1984.

It is a 12-year agreement. Cost for setting up the venture has been estimated by some sources at $300 million, split equally between the two auto makers.

Each company will appoint an equal number of members to the new firm's board of directors, but, under terms worked out between the auto makers, Toyota will name the president and chief executive officer of the company.

Sources in Japan last week hinted that Tatsuro Toyoda, younger brother of Toyota President Shoichiro Toyoda, is a likely candidate for that position.

• In GM's announcement last week, Chairman Roger Smith said the Fremont-built car "is not a copy of any car being offered in this country. It will be a specific design for Chevrolet."

Toyota Chairman Eiji Toyoda denied reports that the car would be Toyota's new front-drive Corolla model, but sources in Japan and the U. S. have suggested the Fremont model will be a sister car to the new Corolla. It is said to be an upscale version called the Splinter, which shares common componentry with the new Corolla. The new Corolla has been introduced in Japan. U. S. Toyota dealers receive the car this fall.

A senior Toyota official said last week that excess capacity from the Fremont plant could also be sold by Toyota. The plant will have capacity to build 300,000 units annually, GM said.

Smith said the production venture would provide as many as 12,000 U. S. jobs, about 3,000 at the Fremont plant and the balance at support facilities. As part of the GM-Toyota pact, a stamping plant is to be built adjacent to Fremont.

Announcement of the GM-Toyota deal brought a swift response from Lee Iacocca, Chrysler Corp. chairman, who said the agreement will "create the world's most powerful automotive combine and raises grave questions about its long-term effects on the U. S. car market."

• The GM-Toyota car will have 50 percent foreign content, a situation which could eliminate 50,000 automotive and supplier jobs, Iacocca said.

"The impact of this arrangement — and the follow-on deals that could be made if this one is permitted to stand — will be so severe that a full examination by both governments is absolutely essential," he said in a statement issued within hours of the GM announcement.

The Federal Trade Commission, which shares enforcement of antitrust laws with the Department of Justice, "has been monitoring developments," according to a spokesman.

Ford Motor Co., at presstime, had made no official response to the GM-Toyota deal. A spokesman did confirm, however, that Ford, acting on an FTC request, had supplied the federal agency with documents that deal with the competitive nature of the auto industry.

Chrysler Corp. officials, too, have been questioned by FTC investigators on the GM-Toyota deal, a company spokesman said.

U. S. Trade Ambassador William Brock said "the FTC would, of course, have to decide the is-

GM-Toyota: Blazing topic

By Al Fleming
Industry Editor

LAS VEGAS.—Nearly matching predictions of stronger new-car sales as the hottest topic of conversation at the 66th annual NADA Convention & Exposition here last week was the agreement by General Motors and Toyota to start joint production of small cars in the U. S. in the 1985 model year.

In an impromptu interview following an Automotive Hall of Fame luncheon, GM Chairman Roger B. Smith said the front-wheel-drive car, to be assembled at a plant in Fremont, Calif., "will be 50 percent local content."

He added that the assembly plant will start to turn out cars at an annualized rate of 200,000 units, "and within a couple years could reach 300,000 — it

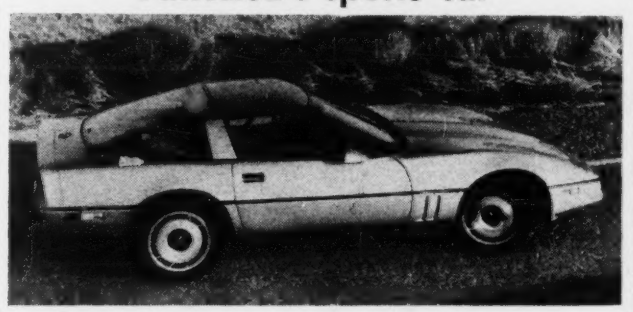
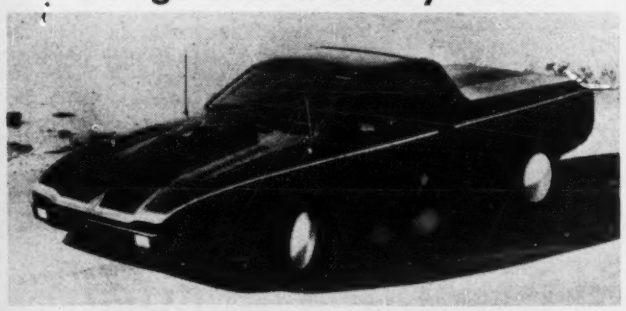
America's sports car



All-new Corvette bows nationally April 21

The 1984 Chevrolet Corvette, the first all-new version of the fiberglass two-seat sports car in 15 years, will bow nationally on April 21, except in California where it debuts March 24. The new Vette is wider, shorter and about 250 pounds lighter than its predecessor. Story and another picture on Page 6.

Dodge with a Shelby touch



Street Fighter on a Rampage

The Shelby Street Fighter, a concept vehicle based on a 1983 Dodge Rampage pickup, features fold-away headlamps, ground effect skirts, car dam and spoiler, unique paint and tape, a four-color rendition of the Dodge Ram logo on the hood scoop and a supercharged 2.2-liter engine. Dodge has no intention of building a similar production model, a spokesman said.

Market comeback is forecast at upbeat NADA convention

By Al Fleming
Industry Editor

LAS VEGAS. — You can't place a bet on it in the gambling casinos. But just about everyone attending the 1983 NADA Convention and Exposition here last week was willing to wager that the new-car market has ended a prolonged slump and is heading upward this year.

The optimists included dealers, factory officials, automotive trade association representatives and exhibitors, most of whom seemed to agree with the NADA forecast of a 10-percent climb in new car and truck sales in the 1983 calendar year.

The convention itself reflected the new upbeat mood. The opening session of the four-day program packed the Rotunda auditorium of the Las Vegas Convention Center. Despite an East Coast snow storm that kept some intended conventioneers from flying westward, total attendance was estimated at 14,000 at the kickoff program, which featured speakers George W. Lyles, outgoing 1982 NADA president, and Lee A. Iacocca, chairman of Chrysler Corp. and convention keynoter.

Although sales volume for the industry was disappointing in 1982, Lyles said individual dealers averaged higher profits than in 1981, and profit as a percentage of sales also was higher.

"Still, I wouldn't be satisfied to classify 1982 as a goal for the future," Lyles added. "Profits still need to be improved."

As Iacocca has done many times before, he called interest rates "the single biggest obstacle standing between this country and economic recovery." He added: "Fix the interest rate problem and we get cars and houses moving again. Get cars and houses moving again, and we get this country moving again."

Iacocca said that although he sees some "silver linings" in the economy and auto market, the key is consumer interest rates. "They must continue to come down or the market will abort," he said.

Norman D. Lean, senior vice president and chief operating officer of Toyota Motor Sales U.S.A., speaking at the Automotive Hall of Fame luncheon, predicted that "the auto recovery should be robust."

He forecast new-car sales will rise to about 9.1 million units this year, and that the increase during a period of reduced interest rates and controlled inflation "will also permit a substantial improvement in dealer and manufacturer profits."

Import dealers will have less to cheer about this year than their domestic counterparts,

190 companies occupy record amount of floor space

NADA exhibitors cite positive mood

By Francis J. Gawronski
Service Editor

LAS VEGAS. — If the attitude of dealers and exhibitors at NADA's 66th Annual Convention and Exposition here can be used as a barometer, the long-awaited turnaround in the automotive industry may indeed be "just around the corner."

Some 14,000 dealers and their wives, exhibitors and management personnel registered for this year's NADA convention and exposition, according to Steve Pitt, show director.

"We are very pleased and surprised by this year's convention," Pitt said. "After last year's 10,000 registrations in Atlanta, we bit the bullet a little and projected 13,000 total registrations for this year's show because we sensed the economy was coming around.

"But the 14,000-plus registrations was a pleasant surprise," Pitt said. "In Atlanta last year, we had 2,200 over-the-counter registrations, which included a lot of Eastern dealers who came to the convention for the first time. This year we had a record 2,700 over-the-counter registrations as of yesterday (Monday) and it could top 3,000."

Pitt said the record total attendance at an NADA convention was set in 1979 when 19,000-plus registrants were counted.

"When you have some 4,000 fewer dealers in the country, the registrations total at this year's show tells you something about the convention," Pitt said. "The dealers are attending the workshops and taking a lot of good information back to their dealerships."

Pitt said that more than 3,000 dealers and 1,000 dealership management personnel attended this year's show.

The show attracted 190 exhibiting companies which occupied a record 113,000 square feet of floor space. Some 50 companies were on the waiting list, according to Pitt.

All show functions, especially the workshops, were well attended by the dealers.

The word most frequently used by exhibitors to describe the attitude of the dealers at this year's convention was "positive."

As at past NADA shows, booths featuring computerized systems and other equipment designed to simplify dealership operations and cut costs attracted the most traffic.

Jack Proud, general sales manager of Dealer Computer Systems, Reynolds & Reynolds, Dayton, was elated about this year's exposition.

"The shows in Los Angeles and Atlanta were good but they were nothing like what we experienced here," he said. "The traffic and the interest in our product was the greatest since we have been coming to this show.

"The dealers' attitude is positive and they are looking for simple solutions to complex problems," Proud said. "They are turning to computers."

Proud called the dealers attending the show "survivors" and "winners."

"We could have doubled the number of people in our booth and it still wouldn't have been enough to handle the traffic," Proud said. "Our orders are significantly up over last year."

• Anders B. Eklov, president of Oakleaf Corp., in Chatsworth, Calif., reported that his sales staff wrote more business in the first two days of this year's show than they did during all of last year's show.

John L. Person, vice president of sales and marketing at Display Data Corp., Hunt Valley, Md., said, "The show has been very good and has generated a lot of customers and prospects. The general attitude of the attendees has been positive and upbeat.

"The business we are doing on the floor has been up dramatically over last year," he said. "The dealers are very interested in total-service computer systems."

Toby Schaeffer, vice president, Lease It Division, First Pennsylvania Bank, Ft. Washington, Pa., said, "So far, we are doing twice as well as last year. Dealers are a lot more interested in leasing programs.

"They also seem to have a tremendous amount of optimism in the future and the automotive outlook," Schaeffer said.

Jack Taylor, president of Telegenix, Cherry Hill, N. J., said the show was "super."

"I am really pleased at the upbeat attitude of the dealers at this year's show," he said. "Dealers are not talking about how to survive anymore, but how to improve and make their operations better.

"The opening-day turnout was excellent. We had twice as many people stopping by our booth as we anticipated," Taylor said. "This is our third show, but it is by far the best. We will be back next year."

• Daniel Richardson, of Shure Mfg. Corp., St. Louis, termed the opening-day traffic "terrific."

"The show was better and the dealers more serious than last year in Atlanta," Richardson said.

Robert Schleeter, president of Broadway Equipment Co., Inc., Minnneapolis, also was jubilant about the show.

"Super. Best show yet. Perfect," he said when asked how he rated this year's event.

"The opening-day crowd was

Subaru launches big recall to fix seat backs

WASHINGTON. — Subaru of America, Inc., at the urging of NHTSA, will mount a safety recall campaign of 84,253 1980 vehicles to replace the seat-back frame on the driver's side.

Involved are DL, GL and GLF models, which include hatchbacks, sedans, hardtops and station wagons as well as four-wheel-drive vehicles.

NHTSA started an engineering analysis last June after receiving seven complaints. It said it has had one report of an accident but it added, Subaru has received almost 300 complaints.

Seat-back frames in the affected vehicles, according to NHTSA, have inadequate weld joints. When the welds break, the seat back can twist and bend potentially causing the driver to lose control.

Subaru did not estimate the cost of the recall, but a spokesman said, "It's going to be expensive."

Chrysler offers buyers an option on rebate

By Joseph Bohn
Marketing Editor

Chrysler is offering buyers the option of taking a rebate instead of 11.9 percent financing for the Feb. 14-March 31 period. The rebates apply to '82 and '83 models.

In doing so, it wants to broaden its appeal to cash buyers and those who arrange their own financing. Normally, cash buyers comprise up to 25 percent of the market and, for them, low-interest financing has little appeal.

Also, Chrysler stands to save money if a buyer goes for the rebate instead of the financing. According to one knowledgeable source, it costs about $85 to $95 per $1,000 of financing to subvent interest rates to their current 11.9 percent level.

This would work out to $475 to $500 on a $5,000 contract, for example.

The new Chrysler rebates generally range from $300 to $400.

Under the new program, buyers can take rebates of $300 on L-bodies, including Omni/Horizon, Charger / Turismo, TC 3/024.

Other models, including Aries / Reliant, LeBaron/Dodge 400, Gran Fury/Diplomat, Cordoba/Mirada, New Yorker (including the 83½ front drive as well as Fifth Ave. rear drive), Ram Van, wagons and Voyager come in for $400 rebates.

The Imperial has a $1,000 rebate. The import cars — Colt/Champ and Sapporo/Challenger —get $300 rebates, as does the '83 Ram 50 and Power Ram 50.

The '82 versions of the Ram 50 pickups are covered under a previously announced program on trucks, "Ram Tough Value Days," which gives both rebates and 11.9 percent financing, as well as various dealer/sales person incentives.

There is sold-order protection covering vehicles ordered by Feb. 28 or delivered by March 31.

There are no dealer contributions to this alternate consumer program.

Toyota Camry to be unveiled in Chicago

The Toyota Camry, an all-new front-drive replacement for the Corona series, will bow at the Chicago Auto Show, Feb. 26. Camry will be available in four-door sedan and this five-door liftback model with Deluxe or LE trim. Power comes from a 2.0-liter SOHC fuel-injected four-cylinder engine.

Yawns greet extension of Japanese quota

WASHINGTON.—Japan's unexpected early announcement that it would extend the current limitations on its export of automobiles to the U. S. for another year appears to have caught much of official Washington and the U. S. auto industry with little to say.

The existing agreement expires April 1.

At the UAW, from where pressure has been the greatest to do something about "the Japan problem," Don Stillman, Director of Government and International Affairs, said the UAW would have no comment on the announcement.

At the Big Three, similar silence was the case.

On Capitol Hill, the move by the Japanese had Rep. Richard Ottinger, the New York Democrat and chief sponsor of the UAW-backed local-content legislation that passed the House last year, saying he "would prefer not to comment."

His cohort, Rep. John Dingell, Michigan Democrat, said he "didn't think the agreement went far enough," however, and said he intends to press ahead with local-content legislation.

Michigan's senators, Democrats Carl Levin and Donald Riegle, were also disappointed. Levin chose to be philosophical about it though, saying that "a half a loaf is better than none."

Levin would like to see a two-year extension and a reduction in the total number of vehicles allowed.

Riegle said the one-year extension was "good news" for the U. S. auto industry but only if interest rates continue to fall and car sales rebound.

"Our trade negotiators should have pressed for more," he said.

U. S. Ambassador for Trade William Brock, meanwhile, said at a press briefing that he was pleased by the announcement, but he noted in response to a question that it would be "highly inappropriate" should there be a surge of Japanese imports after the voluntary restraint arrangement expires.

Dodge joins the lineup for spring football ads

By Joseph Bohn
Marketing Editor

DETROIT. — Dodge joined Chevrolet truck and Buick as a sponsor on ABC's United States Football League telecasts.

Dodge will get nine regular season games and one playoff—identical to Buick's participation—and the two share sponsorship of the league championship game, July 17.

Dodge has also been designated the "official car" and "official truck" of the USFL. Dodge dealers will choose one player and one coach from the 12 teams in the league as Dodge "Man of the year" and "Coach of the year."

As part of the association between Dodge and the League, the USFL will give away 108 Dodge Chargers.

One Charger will be given away to a fan at each team's nine home games. The method of giveaway will be determined by the USFL and the individual team.

The USFL and Dodge will also share in 30-second charitable TV spots on behalf of the Statue of Liberty, Ellis Island Foundation, Inc. Chrysler Chairman Lee Iacocca heads up Foundation efforts to restore the landmarks.

The USFL and its teams agreed to give the Foundation one cent for each ticket the 12 teams sell.

The agreement between Dodge and the USFL also allows the division exclusive use of the USFL League and teams' logos and names in advertising and sales promotion, except where a team has already made prior arrangement.

During the USFL's regular season and playoff games, Dodge will have six minutes' commercial time. The messages will be split between Dodge cars and trucks, both import and domestic, and local dealer associations.

Originally, Nissan, Chevrolet truck and Buick were given first sponsorship crack at the USFL on the basis of being Monday Night Football League sponsors on ABC. But Nissan declined, opting for sponsorship of the USFL on the Entertainment Sports Programming Network (ESPN).

McElwaine criticizes protectionism

AIADA speakers rebut Iacocca

By Matt DeLorenzo
Los Angeles Reporter

LAS VEGAS. — Led by its president, Robert M. McElwaine, the American International Automobile Dealers Assn. (AIADA) used its luncheon to rebut the protectionist sentiments expressed by Chrysler Chairman Lee Iacocca during the NADA keynote.

Under the recurring theme of "Let's talk sense," McElwaine said the American public has "been bombarded with some of the most outrageous nonsense ever heard outside of a national political campaign" when it comes to the effect of imports on the U. S. economy.

"We tolerate the protectionism of other countries that close their borders to our goods, while happily permitting those countries to sell their goods here in unrestricted fashion," McElwaine said. "Our markets are free and open, so goes the myth, while those of other nations are closed to us."

Not so, said McElwaine. "The U. S., far from being the victim of other nation's predatory trade practices, is the world's largest exporter," he said.

McElwaine contended that not only is the U. S. active in other markets, but that it, too, has its share of quotas and restrictions as well.

McElwaine said that the U. S. auto industry has won protection from the government while at the same time "has easily propagated the illusion that it operates in a state of mutual antagonism with its government, while the Japanese manufacturers and the Japanese government conspire to wreck the U. S. industry."

• "For the past several years," he said, "the American automobile industry has been protected from foreign competition by a network of trade barriers including the highest tariff on trucks imposed by any industrialized nation in the world, a discriminatory tariff on automobiles that permits U. S. manufacturers to import their product from Canada without duty, while imposing a 2.5 percent duty on other imports, and a quota on Japanese cars that has been in effect since April 1, 1981."

He added that the industry has further benefited from changes in the tax code and government - guaranteed loans. "What the industry's response has been to all these benefits is that they'd like a little more protection please," McElwaine said.

That protection may be in the form of local content, McElwaine hinted: "The seed for domestic content legislation was sown in the summer of 1981 when Ford and General Motors sought concessions from the UAW that would enable them to achieve competitive status with the more efficient Japanese manufacturers."

McElwaine said that the union's refusal to go along with the concessions prompted the "world car" strategy to go elsewhere in the world to cheaply produce vehicles.

"The UAW's answer to this 'world car' concept was, 'there oughta be a law,' " he said. "Getting Congress to legislate such cost-raising restrictions on an already crippled domestic industry, however, posed problems to make even a skilled union lobbyist quake.

• "Some genius within the UAW, however, came up with the answer: Sell the bill to Congress as anti-Japanese, Buy-American, save-the-jobs bill," McElwaine said.

"Domestic content may cause a temporary feeling of well-being, but it will solve none of the basic problems of the automobile industry and, indeed, over time, will exacerbate many of them. There is no quick fix for Detroit; there is only the long, hard struggle to regain their competitive position."

Outgoing AIADA Chairman David M. Zinn said the domestic content battle last year was the greatest challenge the association has faced and that the fight is far from over.

"All we won was time—time to prepare for the next onslaught which has already started with the introduction of HR 1234, the Domestic Content Bill of 1983," he said.

Thomas Nemet, Zinn's successor, promised to carry on the fight. "I have a motto for all of us and a promise for my year as chairman. The motto is 'don't sit back,' " he said.

Nemet said AIADA faces formidable opposition in the local-content struggle. "Our job is even harder this year," he said. "The UAW has up to 75 percent of new members of Congress sympathetic to its bill."

Nemet stressed the need for all import dealers to become involved.

"All import dealers are in this fight together," he said, "whether they will be hurt immediately by content legislation or by the inevitable step of extending the coverage of the content legislation more broadly. Make no mistake: Once we head down the road to domestic content, no importer or dealer will be immune."

Chicago Auto Show offers a spotlight for new models

CHICAGO.—The 75th Chicago Automobile Show, to be held at McCormick Place Feb. 26-March 6, will be the stage for the national introductions of eight passenger cars and a new truck line.

For many years, manufacturers used the Chicago exposition to introduce new cars, but in recent years, with the accent on downsizing and fuel economy, the cars have not been there for first-time showing.

But auto makers from the U. S. and abroad have decided to use this year's show to present new cars to the press and the public.

The national preview of the Ford Tempo and Lincoln-Mercury Topaz will be staged here on Thursday (Feb. 24), just before the show opening.

Datsun will host the press on Feb. 23 to present the Pulsar Turbo and Stanza notchback, before the public gets its first glimpse of the cars at the show.

Robert C. Stempel, Chevrolet general manager, will host a press conference on the new Corvette on the morning of Feb. 25.

The briefing will include information from the chief engineer David R. McLellan and chief designer Jerry M. Palmer, as well as marketing information from Thomas A. Staudt, the division's general marketing manager.

Mitsubishi will introduce its Montero, a sports utility vehicle, at a press briefing on Feb. 23 and will exhibit the vehicle during the show.

Isuzu is to present its Impulse, a 2+2 sporty passenger car shown only in prototype at St. Louis, which will not be on the market until May.

Toyota will present its Camry line, to replace the Corona vehicles, at the show.

Datsun also has decided to present its 1983½ truck line to the public for the first time at its Chicago exhibit.

The show is staged by the local dealer organization, the Chicago Automobile Trade Assn. (CATA). The show committee chairman is Joseph Bidro, Villa Park Motors (Ford), Villa Park, Ill.

Chrysler sells interest in Sigma

DETROIT.—Chrysler Corp. has sold its 24.9-percent interest in Sigma Motor Corp., the South African vehicle manufacturer, to Anglo American Corp. Sigma is now wholly owned by Anglo American. Sigma retains access to Chrysler technology but currently makes no Chrysler vehicles. It relies instead on Japanese models from Mitsubishi and Toyo Kogyo. It holds rights to Citroen and Peugeot, but does not manufacture either.

GM of Canada reports loss

OSHAWA, Ont.—General Motors of Canada reported a net loss of $71.7 million in 1982, which it blamed on retooling expenditures, high interest rates and an 8.1-percent decline in net sales. Sales of $9.57 billion were still enough to make 1982 the second-best sales year on record.

Auto imports rise 3 pct. in month

WASHINGTON.—Automobile imports in November rose 3 percent above the year-earlier month, the Commerce Department said. The total was 217,225, up from 210,695.

Peugeot 205 ready for France

The new Peugeot 205—shown here in SR version—is to debut in France Feb. 24 and is slotted between the 104 and 305 models. The front-drive 205 will be offered with four engine options, from 954 cc to 1.3 liters. Fuel tank and spare are under the floor. The 205 may replace Chrysler's Omni/Horizon in the U. S. in 1985.

New-car sales trail 1982 in month-opening period

By Jenny L. King
Staff Writer

The spell was broken—or at least cracked — when domestic new-car sales failed to surpass their year-ago level in the first February period. It stopped the chain of consecutive plus periods at 10.

Feb. 1-10 sales dipped some 5,000 units below the comparable 1982 total, a difference of 3.79 percent. The final tally was 136,878 versus 142,273.

Year-to-date sales remained 7.71 percent ahead of 1982, climbing to 549,771 from 510,-411.

Chrysler Corp. was the only major U. S. auto maker to report a sales increase in early February. Chrysler was up 2.82 percent, to 16,846 from 16,384 in 1982. Sales of American Motors passenger cars were estimated at 4,000 units, up 73.91 percent from 2,300. AMC does not release sales figures on a 10-day basis.

General Motors dealers retailed 83,544 new cars during the period, down 5.20 percent from 88,131 last year. Ford Motor Co. sales dropped 8.57 percent, to 30,925 from 33,824. Volkswagen of America missed its year-ago sales by 4.35 percent, dipping to 1,563 from 1,-634.

GM's share of the market was shaved to 61.04 percent from 61.94 percent a year ago. Ford dropped to 22.59 percent from 23.77 percent. Chrysler climbed to 12.31 percent from 11.52 percent. AMC had 2.92 percent, up from 1.62 percent, and VWoA sales accounted for 1.14 percent compared with 1.15 percent a year earlier.

Of the Chrysler Corp. makes, only Chrysler reported a sales gain for the period: Up 42.32 percent. Plymouth was down 16.15 percent, Imperial was down 7.55 percent and Dodge was down 0.89 percent.

Ford was down 12.45 percent, Mercury was up 0.88 percent and Lincoln was off 0.43 percent.

At GM, Buick was up 10.35 percent, Cadillac was up 8.75 percent, Chevrolet was off 23.64 percent, Oldsmobile was up 35.13 percent and Pontiac was down 32.69 percent.

Annualized sales based on the Feb. 1-10 total were moving at a rate of 5,873,000 for 1983.

Olds to drop V-8 diesel in California for '84

LOS ANGELES. — Oldsmobile will drop the 5.7-liter V-8 diesel from its lineup in California next fall as a result of that state's 1.0 grams per mile NOx standard for those power plants in the 1984 model year, according to James F. Mattox, the division's general sales manager.

Mattox said the 4.2-liter V-6 diesel, offered on Cutlass Ciera and Cutlass Supreme models, will continue to be sold in California. He noted that diesel sales in general are down and that the division is "building diesels in line with demand."

Mattox was here to kick off the "Great Olds Road Show Sales Rally," a six-week sales and promotional program that will feature six special-edition Oldsmobiles. The six models are the Firenza GT, 15th Anniversary Hurst/Olds, Omega ES, Ciera ES, Ciera Holiday Coupe and the Cutlass Supreme Special Edition.

The sales goal for those units is about 50,000 the remainder of the '83 model year, and Oldsmobile expects half to be the Ciera ES and Holiday Coupe.

Mattox said Oldsmobile sales are up in 1983 and that the division has posted its 13th consecutive 10-day sales gain over the previous year.

"In the last quarter, we saw a definite pickup in sales," Mattox said. "The trend has continued through February."

Oldsmobile's share of the total market was 10.1 percent in 1982, an alltime high.

"We're currently running at a 10.8-percent clip," Mattox said, attributing the success to "good product and a good dealer organization."

truck industry news

January retail sales jump 7.8 percent to 193,592

Retail sales of trucks in the U. S. in the first month of 1983 totaled 193,592, up 7.8 percent from 179,534 in January last year.

Leading the gain were light trucks, which were up 9.9 percent from January a year earlier to 180,070 units, compared with 163,835.

Imported compact pickups totaled 31,844 in January, up 10.7 percent from 28,762 a year earlier. Noncaptive imported pickups totaled 24,513, a whopping 38.9 percent from 17,650 a year earlier.

Mediums were up 8.7 percent at 3,431, compared with 3,157 a year ago, while heavies were down 18.23 percent to 12,842 from 10,501.

Chevrolet held onto the sales lead among the domestic makers, despite a 21.7 percent gain by Ford during January. Chevrolet sales totaled 65,200, up 3.9 percent from 62,771 a year earlier. Ford boosted its sales to 62,492 from 51,329 in January last year.

GMC sales in January totaled 16,579, up 9.9 percent from 15,088 a year earlier.

Dodge and Chrysler-Plymouth dealers retailed 12,076 trucks in January, down 36.7 percent from 19,084 a year earlier.

Sales of Jeep four-wheel-drive vehicles during January were 4,872, including 383 Scrambler pickups.

Sales of compact pickup trucks during January totaled 67,895, up 51.3 percent from 44,871 a year earlier.

January sales of domestic compacts — Chevrolet S-10 and Blazer, GMC S-15 and Jimmy, Jeep Scrambler, Ford Ranger and Volkswagen—totaled 36,051, up 137.9 percent from 16,109 a year earlier.

Sales of Japanese-built compact pickups were also up during January to 31,844 compared with 28,762 a year earlier.

Toyota dealers sold 9,664 pickups during January, up from 8,468 a year earlier. Datsun pickup sales totaled 8,934, up from 6,245.

• Mazda deliveries totaled 3,870, up from 1,739 a year earlier, while Isuzu sales rose to 1,518 from 1,198. Mitsubishi dealers sold 527 pickups under that name in January. They were not in the market a year earlier.

Chrysler Corp. dealers sold 1,533 Dodge Ram 50s and 99 Plymouth Arrows made by Mitsubishi, compared with 3,481 and 653 a year earlier.

Other captive sales totaled were Ford Courier, 4,852, compared with 4,228, and Chevrolet LUV, 847, compared with 2,750.

Volkswagen dealers sold 544 Rabbit pickups, down from 1,115 a year earlier.

Domestic trucks in inventory at the end of January totaled 519,308 units, about a 77-day supply.

Marines use propane in fuel-economy test

CAMP PENDLETON, Calif.— The Base Motor Transport at this Marine base has begun fueling 40 government-owned Chevrolet LUV trucks with propane gas as an experiment of alternate fuel consumption and economy.

Urban Astro

Mickey Gilley, whose night club became famous in Urban Cowboy, received an '83 Astro truck tractor for his concert tour from the Houston GMC dealers. Gilley is spokesman for GMC and will do promotional spots for GMC dealers throughout the year.

Depressed economy, devaluation of peso cited in poor fourth-quarter

Fruehauf posts loss, sees recovery

DETROIT. — Fruehauf Corp. has reported that while the depressed economy and resultant weaknesses in its major markets and the devaluation of the Mexican peso resulted in a fourth-quarter loss, a number of positive factors point to a return to profitability during the second quarter of 1983.

The fourth-quarter loss of $7.2 million, or 58 cents a share, on sales of $434 million, compares with net earnings of $0.8 million, or 6 cents a share, on sales of $514 million for the fourth quarter of 1981.

Fruehauf reported that the fourth-quarter loss included a $9 million charge after tax, resulting from current economic conditions in Mexico and translation losses arising from the devaluation of the Mexican peso.

A substantial reduction in inventories, primarily in the fourth quarter, resulted in partial liquidation of LIFO layers, reducing the net loss for the year by $6 million.

Fruehauf reported a net loss of $30.4 million for the year, or $2.47 a share, on net sales of $1.9 billion. This compares with 1981 earnings of $21.4 million, or $1.74 a share, on sales of $2.2 billion. This loss was the first that Fruehauf reported since 1958.

• Fruehauf's two major markets had their lowest volume in years. Industry shipments of truck-trailers were down 20 percent from 1981, the lowest since 1975. North American car and light-truck production was down 10 percent from 1981, the lowest since 1961.

Fruehauf Finance Co., which provides sales and lease financing to Fruehauf customers, reported earnings of $14.2 million and finance revenue of $88.6 million for 1982, compared with 1981's $16.1 million and $100.9 million, respectively. Prior to 1982, the finance arm of Fruehauf had set earnings and finance revenue records for 12 consecutive years.

Fruehauf also reported that within the last six weeks, it has paid off all of its domestic short-term debt. During this time, Fruehauf marketed two public long-term debt financings, totaling $72 million, and a $41 million convertible preferred stock issue.

Chairman and Chief Executive Officer Robert D. Rowan and President and Chief Operating Officer Thomas J. Reghanti cited activities in all major business segments that point to a recovery beginning in the second quarter:

1. Cost reductions in both the truck-trailer and automotive component segments that promise a return to profitability with minimum market improvement.

2. North American passenger-car and light-truck production schedules for the first quarter of 1983 are estimated to be up more than 30 percent from the first quarter of 1982.

3. A substantial increase of inquiries regarding new trailers, the highest in the past several years.

4. Liberalization in size and weight restrictions allowing the use of trailers up to 102 inches wide and 48 feet in length, plus government legislation allowing the use of doubles across the nation. Fruehauf is already equipped to turn out the new sizes.

5. Development of a number of new trailers and automotive components, including automotive electronics.

6. Installation by midsummer of a large new drydock at Jacksonville Shipyards to replace one returned to the U. S. Navy in mid-1982.

A delay in new trailer orders will adversely impact first-quarter results, according to the Fruehauf executives.

'Useful life' definition may be overhauled

WASHINGTON. — The EPA has scheduled a March 10 hearing concerning its plan to reduce the "useful life" definition for light and heavy-duty trucks.

The agency will hear comments about the plan at its Ann Arbor (Mich.) testing lab.

Under light and heavy-duty emissions regulations put into effect by the Carter Administration, the useful-life definition for light and heavy-duty trucks would have changed from 5 years/50,000 miles to the length of time to the first engine rebuild commencing with the 1984 model year.

Earlier this year, however, the Reagan Administration postponed until 1985 the effective date of more-stringent emission standards for light and heavy-duty trucks and presented two options regarding the useful-life definition.

For the 1984 model year, it proposed that manufacturers could use the old definition of useful life (5 years/50,000 miles), or for those already committed to full-life certification, the EPA would assign useful-life values, i.e. light-duty trucks average about 12 years and 120,000 miles.

For 1985 and later model years, the agency proposed another useful-life definition wherein it assigned years and mileage for light-duty trucks at 6 years/65,000 miles; heavy-duty gas engines at 5 years/60,000 miles or 1,800 engine hours; Class V heavy-duty diesels at 5/60,000 or 1,800 engine hours; Class VI heavy-duty diesel engines at 5/100,000 or 3,000 engine hours, and class VII/VIII heavy-duty diesel engines at 5/137,500 or 4,125 engine hours.

The March 10 hearing will commence at 9 a.m. The agency held a preliminary hearing Feb. 18 at the same location to clarify its proposals.

In that vein, the agency announced along with the hearing date and location that, in the event it adopts the extended half-life option, the high-altitude light-duty truck emission standards will be adjusted to maintain proportionality.

High-altitude HC would be 0.83 grams per mile and CO would be 12.3 grams per mile.

Kicking up its heels

Ford's Bronco II officially debuts March 10. The theme line, "It's a brand new kick," is being used to introduce the slimmer Bronco, with suburbia seen as an added sales market. J. Walter Thompson handles.

Honda turns to 3M

The role of tape in quality control

MARYSVILLE, O. — The gas tank looks perfect, but Bill W. Hedges, engineering coordinator at Honda of America, Inc., is not satisfied.

He shifts the motorcycle component so that the light falls from a slightly different angle, and points to a tiny speck in the two-tone metallic finish.

"That could be enough for us to reject a part," he says of the almost indetectable flaw.

Quality control is serious business at Honda. Honda products come off the line in perfect working order, everything fits and the finish is impeccable. Otherwise, the product does not go out the door.

The Marysville factory has unique features concerning quality. Hedges says that every associate in the facility is considered a QC manager with the responsibility for approving the motorcycles all the way down the line. The American plant competes successfully, in management's eyes, with the QC crew in the Japanese home factory. As part of this friendly rivalry, the Marysville plant recently improved its already impressive quality record by 20 percent.

With such rigid standards, the only way Honda can continue building products that can be competitively priced is to make certain that the job is done right the first time. Rejecting parts, and re-doing work can quickly add up to significant costs, Hedges says. The way to avoid that situation is to have highly trained and motived associates, while using materials which are subjected to extensive testing for quality and consistency, he adds.

"Because the paint job is so crucial in determining the overall appearance of the finished motorcycle, we pay particular attention to the paints and masking materials we use," Hedges says.

• Two industrial tapes made by 3M, Scotch Brand No. 231 Paint Masking Tape, and Scotch Brand No. 218 Fine Line Tape, have helped the manufacturer avoid potential problems in the paint finishing area, Hedges says.

The Marysville plant, which opened in 1979, builds three popular Honda models, the Aspencade, 1100 and CB. Depending on whether the motorcycle is outfitted with special fenders, fairings and other accessories, the amount of two-tone painted surface can vary somewhat. These generally involve a base color, an accent color and a decal which all must be applied with a great deal of precision.

The fine-line tape is applied to complex compound curves on the parts, while the standard masking tape is used where the extreme flexibility and sharp curve-holding capabilities of the fine-line tape are not needed.

"It's difficult to find a tape that will retain its memory bank when applied in a sharp curve," Hedges explains. "Most will pull away after a period of time. Because production schedules vary, the tape may remain on the component prior to painting anywhere from a few minutes to overnight. The No. 218 tape stays in place until we remove it."

• The fine-line tape consists of a specially extruded matte finish green polypropylene backing, coated with a pigmented rubber-resin adhesive designed for masking use. Its 4.5 mil thickness makes it ideal for the fine paint edges desired by Honda, Hedges says, because, when the tape is removed, a very thin edge, almost imperceptible to the touch, is left behind. Honda uses the ¼-inch width primarily, although some of the ½ inch wide fine-line tape is also applied.

The No. 231 paint masking tape used in the Honda paint masking machines, on the other hand, has a smooth crepe paper base saturated with a pigmented rubber-resin material that helps prevent solvent and moisture from soaking through. Its adhesive has the same properties as the fine-line tape.

The tape is used either alone or with some masking paper for many different Honda parts. So exacting are the company's standards that masking is even done inside parts, so that overspray through holes will not coat the inner surfaces. Honda uses the one-inch and two-inch widths of the tape, with some testing under way on the four-inch version.

Hedges likes the properties of these tapes. He says they do not leave an adhesive or film on the part, which is important because such contamination can interfere with additional painting steps to follow.

"When we remove the tape, we like everything to come up, and nothing left behind to be cleaned off manually," he points out. "They have just the right amount of adhesion. Most other tapes we tried or considered were either too strong or not strong enough."

When some tapes are pulled, wrinkles occur, he continues, causing paint chips which then fall on the part. This is especially true of some lacquer-based paints. The 3M tape pulls right off without chipping. The tapes can also be used over fresh lacquer or enamel, with little risk of leaving an imprint, Hedges says.

The fine line tape's thinness contributes to the minimum edge buildup, and the matte finish backing holds paint securely for less flaking and paint running, he continues. It sticks instantly, so less labor is involved in applying it to surfaces to be painted. The crepe masking tape has many of the same features, and for a paper tape has excellent sliver and moisture resistance.

Much masking is done by hand, Hedges says. The easy hand tear of the 3M tapes eliminates any need for a knife, which, in turn, does away with extra time-consuming steps.

"Because we try very hard to do things right the first time, we conduct extensive testing whenever we try new materials," Hedges says. "What we look for are the qualities and consistency that we need for a given job, availability and a realistic price."

Cowboys score with GMC dealers

Doug Cosbie, far left; Randy White, center, and Drew Pearson, far right, of the Dallas Cowboys football team, joined Tra-Tech Corp. personnel Bob Isham, center left, president, and Phil Wetherby, right center, national sales manager, in welcoming GMC dealers to the Texas Stadium for a tour of the stadium with the players and the unveiling of Tra-Tech's limited edition vans. The event was part of a two-day driveaway hosted by Tra-Tech, of Gardena, Calif.

Year-to-date production 50 pct. ahead of 1982

Week's car output reaches 129,682

By Patricia Hoffman
Staff Writer

The resumption of output at two assembly plants and overtime schedules at General Motor's Flint facility and Chrysler Corp.'s St. Louis point pulled last week's domestic car production up from the previous week's total. Output also was well above that of the comparable 1982 period.

Last week the makers scheduled 129,682 cars, a 9.88 percent gain over 118,025 built the prior week, and up 24.25 percent from last year's 104,376 units.

Breakdown for the week by company was: GM, 57.11 percent; Ford Motor, 26.44 percent; Chrysler, 12.15 percent; American Motors, 2.44 percent; Volkswagen of America, 1.51 percent and Honda, 0.35 percent.

To date, the manufacturers have produced 771,331 cars, a 50.62 percent gain over the 512,111 units built in the same period in 1982.

The Eagle line at AMC's Kenosha plant was idle last week (Feb. 14) due to overstocked inventory. Alliance production was not affected.

Ford's San Jose point returned last week following two weeks of downtime for inventory control.

Also back following inventory adjustment downtime was GM's Willow Run facility. Operations were idled there Feb. 7.

GM's Flint plant worked six days last week, while Chrysler's St. Louis facility operated a daily nine-hour shift.

The Chrysler Jefferson and Newark points worked two daily nine-hour shifts for the third consecutive week last week.

All other assembly plants were reported working regular eight hour shifts.

Truck production moves upward; 45,604 for week

The return of Ford Motor's Louisville facility and overtime at General Motors' Detroit point boosted last week's domestic truck production 13.61 percent from the previous week's total.

Output last week was targeted at 45,604 units, up from 40,140 built the previous week, and an 8.40 percent gain over the 42,070 assembled in the comparable period last year.

Year-to-date the makers have produced 250,270 trucks, up 9.54 percent from last year's 228,480.

The senior Jeep line at American Motors' Toledo facility was down last week (Feb. 14) due to overstocked inventory.

Also idle last week was one line at International Harvester's Springfield plant. Full operations will resume there Feb. 28.

Saturday overtime was scheduled last week at GM's Detroit facility.

The GM Lordstown and St. Louis plants worked Saturday overtime for the second week last week.

Chrysler Corp.'s Warren plant operated a daily nine-hour shift for the fourth straight week last week.

Volkswagen of America's Westmoreland facility, idle since last June 28, is scheduled to resume production today (Feb. 21).

Second-shift operations are slated to resume next week (Feb. 28) at the GM St. Louis plant. About 900 workers will be called back from indefinite layoff.

Beginning March 11, the GM Lordstown facility will increase van output from 24 units an hour on two shifts to 29 an hour on two shifts. About 300 workers will return.

Break-even point is nearer IH chiefs tell shareholders

By Roger Rowand

CHICAGO.—Executives at International Harvester Co.'s annual meeting in the auditorium of the Art Institute here displayed their own picture of restrained optimism.

They exhibited conservatively tinted forecasts that a break-even point is growing more reachable for the troubled firm.

Louis W. Menk, chairman, told the 485 shareholders present that IH continues to tighten operations around a core of North American truck business and agricultural equipment business in North America and Europe.

The most solid good news for holders related to cash.

Menk said disposition of non-core assets and other moves have improved the company's cash position. At Jan. 31, IH had $225 million in cash and marketable securities.

After the meeting, Menk told Automotive News, "That's probably a couple hundred million ahead of our worst cash position."

Menk said, "Our cash forecasts indicate no major problems for the balance of 1983."

President Donald D. Lennox added, "Our cash flow will be sufficient to do without further concessions from banks or suppliers."

Menk said cash flow was boosted by a reduction in inventories to $1.2 billion at the close of 1982 from $1.6 billion at year-end 1981.

Lennox was smiling and cheerful but with restraint. He said truck sales have been depressed by deregulation of the truck industry with resulting intense competition, high interest rates and postponed buying because of new federal laws.

He predicted an increase in truck sales this year of six to eight percent. In a Q & A portion of the meeting, Lennox said none of the company's major businesses is for sale.

Lennox said, "We think we are turning the company around, provided the economy turns around as is being predicted widely."

In its first fiscal quarter ended Jan. 31, IH had a loss of $165 million from continuing operations on sales of $722 million. The comparable year-earlier loss was $276 million on sales of $891 million.

The 1983 loss was eased a bit by extraordinary income of $54 million that arose with acceptance of an exchange offer by some IH bondholders.

Truck sales were $470 million in the first quarter.

3 plants return; Canadian output rises for week

The return of Ford Motor's Oakville and St. Thomas facilities and American Motors' Brampton point helped boost last week's Canadian auto production far above the previous week's total.

Last week, the car makers estimated 23,721 units, a 73.32 percent gain over the 13,686 built the previous week, and up 66.36 percent from 14,259 units assembled in the comparable 1982 period.

So far this year, the manufacturers have produced 125,083 cars, a 35.44 percent gain over last year's 92,356.

Truck output last week, marred by a strike at International Harvester's Chatham plant, was 10,000 units, down 1.83 percent from 10,186 built the previous week. Output was also down 7.96 percent from 10,865 trucks completed in the same week last year.

Year-to-date, the truck makers have finished 60,961 units, a 14.42 percent gain from 53,276 at this time in 1982.

Only one truck plant was reported idle last week. International Harvester's Chatham point was down due to a strike. Operations were halted there following the morning shift on Feb. 7.

The Ford Oakville and St. Thomas points, plus AMC's Brampton facility returned last week following downtime due to overstocked inventory.

All other car and truck plants were reported working last week.

Car production of 131,687 is best since June

By Patricia Hoffman
Staff Writer

Operations at all car facilities and Saturday overtime at five assembly points boosted last week's domestic auto production to its highest point in more than eight months.

Last week, the manufacturers produced an estimated 131,687 cars, up from the previous week's 130,572 and up 45.50 percent over last year's 90,509 units.

The total was the most for any week since the period ended June 19 of last year when the makers assembled 136,630 units just before model-changeover downtime began at most assembly plants.

Breakdown for last week by company was: General Motors, 55.71 percent; Ford Motor, 26.13 percent; Chrysler Corp., 13.18 percent; American Motors, 3.01 percent; Volkswagen of America, 1.60 percent, and Honda, 0.37 percent.

Year-to-date, there have been 903,908 cars assembled, a 49.98 percent gain over 602,673 built in the same period last year.

Assembly of AMC Eagles resumed last week (Feb. 21) at the company's Kenosha plant following a one-week shutdown for inventory control.

Saturday overtime was scheduled last week at GM's Doraville, Janesville and Lansing points, plus Ford's St. Louis and Wixom facilities.

Overtime schedules continued for the fourth consecutive week

Alliance X-37

AMC/Renault to add hatchbacks, diesel

Unofficial photo shows the new five-door hatchback version of the Renault Alliance which, along with a companion three-door hatchback, will be built at AMC's Kenosha (Wis.) plant. Known as the X-37 series, the hatchbacks may wear a badge other than Alliance when they bow this fall. At the same time, AMC will introduce a 1.6-liter diesel engine to its Alliance line and will drop its aging Concord and Spirit lines.

GM-Toyota venture needs much work to wrap up details

By Matt De Lorenzo
Los Angeles Reporter

FREMONT, Calif. — The recent signing of a memorandum joining General Motors and Toyota in a venture to produce cars at the idle GM assembly plant here opens the door to further negotiations and legal maneuvering by the companies before the plant can be reopened.

The agreement calls for production of some 200,000 subcompact cars per year beginning as early as possible in the 1985 model year. The car will be sold by Chevrolet dealers.

At the signing ceremony, reporters hammered away at the question of whether the workers would be represented by the UAW, yet, far more pressing questions, such as antitrust ramifications and selection of the joint venture's management and suppliers have to be answered before the first worker is hired.

GM Chairman Roger Smith was optimistic about the two firms receiving Federal Trade

Teamster pact unlikely at Fremont. Page 2

Commission approval to go ahead with the project.

"We know what the antitrust laws are and we know what to do and what we can't do," Smith said. "We worked from day one to make sure that this would fit under the Federal Trade Commission jurisdiction and we're OK on it.

"We're going to the FTC with the memorandum of understanding we signed today and lay it out to them. They'll be the ones that will pass on it. I'm confident — we've been working on it (the joint venture) for a year with (antitrust laws) in mind and I'm sure we're all right."

• Edwin Harper, a special assistant to President Reagan, was on hand to praise the venture as a sign that the auto industry is on its way back. However, he stopped short of giving the agreement full White House blessing.

Similarly, a letter from Commerce Secretary Malcom Baldrige was distributed at the ceremony hailing the agreement as, "a significant development for the auto industry in the U. S. and the world."

The letter went on to say, "Your production facility in

Logan Manufacturing on sale for $7.5 million

DeLorean seeks 'immediate cash'

By Edward Lapham
Senior Editor

John DeLorean is in the process of liquidating more of his non-automotive business holdings, Automotive News learned last week.

The latest business to go on the block is the Logan Manufacturing unit of DeLorean Manufacturing Co. Automotive News sources said the asking price for Logan is $7.5 million, with the only acceptable terms reported to be "immediate cash."

One of the interested parties is Canadian-based Bombardier, Ltd., which reportedly has made an offer to purchase the Logan (Utah) manufacturer of tracked vehicles.

Helen Crevier, spokesperson for Bombardier, confirmed that the company is planning to expand but said it only has "been studying" the Utah company.

"It is just one of many projects they are looking at as part of a plan to expand," she said.

Bombardier, generally cited as the progenitor of the snowmobile industry with its Ski-Doo models, has expanded into other areas which include tracked vehicles, rail cars, buses and military vehicles.

The U. S. Federal Trade Commission recently ruled that the Quebec provincial government improperly subsidized Bombardier through less-than-market value export financing loans. The ruling came as a result of Bombardier's successful bid to supply transit vehicles to New York.

The FTC said Budd Co., another bidder on the project, was injured by the trade infraction.

• Automotive News also learned that a Logan Manufacturing management group, which has worked there since before DeLorean acquired the company from Thiokol Corp., is interested in a leveraged buyout.

Unlike some other DeLorean ventures, the Logan operation is said to be "quite profitable." It produces tracked vehicles, including those used to groom ski slopes, at a rate of about one a day.

Logan, which is non-union, is considered a "cash cow." That is, it is a mature company which has few major capital needs and generates short-term profits.

Also on the block is Composite Technology Corp., a subsidiary of DeLorean Motor Co. The subsidiary, which was to have produced ERM body panels for the DeLorean sports car, filed for Chapter 11 bankruptcy status on the same day DMC filed.

DeLorean officials have been trying to sell CTC since last June. The search for a buyer for Logan began last autumn.

Logan has been a focal point in certain investigations of John DeLorean's financial holdings, including investigations by the U. S. Internal Revenue Service. Most questions being asked concern the 1979 acquisition of Logan by DeLorean and the ultimate source of the funds used to buy the company.

John DeLorean owns CRISTINA, a Nevada corporation. CRISTINA owns DeLorean Manufacturing Co., formerly the John Z. DeLorean Corp., of which Logan Manufacturing is a unit. DeLorean Manufacturing owned more than 80 percent of

Production changes at Cadillac/Olds home plants

DETROIT.—Beginning in the 1984 model year, Cadillac and Oldsmobile will alter their production lineup. Cadillac will build the rear-wheel-drive Oldsmobile Delta 88 at its home plant in Detroit. It will also continue building the RWD Fleetwood Brougham. Production of the new front-wheel-drive Cadillac deVille and Fleetwood will be switched from that plant to the new GMAD facility in Orion Township, Mich. About 1,200 workers will be laid off by Cadillac.

Oldsmobile will continue building the Delta 88 for 1984 as will the GMAD plant in Fairfax (Kansas City). It will stop producing the car in the spring of 1984 to tool up for production of GM's new FWD 1985 passenger cars. The 1984 FWD Olds 98 will be built at Orion and its new sister plant in Wentzville, Mo.

New minivan on the Japanese market is this diesel-powered Toyota Hi Ace Super Custom. The eight-seater has squared-off styling, with increased glass area and sun and moon roofs.

Japanese cut exports in '82 for first time

WASHINGTON. — Japan's exports of passenger cars, trucks and buses fell 7.6 percent in 1982 — the first year-to-year decline since Japanese auto companies began exporting in the early 1950s, the Japanese Automobile Manufacturers Assn. reported.

The total was 5,590,473 in 1982 and 6,048,447 in 1981.

December was the 17th straight month of worldwide export decline. The total was 461,062 in December, down 4.5 percent from 482,536 a year earlier.

Overall vehicle exports to the U. S. fell 8.6 percent in 1982 to 2,105,519 units from 2,304,814 the year before.

The December decrease of vehicles which Japanese makers sent to the U. S. was 8.3 percent, from 177,365 in 1981 to 163,224 in 1982.

Passenger-car shipments to the U. S. were down 4 percent, from 1,761,043 units in 1981 to 1,691,806 units in 1982, while truck exports were down a sharp 23.9 percent, from 543,411 to 413,713.

In December, 1982, there were 134,378 passenger cars exported to the U. S., up 4.4 percent from the 128,707 during the year-earlier month. Truck exports continued to drop substantially. The December total from Japan was 28,846, down 41.4 percent from 49,258 in 1981.

Worldwide car exports were up 4.5 percent from 1982 at 3,770,036 vs. 3,946,542 in 1981. For December those figures were 317,382 in 1982 and 315,071 a year earlier — a 0.7 percent increase.

Truck exports slumped to 1,773,547 in 1982, down 12.1 percent from 2,017,521 in 1981. During December, truck exports decreased 13.5 percent to 140,859 from 162,832 in 1981.

• Japan exported 46,890 buses last year — a 44.4 percent decrease from 84,384 the year earlier. In December, 1982, 2,821 buses were exported — a 39.1 percent decrease from 4,633 in 1981.

Japanese vehicle production in 1982 was 10,737,034, down 4 percent from 11,179,962 in 1981. This was the first year in which production declined since the 1974 oil crisis, JAMA said.

Vehicle output in December was down 6.2 percent from 913,-

58th year — No. 4956

AUTOMOTIVE NEWS (ISSN 0005-1551) is published weekly except semiweekly the fourth week in April at 965 E. Jefferson Avenue, Detroit, MI 48207. Second-class postage is paid at Detroit, MI and at additional mailing offices. Postmaster: Send address changes to AUTOMOTIVE NEWS, Circulation Department, 740 Rush Street, Chicago, IL 60611.

Futuristic safety car

The Nissan Research Vehicle II (NRV-II) applies state-of-the-art technology to automobile safety. The car is built into a Nissan Sentra body and has many safety features including a television tube that plots out, and gives, directions; reinforced side panels; a radar cruise control system and a monitor that warns the driver of drowsiness.

It talks to driver, protects him and shares tasks

Nissan offers futuristic safety car

CHICAGO. — A car that gives vocal route instructions, warns the driver of drowsiness and keeps its onboard radar fixed on maintaining a proper driving distance is on display at the Nissan/Datsun exhibit at the Chicago Auto Show at McCormick Place.

Conceived and constructed by company engineers in Tokyo, the Nissan Research Vehicle II (NRV-II), was designed as an experiment in blending together electronic high technology with safety advancements.

The vehicle, built within the framework of a Nissan Sentra body structure, is also equipped with a methanol-fueled, turbocharged engine, a computer-directed voice dialog system which recognizes as many as 26 words, a drive information system that provides vocal route guidance and a color liquid crystal display panel which indicates 22 items including radar auto cruise control, drowsiness warning indicators, fuel level, speed, and so on.

"The NRV-II was built to improve the overall safety of the motor vehicle," said Harutoshi Tsujimura, senior product engineer, vehicle research laboratory, Nissan, Ltd. "The project was constructed to reduce the workload of the driver, improve accident-avoidance performance and enhance the protection of the occupants. Modern technology has helped us make these aims approachable."

In the car's radar-cruise device, a microwave generator at the heart of the NRV-II's radar system sends out signals at the speed of light and receives them after they're bounced off the vehicle ahead. Utilizing this data, the radar auto-cruise device measures the distance to the vehicle ahead and factors in weather conditions and the NRV-II's speed to set the vehicle at the appropriate following distance. This distance is then displayed on the vehicle's instrument panel. If the NRV-II is following too close, the cruise control device is disengaged and a voice warning is sounded.

The NRV-II's voice dialog system, as well as recognizing 26 words of instruction from the driver, is capable of giving audible warnings and instructions. Vocal commands can be issued to the drive information system, speed warning monitors, side mirrors and the interior light. The system can speak to the driver for up to 50 seconds.

It can warn the driver about following too closely and drowsiness as well as provide directions to a programmed destination.

• The Drive Information System operates through the use of a computer and a cathode ray tube terminal mounted in the NRV-II's console. Before a trip begins, the starting position and destination are designated on the display's video map and the prospective route input by voice.

This system displays the route map in transit and provides audible directions through the voice dialog system and warns the driver of potentially hazardous vehicle conditions.

The instrument panel uses three large liquid crystal display (LCD) panels which contain 22 pieces of information, including radar auto cruise, drowsiness warning indicators, speed and fuel level.

The NRV-II engine is a 1,300-cc Nissan E13ET model modified to burn methanol, a potential alternative fuel. Its relatively high compression ratio, 11:1, is made possible by the high anti-knock characteristics of methanol.

The turbocharger-provided manifold pressure of 7¾ pounds combines with the other characteristics of the engine to propel the 1,900-pound car to 61.1 miles per hour in 7.7 seconds.

Many of the NRV-II's frequently used switches are located in a non-rotating pad at the center of the steering wheel. A multiplex fiberoptics transmission system is arranged in loops to allow two-way transmission and to alleviate signal loss due to a fiber break.

The 13-inch, fiber-reinforced plastic road wheels reduce the NRV-II's sprung weight and thus improve both its economy and ride. The four wheels weigh 27.56 pounds less than comparable steel wheels and 17.64 pounds less than aluminum wheels.

A plastic fuel tank that weighs 40 percent less than a conventional tank and holds 8 percent more fuel has been installed on the NRV-II. The tank has a multi-layer design and is coated with a barrier resin to prevent the fuel permeation. The resin is effective against all fuel types.

The plastic windshield weighs 30 percent (18.74 pounds) less than glass. The surface has been treated with a "hardener" and is very resistant to damage.

An automatic wiper system optically senses rain on the windshield and adjusts the wip-

Banking on new products

Ford sees no need to reduce capacity

By Marjorie Sorge
Labor Editor

Ford Motor Co. plans to take a bigger share of the market with its new Cougar, Thunderbird, Topaz and Tempo and plans no significant plant closings to reduce capacity, according to Peter J. Pestillo, Ford labor relations vice president.

"We've finally come to market with the products we've been waiting for," he said. "So I would expect us to have a significantly larger share of what could become a potentially larger market."

Many observers have thought Ford had too much capacity and would begin integrating plants in a fashion similar to General Motors, which has merged several facilities. But Pestillo said most Ford plants are not interchangeable or redundant.

In an interview with AUTOMOTIVE NEWS, he said there is a possibility of adding a second shift at Batavia, Ill., source of the automatic overdrive transaxle. Second shifts have already been added at the big-car plants.

The only plant which has too much capacity is Cleveland, source of the 302- and 351-CID V-8 engines, but not enough to warrant closing any part of that facility, he said.

Pestillo also said Ford plans to hit health-care costs hard again when contract talks begin next year and expects the union to press for a pre-paid legal services plan similar to that currently in effect at GM.

The current agreement expires Sept. 14, 1984, and was negotiated about a year ago. That package saved Ford about $1 billion in wages and benefit payments and gave workers more voice in the company plus moves toward guaranteed jobs and income.

• Now, a year after the pact was signed, Pestillo said improvements have been made which can indirectly be passed on to the consumer. While they are not in the form of price reductions, the benefits are in better quality, he said.

According to Pestillo, 1983 quality figures are 59 percent above 1980 figures. The 1982 quality reports were 48 percent above 1980, he said. Those figures are measured through dealer warranty claims.

Also, the new 4x4 Ranger sported the best quality introduction in Ford's history, Pestillo said, with 55 percent of the vehicles coming off the line recorded as perfect.

According to Pestillo, Ford's improved quality and new products should improve its market share. But one question hanging over the heads of both Ford and Chrysler is the impact the new GM-Toyota car will have on the market in 1984-85.

"I think the question is whether they're going to use this as the substitute for the Chevette," Pestillo said. "The question then becomes, is GM abandoning U. S. production as its small-car strategy? You certainly wonder what's coming."

Ford is still reviewing the situation, he said, but "we really don't know the deal, we don't prowl through their files."

"There is always the prospect that if this is that attractive a venture, then maybe there is an opportunity for us," he said.

He said possible joint ventures and purchases should be reviewed by both Ford and Chrysler as ways to meet that part of the market. These could be on a project basis, not a full corporate merger, he said.

• Meanwhile, Pestillo indicated that next year's contract talks will again be loaded with health-care reduction plans. While Ford and the UAW have done specific things such as mandatory second opinions at some locals, the cost still continues to rise, he said. It costs

U. S. Trade unit to gather data on auto industry

WASHINGTON. — The International Trade Commission, at the request of the House Ways and Means Trade subcommittee, will gather monthly data on the U. S. auto industry.

Monthly reports will include data on production, imports, exports, inventories, retail sales, price adjustments and employment.

They will also include retail prices of selected comparable Japanese and U. S.-produced automobiles on a monthly basis.

'82 total is 7,754,342; December is top month

Car registrations lowest since 1963

By Jenny L. King
Staff Writer

New-car registrations in the U. S. claimed their best total of the 1982 calendar year in December, but the final count for the 12 months was lowest since 1963, according to figures compiled by R. L. Polk & Co.

In December, 765,461 registrations were placed on the cumulative books of 49 states (they are not available for Oklahoma), up 12.96 percent from 677,639 in

Table on Page 64

November, and up 25.17 percent from 611,520 in December, 1981. It was the best monthly total since March, 1981, when the tally read 848,967.

Total registrations in 1982 numbered 7,754,342, down 8.17 percent from 8,443,919 the preceding year, and down 11.49 percent from 8,760,937 in 1980. Registrations in 1982 were lowest since 1963 when the sum was 7,556,717.

Domestic registrations reached 5,461,074 in 1982, a decline of 9.17 percent from 6,012,239 in 1981, and a drop of 13.20 percent from 6,291,757 in 1980.

Import registrations in 1982 accounted for a record 29.57 percent of the market, erasing the 28.80-percent record set in 1981. New imports numbered 2,293,268, down 5.69 percent from 2,431,680 a year earlier.

December's import figure was 220,075, up 19.42 percent from 184,282 in 1981. New imported cars captured 28.75 percent of the December market, down from a record 30.14 percent the preceding year.

General Motors and Ford Motor Co. improved their shares of the market from 1981 positions in December. American Motors, Chrysler Corp., the imports and miscellaneous domestics all lost ground.

GM was up 0.28 percentage points, to 44.54 percent from 44.26 percent, while Ford climbed 1.86 percentage points, to 16.82 percent from 14.96 percent. Chrysler was down 0.02 percentage points, AMC dropped 0.70 percentage points, imports were off 1.39 percentage points and miscellaneous domestics fell 0.03 percentage points.

Of the domestics alone, GM earned 62.51 percent of the market in December, down from 63.34 percent; Ford climbed to 23.60 percent from 21.42 percent; Chrysler had 12.63 percent, down from 12.91 percent; AMC slipped to 1.23 percent from 2.26 percent, and miscellaneous domestics dropped to 0.03 percent from 0.07 percent.

The market class breakdown uncovered a shift from smaller to larger, with subcompacts, compacts and imports giving ground to intermediates, standard-size and luxury class passenger cars.

Subcompacts accounted for 10.42 percent of the December market, down from 1981's 14.08 percent (79,794 vs. 86,131). Compacts dropped to 17.10 percent from 18.56 percent (130,863 vs. 113,507). Imports had 28.75 percent, down from 30.14 percent (220,075 vs. 184,282).

Intermediates jumped to 25.54 percent from 20.44 percent (195,509 vs. 124,986). Standard-size domestics went to 12.01 percent from 10.78 percent (91,913 vs. 65,904). Luxury models claimed 6.18 percent, up from 6.00 percent (47,317 vs. 36,710).

In the domestics-only market in December, subcompacts accounted for 14.63 percent, compacts had 23.99 percent, intermediates had 35.85 percent, standards had 16.85 percent and luxury cars had 8.68 percent.

A year earlier it was subcompacts at 20.16 percent, compacts at 26.57 percent, intermediates at 29.25 percent, standards at 15.43 percent and luxury models at 8.59 percent.

• In calendar year 1982, Ford Motor Co. and the combined imports increased their shares of the market. Ford was up 0.36 percentage points, to 16.68 percent from 16.32 percent, and the imports gained 0.77 percentage points (to 29.57 percent from 28.80 percent).

GM was down to 44.02 percent from 44.50 percent, a difference of 0.48 percentage points. Chrysler slipped 0.15 percentage points, to 8.61 percent from 8.76 percent; AMC was down 0.49 percentage points, to 1.09 percent from 1.58 percent, and miscellaneous domestics were down to 0.03 percent from 0.04 percent.

Among the U. S. auto makers in 1982, three were down in domestic market shares, one was up and one was unchanged. Ford climbed to 23.69 percent from 22.92 percent; GM remained at 62.50 percent; Chrysler dipped to 12.22 percent from 12.30 percent, and AMC was down to 1.54 percent from 2.22 percent.

For the year, the shift from smaller to larger cars and to imports dominated. Imports claimed a record 29.57 percent of the total market in 1982, up from 28.80 percent in 1981. U. S. subcompacts dropped to 12.14 percent from 15.42 percent. Compacts were down to 15.72 percent from 20.53 percent.

Intermediates represented 25.13 percent, up from 20.46 percent, standard-size cars had 12.10 percent, up from 9.99 percent, and luxury models were up to 5.34 percent from 4.80 percent.

Where Auto Market was in December

	Total Sales	Pct. of Total
SUBCOMPACT	100,673	15.93
COMPACT	105,326	16.67
INTERMEDIATE	128,044	20.27
STANDARD	74,053	11.72
LUXURY	39,952	6.32
IMPORT	183,827	29.09
TOTAL	631,875	120.00

GM and Toyota make it official

After a year of negotiations, General Motors Chairman Roger Smith, left, and Toyota Chairman Eiji Toyoda shake hands to seal the manufacturing agreement between their firms. They'll build a subcompact car at GM's Fremont (Calif.) assembly plant. It will be sold by Chevrolet dealers beginning in the 1985 model year. Story on Page One.

Auto leaders join in plea for U. S. fiscal restraint

It is highly unusual for auto industry executives to step into the brilliance of the political spotlight. Surprisingly, however, several of them are doing it collectively these days.

They are active in a business-backed drive to influence Congress and President Reagan. They are appealing to Washington for new thinking on the politically hot issues of budget deficits and threats to the solvency of Social Security.

Philip Caldwell, chairman of Ford Motor Co.; Lee A. Iacocca, chairman of Chrysler Corp., and W. Paul Tippett, chairman of American Motors, are in the group.

It was drawn together as a committee by six former Treasury Secretaries including John B. Connally, a Ford director, and W. Michael Blumenthal, chairman of Burroughs Corp., Detroit, and former chairman and president of Bendix Corp.

Principal tool in the campaign is a large advertisement which began appearing in such publications as the New York Times Jan. 20.

The two-page ad is headlined, "To the President and Congress, a bipartisan appeal to resolve the budget crisis." Its text is consistent with what the industry leaders have said in the past on the topic of federal fiscal policy.

Other auto industry executives among the approximately 300 corporate officers signing the ad are: Harry J. Bolwell, chairman of Midland-Ross Corp.; John G. Breen, chairman and president of Sherwin-Williams Co.; E. Mandell de Windt, chairman of Eaton Corp., and Joseph P. Flannery, chairman of Uniroyal, Inc.

Also on the list are W. H. Krome George, chairman of Aluminum Co. of America; Alexander F. Giacco, chairman of Hercules Corp.; Edward L. Hennessy Jr., chairman of Allied Corp.; Thomas F. Russell, chairman of Federal-Mogul Corp., and Henry B. Schaact, chairman of Cummins Engine Co., Inc.

Detroit could lead world in quality, Caldwell says

DETROIT — With the proper management of people as a key ingredient, Detroit has the power to become the "quality capital" of the world, Philip Caldwell, Ford Motor Co. chairman, said here.

"When we achieve that distinction, our economic pie will grow, and once again there will be more — not less — for everyone," Caldwell told the Booker T. Washington Business Association, which presented him with its Brotherhood Award.

To illustrate what he termed "a particularly important facet of management — the management of human beings," Caldwell cited Ford's experience with Employe Involvement.

"A few years ago it became obvious to me that we at Ford were under-utilizing this important human resource," Caldwell said. "Too many of our men and women were being asked to use only their hands and their backs . . . They gave us all that was expected, and, under the circumstances, it was all they were encouraged to contribute."

In 1979, Caldwell said, the company announced a policy that initiated Employe Involvement.

"The policy recognized that imagination, ingenuity and creativity are widely distributed throughout our work force, as are a sense of dedication and a desire to contribute to our overall effort," he said.

Caldwell said that Employe Involvement groups were established in Ford plants, engineering and research centers, offices and sales operations. He added that self-selected groups of employes were encouraged to discuss what they could do to work more efficiently and more productively, while aiming for improved product quality and increased job satisfaction.

"We gave individual employes the right to stop an assembly line if quality was not right," Caldwell said. "Long before they were ready for production, we brought prototypes of new vehicles into the plants that would make them, and we asked employes for their ideas on how they could be made better.

"We changed shifts and reordered break-times, and we have achieved the highest average quality level in our products of any U. S. auto manufacturer — and by a wide margin. When we renegotiated our agreement with the UAW last spring, we made Employe Involvement an integral part of our new understanding."

Caldwell said, "I have been heartened by this new phase of management, this new kind of involvement . . . The viability of the company has been strengthened and our jobs have been made more secure.

"But even more fulfilling is the feeling of excitement in our plants when we manage properly our most precious resource —human beings."

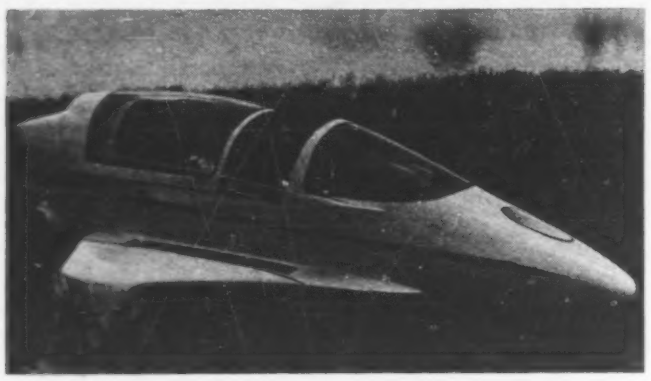
Automotive News analysis of new-car registrations based on R. L. Polk & Co. statistical report.

Cressida wheels sourced in U.S.

TORRANCE, Calif. — Toyota has begun purchasing styled wheels from Rockwell International for use as original equipment on 1983 Cressida models.

Rockwell will ship 4,000 to 5,000 wheels per month to Toyota's production facilities in Toyota City, Japan, for factory installation on the Cressida. The wheels are produced at Rockwell's La Mirada (Calif.) plant.

In 1982, Toyota purchased $56 million in U. S.-sourced production components and materials, up from $55 million in 1981.



Product of Tomorrow

The Litestar Autocycle, introduced by Tomorrow Corp. at the Chicago Auto Show, is a combination of an auto and a cycle. It is made mostly of rustproof urethane and weighs 575 pounds.

Vehicle debuts at Chicago show

Autocycle production due in April

ST. LOUIS. — It's a car. It's a motorcycle. It's a product of Tomorrow.

The Litestar Autocycle, a combination of an auto and a cycle, is being introduced by Tomorrow Corp. The vehicle is said to get 102 MPG at 55 MPH, 73 MPG at 100 MPH and 75-plus MPG in the city.

The autocycle, which resembles Chevrolet's futuristic Astro III, ranges in price from $3,995 to $7,500.

Already 11,000 orders, including $400 deposits, have been received, said Stan Leitner, Tomorrow management consultant.

The vehicle has been displayed only at a few fairs, including Chicagofest. Leitner said that its appearance at that festival resulted in requests by 30,000 people for additional information.

The Litestar Autocycle made its official debut at the Chicago Auto Show.

The first models, to be produced by Scranton (Ia.) Mfg. Co., will be coming off the line in mid-April, Leitner said.

The vehicle is licensed as a motorcycle and is powered by a Honda engine, similar to that in a 250cc cycle.

The brainchild of aeronautical engineer James Brede, the Litestar is made mostly of rustproof urethane and weighs 575 pounds.

The two-seater is 16 feet long and 6 feet wide, has a maximum speed of 120 MPH and accelerates from 0 to 60 MPH in 9.5 seconds.

Leitner expects to sell about 50,000 units the first year. In the second year, he plans to deliver 100,000 vehicles.

Litestars are being sold through a network of distributors and dealers.

The fully-enclosed autocycle operates primarily on two wheels, at the front and rear, and is assisted by two smaller wheels, or outriggers, which flare from the side and provide stability.

Blood alcohol test refusal can be used as evidence

WASHINGTON. — Using an accused drunk driver's refusal to submit to a blood alcohol test as evidence against him in court does not violate the defendant's constitutional rights, the Supreme Court has ruled 7-2.

The court's decision is seen as a major victory for leaders in the current nationwide crackdown on drunk driving.

If the defendant's refusal to take the test cannot be mentioned at a trial, argued prosecutors and representatives of anti-drunk-driving organizations, the jury assumes that the defendant took a blood alcohol test and passed it.

Attorneys on the opposing side, however, argued that using a defendant's refusal to take such a test as evidence against him is the same as using a forced confession of murder as evidence against him.

The South Dakota Supreme Court, from which the case came to the U. S. Supreme Court on appeal, ruled that using the defendant's refusal as evidence is forcing him to testify against himself.

But Judge Sandra Day O'Connor, writing the majority decision for the high court, ruled that drunk driving and murder cases are not comparable in this instance. A blood alcohol test is not a form of interrogation, O'Connor said, and therefore a defendant has no constitutional right to refuse it.

"We recognize, of course, that the choice to submit or refuse to take a blood alcohol test will not be an easy or pleasant one for a suspect to make," O'Connor said. "But the criminal process often requires suspects and defendants to make difficult choices."

The dissenting justices, John Paul Stevens and Thurgood Marshall, held that the South Dakota Supreme Court based its decision on the state constitution, and the U. S. Supreme Court should not interfere.

Test results still not known on two '82s

WASHINGTON.—As the midpoint of the 1983 model year approaches, NHTSA has only two 1982 models whose high-speed test results are not yet made known.

These are the Chrysler LeBaron and the Lincoln Continental.

Results from the Chevrolet Cavalier and the Toyota Corona — preliminary but expected to be validated by today—are respectable but not spectacular. Both vehicles passed three safety standards: Windshield retention, windshield non-intrusion and fuel-system integrity.

Results from a 35-MPH into-barrier test (about one-third more energy involved than at 30 MPH, the usual safety standard compliance speed) of the 2,830-pound Cavalier two-door shows Head Injury Criteria of 708 for the driver and 821 for the passenger. Driver chest reading was 42Gs; passenger, 37Gs. (HIC 1000 and 40 Gs in the chest area are generally taken to mean survivability.)

Results from a 34.9-MPH barrier crash of the 3,034-pound Toyota Corona four-door results in HIC readings of 842 for the driver and 828 for the passenger; and 59 Gs for the driver chest and 40 Gs for the passenger chest.

Kraft heads Mercedes-Benz dealer council

MONTVALE, N. J. — Rudy Kraft has succeeded Harry Evans as chairman of the Mercedes-Benz National Dealer Advisory Council. Kraft owns Autohaus Pompano, Pompano Beach, Fla. Evans' dealership is Boulevard Motors, St. Louis.

Elected to the council to represent dealers in Mercedes-Benz of North America's sales areas were: Alan Feldman, Sovereign Motor Cars, Brooklyn; Roy Serrentino, Cambridge Imported Cars, Cambridge, Mass.; Morton Zetlin, American Service Center Associates, Arlington, Va.; Peter Rafaeli, Towson Valley Motors, Cockeysville, Md.; J. W. Snyder Jr., Synder's Auto Sales, Greenville, S. C., and John Ellis Jr., RBM of Atlanta.

More are: Charles Ghesquiere, Estate Motors, Birmingham, Mich.; Donald Sears, Sears Imported Autos, Minnetonka, Minn.; William Pennel, Intercontinental Motors, Houston; Brian Harris, Stephens Imports, New Orleans; Philip Smart Sr., Phil Smart, Seattle; William Smythe, Smythe European, San Jose, Calif.; Michael O'Donoghue, House of Imports, Buena Park, Calif., and J. C. Theisen Jr., Phoenix Motor Company, Phoenix.

Siegfried Grimm, Siggi Grimm Motors, Tulsa, is chairman of the council's technical liaison committee.

Domestic total of 129,096 is lowest since 1961

Mid-February sales down 22 pct.

By Jenny L. King
Staff Writer

New-car sales in mid-February dropped 22.88 percent below the total for the period a year ago and slumped to their lowest level in 22 years.

The domestic auto makers reported sales of 129,096 passenger cars in eight selling days Feb. 11-20, down 22.88 percent from 167,395 in nine selling days in 1982. The most recent daily selling rate was 16,137, down 13.24 percent from 18,599 a year earlier.

It was the poorest showing for mid-February since 1961 when 116,947 new cars were delivered.

Based on the period, sales were annualized for 1983 at 5,286,000.

American Motors, whose sales are estimated for 10-day periods, was apparently the only U. S. company to enjoy an increase on a year-to-year comparison. On a daily-rate basis, Chrysler Corp. was up as well.

AMC sales climbed 35.71 percent to an estimated 3,800 from 2,800 (up 52.73 percent daily rate). Chrysler reported sales of 14,837 units, down 10.38 percent from 16,556 (up 0.82 percent daily rate).

• General Motors sales of 76,697 were down 26.07 percent from the year-ago 103,743 figure (down 16.83 percent daily rate). Ford Motor Co. reported sales of 32,396, down 23.24 percent from 42,206. (down 13.64 percent daily rate). Volkswagen of America reported sales of 1,366 new Rabbits, down 34.64 percent from 2,090 (down 23.69 percent daily rate).

GM earned 59.41 percent of the mid-February domestic market, down from 61.97 percent last year. Ford sales accounted for 25.09 percent, down slightly from 25.22 percent. Chrysler was up to 11.49 percent from 9.89 percent. AMC climbed to 2.95 percent from 1.67 percent, and VWoA claimed 1.06 percent, down from 1.25 percent.

On a year-to-year basis, only two of the domestic makes were up in sales. Chrysler had an increase of 29.21 percent, to 4,273 from 3,307. Oldsmobile was up 2.35 percent, to 21,143 from 20,657. Because AMC doesn't report 10-day sales, it isn't possible to compare American Motors/Renault Alliance makes with year-ago levels.

Makes suffering defeats included: Plymouth, down 34.77 percent; Imperial, down 12.90 percent; Dodge, down 3.39 percent; Ford, down 26.35 percent; Mercury, down 19.75 percent, and Lincoln, down 2.80 percent.

Buick was down 9.69 percent, Cadillac was down 17.10 percent, Chevrolet was down 43.41 percent and Pontiac was down 41.75 percent.

Year-to-date sales numbered 678,867, up 0.16 percent from 677,806 in 1982.

DOMESTIC SALES

Lean and mean

Adding hi-tech styling to 1982-83 Camaros are Black Outs, which are motorized headlight louvers controlled by printed circuit boards. They can be opened with the headlight switch for night driving, then, during the day, remain closed for a sleek, mean look, reducing air drag. They are offered by P.V.T. Plastics Corp., Brooklyn, N. Y.

auto personnel

Chevrolet

Chevrolet has made several appointments in its sales and marketing organizations. The following men have new duties in Chevrolet Central Office:

Stephen D. McAvoy from zone manager, San Diego, to manager-passenger car advertising. He replaces **T. Russell Chick** who was recently appointed director-national advertising.

Jeffrey P. Hurlbert from manager-sales promotion, passenger car-merchandising to merchandising maanger-trucks. He replaces **Jack L. Sherman** who has been appointed San Diego zone manager.

George E. Borst from manager-marketing special projects to manager-sales promotion replacing Hurlbert.

Steven L. Ramsey from Louisville assistant zone manager, to manager-marketing special projects replacing Borst.

The following men have new positions in Chevrolet's field organization:

Jack L. Sherman from merchandising manager-trucks, Central Office, to zone manager-San Diego zone. He replaces McAvoy.

Robert D. Cenedella from Los Angeles zone manager to regional director-customer service, Southeast region. He replaces **Thomas R. Mason** who has become regional manager of the same office.

Thomas R. Shaver from Cleveland zone manager to Los Angeles zone manager replacing Cenedella.

Daniel S. West from Oakland zone manager to Cleveland zone manager replacing Shaver.

James F. McDonald from Peoria zone manager to Oakland zone manager replacing West.

Eldon D. Kibler from Atlanta assistant zone manager to Peoria zone manager replacing McDonald.

American Motors

Stephen W. Guittard, 46, has been elected vice president and associate general counsel for American Motors. He had been associate general counsel since joining AMC in February, 1982.

Before going to AMC, Guittard was vice president, general counsel and secretary of Dow Corning Corp., Midland, Mich.

MoTech school in new quarters

By Jenny L. King
Staff Writer

WARREN, Mich.—When MoTech's Diesel and Truck Mechanics School moves to a new location, City Hall turns out.

MoTech students already were several weeks into classes in the new suburban Detroit setting when the official welcome by Warren Mayor James R. Randlett and several members of his staff took place on MoTech Day in Warren, Feb. 10.

The move from a building on the west side of Detroit to a centrally located 38,000-square-foot former plant provides much needed additional space for more than 150 students, according to L. R. Knowlton, director of the school.

MoTech Diesel is operated by Chrysler Learning, Inc., a wholly owned subsidiary of Chrysler Corp.

The new home of the diesel engine repair school is situated on more than four acres of land in a building previously occupied by the Place Machine Division of Budd Co. Knowlton said about $50,000 has been invested in this move.

Following the traditional ribbon-cutting ceremony, proclamations were read and plaques exchanged between MoTech and the City of Warren, MoTech and the State of Michigan. Guests toured the single-story factory-turned-school where bus and truck diesel engines of all sizes and in various states of disrepair were being worked on by the day students.

Knowlton said the MoTech curriculum expands to serve four student groups. There are 120 attending from 7:30 a.m. to 1:30 p.m.; then 25 Comprehensive Employment and Training Act clients come from noon to 6:30 p.m., and a night class of 25 labors from 5 p.m. until 11 p.m.

MoTech serves eight blind students through a transmission repair course. These students are in school from 7:30 a.m. until 3:30 p.m. and are transported to and from a designated pick-up point in a van driven by a MoTech staff member.

Increased sales of heavy trucks expected by IH

By Roger Rowand
Engineering Editor

CHICAGO. — International Harvester Co. expects a higher volume of heavy truck sales before April because of an increased federal tax on users after that.

"We also anticipate a rejuvenation of medium truck sales due to the elimination of the federal excise and use taxes," President Donald D. Lennox said at the IH annual meeting.

"In addition, there could be a gradual shift in market preference to conventional trucks from cabovers due to the elimination of length restriction," Lennox said.

The company expects an upswing in heavy-truck sales this year of 6 to 8 percent. That would reverse a severe downward trend seen over the past three years for the industry.

Lennox called attention to the first quarter and noted that upswing had not yet begun.

"Volumes are lower than a year ago. But I want to point out that while unit sales are down across the board, IH has improved over last year," he told the investor gathering at the Art Institute of Chicago.

"For the first three months of fiscal 1983, which ended Jan. 31, IH captured 31.1 percent of the market for medium trucks, as compared to 27.6 percent during the same period last year. In heavy trucks, IH's first quar-

James Blanchard, during recent MoTech Day in Warren ceremonies marking the move of the MoTech Diesel and Truck Mechanics School from Detroit to Warren.

Ford replaces IH as HD leader; '82 total off 21 pct.

Ford regained heavy-truck registration leadership from International Harvester in 1982, with its domination of the Group 7 market the major factor. In 1980, Ford was No. 1 in heavy-truck tallies due mainly to losses suffered by International as a result of a six-month UAW strike.

Industry registrations of Groups 7 and 8 trucks in 1982 totaled 127,942 units, a decline of 20.7 percent from the previous year's 161,344 and 33.8 percent below the 193,410 units tallied in 1980.

Ford's 1982 heavy-truck total was 30,180 and accounted for 23.59 percent of the industry total. In 1981, when it dropped to No. 2, Ford had 34,058 tallies good for 21.11 percent of the total.

International's registrations skidded from 40,539 units in 1981 to 28,754. Its 1982 total accounted for 22.47 percent of the industry total, off 2.66 percentage points from the 1981 share of 25.13 percent.

December registrations of Groups 7 and 8 trucks totaled 11,336 units, down 20.9 percent from the previous year's 14,339 and 24.5 percent below the 15,005 heavies tallied in December, 1980.

Seven big-truck makers increased their penetration in 1982 while unit tallies in most cases were down, and six producers and the miscellaneous group suffered losses during the year.

Year's tally: 2,430,471

1982 truck registrations rebound

Registrations of new trucks of all types in the U. S. rebounded sharply in 1982, with the domestic compacts providing the spark, but the total for the 12 months was slightly lower than the count for the first year of the '80s.

R. L. Polk & Co. reported 2,430,471 registrations in 49 states last year, an increase of 11.2 percent over the 2,185,489 units tallied in 1981 but 1.9 percent below the 1980 total of 2,476,777 units.

In the final month of 1982, there were 246,093 registrations, a gain of 36.9 percent over the 179,806 vehicles tallied in December, 1981. In the 12th month of 1980, the total was 191,073.

Light trucks were the only market segment to show an increase in registrations in 1982. The big trucks — mediums and heavies — were down for the third year in a row.

In 1982, there were 2,257,335 light-truck tallies, a gain of 14.6

GVW table on Page 65.

percent over the year-earlier 1,970,114 and 1.8 percent higher than the 2,217,085 vehicles registered in 1980.

Registrations were higher last year in all three light-truck weight groups, and the count in two of them also was greater than those in 1980.

Record sales of compact pickup trucks in 1982 boosted the Group 1 tallies to 1,277,374 units, an increase of 16.8 percent over the previous year's 1,094,006 and almost 13 percent higher than the 1,130,942 units registered in 1980.

Group 2 tallies gained ground last year, but the advance wasn't strong enough to top the 1980 count.

Last year, there were 960,469 registrations in this group, up 11.2 percent from the year-earlier 863,617 units. But the 1982 count was 10.9 percent below the 1,078,067 vehicles tallied in 1980.

Group 3 registrations were up for the third year in a row, due principally to the steady growth in sales of recreation vehicles after a dismal slump in 1979 and most of 1980.

During the year, 19,492 Group 3 vehicles were tallied, an increase of 56 percent over the 12,491 units registered the previous year, and 141.4 percent higher than the 1980 count of 8,076 units.

Registrations of medium trucks in 1982 dropped to 45,194 vehicles, a decline of 16.4 percent from the previous year's 54,031 tallies and 31.8 percent below the 66,282 units in 1980.

There were 13 Group 4 registrations last year, compared with 11 the previous year and 203 in 1980.

The count was down significantly in Group 5 from the 1981 and 1980 totals. Last year, there were 1,384 tallies, off 24.1 percent from the year-earlier 1,823 and 39.5 percent below the 1980 total of 2,289 vehicles.

Group 6 registrations last year totaled 43,797 units, a decline of 16.1 percent from last year's 52,197 units and 31.3 percent lower than the 63,790 vehicles tallied in 1980.

Heavy trucks were down 20.7 percent last year, from 161,344 in 1981 to 127,942 units. The 1982 count was 33.8 percent lower than that in 1980, when the total hit 193,410 units.

For the third straight year, registrations were down in both heavy-truck weight classifications.

The Group 7 total last year dropped to 54,657 vehicles, a decrease of 17 percent from the previous year's 65,872 and 31.4 percent lower than the 79,719 trucks registered in 1980.

In 1982, there were 73,285 Group 8 tallies, down 23.2 percent from the 95,472 units registered the year earlier and 35.5 percent under the 113,691 tallied in the first year of the decade.

Big sales gains for GM in Europe

Japanese take smaller share of 1982 market

By Richard Feast
European Editor

Unofficial sales figures for 1982 are beginning to emerge for Europe, the biggest new-car market in the world.

They indicate a small unit rise overall but a wide divergence among nations. They also show the biggest gainer by far was General Motors and its Adam Opel (West Germany) and Vauxhall Motors (UK) subsidiaries. There was a substantial gain for Renault and small gains for Ford of Europe and BMW.

Japanese manufacturers took a smaller share of the market than in 1981, but with various restrictions on them in so many markets, the result by no means accurately reflects their combined potential, nor some of the serious weaknesses among European manufacturers.

Industry sources say 1982 sales in Europe amounted to 9,893,800 new cars, 1.4 percent more than 1981, but short of 1980's 9.97 million and the 10-million-plus years of the late '70s.

However, it's believed the worst of the economic recession is over, and early 1983 returns suggest auto demand is strengthening.

DRI Europe, which forecast 1982 sales in Europe at 9.71 million, projects 1983 sales at 10.32 million.

Europe's car sales pattern is set by two markets, West Germany and France, which accounted for two of every five sales in Western Europe. Last year saw contrasting fortunes on either side of the Rhine. In France demand rose 12 percent to a record 2.056 million. In Germany sales dropped 7.5 percent to 2.155 million.

Recession and an uncertain political climate contributed to Germany's troubles. In contrast, a price freeze in France helped stimulate demand, and with the country's political change of direction there is evidence consumers are more prepared to put money into consumer articles rather than savings.

Nevertheless, each country's industry increased production last year. Germany's performance was stimulated by a big boost in exports which reached a record level.

The other two major markets, Italy and the UK, suffered reverses in trends. Italian car sales expanded notably during the 1980-81 period when the rest of Europe was in decline. Now Italy has slumped, its 1982 total of 1.686 million down 3 percent from record 1981.

UK sales blossomed in the second half of 1982 when relaxed credit restrictions prompted people to buy. As a result, registrations were up nearly 5 percent at 1.555 million.

Between them, France, Germany, Italy and the UK account for three-quarters of all European sales.

There were sales gains in the next two largest markets, Spain and Holland, and the four Nordic markets, Sweden, Norway, Finland and Denmark.

Renault again was Europe's leading nameplate, recording 1.44 million sales and a 14.6 percent share compared with 13.9 percent in 1981. Renault's success was based on its performance in France, Spain and the declining Italian market.

Renault's weaknesses were in the flat German market, where it was nipped as leading importer by Fiat, and the UK where its showing was dismal.

Fiat and Peugeot, the next two leading groups, each lost market share in Europe. However, by Fiat's reckoning it did better than industry statistics suggest. Fiat's definition of Western Europe does not include Spain. How can it, Fiat says, when the market essentially is closed to non-domestic producers? Fiat believes it is unfair to include sales of its former partner, Spain's Seat, in the picture.

Fiat's 1.23 million and Peugeot's 1.22 million sales in 1982 represented small slips. Ford's 1.21 million was a fractional gain and Volkswagen group's 1.19 million was a reverse.

By far the greatest increase was by General Motors which sold 940,000 Opels and Vauxhalls in 1982 for a 9.5 percent share. The previous year it had 8.2 percent of a smaller overall market.

The Opel turnaround is one of the recent major achievements in Europe. The J-car (Ascona/Cavalier) is a roaring success and has generated renewed interest in the T-car (Kadett/Astra) launched a few years earlier.

GM, selling as Opel in mainland Europe and Vauxhall in UK, made substantial gains across the board. It is beginning to creep up on Volkswagen in the important German market and Europe as a whole, and completion of its model line with the S-car (Corsa/Nova) is likely to accelerate its progress.

European new-car sales — calendar 1982

Peugeot extols 'pioneering' hatchback

First-year sales forecast at 250,000 minimum

By Richard Feast
European Editor

Automobiles Peugeot believes its new 205 hatchback is pioneering a new market segment.

"We're between Fiesta and Escort, between Polo and Golf, between Samba and Horizon," maintains the man charged with its commercial success, N. Victor Dial, director of sales and marketing.

Trying to make one model achieve the sales appeal of two is becoming common in Europe. The new Fiat Uno is bigger than the model it replaces, closer in size to the Ritmo. Up a notch, the still secret Austin Maestro tries to bridge the gap between opposition such as Ford Escort and Sierra.

These new lines will all offer a depth of model variety seldom attempted before. The reason is automated production technologies now allow various bodies to be built on the same lines.

To gain as wide sales appeal as possible, basically small economy cars are getting sophisticated equipment generally only seen on expensive European cars. The 205, for instance, will have electric power windows and central door locking on its top model; that would have been unthinkable a few years ago.

The 205 represents a $200 million investment by Peugeot.

The 205 represents a $200 million investment by Peugeot. It will be built alongside the recently updated 305 and established 505 at the giant Mulhouse plant in southeastern France.

At the end of this year 205 will be introduced into the Talbot factory at Villaverde, Spain. Domestic manufacture of a car of this type in Spain is important, for the segment accounts for 40 percent of total sales.

Much of Spanish 205 production will go into Spain's closed home market. A good deal will be exported. Building a Peugeot in a Talbot factory is the first manufacturing evidence of the amalgamation of the two makes.

Dial believes the first full year of 205 output and sales could hit 250,000. He suspects it could be higher, making it Peugeot's best seller.

"We have more capacity if it's needed," he says. "The 205 is a large small car and a small medium car. We figure that together these two segments in most countries represent 40 to 50 percent of the market."

The small car sector is particularly strong in southern Europe, which means opposition from Fiat Uno, Renault 5, Opel Corsa and Ford Fiesta. In northern European markets, where medium cars are more popular, the rivals are Golf, Escort, R9/11 and Kadett.

The 205 is an addition to Automobiles Peugeot's line of Peugeots and Talbots. If there is one thing the company is not short of it is model variety. Despite the amalgamation, customers still select either a Peugeot or a Talbot, says the company. There is comparatively little transfer of allegiance between the two.

Peugeot had a gap between the baby 104 and medium-sized 305. It used to build a 205, but it disappeared in 1976. Thus the 205 is essential for Peugeot's commercial success. However, its arrival threatens the future of Peugeot and Talbot models on either side of it.

It is a company secret, but observers believe that over the long run the 205 will emerge as the second of Peugeot group's integrated model offerings. The first was Automobiles Citroen's medium range BX, announced last fall. It is a fair bet that over the years a Peugeot (and possibly Talbot) variation will play on the BX theme. They would replace cars such as the 305 and 1501/Solara.

Similarly, Talbot and Citroen derivatives along a common 205 theme would replace Peugeot 104/Talbot Samba/Citroen Visa (which have similar design features already), Talbot Horizon and Citroen GSA.

This would allow a common design effort, large-scale supplies of components and interchange of parts between seem-

Continued on Page 43

Stateside thoughts

"It's still my ambition to do a lot better than we are with the Peugeot 505 in the States. We look how well Volvo has done with a wagon, four-door and two-door of basically the same car. We are going to have a wagon in September, although there are no plans for a two-door. Then, if we get everything right, I think we can get 40,000 a year out of our 505," says Automobiles Peugeot's commercial director for Europe and North America, N. Victor Dial.

Dial was reflecting on recent Peugeot sales in the U. S., down in 1982 to 15,000 from 17,000 the previous year. He attributes part of the cause to an excess of diesel stocks and not enough gasoline cars.

Part of the expansion plan involved acquiring a key member of the opposition. James A. Fitzhenry, 42, formerly vice president of field operations in North America for Volvo, recently became manager of sales and marketing, Peugeot North America.

Peugeot

Continued from Page 41

ingly rival factories. At present PSA, because of the way it evolved, has too much of everything for modern auto manufacturing, except possibly sales.

Last year it sold 800,000 cars, down from the previous year's 875,000. It lost 60,000 units through factory strikes last spring.

This year Dial is shooting for 850,000, possibly 900,000. The 305 has been well received and the 205 will broaden its appeal.

Dial reflects, "I would say, generally, Peugeot is a very successful exporter to places like Africa and the Middle East. It was never as successful an exporter to the rest of Europe. That's what we're starting to get into, and it's one of our priorities for this year."

• Peugeot 205 is being launched in seven versions, but many others will follow. There is a lot of the experimental VERA cars in the new model, although not the one which will attract great attention at the forthcoming Geneva auto show. One very rare derivative is a prototype rally car equipped with four-wheel-drive and a centrally mounted, turbocharged 16-valve engine developing 320-HP. The aim is a serious attack on the 1984 world rally championship, and all the image-building that brings.

The 205 has a choice of four engines: 1-liter 44-HP, 1.1-liter 49-HP and 1.4-liter 59- or 70-HP. The engines are all alloy single-overhead camshaft units mounted transversely and driving the front wheels.

The transmission is four-speed manual with five-speed available on more expensive models. All models have all-independent suspension, the rear springing units being nearly horizontal for space-saving.

The car has a drag coefficient of 0.35, weighs 1,628 to 1,782 pounds and is 145.7 inches long with a wheelbase of 95.3 inches, same as the five-door 104.

This summer a diesel will be added. Later there will be a three-door model and within a year there will be a very sporty model. There are no plans to build a three-box version or introduce an automatic transmission, which are not big sellers in Europe.

The car went on sale at the end of February in France and will be introduced across Europe by September. Peugeot officials see it as essentially European, and rebut suggestions that a Chrysler version will follow.

Blake to address Automotive News Seminar

Avanti chief at World Congress

Stephen H. Blake, chairman and chief executive officer of Avanti Motor Corp., South Bend, is among the 34 faculty members for the eighth annual Automotive News World Congress to be held July 10-13 at the Westin Hotel in Detroit.

At the Automotive News World Congress, leaders of the international vehicle industry and related fields will focus on industry trends, the global outlook for the industry and government automotive regulations with emphasis on future impact.

Blake began his business, marketing and management career in 1969 when he formed two Washington firms representing a group of real estate development, construction, management, leasing, consulting and sales companies.

In 1976, Blake purchased a Claremont (N. H.) Ford-Lincoln-Mercury dealership. That year he also formed a wholesale and retail parts supply business and a specialty exotic/antique car dealership.

Two years later, Blake was involved in the organization of Old Car Reproductions, Inc., in Daytona Beach. He sold his interest in the company in 1980.

Stephen H. Blake

Also in 1978, Blake assisted in forming an automotive coach building firm in Clearwater, Fla., which manufactures buses and custom coachbuilt automotive products. He continues to serve as company consultant.

Blake purchased Avanti for $5 million last October. The company has built the Avanti II luxury GT since 1967. Annual output of the $20,000-plus car is about 200 units.

• Blake will be discussing the future of Avanti Motor Corp. and its cars during a concurrent World Congress session on July 11.

The four-day World Congress, along with the second annual Automotive News World Expo, make up Automotive News Week in Detroit. The World Expo is a buy/sell trade fair to be held July 11-14 at Cobo Hall.

Attendees of the World Congress in past years have included executives involved in managing, planning, designing, engineering, manufacturing, marketing and retailing in the automotive and related fields. These, plus purchasing executives, will be attracted to World Expo.

Registration fee for first-time Automotive News World Congress attendees is $490, the same as last year. Special Early Bird registration for past participants is being offered again.

The fee includes access to 34 sessions, a work book, three dinners, two luncheons, hosted cocktail receptions and entry to World Expo.

Automotive News World Expo exhibitors and visitors who wish to attend all of the World Congress are required to pay the $490 registration fee.

All Automotive News World Congress registrations must be accompanied by the full fee or a $100 non-refundable deposit. If a registrant's plans change, the name of another individual may be substituted at any time prior to the opening. Full cancellation will be charged the $100 deposit or the equivalent from the paid registration fee.

Further information is available from Cynthia Radom, director of special projects at Automotive News, 965 E. Jefferson, Detroit, Mich. 48207. Phone: (313) 567-9520.

Suzuki prepares to produce GM minicar for U. S. sale

TOKYO. — Suzuki Motor Co. is gearing up to produce the one-liter minicar which General Motors will sell in the U. S.

Osamu Suzuki, president, announced here that production for sale in Japan will start in the fall. Suzuki is investing $170 million in the new factory.

The new model, an 11-foot minicar, will be longer and roomier than Suzuki's Alto and Fronte models, which are sold mainly in Japan.

Suzuki has ambitious plans for the new car. Beginning in the fall, it plans to sell about 2,500 units a month in Japan, and soon afterwards expects to be able to export 4,000 units a month "through existing channels," which means to Southeast Asia, Australia and Europe.

Suzuki, which currently has a weak sales network — many dealers make most of their money from motorcycles—will build up a new sales network to sell the car.

It is expected that some of these will be Isuzu dealers, now that both Isuzu and Suzuki have an affiliation with GM.

Exports to the U. S. will start next spring at an estimated rate of 7,000 a month, to boost output to 14,000 units monthly. This plan is based on the assumption that the voluntary restraint of exports to the U. S. will end this year, Suzuki said.

Significantly, on the day that Suzuki made its announcement, an anonymous official from the Ministry of International Trade and Industry said that "in no way can we accept a two-year extension of the restraint."

In addition, he indicated that this year's quota should be 1.68 million plus a proportion of any increase in sales in the U. S.

This statement is in line with the views of Takashi Ishihara, Nissan president.

Wholehan named to post at Manheim Auctions

LANCASTER. — Robert J. Wholehan has been named national accounts manager for Manheim Auctions, Inc.

Wholehan, who joins Manheim after 31 years with Chevrolet, will be responsible for coordinating and promoting increased fleet and lease disposal business for the 13 Manheim Auction locations nationwide.

Murphy succeeds Hilger at Saginaw Steering

SAGINAW, Mich. — Paul R. Murphy has been named comptroller of General Motors' Saginaw Steering Gear Division. He formerly was comptroller of General Motors of Canada.

At Saginaw Steering Gear, Murphy succeeds Harry A. Hilger, who is retiring after 42 years with GM. Murphy joined GM in 1955.

Firm to make more alcohol as gasohol use increases

DOUGLAS, Ga. — American motorists are buying more gasahol, prompting plans to double production of alcohol at the Southeast Georgia Agricultural Production and Development Corp. here.

The corporation announced a joint venture with Clinton Associates, in Glastonburg, Conn., to expand the plant's production.

Clinton, which has invested $1 million to become an operating partner, plans to move production from Terre Haute, Ind., to Douglas as part of later expansions.

The Douglas facility began its operation a year ago with an investment of nearly $2.5 million, said Garland Thompson, chairman of Southeast Georgia Agricultural Development, a nonprofit company created to run the plant.

The plant, which was created to provide a market for southern corn and to encourage farmers to grow corn, gets 2.5 gallons of ethanol per bushel of corn.

Alcohol to the extent of 10 percent is being added to superunleaded fuel by some oil companies to increase octane.

Information Resources in Washington reported that consumption of gasoline containing alcohol has increased from about 800 million gallons in 1981 to 2.2 billion gallons in 1982.

The company said its production will be increased to more than 3 million gallons from 1.7 million.

If usage of alcohol as a fuel continues to increase, the plant capacity may be increased to eight million gallons by 1984, the company said.

Retail sales down by 250, wholesale up by 40

Rolls-Royce 'weathered '82 storm'

LYNDHURST, N. J. — Rolls-Royce Motors weathered the storm of 1982's slumping retail sales with the past two months showing sales increases.

And, after finishing the year with an increase in wholesale sales, George Lewis, company president, thinks momentum is returning.

Although the company finished the year with 908 retail sales, 250 down from 1981, Lewis was encouraged by the rising sales trend developing in the U. S. Rolls-Royce market over the past two months.

But he added that there appears to be a direct correlation between the success of Detroit auto makers and the success of Rolls. When Detroit does well, then Rolls-Royce apparently does well, he said. The only explanation he could offer is that many Rolls dealers are dualed with Detroit luxury products.

The wholesale turnaround did not occur without help from Rolls-Royce. While 1,015 cars were wholesaled, a 40-car increase over the previous year, Lewis said that incentives were offered to the dealers.

The company agreed to assume floorplanning costs for dealers who ordered beyond their normal supply level. Lewis said the program was progressive depending on the orders and said that if a dealer doubled his normal order "we'd go all the way with him."

Lewis added that while the company has had incentive programs in the past, this floorplanning assistance was the most successful.

One of the company's problems in 1982 was that the exchange rate between the British pound and the U. S. dollar drove up the price of a Rolls-Royce "stratospherically."

Lewis said the company is extremely unhappy that the price of the car is nearly double that of Mercedes-Benz' top-line car.

Lewis said that one of his objectives is to arrest the rapid price increases of the Rolls-Royce.

But Rolls-Royce, while not being problem-ridden in the U. S., did have problems in Great Britain. While factory layoffs received widespread publicity, basically because Great Britain is an employment-intensive economy, it did not have a ripple effect.

For the parent company, 1982 was a record year as far as export sales were concerned with a total sales volume in that area of $140.8 million, or a $9.48 million increase over 1981.

Lewis referred to any sales problem in the UK as "temporary" in that the car is a national symbol and a "major status symbol" with many corporations.

As for European and Middle Eastern markets, he said that the parent company anticipated selling a total of 450 cars in those two markets, but actually sold 520.

During 1982, Rolls-Royce ceased being the distributor for Lotus cars in the U. S. Lewis said his company learned a lot and the experience did not sour him on the idea of perhaps becoming the distributor for another line.

Lewis said the effort cost Rolls-Royce $400,000 in attempting to position Lotus.

But there were problems centering on selling old inventory and obtaining new cars which hampered the entire operation, he said.

He noted that the 70 dealers which now comprise the Lotus network are strong and in his eyes have proved they are capable of selling the car.

For Rolls-Royce, Lewis is encouraged by the market upturn. He said that 25 percent of the cars sold in 1982 were the top-of-the-line Corniche selling at $162,000. This was a 10 percent gain over the previous year.

And with indications of an upturn, Lewis said that Rolls has weathered the economic storm.

Vermont dealer faces 2nd charge of discrimination

BURLINGTON, Va. — Paul Payne, who was 58 in 1980 when he allegedly lost his job as a Nordic Ford used-car salesman because of age, has brought a new discrimination suit in Chittenden County Superior Court against the dealership.

A related action, which would provide only for back wages if Payne and four others win their suits against Nordic Ford, is pending in the U. S. District Court here.

The latest Payne move was implemented after a federal judge ruled that a trial in U. S. District Court would not be the proper forum for hearing damage claims based on Vermont law.

In his Superior Court suit, Payne contends that he was the dealership's top used-car salesman when a consulting firm recommended dismissal of five people and hiring of younger persons.

Legal counsel for three other fired salesmen and the widow of a fourth former Nordic employe indicated that Vermont Superior Court action would also be implemented.

Super sales

James DeCastro, left, sales manager at Dodgeland, Springfield, N. J., and Larry Everly, right, sales manager at Warnock-Ryan Dodge, Inc., Livingston, N. J., are awarded plaques and 10-karat gold rings by Ted Cunningham, Chrysler's national sales manager, in recognition of their sales accomplishments. Both men took part in a three-day National Sales Conference in New Orleans in which they were named the top Dodge dealership sales managers in the nation.

5-percent advantage cited

FWD easier on tires, Uniroyal tests show

DETROIT. — The automobile industry's movement toward front-wheel drive is saving gas, but is having a surprising impact on another important consumer consideration—tire treadwear.

Al Tavenor, vice president of R&D for Uniroyal Tire Co., cited industry forecasts predicting that approximately 85 percent of the cars sold in the U. S. by 1985 will feature FWD.

Taken at face value, this would appear to have an unfavorable impact on tire treadwear, because industry tests reveal front tires wear more rapidly than rear tires on FWD vehicles.

But Tavenor said the question of relative wear between front and rear tires on FWD vehicles actually can give the consumer more tire treadwear.

"Front tires do wear more quickly than rear tires on FWD cars, but we found a 5-percent overall tire treadwear improvement in FWD cars as opposed to rear-wheel-drive cars," Tavenor said. "Proper tire rotation is the key to realizing this improvement.

"For longer tire life, Uniroyal recommends tires be rotated every 6,000 to 8,000 miles. The timeliness of the first rotation is especially important."

Uniroyal recommended two principal rotation patterns: The "X" rotation and the front-to-rear rotation.

In the "X" rotation pattern, which Uniroyal recommended more strongly, front tires are moved to the rear, with the right front becoming the right rear tire, and the right front tire moving to the left rear position. In the front-to-rear pattern, the tires remain on their left or right side but are exchanged from front to rear.

"The best rotation pattern is the one that results in the most uniform wear on a given vehicle," Tavenor said. "We've found no basis for the once widely accepted contention that problems can result from reversing the rotation direction of radial tires in the 'X' pattern.

"It is likely that the 'X' pattern will give better treadwear results," he said.

Uniroyal also recommended that the car owner adjust the front and rear tire pressure to the vehicle manufacturer's specifications after rotation. For optimum treadwear, performance and fuel economy, Uniroyal also suggested operating its tires at the maximum recommended inflation pressure and that inflation pressure be checked at least once a month.

DeLorean parts depot established in Columbus

COLUMBUS, O. — The national DeLorean parts warehouse will be established here, said Sol Shenk, president of Consolidated International, Inc.

Kapac, Inc., has been appointed to store and distribute the DeLorean parts which Consolidated has acquired.

Visitors, buyers top last year at Milwaukee show

MILWAUKEE. — Milwaukee-area new car dealers were "upbeat" following the conclusion of the second annual Milwaukee International Auto Show.

Much of that enthusiasm stemmed from the 20-percent increase in attendance reported following the Feb. 9-13 event. The five-day show drew 106,485 visitors. Last year's inaugural, following a 15-year hiatus of a major auto show in Milwaukee, drew 89,112.

Gary Scheppke Sr., manager of the New Car Dealers of Greater Milwaukee, Inc., said there seemed to be more buyers at the 1983 show.

All major domestic and import manufacturers were represented, including three Wisconsin manufacturers — AMC/Renault with its "Car of the year" Alliance; Excalibur, manufactured in West Allis, and Chevrolet Cavalier and Cadillac Cimarron, both made in Janesville.

★—No registrations for Oklahoma, 1982 and 1981.
#—Memo units are trucks which are part of the total listed above each entry. Chevrolet memo units are vans, Sportvan, El Camino, Blazer, LUV and S-10; Dodge, vans, Ram Wagon, Ramcharger, Ram 50 and Rampage; Ford, Econoline vans, Club Wagon, Bronco, Courier and Ranger; GMC, vans, Jimmy, Caballero and S-15; Jeep, CJs, Cherokee, Wagoneer and Scrambler. *—Miscellaneous includes imports, Crane Carrier, Oshkosh, FWD, IVECO/Magirus, Diamond Reo, Hendrickson, etc.
—Compiled from R. L. Polk & Co. data.

Week's yield: 43,651

Truck production down slightly

Domestic truck production last week fell 2.31 percent from the previous week's total as General Motors' Pontiac truck and bus line and American Motors' Toledo Jeep facility closed for inventory control.

The downtime offset Saturday overtime at three plants and the resumption of output at Volkswagen of America's Westmoreland facility.

Last week, the truck makers scheduled 43,651 units, down from 44,685 the previous week but up 1.22 percent from last year's 43,124 units.

Year-to-date, there have been 293,002 trucks assembled, an 8.57 percent gain over 269,884 units built in the comparable 1982 period.

GM closed the truck and bus line at its Pontiac plant last week (Feb. 21) due to overstocked inventory. Operations there are slated to resume today (Feb. 28).

Also idled for inventory control was AMC's Toledo Jeep plant.

One line at International Harvester's Springfield facility was down for the second week last week. Full operations are slated to resume today.

VWoA's Westmoreland point resumed production last week following an eight-month shutdown. The plant, closed since last June 28, slated 235 units its first week back in production.

GM's Detroit and Janesville points, plus Ford Motor's Lorain facility operated six days last week.

Chrysler Corp.'s Warren plant operated a daily nine-hour shift for the fourth consecutive week last week.

Second-shift operations are scheduled to resume today at GM's St. Louis facility. The plant will produce 28 trucks an hour on each shift. About 900 workers return.

Beginning March 11, the GM Lordstown point will increase van output from 24 units an hour on two-shifts to 29 units an hour on two shifts.

DeVries buys in

CEDAR RAPIDS, Ia.—Robert DeVries, who has been associated with Volkswagen of Ames, has purchased an interest in Nuzum, Inc., Volkswagen from Mel Nuzum.

DeLorean seeks to sell unit in Utah for 'immediate cash'

Continued from Page 1

the stock of DeLorean Motor Co., making John DeLorean the corporate parent of all the companies in question.

JZDC acquired the Logan operations from Thiokol Corp. on June 28, 1979, for a total purchase price of $9,084,583. The purchase price included $6,379,635 in cash, a promissory note from JZDC in the amount of $1.27 million plus assumption by JZDC of $1,434,948 in balance sheet liabilities.

JZDC arranged for a loan from Continental Illinois National Bank and Trust Co. to cover most of the cash portion of the deal plus a $1.5 million working capital loan.

The sale of Logan's assets did not include the division's cash on hand, cash in banks or balance sheet cash equivalents. Also excluded was the division's property in Logan, Utah.

DeLorean acquired the Logan property through a complicated, multi-party real estate transaction.

On the same day DeLorean acquired Logan's assets, June 28, 1979, he transferred title to a portion of his Pauma Valley (Calif.) ranch to two companies, Elsinore Properties and Elsinore Industries, plus an individual. John DeLorean transferred title to 400 acres, in 11 parcels, to the three parties.

Tax stamps purchased in San Diego County on the day of the transaction indicate the "sale" of the ranch acreage was worth about $4.4 million. In exchange for the California property, DeLorean received title to the Utah property.

The "sale" was structured as a multi-party land swap to take advantage of U. S. tax laws which exempt such non-cash deals from capital gains taxes.

John DeLorean retained some of the Pauma Valley property, valued at about $1.5 million at the time of the 1980-81 property tax assessment. The property recently has been on the market with a $5 million asking price.

Car production of 131,687 is best since June

Continued from Page 1

last week at Chrysler's Jefferson and Newark points. Both plants operated two daily nine-hour shifts.

The GM Lordstown plant will increase production of Chevrolet Cavalier and Pontiac 2000 from one shift at 68 units an hour to two shifts at 68 units an hour beginning March 7. About 2,500 workers will return from indefinite layoff.

At the same time, the GM Arlington plant will boost output of Buick Regal and Chevrolet Monte Carlo and Malibu models from 45 units an hour to 56 units an hour on each of two shifts. About 600 workers return.

GM's Kansas City plant will increase output from 50 to 60 units an hour on each of two shifts starting April 18, recalling about 500 workers. The plant, which builds Buick LeSabre, Chevrolet Impala and Caprice and Oldsmobile Delta 88 models, has been operating at a rate of 50 units per hour on two shifts since June 1, 1982.

Also at GM, beginning April 25 assembly of Buick Century and Chevrolet Celebrity and Citation models at Oklahoma City will be upped from 75 units an hour on one shift to 75 units an hour on two shifts. The plant has been operating on one shift since November, 1981. About 2,800 will return.

All car facilities were reported operating last week.

Ford changeover trims Canada's auto production

Canadian auto production last week fell 14.18 percent from the previous week's total as model changeover began at Ford Motor's Oakville assembly plant, and the American Motors Brampton facility closed for inventory control.

Last week's car output was estimated at 20,984 units, down from 24,451 built the previous week but up 12.42 percent from 18,665 units assembled in the comparable 1982 period.

Year-to-date, 146,797 autos have been assembled, a 31.99 percent gain over last year's 111,219.

Truck production for the week was targeted at 9,976 units, a 2.14 percent drop from the previous week's 10,194, and down 12.76 percent from last year's 11,435 units.

So far this year, the truck manufacturers have finished 71,131 units, an 11.06 percent gain over the 64,046 built in the same period.

Ford's Oakville car facility closed last week (Feb. 21) for conversion to the new Ford Tempo and Mercury Topaz models, slated to go into production April 11. Oakville currently assembles the full-size Ford. Operations are scheduled to resume April 4.

AMC's Brampton point was idle last week due to overstocked inventory.

Still down last week was International Harvester's Chatham facility. Operations there were idled the afternoon of Feb. 7 due to a strike.

The Ford St. Thomas car point will close today (Feb. 28) for inventory control. Operations are scheduled to resume March 14.

Pininfarina at Geneva

Special four-seater Fiat

This Pininfarina Brio, based on a Fiat Ritmo Abarth 125 TC, is destined to be the star of the Pininfarina stand at the Geneva Motor Show. The four-seater sports coupe, a one-of-a-kind prototype, will be evaluated for marketing possibilities.

Import outlets fare better on survival with 10,908

By Kathleen Hamilton
Financial Editor

The number of auto dealerships in the U. S. fell by 974, or 3.8 percent, during 1982.

The dealer total on Jan. 1, 1983, stood at 24,729, including both import- and domestic-car stores, down from 25,703 a year earlier.

Despite some major upheavals in import-car networks during the year, dealers selling foreign makes fared better than those handling domestics.

Of the 974 decline for the year, 881 were domestic dealers (some dualed with imports) and 93 were import-only outlets, according to the latest AUTOMOTIVE NEWS dealership census.

Put another way, the 84 percent of the nation's dealerships that carry domestic lines suffered 90 percent of the losses in 1982, and the 16 percent of dealerships which carry only imports suffered only 10 percent of the losses.

An earlier AUTOMOTIVE NEWS census (Feb. 14) showed 20,799 dealers carrying domestic lines on Jan. 1, 1983, compared with 21,680 on Jan. 1, 1982.

(Renault is being counted as a domestic line for the first time in 1983, because its dominant seller is now the Alliance, built by American Motors.

Another 3,930 dealers carried only imports at the start of '83, compared with 4,023 at the start of '82.

Adding up all the dealerships that carried imports, the latest census found the import-dealer total fell 3 percent, from 11,270 to 10,908. But that total is deceiving because of the change in Renault's status.

Perhaps a more valuable gauge would be to eliminate Renault for both years.

In that case, the import-dealer population actually rose during the year, from 10,076 to 10,908. That would be an increase of 832 dealerships carrying imports, or 8.3 percent.

This was despite the fact that the Fiat, Lancia and Lotus sales networks folded; DeLorean's dealer network declined by nearly a third as Consolidated International took over from the defunct DeLorean operation, and import quotas limited growth in the Japanese networks.

Despite all those factors plus

Dealers to get Canadian-built Parisienne

Big car returning to Pontiac lineup

By Jim Plegue
Staff Writer

Pontiac's resurrection of its rear-drive B-body car in the U. S. may prove a frustrating experience for its dealers, who will probably receive only a trickle of the now-popular full-size cars during 1983.

The four-door sedan and wagon models will be re-introduced in the U. S. in May under the name Pontiac Parisienne, the same badge used on the identical car sold in Canada.

The full-size U. S. Pontiac line, previously called Catalina and Bonneville, was discontinued after the 1981 model year. Since then, Pontiac has sold the mid-size G-body car under the Bonneville name.

Despite previous denials by Pontiac management, the division said last week that it would revive the B-body in response to consumer and dealer demands for a big car. But production may be spread thin during the first year.

Parisienne for both the U. S. and Canada will be sourced only at General Motors' Oshawa (Ont.) assembly plant during 1983. That plant is also one of two sources for Chevrolet's B-body line (Impala/Caprice), which has been Chevy's hottest nameplate since fuel prices dropped and big cars regained popularity.

Early next year, GM will convert Oshawa to build front-drive A-body models. At that time, Parisienne production will be moved to the GM Fairfax (Kans.) plant, which currently builds B-bodies for Chevrolet, Buick (LeSabre) and Oldsmobile (Delta 88).

The full-size Chevrolet may also be built by Buick at its Flint plant, beginning early next year. Such a move could free up some Parisienne output at Fairfax.

• Using the Parisienne name — and therefore the badges and trim pieces of the Canadian car — was the cheapest and quickest way for Pontiac to return that model to the U. S. market, a source said.

Parisienne sedans will be offered only with a two-tone paint scheme, according to a source, as a means of differentiating Parisienne from its Chevrolet counterpart. Wagons will have woodgrain trim.

Pontiac will make trim and suspension changes in 1984 or 1985 to give the car a more separate identity.

The Parisienne will not be sold in California until 1984, Pontiac said.

Standard sedan powertrain will be a 3.8-liter V-6 engine with three-speed automatic transmission. The Chevy 5.0-liter V-8 and the Oldsmobile 5.7-liter V-8 diesel will be optional. Standard engine in wagons will be the 5.0-liter V-8.

Pontiac canceled its B-body program in 1981 because the car didn't fit the division's new "sporty" image and because sales of the car lagged behind

FTC is ready to begin look at GM-Toyota deal

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Federal Trade Commission antitrust experts should be able to start soon on their examination of the joint-venture agreement between General Motors and Toyota. Lawyers have at least—and at last—decided what documents are needed.

Meanwhile, there has been virtually no comment from Congress. Both Chrysler and Ford believe the effect on them may be adverse, and Toyota dealers are unhappy.

The outcome is far from certain but the chance of a split commission decision has disappeared since FTC Chairman James C. Miller III has now declared himself eligible to vote.

Earlier, Miller had excused himself from any decision involving General Motors because GM had once been his client in

Customers stay under cover

Storms batter California business

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. — Severe winter rainstorms accompanied by a rare tornado in the downtown area damaged several auto dealerships here last week and kept customers away from many others.

The tornado, which touched down at 8 a.m. Tuesday (March 1), tore through a two-mile section just south of downtown, damaging more than 100 homes and businesses, including a number of dealerships along an auto row.

One of the hardest hit was Downtown Motors, a Mercedes-Benz, Volkswagen, Porsche-Audi and Datsun combine managed by Tom Iannone. Iannone said more than 40 cars were damaged, windows were blown out and signs were knocked down by the twister.

"We're still trying to assess the damage," he said. "We have a 100-foot-long sign that stretches from our new-car lot to our used-car lot, and it's completely twisted. The steel beams are bent just like they were straws."

Iannone said much of the damage to the cars was done by flying debris, although one vehicle on his lot was overturned. He added that much of the structural damage to the dealership was in the service area.

"If it had to happen, I guess it couldn't have happened at a better time since there weren't many people around," Iannone said. "If we had had anyone around, there would have been injuries."

• Jack Biezeff, general manager at Kaiser Brothers Oldsmobile up the street, said damage there was light.

"Three windows were blown out," he said. "It appears that it skipped over us and then hit the Convention Center."

The Convention Center, located to the north, suffered more

breaking news

Lotus to test programmable suspension

NORWICH, England. — Team Lotus, the racing arm of Group Lotus, will test a new programmable suspension at the March 13 Brazilian Grand Prix. It uses a microprocessor and allows the driver to select the appropriate tuned suspension, from firm to soft at any time. If used on production cars, it would eliminate shock absorbers, springs and rollbars.

Chrysler gives $500 on demo orders

HIGHLAND PARK. — Chrysler Corp. is giving dealers $500 on two-door Aries/Reliant and two-door LeBaron/Dodge 400 models ordered for demo service before March 14.

Porsche 944 price up $505

TROY, Mich.—Porsche has added $505 to the price of the 944 coupe. The car now is $19,485 with five-speed transmission and $19,890 with automatic. Options are unchanged.

SAE places emphasis on solid engineering

By Roger Rowand
Engineering Editor

It was the Chinese Year of the Hard Engineering Technical Session and exhibit displays that ranged from the exotic to the down-to-earth at the SAE Congress and Exposition in Detroit's Cobo Hall last week.

Sparked by scheduled appearances by NHTSA Administrator Raymond Peck Jr. and Chrysler Chairman Lee A. Iacocca, the annual event was generally labeled a success.

Of those queried by AUTOMOTIVE NEWS — a sampling that included dignitaries, engineers and other visitors from the U. S. and other countries — all voiced enthusiasm for the professional society's technical sessions and exhibition.

One engineer noted that this year's technical sessions dealt more with solid engineering and less with pitches for particular products or lines of products than in some recent past years.

Another said the failure of General Motors and Ford Motor Co. to meet 1983 Corporate Average Fuel Economy bogeys and the likelihood of similar failures next year have put the engineer back in the spotlight.

"It's made some people a little more serious, and you'll notice more attention being paid to the raw materials companies — like steel, aluminum and plastic," he said.

Three exhibits that stood out with continuing long lines, packed exhibit areas and bustling activity also stand as prime examples of why some people go to shows.

The Alcan Aluminum Corp. display lured the technical types, the imagineers and the group leaning toward scientific interest.

Along with examples of its newest applications of the lightweight metal, Alcan showed the aluminum-air battery. That's an advanced electrochemical energy source which Alcan says promises to give electric vehicles long range, rapid acceleration and fast refueling.

Not far away, Linda Vaughn (Miss Hurst) and Kathie Tate (Miss Cars and Concepts) signed revealing posters of themselves. That, obviously, appealed to still another group of show goers.

Lines at the Cars and Concepts area shared by the women were long with lighthearted, mostly male, badge wearers.

• Also close at hand was the Bendix Corp. exhibit. That display zone seemed to attract many interested in items more mundane than aluminum-air batteries and not so exotic as Linda Vaughn.

Bendix was giving hands-on demonstrations of a down-to-earth, state-of-the-art, high-tech diagnostic tool for testing complex electronic systems.

The microprocessor-controlled tester was developed by Bendix Engine Controls Division, Newport News, Va., as a service tool for the electronic fuel injection system and electronic control system for the automatic transmission on American Motors' Renault Alliance.

It plugs into the vehicle's wiring and records and displays faults that have been detected and recommends corrective action.

While those three exhibits may not cover all the special-interest groups at an SAE Show, they do cover a broad cross section of this year's attendance.

Peck was on hand to stimulate interest in seat-belt usage. He was trying so hard to concentrate on that subject that press relations people were asking newsmen not to ask questions on other subjects until after a specific hour. As usual, of course, such efforts were for naught.

Peck attended a panel session on successful programs to increase belt use. Such programs are designed to support the national Get-It-Together safety belt campaign.

Iacocca was the featured speaker at the annual banquet, a sellout affair with some 4,200 diners.

High-speed liftoff

The Ferrari Boxer Targa conversion is offered by Straman, of Costa Mesa, Calif. Conversion time is six to eight weeks. Dealer cost is $15,000 and the suggested retail price is $17,500. Straman expects to produce 50 units per year.

FTC ends probe of some auto rustproofing firms

WASHINGTON. — Investigation into automobile rustproofing has been closed—at least for some companies.

Questions had been raised as to whether any company in the field may have violated the Magnuson - Moss Warranty Act or otherwise engaged in unfair and/or deceptive acts or practices in the manufacture, application and distribution or sale of automobile rustproofing.

FTC said that although no further action is warranted now, the closing of the investigation is not to be read as though a violation has not occurred.

Of course, FTC reserves the right to take further action "as the public interest may require."

Letters were sent to: Quaker State Oil Refining Corp., Oil City, Pa.; Daubert Chemical Co., Oak Brook, Ill.; Penn-Syn Supply Co., Pittsburgh; Classic Chemical, Arlington, Tex.; Durable Coating, Inc., Akron; Hercules Rustproofing, Johnstown, Pa.; National Rustproofing Services, Inc., Pittsburgh, and Nu-Kar Rustproofing System, Madison Heights, Mich.

So far, no letter has been docketed for Ziebart, a company that was part of the initial investigation. Ziebart earlier had filed a motion to quash a subpena — normally the only way to discover that FTC is conducting a non-public investigation.

Detroit firm offers $250 to employes buying cars

DETROIT. — Group Lakeshore, Inc., a developer of condominiums, will give $250 to employes who purchase a new domestic car or truck before March 31.

New three and five-door cars on the way

AMC to drop two Renault models

By Jim Plegue
Staff Writer

American Motors Corp., in a major shakeup of its U. S. product line, will drop four passenger cars—including the imported Renault 18i sedan and Renault LeCar models—at the end of the 1983-model year, it was learned last week.

As previously reported, AMC will discontinue its aging Spirit and Concord car lines this fall.

At the same time, new three-door and five-door Alliance-based hatchback models will debut, but those cars will not carry the Alliance nameplate, sources said.

American Motors will continue to import the station wagon version of the 18i but it will be called the Renault Sport Wagon. It will not carry 18i badges, according to an insider.

The Renault Fuego continues in the AMC/Renault model mix for 1984 but its 1.6-liter engines will be dropped and replaced with a new 2.2-liter turbocharged powerplant. A normally aspirated version of that engine could be standard, a source said.

Finally, AMC will discontinue its current Cherokee-Wagoneer lines this fall and replace them with the new downsized XJ-series—Cherokee and Wagoneer versions in two-door and four-door body styles. Wheelbase of the XJ series is said to be 101 inches, down from 108.7 inches.

The AMC Eagle will continue through the end of the 1984-model year, when some sources hint that it may be replaced with a new four - wheel - drive series based on the Alliance platform.

The Renault 18i sedan has been a slow seller in recent years. The LeCar has held steady at about 20,000 sales per year.

Dropping the front-drive LeCar leaves a void at the bottom end of the AMC line but a source said sales are so low that AMC could not justify changes necessary to meet '84 emissions with the LeCar.

With those changes, according to a source, both AMC and Renault dealers will sell identical passenger - car lines for 1984. Those dealers with a Jeep franchise will also offer the XJ series and Eagle models.

Feb. sales trail 1982 but surge at month-end

By Jenny L. King
Staff Writer

Domestic new-car sales in February trailed the year-earlier month for the first time since last October, though a sales decline in the first two periods of the month was stemmed by a 17.82-percent increase Feb. 21-28.

Import sales climbed 4.95 percent compared with the month in 1982 and captured a record 29.64 percent of the total U. S. market.

Where auto market was in February

	Total Sales	Pct. of Total
SUBCOMPACT	74,138	11.79
COMPACT	93,403	14.85
INTERMEDIATE	155,195	24.68
STANDARD	87,221	13.87
LUXURY	32,522	5.17
IMPORT	186,374	29.64
TOTAL	628,853	100.00

Domestic sales totaled 442,479 in February, down 3.16 percent from 456,944 the preceding year. It was the worst showing for the month in 22 years, lowest since the 360,349 reported in 1961. February domestic sales, however, were up 30,000 units from the January total of 412,893.

Sales of imported passenger cars numbered 186,374, up 4.95 percent from 177,580 in 1982 and up 1.93 percent from 182,853 in January, 1983. Imports claimed a record 29.64 percent of the U. S. market, up from 27.72 percent a year ago and breaking the 1981 record of 28.82.

Total new-car sales in February added up to 628,853, down 0.89 percent from 634,524 for the month in 1982. Year-to-date sales amounted to 1,225,846, up 5.04 percent from 1,166,975.

• Domestic year-to-date sales totaled 856,619, up 3.82 percent from 825.082 last year. Import sales through February num-

Do Americans have the wrong idea?

Charting the personality of Japanese makers

By Helen Kahn
Washington Bureau Chief

EDITOR'S NOTE: *These interviews, done last November in Japan, were set up in advance by the Japanese Automobile Manufacturers Assn. in Washington and Tokyo. They are with executives of Nissan, Toyota, Mitsubishi and Honda. The choice was made partly because of geographic convenience and partly because of company personality.*

Toyota is number one, sometimes known as the "rural" company because much is centralized and to some extent isolated in Toyota City with its housing, recreation and suppliers close to major assembly. But Toyota is also a multinational with more knock - down shipping than manufacture abroad.

Nissan, number two, is the "city cousin" and also a global company and a big manufacturer overseas.

Mitsubishi, offspring of a much bigger group and still 85 percent owned by Mitsubishi Heavy Industries, is also owned 15 percent by Chrysler and now is beginning to become known in the U. S. as a seller in its own right, rather than merely a supplier of vehicles for Chrysler.

Honda is the brash, young company, viewed as the forward-thinking innovator, still in the image of its maverick founders.

The idea was to avoid the well - ploughed areas — landed cost advantages, quality circles, "lifetime" employment, the "company song" and consensus management.

Instead, the assumption was made that even the culturally unique Japanese could not remain unaffected by the increasing Westernization in the country, the global consumer movement and the restlessness of the youth culture of the mid '60s to mid '70s.

A further assumption was that the intense competition in every aspect of Japanese life between those who passed the examinations and those who failed to make the grade would inevitably create resentment

As dealership total falls to 10,908

Import outlets fare best in survival

Continued from Page 1

a depressed market, 14 imports increased their dealer networks during 1982 and Mitsubishi started one up from scratch. Nine import makes reached record franchise numbers. Only 10 import makes recorded losses.

• The record-setters were Dodge Colt/Challenger, 2,492; Subaru, 784; Honda, 806; Porsche, 328; BMW, 403; Ferrari, 48; Mercedes-Benz, 413; Plymouth Colt/Sapporo, 2,587; Isuzu, 206. In all cases except Porsche, those new records supplanted ones set in the July, 1982, census. Porsche tied its July record.

Year-to-year franchise gains were recorded by Plymouth Colt/Sapporo, up 381; Dodge Colt/Challenger, up 267; Subaru, up 25; BMW, up 21; Isuzu, up 13; Saab, up 12; Maserati, up 7; Honda, up 5, and Ferrari, up 5.

Also, Mercedes-Benz, up 4; Porsche, up 3; Peugeot, up 3; Rolls-Royce, up 2 and Volvo, up 2.

Losses were recorded by Fiat, down 499; Lancia, down 141; DeLorean, down an estimated 90; Lotus, down 28; Datsun/Nissan, down 22; Jaguar, down 16; Alfa Romeo, down 13; Audi, down 7; Aston Martin Lagonda, down 2, and Mazda, down 1.

Toyota's total was unchanged.

The census figures don't include the eight Dodge dealers or the 126 Isuzu dealers which handle trucks only. Volkswagen is counted as a domestic.

The number of German-car franchises increased by 21, or 1.4 percent, during 1982. Italian-car franchises declined by 641, or 76.3 percent, and UK-car franchises declined by 134, or 20 percent.

Sweden gained 14, or 2 percent. Peugeot—the only remaining all-French line in the U. S., increased its dealer network by 3, or 0.09 percent.

The biggest gain was recorded by the Japanese. Their franchises increased by 735, or 8 percent, led by the increases in Chrysler Corp.'s captive imports, the Mitsubishi-built Colt, Challenger and Sapporo.

Mitsubishi also started its own dealer network during the year, adding 67 to the dealer count—all single-line dealers.

The only Japanese makes to lose dealers during the year were Mazda (down 1) and Datsun/Nissan (down 22). Nissan's loss enabled Toyota to pull ahead of it for the first time since January, 1978.

Now that VW and Renault are building cars in the U. S., the Japanese have the top seven spots in dealer totals.

• The new Top 10 are ranked Plymouth Colt/Sapporo, Dodge Colt/Challenger, Toyota, Datsun, Nissan, Honda, Subaru, Mazda, Audi, Mercedes-Benz and Volvo.

A year earlier, the ranking was Dodge Colt / Challenger, Plymouth Champ/Sapporo, Renault, Datsun / Nissan, Toyota, Honda, Mazda, Subaru, Fiat and Audi.

There were declines in every segment in the latest import-dealer census. The number of domestic-import duals declined from 7,247 to 6,978, a decrease of 362, or 3.2 percent.

Within that total, the domestic-car dealerships dualed with non-captive imports fared worse than the Chrysler Corp. duals with its captives.

Domestic dealers with non-captive imports declined from 3,563 to 3,341, a decrease of 222, or 6.2 percent. The Chrysler captive total decreased from 3,684 to 3,637, a decline of 47, or only 1.3 percent.

As noted, the import-only dealer population declined by 93, or 2.3 percent. Multiple-line import dealerships declined from 1,320 to 1,287, a drop of 33 outlets, or 2.5 percent.

• Single-line import dealerships declined from 2,703 to 2,643, a drop of 60 outlets, or 2.2 percent.

The only make to significantly alter its exclusive-dealer network during the year was Jaguar, which had 36 exclusives at the beginning of 1983, compared with 64 at the beginning of 1982.

Still, that was enough to rank Jaguar 10th on the list of imports with the highest percentage of exclusive dealers.

The Top 10 and their percentages of single-line dealers are Mitsubishi, 100 percent; Toyota, 62 percent; Datsun/Nissan, 59 percent; Honda, 49 percent; Subaru, 38 percent; BMW and Volvo, 23 percent; Mercedes-Benz, 21 percent; Alfa Romeo, 20 percent, and Jaguar, 18 percent.

The Top 10 in actual number of exclusives were Toyota, 678; Datsun/Nissan, 640; Honda, 397; Subaru, 299; Mazda, 106; BMW, 94; Volvo, 93; Mercedes-Benz, 87; Mitsubishi, 67, and Saab, 55.

Looking at the list, 44.9 percent of all Japanese non-captive franchises are exclusives.

The European car franchises are dualed far more frequently. Only 20.5 percent of Swedish-car franchises are single-line dealers, and 15.1 percent of Italian-car franchises are exclusives, as are 11.6 percent of the German-car franchises, 11.5 percent of the French-car franchises and 7.8 percent of the UK-car franchises.

The import-car franchise total on Jan. 1, 1983, was 13,252, a decrease of 1,359 franchises or 9.3 percent for the year. Because most import-car dealers carry more than one line, the number of import outlets is far below the franchise total.

Pontiac dealers to get big car built in Canada

Continued from Page 1

those of its sister models at the other divisions.

Pontiac will continue selling its G-body-based Bonneville model alongside the Parisienne.

Insiders also said that Pontiac traded its participation in the B-body program in order to win corporate approval for its $250 million P-car project, the sporty two-seat Fiero model which bows this fall.

Pontiac, however, is still scheduled to receive the new front - wheel - drive replacement for the B-body in 1986. Because of renewed consumer interest in big cars, that GM program is being reviewed vis-a-vis its timing and dimensions, a source said.

Vauxhall plans production boost

LONDON. — Vauxhall Motors has announced plans to increase production at its car plants in Luton and Ellesmere Port.

This follows last year's increase in Vauxhall-Opel's UK market penetration from 8.5 percent to 11.7 percent.

The addition of a second shift at both factories has been demanded by Vauxhall's unions. It is expected to increase substantially the UK-built proportion of Vauxhall-Opel sales.

Thomas H. Keating, 88, dies; former head of Chevrolet

BAL HARBOR, Fla.—Thomas H. Keating, who held just about every sales job in the Chevrolet organization during his ascent to general manager, died here Feb. 25. He was 88.

Mr. Keating retired in 1959 as General Motors group vice president in charge of the passenger-car divisions, a post he had held for three years. He was general manager of Chevrolet from 1949 to 1956.

He became a GM vice president in 1949 and was elected to the board of directors in 1954.

His Chevrolet career began in 1916 and continued until 1956, except for U. S. Navy service in World War I and a three-year stint with Durant Motor Co. in 1924-27.

He was with Chevrolet during part of World War I, the boom that followed that conflict, the Great Depression, all of World War II and the period in which Chevrolet and the auto industry returned to normal operations following four years of war production.

Mr. Keating's first job with Chevrolet paid $14 a week. He was a clerk, although his title was assistant car distributor. That was in Tarrytown, N. Y. (He was a native of Brooklyn.)

After Navy service, he advanced through such sales posts as car distributor and district manager at Tarrytown, assistant zone manager at Philadelphia, zone manager at Atlanta, city manager at Pittsburgh, zone manager at Philadelphia and regional manager at St. Louis.

• In 1937, Mr. Keating was promoted to assistant general sales manager and was transferred to Chevrolet headquarters in Detroit. In that post, his immediate boss was William E. Holler, famed as one of the auto industry's great salesmen.

Mr. Keating had a high regard for Holler. He frequently referred to Holler as "The Coach."

But the two men were quite different. Holler employed something of an evangelistic frenzy in his sales campaigning. Mr. Keating used a much quieter approach, but it was likewise highly successful.

He avoided the spectacular and used sound business psychology and an intensity of purpose that won the respect and support of the Chevrolet dealer organization.

Holler retired in 1945 and Mr. Keating succeeded him as general sales manager. It was a difficult period. It wasn't much of a trick to sell automobiles to a car - starved public in the immediate postwar days, but equitable distribution and retaining or rewinning buyer loyalty wasn't easy.

In 1949, Mr. Keating moved up to Chevrolet's top job — general manager.

While serving as Chevrolet general manager (in 1954), Mr. Keating was elected to the GM board of directors. It was a singular honor: Since that time, no car division general manager has been elected to the GM board while serving as a car division chief.

Many onetime car division bosses have moved onto the board in the last 29 years, of course, but their elections came after they had been promoted to higher posts in the corporation.

Mr. Keating left Chevrolet in 1956 for a GM group vice presidency. In his last three years before retirement, he was in charge of the passenger-car divisions.

TOYOTA "SPORT" CONVERTIBLES

"AMERICAN CUSTOM COACHWORKS, LTD."

Custom built convertibles with their "fully automatic convertible top" have already proven they sell very fast and are **very profitable** for Toyota dealers to sell. They are the very highest quality of craftsmanship, and are the finest showroom traffic builders, and with their superb engineering and style create additional business. Base units can be drop shipped to American Custom Coachworks, Ltd. plants, or there are open factory (pool cars) presently in build that are available.

Sports-car specialist modernizes

Corvette firm grows with computer

WALDEN, N. Y. — Tom and Rick Taylor's computerized Corvette Specialty Center is a sports-car landmark of sorts on the outskirts of this village 75 miles from New York City.

Corvette Specialty Center, opened in 1975 by the Taylor brothers, is a 4,100-square-foot building with service bays, showrooms and a parts warehouse. It sells and services only Corvettes, maintains a complete body shop and inventories over 7,500 Corvette parts and accessories.

The brothers said that their lot is dotted with drivers from the Midwest and Atlantic Coast states and they receive catalog orders from all over the world.

Their venture is paying off because there are few firms in the U. S. which specialize in Corvettes, the brothers said. Competition is cooled by the car's price tag, limited production run and the capital-intensive inventory of cars, parts and accessories.

Tom Taylor attributed the success of Corvette Specialty Center to the Corvette's merits.

"While there are a shrinking number of individuals who have or will purchase a Corvette, these driving machines are now recognized investments and lots of money is spent maintaining and upgrading them," he said.

The Taylors have quadrupled their business in the past seven years, they said.

Until November, 1982, they maintained their parts inventory and a 3,000-name mailing list using index cards filled out by hand.

"We were using horse-and-buggy office procedures to sell one of the world's fastest production cars," Rick Taylor said.

They decided to look into the feasibility of computerizing the inventory.

In 1980, Tom Taylor began looking at ads in automotive publications and noticed that about 20 computer vendors in northern New Jersey claimed to be specialists in computerization of automotive applications.

Taylor contacted half of the vendors and said, "Due to the varied nature of our inventory, which we obtain from General Motors and aftermarket suppliers, there was no way that the databases they had could handle my operations."

The brothers were almost reconciled to continue doing things manually until they contacted Computer Revolution, Inc., in Newburgh, N. Y., and learned about the North Star microcomputer.

The Taylors bought a North Star Horizon system, which cost a little under $15,000 installed, in November, 1982.

With the new system, they are able to respond better to queries about parts in stock, avoid out-of-stock conditions and determine stock parts movement for better, money-saving inventory control, they said.

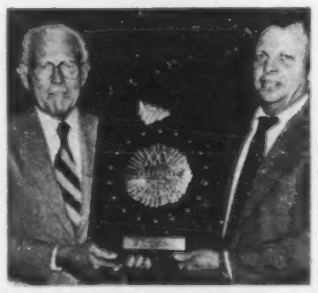
Since the Taylors are adding more stock parts and must have correct pricing and proper discount structures on the computer, this attention to inventory control will allow for orderly expansion.

The Taylors expect to double the capacity of their parts department through more efficient management of inventory. They intend to expand their showroom to enable them to display all of the items.

NADA names Hopkins AUTOCAP administrator

WASHINGTON. — Deborah M. Hopkins has been appointed administrator of the Automotive Consumer Action Program (AUTOCAP), sponsored by NADA.

Hopkins is responsible for coordinating technical, training and promotional assistance NADA provides to new and established AUTOCAPS. She also will monitor program compliance with the NADA National AUTOCAP Standards on an annual basis.



Biggs' 25 years

Warren Biggs, left, owner, Warren Biggs Chevrolet, Los Angeles, receives a 25-year dealer award plaque from Robert D. Cenedella, Los Angeles zone manager.

Clarke honored

James R. Clarke, left, president of Alfred Matthews, Inc., Modesto, Calif., receives his 25-year Cadillac Dealer Anniversary Recognition Award from Edward E. Houlihan, Cadillac district sales manager in Fresno, Calif.

Executives at Chicago show look for lower interest rates

McDonald says upturn is now here

By Nancy I. Phillips
Staff Correspondent

CHICAGO. — After 11.9 percent, then comes April! That's the way Jim Perkins, general sales manager of Buick, answered a question at a press conference during the Chicago Auto Show.

His response was like that of others who addressed the subject, including Louis E. Lataif, general manager of Ford Division, and Gordon B. MacKenzie, general manager of Lincoln-Mercury.

Oldsmobile and Nissan spokesmen agreed that they expect the lowering of interest rates in general and the increased economic activity to take care of the rest of the year.

But in a radio interview, Roger B. Smith, chairman of General Motors, indicated that if there were a need for lower interest rates, GM would offer this to the consumer. However, he, too, indicated that he didn't expect this to be necessary.

He said he expected the economy to move along and car sales to pick up.

F. James McDonald, president of GM, told the press, "Car buyer attitudes as measured in the fourth quarter of '82 were more favorable than at any time since the beginning of 1979. That's why I say the auto industry is already participating in the upturn we've been looking for."

He said that the annual rate of domestic car sales for the three months ended in January was about 9.1 million . . . up about 12 percent over the prior three months. And he said that the sold order bank for both cars and trucks is solid and indicates the upturn is taking place.

• C. P. (Chuck) King, senior vice president, sales, of Nissan Motor Corp. in U.S.A., said that the 9.9-percent financing offered by his company was the key to bring people into showrooms. It was expensive and he'd like to see interest rates go down, so that they are not subsidized.

"Then we'll return to normal incentives," he said.

Speaking of confidence in an upturn, Harold A. (Red) Poling, executive vice president, North American Automotive Operations, for Ford Motor Co., told the press that there are more than 70,000 orders in the system for the new Thunderbird and Cougar.

He expects the new cars already on the market, plus the Topaz and Tempo due to go on sale May 26, will give Ford an improvement of 1.5 to 2 points of market share by the end of the year. He's expecting to gain this share from imports as well as from GM and Chrysler, he said.

Poling said that he hopes that Ford won't have to support sales with reduced interest rates.

"We'd like to discontinue them, and get back to selling product," he said.

• A number of the executives were asked about dropping fuel prices and the effect of this on small-car sales. Most indicated that they think of this as a temporary situation which may help sell larger vehicles, but they reminded their audiences that CAFE is still to be met and that the lower gasoline prices may not last.

"We expect cyclical movements in fuel prices," said Poling.

In an interview with Automotive News James Mattox, sales manager of Oldsmobile, told of sales increases for Olds, including an increase of 35 percent for the first 10 days of February and 15 percent for the second 10-day period, when others saw a dip.

He attributed this not only to product, but to an excellent dealer organization. He's especially pleased to be ahead of Buick, some 47,000 cars on Feb. 10 and 50,000 cars on a model-year basis.

Like others, Mattox indicated that he's not going to replace many dealers from small points. He said that they had not lost many dealers in the last few years, but that open points in small communities may be eliminated as dealers retire and leave the business.

Other executives indicated that they were taking careful looks at open points in remote communities and that they are not in a hurry to replace them.

• Offering lower interest rates was helpful even to Cadillac, according to Robert D. Burger, general manager. He pointed out that though Cadillac buyers in the past haven't been interested in the percentage of interest, at this time many of them are buying on time and putting their money into other investments.

"The 11.9-percent financing hasn't worked as well as 10.9," Burger said. He indicated that the offer was regionally oriented, with the East Coast not as affected by the offer as the West Coast where it's gone well. He hopes, too, that there won't be a need to extend the offer.

"I am dead set against rebates," he added.

The 9.75-percent interest offered by Mitsubishi dealers was, according to Richard D. Recchia, executive vice president, designed to draw in the competition, not necessarily to increase deals.

But it did result in a higher percentage of competitive trades, he reported. He did not indicate how long after March 31 it would be offered.

"The consumer confidence isn't there," said Jose Dedeurwaerder, president of American Motors.

He said 11.9-percent financing has helped meet the sticker shock. But, he said, the industry is going to have to "battle to convince and recapture the consumer's confidence in price and quality."

He said this can be done by AMC with the support of its "fantastic partner" (Renault).

Announcing: Beach Lincoln-Mercury

Beach Lincoln-Mercury has opened in Huntington Beach, Calif. Dealership owner Peter Chang, right, formerly controller and general manager of Sachs & Sons Lincoln-Mercury, Downey, Calif., is congratulated by Ross H. Roberts, Lincoln-Mercury Los Angeles district sales manager.

Cadillac studies market for $100,000 luxury car

Continued from Page 6

spects, for the '90s — both in terms of technology and design.

"Our strategy is to retain our current buyers in the intermediate sector of the market and to attract new ones, drawn from the ranks of domestic and import owners or intenders."

He told how they designed the instrument cluster of the Topaz to have needle gauges, playing to the buyer who is used to specific readings on his instrumentation.

And he said, "We insisted from the beginning that Topaz carry — as standard — a handling suspension that gives drivers a sure, controlled feel of the road."

C. P. (Chuck) King, senior vice president, Nissan Motor Corp. in U.S.A., explained his company's thinking in introducing the company's new pickup truck.

The "made in America" trucks shown at the press preview and at the auto show are Nissan's way of meeting domestic competition. He expects the light truck market for 1983 to be 2.7 million units, up from 2.4 million.

"The compact share will grow from 774,000 to 936,000, most of it from domestics," King said. "Imports, we expect, will share some of that expansion, going from 443,000 to 455,000 units."

King said his company is catching up with domestics as it introduces the new truck. He also spoke of adding a mini van in the future and of bringing in a vehicle like the Prairie, a van which is offered now in Japan.

• Richard D. Recchia, executive vice president of Mitsubishi, said that in introducing the Montero, a personal sports utility vehicle, at the Chicago Auto Show, it was one of the biggest markets for this type of vehicle. Heaviest advertising programs for the sport vehicle are scheduled for Chicago.

Recchia said he was proud of the Chicago organization, which has three dealerships open and two under construction. He said that all of his dealers in the U. S. are tracking at 3,000 cars and trucks for February and the figure may go to 4,000.

Some 72 dealers have been named nationally and 27 of them are not yet operational, so if they track 4,000 cars and trucks for March and April, this will be some 42 cars per dealer per month. They've had four record 10-day periods since the first of the year, he said.

Jose Dedeurwaerder, president of American Motors, said two new cars will be built in Kenosha this summer for the 1984 lineup.

He also said the company will introduce a new Jeep "that will be more than competitive with the Bronco II and the Blazer."

U. of Michigan evaluates potential electric car market

ANN ARBOR, Mich.—Electric cars are going to school.

Detroit Edison has supplied two of the company's electric cars to the University of Michigan as part of an electric vehicle project funded by the Electric Power Research Institute (EPRI).

A project team at U. of M. is operating the cars on a daily basis and will perform all routine maintenance. The cars are American-built converted Volkswagen Rabbits, similar to those used in Detroit Edison's utility's electric car demonstration program.

The U. of M. project team is assessing the potential market for electric vehicles in the commercial sector as well as planning for expanded electric vehicle demonstration programs.

According to Mark Berg, project director, U. of M. Institute for Social Research, the project is examining a wide range of market, technology, economic and attitude factors which will influence the success of electric vehicles in commercial applications.

"The electric cars will give the U. of M. project team an opportunity to solicit fleet operator views, test some sophisticated monitoring equipment that will be placed on the cars and receive some hands-on driving experience," Berg said.

• These real-life driving experiences will help identify research and demonstration activities needed to move toward commercialization and mass production of electric vehicles and component systems.

The U. of M. project team consists of researchers and faculty from the Institute for Social Research, the program in Urban Technological and Environmental Planning and the Engineering School. EPRI, the primary sponsor of the U. of M. project, is the research arm of the electric utility industry in the U. S.

"This project is an extension of the Detroit Edison program, which is concentrating on the electric passenger car," said George Murray, administrator of new technology marketing at Detroit Edison. "At U. of M., the program will examine fleet applications for electric vehicles in the automotive marketplace."

So far, Detroit Edison employe drivers and their families have driven 175,000 miles, saving more than 5,800 gallons of gasoline, 400 quarts of motor oil and 47 gallons of antifreeze, the company said.

Ryder System notes record '82 revenue, profits

Continued from Page 20

results were attributable principally to strength in four of the company's most important product lines: Full-service truck leasing, consumer one-way truck rental, dedicated contract carriage and automotive carriage.

The company's Truckstops Division, which was subjected to significant pressure as a result of the difficult economy, suffered a loss for the year, he added.

Results in the last quarter of 1982 were the best of any fourth quarter in the company's history, Burns said.

Revenue in the fourth quarter was $520 million, 7 percent higher than revenue of $488 million in the fourth quarter of 1981. Net earnings were $21.5 million, compared with net earnings of $20.7 million in the fourth quarter of 1981.

Dealership transferred

MACON, Ga.—After 53 years with Dunlap Chevrolet Co. here, R. C. Dunlap Jr. has sold the business and transferred the franchise to his son-in-law, George E. Youmans. The new dealership is Youmans Chevrolet Co.

Congressman raises some questions

FTC ready to look at GM-Toyota

Continued from Page 1

an OSHA matter. Two years have passed since Miller received money from GM and he now feels cleansed.

Rep. Peter Rodino, New Jersey Democrat and chairman of the House Judiciary Committee and its Monopoly Subcommittee, has written to Miller raising questions about the long-term effects of the GM-Toyota venture and the competitive position of other domestic companies.

The Rodino letter is thought to be very similar to one sent to Rodino by Rep. John F. Seiberling, Ohio Democrat, a member of the Judiciary Committee. Seiberling told Rodino the situation is "crying" for a Congressional inquiry into what FTC has done or plans to do.

Seiberling said the joint venture combines resources of two companies that already have 35 percent of the U. S. subcompact market, "a figure well beyond the limits of the revised Department of Justice guidelines."

Seiberling also said there is nothing to stop the two companies from renewing their agreement when it expires in 12 years.

• Commerce Secretary Malcom Baldrige—while stopping short of a Reagan Administration blessing—sent GM Chairman Roger B. Smith a letter of congratulations, calling the GM-Toyota pact a "sign of confidence in the strength of the American economy" and a move that will mean quality cars and a wider choice for the consumer.

The GM-Toyota deal, combined with other Japanese investments, will mean that Japanese firms have invested more than a billion dollars in U. S. production facilities by 1984, Baldrige said, which "in turn will create jobs for American workers."

U. S. Trade Representative William E. Brock called the GM-Toyota deal a "kind of domestic content that works."

GM and Toyota will build 200,000 front-drive subcompact cars per year at GM's empty Fremont (Calif.) assembly plant, creating 3,000 jobs at the plant and another 9,000 in the supplier industry. Production will start as early as possible in the 1985-model year. The car will be sold by Chevrolet dealers.

So far, the UAW has said little about the pact, only that it welcomes anything that creates jobs in the auto sector. But there has been grumbling about whether Toyota will abide by seniority rules.

The effect of UAW-backed local-content legislation is unclear. If local-content laws are passed, the Transportation Department would have to study the GM-Toyota deal to determine how labor and parts content would be divided.

Because GM has equity interests in two Japanese firms, Isuzu and Suzuki, and because there may be partial ownership in the supplier firms by one or both companies, the content question could be a sticky one.

February car sales trail '82 but surge at month-end

Continued from Page 3

bered 369,227, up 7.99 percent from 341,893.

Of the major U. S. auto makers, two improved their lots compared with February, 1982, sales levels. Three declined and Honda joined the ranks. American Motors sales doubled to 14,795 from 7,201. Chrysler's February sales totaled 57,034, up 2.74 percent from 55,515. Honda reported sales of 1,253 Ohio-built Accords during February.

General Motors dropped 5.36 percent, to 261,560 from 276,383. Ford Motor Co. was down 7.76 percent, to 102,321 from 110,932, and Volkswagen of America dealers retailed 5,516 new Rabbits, down 20.19 percent from 6,913 a year earlier.

GM earned 59.11 percent of the domestic market in February, down from 60.49 percent last year. Ford had 23.12 percent, down from 24.28 percent. Chrysler climbed to 12.89 percent from 12.15 percent. AMC earned 3.35 percent, up from 1.57 percent. VWoA slipped to 1.25 percent from 1.51 percent, and Honda picked up the remaining 0.28 percent of this year's market.

Among the top importers, several reported sales increases in February and two—Mercedes-Benz and Jaguar—claimed record sales for the month. Toyota was up 3.09 percent, Nissan was up 26.94 percent, Mazda was up 10.75 percent, Volkswagen was up 43.80 percent, Volvo was up 16.39 percent and Saab was up 28.45 percent.

• The market-class spectrum in February showed imports with the largest section of the total, 29.64 percent. Intermediates were second with 24.68 percent, followed by compacts at 14.85 percent, standards at 13.87 percent, subcompacts at 11.79 percent and luxury models at 5.17 percent.

U. S. makes reporting sales increases in February were Chrysler, up 54.45 percent from last year; Dodge, up 1.30 percent; Buick, up 10.11 percent; Cadillac, up 11.43 percent, and Oldsmobile, up 27.59 percent. Renault Alliance and Honda were on the charts for the first time in 1983.

Not meeting their year-ago totals were: AMC, down 37.97 percent; Pontiac, down 28.41 percent; Chevrolet, down 23.18 percent; Lincoln, down 2.12 percent; Mercury, down 3.87 percent; Ford, down 9.71 percent; Imperial, down 31.42 percent; Plymouth, down 21.23 percent, and VWoA, down 20.19 percent.

Western Star, White pact ended

GREENSBORO, N. C.—Volvo White Truck Corp. and Western Star Trucks, Inc., Mississauga, Ont., have terminated a licensing agreement which allowed distribution of each firm's White and Western Star heavy trucks in the U. S. and Canada.

A new agreement has been executed for the sale of White trucks in Canada but there will be no distribution relationship for Western Star trucks in the U. S.

"However, Volvo White will retain non-exclusive rights for a limited time as necessary for a smooth transition," a spokesman said. "Volvo White will distribute Western Star service parts for three years, and continue to process warranty claims for vehicles it sold."

Year-to-date output is up 49 pct.

Millionth car 3 weeks ahead of '82

By Patricia Hoffman
Staff Writer

The domestic auto makers reached their first milestone for 1983 as the one-millionth automobile was assembled last Friday (March 4), three weeks earlier than in 1982. Last year, the million mark was reached March 26.

So far this year, the manufacturers have assembled 1,021,809 cars, a 49.31 percent gain over 684,389 built the same period last year.

Breakdown for the year-to-date by company is: General Motors, 59.98 percent; Ford Motor, 23.24 percent; Chrysler Corp., 11.80 percent; American Motors, 3.03 percent; Volkswagen of America, 1.60 percent and Honda, 0.35 percent.

During February, the makers produced 493,182 cars, a 51.63 percent gain over last year's 325,243. It was the most for that month since 1980 when 624,301 units were completed, and the most for any month since 568,332 cars were assembled in June of last year.

Breakdown for the month by company was: GM, 57.23 percent; Ford, 25.42 percent; Chrysler, 13.06 percent; AMC, 2.86 percent; VWoA, 1.08 percent and Honda, 0.35 percent.

Last week's estimated production, marred by downtime at four assembly plants plus the Eagle line at AMC's Kenosha facility, was 116,171 units, a 12.93 percent drop from the previous week's 133,417. Output, however, jumped 43.83 percent from last year's 80,772.

A paint fire at GM's Lordstown plant shut down operations following the morning shift last Monday, Feb. 28. Lordstown remained idle through Thursday, with production resuming Friday. Saturday overtime was scheduled due to loss of assembly.

The Ford Kansas City, Metuchen and San Jose facilities were idle last week due to overstocked inventory. Also down for inventory control was the Eagle line at AMC's Kenosha point.

GM's Detroit plant operated 1.6 hours of daily overtime last week.

Saturday overtime was scheduled last week for the B and C lines at GM's Flint facility.

Beginning today (March 7), GM's Arlington plant will increase output of Buick Regal and Chevrolet Monte Carlo and Malibu models from 45 units an hour on two shifts to 56 units an hour on two shifts. About 600 workers return from indefinite layoff.

Also today, production of Chevrolet Cavalier and Pontiac 2000 models will increase from one shift at 68 units an hour to two-shifts at 68 units at the GM Lordstown facility. About 2,500 workers return.

Next week (March 14), assembly will resume at GM's Framingham point, idle since Oct. 1, 1982. The facility will produce the Chevrolet Celebrity and Oldsmobile Cutlass Ciera at a rate of 45 units an hour on one shift. About 1,800 workers return from layoff.

February truck production is 172,095, best since 1979

February proved another favorable month for domestic truck production as output jumped 34.44 percent from the comparable 1982 period. It was the highest February total in four years, and the most for any month since last June.

Last month, the makers assembled 172,095 trucks, up from 128,013 built in February, 1982. Output was the most for that month since 1979 when 308,358 units were completed. It was the most for any month since last June, when 213,209 trucks were produced.

Production last week was estimated at 47,912 units, up 11.76 percent from the previous week's 42,869, and up 39.12 percent from last year's 34,440.

Year-to-date there have been 340,132 trucks produced, a 9.16 percent gain over the 311,593 units built in the comparable 1982 period.

All truck facilities were reported operating last week (Feb. 28) with overtime scheduled at five plants.

The General Motors Detroit, Lordstown and Pontiac S-truck line, plus Ford Motor's Lorain and St. Louis facilities operated six days last week.

Chrysler Corp.'s Warren point worked a daily nine-hour shift for the fifth consecutive week last week.

Operations resumed last week at American Motors' Toledo Jeep plant following a week of downtime for inventory control.

International Harvester's Springfield point returned to full operations last week with the resumption of one line which was idled Feb. 14.

Also back last week were the truck and bus lines at GM's Pontiac facility.

Second-shift operations resumed last week at the GM St. Louis truck plant. The plant will build at a rate of 28 units an hour on each shift. About 900 workers returned from indefinite layoff.

Beginning March 14, van output at GM's Lordstown facility will be upped from 24 units an hour on two shifts to 29 units an hour on two shifts. About 300 workers will return.

Hennessy Jaguar opens

ATLANTA, Ga.—A new Jaguar dealership has been opened here by Robert Hennessy. He has been an automobile dealer in the Atlanta area for 18 years.

Auto production in Canada rises 21 pct. for month

Canadian auto production in February jumped 21.62 percent from the 1982 period and was the highest for that month in four years.

During February, the car manufacturers assembled 77,863 units, up from 64,022 built in the same 1982 month. It was the most for that month since 93,463 autos were produced in 1979.

As Ford Motor's St. Thomas facility joined in downtime last week with the company's Oakville point, car production fell to 17,759 units, 17.19 percent below the previous week's 21,446. Output, however, rose 25.22 percent from last year's 14,182.

Year-to-date the car manufacturers have finished 165,018 units, a 27.61 percent gain over 129,316 built in the comparable 1982 period.

Truck production last month totaled 38,850 units, up 9.55 percent from the 64,022 built in February last year. It was the most for that month since 1981 when 57,714 trucks were assembled.

Last week's truck output was estimated at 10,232 units, almost the same as 10,226 the previous week and down 10.49 percent from last year's 11,431.

So far this year makers have completed 81,613 trucks, a 7.53 percent gain over 75,901 built in the comparable 1982 period.

Ford's St. Thomas car point was idled last week (Feb. 28) for two weeks of inventory control. Operations are slated to resume March 14.

The Ford Oakville car facility remained down last week for conversion to the Tempo and Topaz models. The plant, which recently built the full-size Ford, is expected to reopen April 4 with Job-One operations slated for April 11.

International Harvester's Chatham facility, idled after the morning shift on Feb. 7, remained closed last week due to a strike.

American Motors' Brampton car point returned last week following one week of downtime to control overstocked inventory.

All other car and truck facilities were reported working last week.

BL's Maestro

New competition for Europe

BL's Austin Rover Group introduced the Austin Maestro at the Geneva Auto Show to compete on the Continent in the medium ranges. It is 159.5 inches long and has a wheelbase of 98.7 inches. Hydrolastic suspension has been abandoned in favor of conventional springing. It has a voice synthesizer to instruct the driver. Story and another picture on Page 48.

Inventory edges upward as days' supply dips to 68

By Richard A. Wright
Assistant Managing Editor

The domestic new-car inventory continued to edge upward during February, but a stronger selling rate resulted in a 68-day supply March 1, compared with a 71-day stock a month earlier.

The March 1 stockpile totaled 1,248,384 new cars, up from 1,180,291 units a month earlier.

A year ago, the industry had a domestic inventory of 1,325,073 new cars, a 70-day supply.

So while no recovery is yet indicated in the sales reports, the domestic industry's situation is quite healthy. In fact, the industry is in fighting trim and a spring sales surge with any punch behind it would quickly produce shortages.

Among the corporate makers, only American Motors and Volkswagen of America trimmed their unit counts during February, but all the makers opened March with lower days-supply figures.

• General Motors had a 66-day supply March 1, compared with a 67-day stock a month earlier, despite the fact that its unit count grew by more than 33,000

Table on Page 45

units. GM's inventory was light in some big-car lines and heavy in small cars. Oldsmobile's stock was substantially leaner than any other division's, mainly because of its strong-selling standard and intermediate lines.

Ford Motor Co. opened March with a 71-day supply, down from 76 days a month earlier. Ford's stock was also heavier in small cars, lighter in the big ones.

Chrysler Corp. had a 70-day supply, down from 81 days a month earlier. The corporation's stock was well-balanced between size classes.

AMC also had a 70-day supply March 1, down from 78 days a month earlier. VWoA sliced its days supply to 93 from 100 a month earlier. Honda had a 40-day supply of U. S.-built Accords in stock March 1.

The March 1 domestic inventory was divided this way: GM, 57.29 percent; Ford Motor Co., 24.13 percent; Chrysler Corp., 13.25 percent; AMC, 3.44 percent; VWoA, 1.71 percent, and Honda, 0.18 percent.

A month earlier, the domestic inventory was divided as follows: GM, 57.84 percent; Ford Motor Co., 23.65 percent; Chrysler Corp., 12.94 percent; AMC, 3.68 percent, and VWoA, 1.89 percent.

• By size class, the domestic inventory continued to move into better balance during February. On March 1, the industry had a 75-day supply of subcompacts and 73½-day stock of compacts, down from 79 and 76 days a month earlier.

The largest segment, inter-

U. of Michigan expert says makers expect curbs to stay

Japan feels 'open' U. S. market is gone forever

By Kathleen Hamilton
Financial Editor

In his studies of the Japanese and U. S. auto industries, Robert Cole finds he has to ignore the rhetoric on both sides of the Pacific.

By studying trends and facts instead of the speeches, he has come up with two notable conclusions: The Japanese auto makers expect to never again see a completely open U. S. market. And, although they have eliminated most barriers to their domestic market, an attitudinal barrier remains high enough to keep most foreign suppliers out.

Cole is former director of the University of Michigan's Center for Japanese Studies. As such, he was one of the organizers of the annual conference of the Japanese and American auto industries, which will be held this week (March 16-17) in Ann Arbor.

He is also project director of the Joint U. S.-Japan Automotive Study, a comprehensive two-year examination of the industries that is funded by the U. S. Big 3, Nissan, Toyota, Volvo, Saab, the UAW, the Canadian government and major automotive suppliers in the U. S. and Japan.

Cole believes that—despite the public hard line taken recently by the Japanese on the subject of continuing voluntary export quotas—they expect the U. S. to be limited to them in some fashion.

"My own personal view is that they don't expect to see an open U. S. market again," Cole said. "After all, they are restricted in 77 percent of the world markets now."

That figure represents the percentage of non-Communist world car demand that restricts the Japanese exclusively. It doesn't include developing nations' content and import laws that apply equally to all auto makers.

Facing this reality, Japanese auto makers have begun to move production overseas, Cole said. He pointed to the recent Toyota decision to become a major producer for export in Thailand.

A look at other foreign-production ventures by the Japanese auto makers shows there indeed has been a flurry to move production overseas, especially in the last two years, as restrictions went up in the U. S. (their biggest foreign market), Germany and the UK. (See list on Page 47.)

There are also some indications that the already-diversified Japanese auto conglomerates are putting their money into other products as the auto industry matures and thereby becomes game for lower-wage countries, Cole said.

Toyota, already a leader in forklifts, has made entries into the home-construction field. Honda, the world's largest motorcycle producer, is making big gains in small-engine production.

Cole's findings from a soon-to-be-published paper on tariff and non-tariff barriers to entry of the Japanese auto market run counter to both Japanese and American industry rhetoric on the subject.

The protectionist walls that

Service Index gains in all five segments

By Francis J. Gawronski
Service Editor

Service and parts business in new-car dealerships across the country opened the new year the same way it closed 1982 — on the upswing.

With all five indicators in the Automotive News Service Index scoring impressive gains, shop business in January amounted to 109.5 percent of the volume for the same month a year earlier. In December, shop business was 108.7 percent of the year-ago volume.

SERVICE INDEX
109.5*

	Jan., '83 vs. Jan., '82
Gross Profit on All Labor and P&A Sales	+ 9.9%
Repair Orders Written	+ 6.4%
Total Labor Sales (Customer & Warranty)	+11.9%
Shop Parts Sales (Customer & Warranty)	+ 9.5%
Sales of All P&A	+ 9.9%

*—Survey by Automotive News shows that dealers' service and parts business in January, 1983, was 109.5 percent of business in January, 1982.

January marked the 23rd consecutive month in which service and parts business has shown an increase over the comparable period the previous year.

The leading indicator in January was total labor sales—customer-paid and warranty—up 11.9 percent.

Both gross profit on all labor, parts and accessory sales — the most important indicator from a dealer's standpoint—and sales of all parts and accessories were up 9.9 percent above the 1981 figure.

Shop parts sales (those used in dealers' shops on both customer-paid and warranty work) were up 9.5 percent, while repair orders written jumped 6.4 percent over the year-ago volume. January marked the third consecutive month that repair orders registered a gain over the year-earlier figure.

Figures used in the Service Index are compiled from monthly reports on service and parts business from a cross-section of the nation's new-car dealers.

IH and UAW settle in Canada

TORONTO.—The UAW and International Harvester in Canada have settled a new 19½-month contract ending a five-week strike. The new contract, which expires Oct. 1, 1984, provides quarterly cost-of-living adjustments based on the Canadian Consumer Price Index (effective this September); a one-time payment of $300 for retirees on Jan. 1, 1984; plant closing benefits, and improvements in work rules. The new pact was ratified last week by 94.7 percent of the workers voting. The 720 workers return to the job today (March 14) at Chatham, Ont.

VW ad agency to open Detroit office March 21

TROY, Mich. — The Doyle Dane Bernbach advertising agency is locating across the street from client Volkswagen in this Detroit suburb, with billings in the new office estimated at $75 million. Robert Rees will become president of the new office, which opens March 21. Rees, executive vice president of DDB-New York, supervises the VW, Porsche and Audi accounts. Media buying will continue out of New York.

On cars sold only in Japan

Court may tell Toyota to supply price data

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES.—Toyota Motor Corp., of Japan may have lost the first round in a fight to keep the IRS from obtaining price and cost data on cars built and sold solely in Japan by the company.

U. S. District Judge Cynthia Hall said she is inclined to find that the federal court here has jurisdiction in the civil case, which has grown out of an investigation by the IRS to determine the exact income tax liability of Toyota Motor Sales U.S.A. for the period 1975-78. TMS/USA is a wholly owned subsidiary of Toyota Motor Corp.

Judge Hall's written findings in the jurisdiction matter are expected early this week.

Attorney John S. Nolan, who is representing TMC, said the firm complied with an IRS request to provide production and selling costs for vehicles marketed in the U. S. during that period.

However, the request to provide secret cost information on vehicles built solely for the Japanese home market was "unprecedented," he said.

In fact, Nolan continued, to ask that a foreign company open its books in this matter, as a result of the jurisdictional proceedings, would be "extreme" expansion of the court's powers.

One of the questions in the jurisdiction dispute is whether or not TMC is "found" in California, or in other words, is directly doing business here.

Nolan insisted that TMC is not found in California but, rather, conducts its business through arms-length relationships with its subsidiaries and that TMC does not exercise day-to-day control over those companies.

Of the more than 2,000 persons employed by TMS/USA, Nolan said that only 26 can expect to return to TMC and that while here, they are in the employ of TMS/USA. Isao Makino, Toyota Motor Sales' president, owes his employment to TMS and is only a director of TMC and not an employe of the parent, Nolan said.

"The government has failed to establish the burden that such a relationship exists," Nolan said of the IRS contention that TMC and TMS/USA are tied closely together.

"It appears to me that TMC is a completely separate entity," Judge Hall said in her opening remarks. But, she added, "Although TMC maintains full corporate formalities, this fact alone is not enough to preclude jurisdiction."

Judge Hall said her tentative ruling is to find that jurisdiction does exist, although she added that she would take TMC's arguments under submission before issuing the final written ruling.

If jurisdiction is established, a hearing on the merits of the case will be held April 11.

Ruddell named dealer of year at NIADA meeting

CLEARWATER BEACH, Fla.—Howard M. Ruddell, of Port Angeles, Wash., was named best used-car dealer in the nation by the National Independent Automobile Dealers Assn. during its 36th annual convention here.

Ruddell is president/manager of Ruddell Pontiac-Buick-Cadillac-GMC-Mazda in Port Angeles. His nomination for National Quality Dealer was sponsored by the Washington State Independent Automobile Dealers Assn.

Ruddell began his career in the auto business at age 11 as a lot boy for his father's dealership in Port Angeles and eventually became general manager.

When his father retired, he began his own used-car sales and leasing business. He received his current new-car franchises in 1981.

Peugeot 205 Turbo 16 unveiled

The Peugeot 205 competition version made its debut at the Geneva Motor Show. The 205 Turbo 16 is powered by a mid-mounted 1.8-liter engine developing 320 horsepower. The car will compete in the world rally championship series in 1985.

Rinspeed's 170-MPH Porsche 939 shown

The Rinspeed 939 Turbo Convertible, shown at the Geneva Motor Show, incorporates design elements of the Porsche 928 into the 930 model. The car's 300-horsepower engine moves it from 0 to 100 kilometers-per-hour in less than five seconds. Top speed is more than 170 MPH. Radio-controlled door locks, electric seats and a Clarion stereo system complete the car.

Daimler-Benz goes 'outside' for first time

By Richard Feast
European Editor

GENEVA. — Daimler-Benz is taking the highly unusual step of buying in a key component from an outside engineering firm.

Cosworth Engineering, of England, is to supply the West German auto maker with 16-valve twin overhead camshaft cylinder heads for its forthcoming sporty version of the new Mercedes-Benz 190/190E.

Daimler-Benz carries the biggest research and development team—in relation to overall size — of any auto maker in the world. It is almost unknown for it to subcontract such vital work.

Cosworth is a small firm with a big reputation. Its specialty is the design of high-performance engines. It was responsible for the all-conquering Formula 1 V-8 which was sponsored by Ford in Europe.

The sporty new Mercedes will debut at September's Frankfurt Auto Show. While Prof. Werner Breidschwerdt, head of R and D, publicly admits that the new version will have outputs of "150 to 185 horsepower," no other details have been officially released.

It is understood the car will be known as 220, but will feature a 2.3-liter engine capacity.

Cosworth was commissioned to develop the head in the late 1970s, when Daimler-Benz was involved in international rallying. The company subsequently withdrew — it was not winning — but there were plenty of senior executives who would like to see the three-pointed star return to competition.

• Sixteen-valve heads seem all the rage for European auto makers. At the International Auto Show here Saab unveiled a prototype version of its engine with such an arrangement. It will go into limited production later this year, though deliveries will not reach the U. S. until next year.

At present, Saab's engine, equipped with turbocharger and intercooler, can produce 180 HP. It is expected that later versions without the turbo will be produced.

Saab's engine develops 10 percent more power, but is 10 percent more economical. This is expected to be important in meeting the 1985 fuel consumption requirement in the U. S. of 27.5 MPG.

Volvo has a 16-valve version of its 2-liter four-cylinder engine under development. Power outputs range from 170 to 231 HP, depending on the state of tune.

In an engine with four valves per cylinder the combined opening area of the valves can be larger. Since each valve is smaller and lighter the inertia decreases. This makes it possible for the valves to open and close faster and more efficiently.

For Westmoreland and South Charleston

VW-UAW pact has plant assurance

By Marjorie Sorge
Labor Editor

Volkswagen of America will maintain its Westmoreland (Pa.) assembly plant and South Charleston (W. Va.) stamping facilities as integral components of its manufacturing operations, according to the new VWoA-UAW labor agreement.

It has been reported, and vehemently denied by VWoA, that those operations could close as early as this August because of the company's falling sales. But the new three-year contract contains written confirmation that those two plants will be part of VWoA's operations.

However, the contract does state that in the event of any "major unforeseen circumstances beyond the control of either party" which could alter the company's plans, the union will be given advance notice and allowed to negotiate, taking into account "the corporation's obligations to the workforce and the communities involved."

"We are pleased we were able to reach a fair and equitable agreement without a work stoppage," said a VWoA spokesman. "We hope to continue in a spirit of cooperation to overcome the adverse conditions all the automotive companies are encountering in the market."

UAW workers at the VWoA Westmoreland assembly plant ratified the three-year pact last week. It includes a three-year freeze in base wages and a one year delay in increased COLA.

The agreement was approved by a vote of 1,330 to 214. A similar contract was presented for ratification at the company's South Charleston plant last weekend.

Under the new agreement, COLA will be paid annually in March, 1984 and March 1985. Quarterly payments will be made in December, 1985, and in March, 1986. The contract expires March 10, 1986.

COLA is based on a one-cent increase for each 0.26 percent rise in the U. S. Consumer Price Index.

• Assuming a 3-percent annual inflation rate in the first year of the contract and a 5½-percent rate in the second and third years, an assembler's base hourly wage would rise from the current $12.14 (including $2.57 in COLA) to $13.79 by the end of the contract. A skilled trades worker's base rate would jump from $14.16 (also including $2.57 COLA) to $15.81.

There is also an economic reopener clause which allows either the company or the union to reopen the contract on or after Sept. 14, 1984. There is no formula for reopening the agreement, it is left to the discretion of either party, a UAW spokesman said.

If the contract is reopened, an agreement must be reached within 30 days or a strike could occur.

Other changes include:

1. Combining of job classifications in the skilled trades.

2. A Contingency Benefit Account (CBA) funded with $312,000 to restore supplemental unemployment benefits. The CBA will be used for one year to pay benefits at a reduced level while the regular SUB fund is frozen and allowed to rebuild. Regular SUB payments resume in March, 1984.

3. A commitment from VWoA not to increase outsourcing in areas where work can be done in-house. If outsourcing becomes necessary, VWoA must give the union 30 days' notice.

4. An additional 36 months of recall rights, which lengthens recall protection for up to six years.

5. Increase in life insurance and accidental death and dismemberment coverage.

6. An educational leave of absence for up to one year for workers with one or more years' seniority.

7. The continuation of Deer Day, a paid holiday negotiated in the last contract which gives workers the first day of deer hunting season off.

The new contract covers 2,500 active and 2,400 laid-off workers at the Westmoreland plant and 500 active and 150 laid-off workers at the South Charleston facility. Workers at the West Virginia operation have been working under an informal extension of their previous agreement which expired Jan. 17.

The new contract marks the first time both plants have been under one pact.

Millionth service contract is issued by AWC

LOS ANGELES. — American Warranty Corp. has issued its one-millionth service contract.

William P. Fisher, AWC president, said the company issued 30 percent more service contracts in December, 1982, than in the same month a year earlier.

Back to the trappings of corporate success

Chrysler, flying high, wins OK on a plane

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — Things are looking up for Chrysler these days. Last year it turned a profit for the first time in five years. This year it has been one of only a few makers to report consecutive sales gains for the first two months.

In a few weeks it will convert $1.1 billion worth of preferred stock to common stock in a recapitalization move that will be a big boost to its new-product program and now, to top it all off, it is getting its airplane back.

Constant Reader will recall that when Chrysler came to the government in 1978 for help, one of the conditions of the company receiving the $1.2 billion in loan guarantees it wanted, was that it shed many of the trappings of corporate power, including the three company planes it had then.

In no position to argue, though it did, the company reluctantly agreed. It got the guarantees but since then Chrysler Chairman Lee Iacocca and the company hierarchy have had to make do with a leased Cessna Citation to get from plant to plant.

But, as we said at the beginning, times and fortunes have changed for Chrysler and a gleaming new Canadair Challenger 10-12 passenger corporate jet will shortly be rolling down the runways, winging Chrysler's corporate hierarchy hither and yon.

• The decision to let the company have the plane came in February after the Chrysler Loan Guarantee Board had received another request from Chrysler.

"We want to interfere as little as we can in the daily operation of the company," a spokesman for the board said in explaining why it had agreed to the plane request.

Meanwhile, the board has rejected for a second time, (Chrysler asked in the summer and at the end of the year), a request by Chrysler to reduce, from $12 million to $6 million, the annual "administration" fee the company pays to the government on the grounds that the company is now a "going concern" by evidence of its market performance and the judgment of most financial observers.

The $12-million fee is made up of two parts: $6 million to cover administration costs for the Loan Guarantee Board and $6 million in what the board calls a "risk fee."

Chrysler wants the risk fee eliminated on the grounds that it no longer is a financial risk.

Notwithstanding the company's $170.1 million profit last year, the board is resisting, however, and has told the company that it will not consider eliminating or reducing the risk fee until the firm shows a profit for two consecutive operating quarters.

• It is relenting in another area though. When Chrysler received its $1.2 billion in government guaranteed loan authority, one of the conditions was that it actively seek a merger partner, on the grounds that this was a necessity for the firm's long-term viability.

Chrysler hasn't found a partner thus far, but now the loan board, though officially still asking the firm to continue the search, is backing off on the demand. A source at the board said the "pressing need" is not there any more.

The source said also that the board will likely "sign off" within the next couple weeks on Chrysler's recapitalization plan (the preferred stock for common stock swap).

"It looks like a good deal for everyone," he said.

Bill requires spare to match other tires

HARRISBURG, Pa.—Legislation requiring Pennsylvania automobile dealers to provide each new car with a spare tire like the other four tires on the vehicle has been introduced in the state Senate by Senator Clarence Bell.

The measure would enable car buyers to reject, at no extra cost, the emergency tire — which has limited use — as a spare on some new cars.

Automobile Importers appoints general counsel

WASHINGTON. — The new position of general counsel has been created by the Automobile Importers of America, which represents all foreign car makers except Daimler Benz and Volkswagen of America as well as tire companies and some suppliers.

Named to that post is Diane E. DePould, who was a trial attorney with the Navy Department and served with the EPA's office of legislation.

Despite 1982 decline of nearly 140,000 units

Record market slice goes to imports

By Jenny L. King
Staff Writer

Registrations of new imported cars claimed a record share of the total U. S. market in 1982 in spite of a decline of almost 140,000 units compared with the preceding year.

Imports accounted for 29.57 percent of the 1982 calendar year total, up from the former record of 28.80 percent in 1981 and up from 28.18 percent in 1980. There were 2,293,268 new registrations in '82, down 5.69 percent from 2,431,680 in 1981, and down 7.12 percent from 2,469,180 in 1980.

December import registrations were up 19.42 percent, to 220,075 from 184,282 a year earlier. Because of especially strong domestic sales during the final month of the year, imports claimed only 28.75 percent of the market, down from 30.14 percent in 1981.

Toyota remained comfortably atop the list of imports in 1982, earning 23.11 percent of the import market, down 0.17 percentage points from 23.28 percent in 1981. Second-place Nissan climbed 1.45 percentage points, to 20.04 percent from 18.59 percent. Honda was third at 15.97 percent, up from 15.04 percent.

Mazda, Volkswagen and Subaru were clumped together in fourth, fifth and sixth places respectively, with Mazda taking fourth from slipping VW. Mazda's share of the market was off 0.14 percentage points in 1982, but VW's plunged 3.01 percentage points. Subaru climbed 0.24 percentage points to further narrow the gap.

• Volvo was seventh at 3.19 percent, followed by Mercedes at 2.84 percent, BMW at 2.24 percent and Audi at 1.98 percent. "Others" picked up the remaining 11.01 percent of the import market.

In December, Toyota was up 0.17 percentage points, Nissan was up 0.90 percentage points, Honda was up 0.08 percentage points and Mazda was up 0.07 percentage points.

Fourth-place VW was down 3.10 percentage points, Subaru was down 0.64 percentage points, Mercedes was down 0.07 percentage points and Volvo was up 0.06 percentage points.

Renault Alliance leaped from obscurity to seventh-best among the imports in December and BMW made its way into the top 10. Audi and Colt lost their footholds, and together with the remaining imports accounted for 11.71 percent of the market.

Japan, of course, continued as the dominant source of imported cars in 1982, with 77.28 percent of new import sales coming from the Land of the Rising Sun. In 1981, 75.17 percent were Japanese-built.

West Germany captured 14.18 percent, down from 17.39 percent in 1981. Sweden was third, with 4.02 percent (up from 3.24 percent), followed by France at 3.26 percent (up from 1.88 percent).

• Registrations in 1982 by country of origin compared with the preceding year were as follows:

	12 mos., 1982	12 mos., 1981
Japan	1,772,145	1,827,850
West Germany	325,211	422,926
Sweden	92,283	78,834
France	74,647	45,625
Italy	15,054	36,097
Great Britain	10,522	18,019
Ireland	3,396	2,329

In December, Japanese-built passenger cars represented 74.48 percent of the import market, down slightly from 74.90 the preceding year. German-built products slipped to 14.41 percent from 17.31 percent, and Swedish products edged up to 3.86 percent from 3.81 percent.

Registrations by country of origin Dec., 1982 vs. Dec., 1981, were:

	Dec., 1982	Dec., 1981
Japan	163,916	138,028
West Germany	31,722	31,906
France	13,394	4,128
Sweden	8,489	7,019
Great Britain	1,445	1,009
Italy	895	1,651
Ireland	214	541

Imported-truck registrations soared 20.51 percent in December but finished the year 9.50 percent behind 1981. Calendar-year registrations totaled 439,700 in 1982 compared with 485,875 in 1981. Makers and totals were as follows:

	12 mos., 1982	12 mos., 1981
Toyota	147,542	130,379
Nissan	106,440	112,383
Mazda	38,058	.....
Dodge Ram 50	31,975	.....
Ford Courier	.....	63,027
Chevrolet LUV	.....	62,713
Others	115,685	117,373
TOTAL	439,700	485,875

December truck registrations numbered 45,039, up 20.51 percent from 37,373 in 1981. Breakdown by truck maker was:

	Dec., 1982	Dec., 1981
Nissan	13,637	9,118
Toyota	13,451	10,675
Mazda	4,173	.....
Ford Courier	3,420	4,337
Volkswagen	.....	3,839
Others	10,358	9,314
TOTAL	45,039	37,373

New Chevrolet dealer

Geraldine G. Irby signs papers making her sole owner of Irby Chevrolet, Inc., Sylva, N. C. With her is husband Ray, left, dealer-operator of Ray Chevrolet-Oldsmobile, Inc., Franklin, N. C.; Richard Berthelsen, center, Chevrolet assistant zone manager in Charlotte, and Larry Mayfield, zone manager.

68-day supply on hand

New-car inventory edges upward

Continued from Page 1

mediates, was in 66-day supply, compared with 69 days a month earlier, while the industry had a 58-day stock of standards, down from 64, and a 65-day supply of luxury cars, unchanged from Feb. 1.

The March 1 inventory was divided this way by market segment: Subcompact, 18.80 percent; compact, 22.95 percent; intermediate, 34.33 percent; standard, 16.84 percent, and luxury, 7.08 percent.

A month earlier, the inventory was divided as follows: Subcompact, 18.85 percent; compact, 22.95 percent; intermediate, 34.52 percent; standard, 16.66 percent, and luxury, 7.02 percent.

• The March 1 days-supply figures by market class were:

Subcompact — Accord, 44; Alliance, 53; Escort, 65; Omni, 71; Horizon, 73; Eagle SX/4, 75; Charger, 76; Turismo, 82; Lynx, 82; Chevette, 88; Rabbit, 93; LN7, 96; Pontiac 1000, 109; EXP, 140, and Spirit, 156.

Compact — Zephyr, 47; Cavalier, 48; Aries, 61½; Fairmont, 67; Reliant, 68; Pontiac 2000, 75; LeBaron, 76½; Dodge 400, 79; Firenza, 81; Camaro, 82; Skyhawk, 83½; Firebird, 92; Cimarron, 95; Capri, 98, and Mustang, 101.

Intermediate — New Yorker E, 32; Cutlass four-door, 35; Cutlass coupe, 44; Cougar XR7, 48; Ciera, 52; Malibu, 57; Granada, 58; Celebrity, 61; Bonneville, 62; Thunderbird, 65; Marquis, 65; Regal four-door, 65; Regal coupe, 66; Century, 66; Pontiac 6000, 69; Monte Carlo, 76; Cougar, 76; LTD, 78; Grand Prix, 83; Dodge 600, 91; Concord, 91; Omega, 91; Skylark, 93; Chrysler E Class, 93; Citation, 101; Phoenix, 117, and Eagle, 135.

Standard — Olds 88, 36; Gran Fury, 46; Olds 98, 48; LeSabre, 52; Grand Marquis, 55; Diplomat, 60; Electra, 66; Crown Victoria, 68; Fifth Avenue, 71; Cordoba, 75; Chevrolet, 76½, and Mirada, 140.

Luxury — Eldorado, 57; Lincoln, 59; Continental, 59; Seville, 60; Cadillac, 62½; Imperial, 62½; Riviera, 69; Toronado, 69½; Mark VI, 83, and Corvette, 115.

Z-28 goes topless

The new 1983 Chevrolet Camaro Z-28 "Roadster" conversion by American Custom Coachworks, Ltd., Beverly Hills, Calif., features a fully powered automatic top, extensive body restructuring and a special lacquer paint finish.

AMC accused by dealers of holding back holdback

Continued from Page 2

dealers to accept other cars. It's not any specific line," although he felt more pressure to take Fuego and 18i.

"It's more that if you don't join the program, you won't get the merchandise you want," he concluded.

There was also reported pressure to take "wheel cars," i.e., cars built for factory stock (not any one dealer).

"To get into their program you had to buy a certain number of those cars," dealer sources said.

"The field people are really starting to feel their oats," added another source. "When you order some Alliances, they're saying you must have full-line representation. They're forcing other cars on you." This came from two dual-make dealers.

Said an AMC spokesman: "There is no companywide, regionwide or whatever plan to force any dealers to take any cars of any kind."

• AMC's problems may be viewed in terms of its working capital margins, which have been slim.

AMC's working capital at the end of 1982 was $73.8 million — down sharply from $164.6 million at the end of 1981. And that, in turn, was down from $190.4 million at the end of 1980.

In releasing the 1982 results, AMC warned that the economic difficulties in Mexico plus the heavy launch costs of the new line of Jeeps plus additional Alliance-based cars would have an adverse effect on the firm for the first two quarters of 1983.

To help with the cost, Renault on Feb. 2 loaned AMC $50 million in 20-year notes.

One analyst said the very success of the Alliance, plus the cost of bringing out other new models, has "put them into a bind." But he views it as a common problem in the industry.

"Working capital in relation to sales is a pittance of what it used to be," he said. "Everybody's in the same chute."

• AMC's working capital, although slim, is still on the positive side compared with Ford Motor Co., for example, which has a negative working capital balance, he pointed out.

He described it as "a complicated game, not an easy story. The companies are all denying what we (financial analysts) have been saying — that their working capital is too slim."

AMC is working on major new products that must be funded immediately, he pointed out. "Those are out-of-pocket costs."

The successful new Alliance, acknowledged as a winner by everyone, is ironically also taking its toll.

"With the sales increasing, they're building more product (Alliance)," the analyst said. "They have to increase their components purchases, materials — everything right down the line — and that puts them into a short-term cash bind."

An attorney who represents an American Motors dealer group and groups of Ford and Volkswagen dealers, added: "All the manufacturers are not in a great hurry to pay monies owed them. Whether its contests, warranties . . . "We're always talking to manufacturers about paying their bills."

Mitsubishi point

LYNN, Mass. — North Shore Mitsubishi has opened here.

Directory lists all U.S. dealers

OMAHA. — A comprehensive directory of all new-car dealers in the U. S. is now available, with over 27,000 dealers listed.

Listings are arranged by states, with cities listed alphabetically within the states and with dealers arranged alphabetically within cities.

The 1983 New Car Dealer Directory is available from American Business Directories, Inc., P.O. Box 27347, Omaha, Neb. 68127. Price is $295.

Outlook appears cloudy for local-content measure

Continued from Page 2

ten to Senator Packwood to express its continuing opposition to the local-content bill. What is new, however, is a separate statement by FTC Commissioner Michael Pertschuk.

Pertschuk, while still believing that the UAW bill is "not in the long-run public interest," dissented from the position that "principles of free trade and free market economics" means that "no industry ever deserves even limited, temporary protection."

He also rejected the idea that "strategic intervention by government to support domestic industry by providing advantages similar to those provided by foreign governments to their own industry is never warranted."

He added that almost all countries — including Japan — have nurtured fledgling industries and protected their health during periods of transition.

Further, in autos and steel, such transition is taking place looking ahead a decade or so, Pertschuk said.

He named three goals for the transition: 1. "To the extent that the automobile industry plays a smaller role in our economy than in the past, the government should intervene to prevent tremendous dislocation for the workers and the communities involved, including a substantial commitment to retraining.

2. "The American auto industry should emerge more efficient and more competitive with increased quality in its products and increased worker productivity.

3. "The American consumer should not be forced to suffer significantly higher prices and loss of access to foreign products during the transition period, as a result of government intervention on behalf of the industry."

Ford expected to supply air-bag cars for U.S. test

Continued from Page 8

and the data is questionable since they will be used with shoulder harnesses.

What additional protection is given can be found only by comparing the accidents with accidents of other government-belted drivers. In real life, it is not too meaningful since only about one out of 10 drivers wears belts.

The second purpose is to provide additional exposure of air-bag technology to the public to encourage acceptability in the marketplace. This is also overblown since at maximum only 5,000 drivers will be exposed, not the general public.

The third purpose is to show reliability and maintainability of the system. Those who have operated air-bag fleets — GM, Mercedes-Benz, Allstate, Volvo — have no questions about this, and Mercedes' new try at selling its driver-only air-bag system could also provide this data.

The fourth purpose is to show that industry will incorporate air bags without regulation. It seems doubtful that this program will show this — with only one prospective bidder. Besides, Mercedes' new plan is already going to test the marketplace.

The fifth purpose is to encourage private fleets to buy driver air-bagged vehicles. This seems extremely remote unless air bags bcome very cheap or insurance costs savings are very large.

Nonetheless, the first program is under way. Former administrators of NHTSA have tried, but what they wanted was a test of the air bags themselves — not a system using shoulder belts that can prevent or attenuate ride-down.

While the earlier plans would have allowed a lap belt — useful in the rare rollover — the data would not have been clouded by the shoulder belt. However, the earlier proposals failed because no manufacturer would accept the compliance and liability problems foreseen with air-bag and lap belt only.

Chevrolet deal expands for AMC, Renault, Jeep

SAN ANTONIO. — Ancira-Winton, a Chevrolet dealership here, is building a new facility for American Motors, Renault and Jeep vehicles.

The new showroom will have 10 sales offices as well as parts and service facilities.

Rental J-cars use European unit

GM is testing no-cut windshield

DETROIT.—NHTSA has OK'd a General Motors field test of 2,500 cars fitted with a windshield that offers added protection from lacerations.

If approved for widespread use, the windshields could drastically reduce facial cuts in accidents, GM said.

President F. James McDonald said Chevrolet Cavaliers and Pontiac 2000s in rental fleets will be used in the evaluation. The main objective will be to investigate durability, scratch resistance and any tendency of additional plastic to hazing.

Interior scratch resistance requirements under federal motor vehicle safety standards are not met by the new glass, although it meets all other safety standards, GM said.

Plastic-glazed windshields have been used in Europe. They currently are installed in some 50,000 Audi, Porsche, Opel and Peugeot cars there.

GM engineers said introduction of high penetration resistance windshields by the U. S. industry in the mid-1960s all but eliminated extreme, or life-threatening lacerations from windshields in accidents. Injuries today are usually more cosmetic than life threatening.

Engineers said that if these experimental windshields prove satisfactory, they could significantly reduce the chances of even small facial cuts being inflicted by windshields broken in an accident.

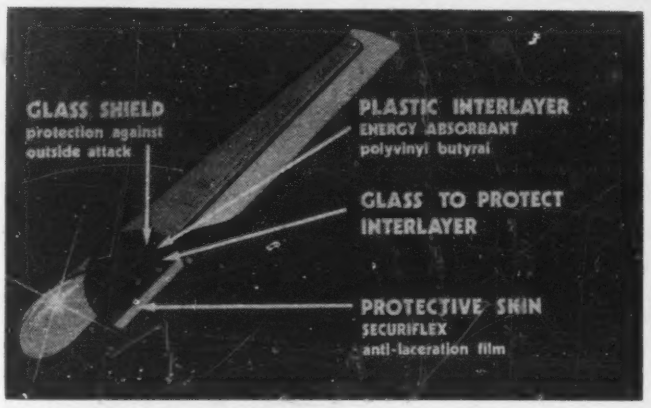
• The first test car was produced Feb. 16 at GM's Lordstown (O.) assembly plant, and the final one is expected to be built by mid-April. In rental service, experience with scratch resistance will accrue more quickly than in normal use, GM said.

The experimental windshields are built in the U. S. and flown to Germany where they receive the interior polyurethane coat. They are then flown back to this country for installation at Lordstown.

The anti-laceration windshield, Securiflex inner guard, was developed by Saint-Gobain Vitrage, a European glass maker.

St. Gobain said it has no plans to ship the Securiflex windshield to the U. S. for installation in other cars and has no plans to make the windshields here. Instead, it said it prefers to make the technology available to U. S. glass makers.

"The additional cost to the automobile companies of the inclusion of the anti-lacerative windshield in American-manufactured cars is estimated to be on the order of $30 per vehicle on a volume production basis," Saint Gobain said.



Anti-lacerative windshield

A new generation of windshield, this one designed to eliminate the cosmetic type of facial injury, is being tested in rental fleets by General Motors. NHTSA had to approve the test because the new windshield doesn't meet U. S. scratch-resistance standards on the inside. Windshields being tested are made in Europe by Saint-Gobain Vitrage.

Trade commission studies position of robotics industry

WASHINGTON. — The competitive position of the U. S. robotics industry in domestic and international markets is being studied by the U. S. International Trade Commission (ITC).

The commission will be assessing capital, labor, technology and other factors affecting making and using robotics here and abroad.

Further information can be obtained from Nelson Hogge, Machinery and Equipment Division, U. S. International Trade Commission, Washington, D. C. 20436.

Statements should be sent to the Secretary, ITC, 701 E Street, NW, Washington, D. C. 20436.

RV shipments rise 8 pct. to 258,000; best since '79

Continued from Page 18

proximately 105,500 units, an increase of 1.5 percent over the year-earlier 103,000.

During the year, manufacturers delivered 65,500 travel trailers, both conventional, and fifth-wheelers. The count was 2.7 percent higher than the 63,800 units shipped in 1981.

Folding camping trailers, generally the lowest-priced RVs and normally considered RV-lifestyle entry units, were down 2 percent last year to 34,300 vehicles, compared with 35,000 in 1981.

Shipments of truck campers in the 12-month period totaled 5,700 units, an increase of 11.8 percent over the previous year's 5,100. Since 1977, when 31,900 truck campers were shipped, this category has been declining in popularity.

Total motor-home shipments in the last year were up 16.4 percent to 41,200 units, compared with 35,400 the previous year.

During the year, manufacturers delivered 19,300 conventional (Type A) units, a gain of 35 percent over the year-earlier 14,300. Chopped vans — mini, low-profile and compact motor homes—were up 4 percent, from 17,300 units in 1981 to 18,000.

• Van campers, a panel-type truck to which at least two convenience items have been added, were up 2.6 percent to 3,900 units in 1982, compared with 3,800 in 1981.

Shipments of multi-use vehicles during the year totaled 111,300 units, an increase of 11.5 percent over the 99,800 delivered in the previous year.

RVIA defines a multi-use vehicle as one designed for the transportation of people and/or property and altered by the manufacturer for aesthetic or decorative purposes. Changes may include windows, carpeting, paneling, seats, sofas and accessories.

Increase by GM sparks upturn

Week's car output rises to 118,366

Hikes in General Motors output last week helped boost U. S. auto production to an estimated 118,366 units, up 1.58 percent from 116,522 built the previous week, and up slightly from last year's 118,004.

GM production last week was 71,563, up 6.84 percent from the 66,980 built the previous week. However, that output was below last year's 73,166.

Year-to-date output through March 12, was 1,140,526, up 41.97 percent from last year's 803,381.

American Motors was also able to boost its output last week, to 3,905 up 20.49 percent from the previous week's 3,241. The increase was due to Eagle production which was phased out at the Kenosha plant last week and moved to AMC's Brampton (Ont.) plant.

Kenosha will now build only the AMC/Renault Alliance. The Eagle line was idle in Kenosha the previous week to balance inventory.

While GM production increased last week, no heavy overtime was scheduled. Doraville, source of the Oldsmobile Cutlass Ciera and Buick Century, worked overtime last Saturday. The Cadillac Detroit facility also worked last Saturday and 1.6 hours of overtime Monday through Friday last week.

Overtime was also scheduled at Ford's St. Louis plant, source of the Grand Marquis and Crown Victoria.

Chrysler's Jefferson Ave. plant, source of the Aries, Dodge 400, LeBaron, Dodge 600, Caravelle, Chrysler E-Class and New Yorker, worked nine-hour shifts last week as did the Newark plant, source of Reliant and Aries.

Beginning today (March 14), GM will reopen its Framingham plant, building the Chevrolet Celebrity and Oldsmobile Cutlass Ciera on one shift at 45 an hour. Framingham has been idle since Oct. 1, 1982. About 1,800 workers will return to their jobs.

Last week also marked a production increase for the Chevrolet Cavalier and Pontiac 2000 as output rose from one shift at 68 an hour to two shifts at 68 an hour at the Lordstown plant.

GM also increased production of the Buick Regal, Chevrolet Monte Carlo and Malibu last week when the Arlington plant went from 45 units an hour on two shifts to 56 an hour on two shifts.

Ford began building its new Thunderbird Turbo Coupe at the Lorain assembly plant last week. The plant also builds the Cougar and the regular Thunderbird.

According to Harold A. Poling, executive vice president, Ford North American Automotive Operations, there were 70,000 orders for the new models on hand on Feb. 17 when the cars were introduced. So far, Lorain has produced 26,600.

Ford's Dearborn plant, source of Mustang and Capri, and the San Jose operation, source of Escort, Lynx, LN7 and EXP, were idle last week to balance inventories. San Jose was also down the previous week.

Production breakdown by company for last week was: GM, 60.5 percent; Ford, 20.6 percent; Chrysler, 13.3 percent; AMC, 3.3 percent; Volkswagen of America, 1.8 percent and Honda, 0.5 percent.

Canadian car output steady; 16,585 assembled for week

Improved output at General Motors and Chrysler helped keep Canadian production stable last week even though American Motors closed its Brampton plant.

Auto production last week was 16,585, up slightly from the previous week's 16,533 but off 5.45 percent from last year's 17,541.

Year-to-date output jumped to 180,377, up 25.90 percent from last year's 143,266.

Canadian truck production last week was 10,200, up 3.04 percent from the previous week's 9,899, but off 10.53 percent from last year's 11,401.

Year-to-date truck production was 91,470, up 4.73 percent from last year's 87,343.

Beginning today (March 14), Chrysler will increase production at its Windsor car plant, source of the Gran Fury, Diplomat, Caravelle Salon, Cordoba, Mirada, Imperial, and New Yorker Fifth Ave., from 47 an hour to 50 an hour.

AMC will reopen its Brampton plant today after a week's shutdown to balance inventories. The plant reduced daily output from 192 to 160 at the beginning of March, laying off 150 workers. Brampton builds the Spirit, Concord, SX-4 and Eagle.

While production remained stable last week, it should pick up this week when Ford reopens its St. Thomas facility, source of Escort, Lynx, LN7 and EXP. That plant has been down for inventory adjustment and will resume operations today.

Ford's Oakville plant remains down for conversion to the Tempo/Topaz. The plant, which was building the Crown Victoria, shut down Feb. 21 and will resume full production the week of April 11.

In the truck operations, International Harvester will resume work today after a five-week closure due to a strike. The plant has been idle since Feb. 7. A new contract was ratified March 8.

GM is adding a second shift to its Oshawa truck plant. The company began recalling workers in stages on Feb. 28 with full production expected the week of April 4. The plant will then build 720 units a day.

The second shift will require an additional 1,250 workers, 665 will come from the laid-off workforce and the other 585 will be either new hires or transfers from other GM facilities.

With the second shift at Oshawa, all GM Canadian car and truck plants will be working double shifts.

Elges named president of Richard Petty Fund

DAYTONA BEACH.—George R. Elges, retired General Motors vice president, has been named president of the Richard Petty Fund of the Daytona Beach Community College Foundation.

The Petty Fund was established to raise scholarship funds and to distribute grants to qualified students in automotive mechanics and related programs at DBCC. The fund is also a depository for gifts of automotive equipment.

Jeep plant down, truck production declines for week

U. S. truck production fell last week as American Motors' Jeep facility in Toledo closed for inventory adjustment.

Last week's output was 47,070, off 4.37 percent from the previous week's 49,223, but up 6.77 percent from last year's 44,085.

AMC closed its Jeep operations last week and will resume output of the CJ line today (March 14). Production of the Wagoneer and Cherokee will resume on March 21.

Year-to-date truck production through March 12 was 388,513, up 10.57 percent from last year's 351,388.

Overtime was scheduled at four plants last week. Ford worked Saturday at its Lorain plant. General Motors' Janesville plant worked 2 shifts on Saturday, and the heavy-duty line in Pontiac worked one shift. And for the sixth consecutive week, Chrysler's Warren truck plant worked nine-hour days Monday through Friday last week.

GM will increase van output at the Lordstown facility beginning today (March 14) from 24 an hour on two shifts to 29 an hour on two shifts. About 300 workers will return.

Europeans gear for sales gains, hot competition

Stable market, high profits linked to upscale products

By John A. Russell
New York Staff Writer

NEW YORK. — Most European auto importers enjoyed sales gains in 1982, and project the same for 1983 since they mostly concentrate on the upscale market segment. But while that market base is expanding, Europeans are gearing for something they see coming on in force over the next few years: Hotter competition from both the domestic and Japanese auto makers.

As one executive said, the market — covering cars in the $11,000 to $15,000-plus range — was basically an exclusive domain of the European importers until the last few years. It is a market inhabited by upper-income people relatively untouched by the economic recession.

The stability of the market makes it attractive, and profits are higher for both manufacturers and dealers.

Noting this, domestic manufacturers are now coming on strongly and the Japanese, because of quotas on exports to the U. S., are enriching their model mix to maximize profits during the period of voluntary restraint.

European importers, meantime, are also expanding their efforts in other areas they think will help them maintain or increase their overall market share. The effort focuses heavily on customer satisfaction and tuning dealers to the concept that they are selling "transportation packages" rather than cars.

In analyzing their competition, European import executives seem to agree that new competitors are trying to play catch-up with a moving target.

Besides expanding their model offerings, trying to turn the "transportation package" concept into reality, European importers believe they have the advantage of a "consistent image," compared to their domestic and Japanese competition.

William Hoover, vice president-marketing of Volvo of America, believes Japanese car makers still have credibility problems in the market segment but are overcoming it by "loading the cars up," which appeals to the domestic buyers.

As for domestic auto makers, Hoover believes their credibility problems lie in product quality. But he does not underestimate the ability of both groups to overcome their problems.

European importers do not boast massive sales compared with most Japanese and the domestic car companies. Only one European has broken the 70,000 annual mark. Total European import sales in 1982 (including Volkswagen imports) was just 417,508.

With the upscale U. S. market projected to reach 1.5 million this year, there is plenty to go around. The European importers have no dreams of capturing the major portion of the upscale market, but do intend to benefit from the market-base increase.

Domestic manufacturers have begun to compare their wares to European products in the upscale category. Most European executives feel this will help more than hurt them for several reasons. First, it will influence U. S. car buyers "to try the original" and will boost their sales.

Also, each European car maker for years has moved to develop its own distinct identity, and import executives believe this is a key to their market success, even though they are not talking large numbers.

BMW

At BMW of North America there is general agreement that the upscale market is heating up, particularly for its 3-series car in the $15,000 to $20,000 price range. BMW is responding in several ways, which company officials see as a logical development based on company growth.

J. Gordon Bingham, senior vice president of BMW of North America, views the expansion as an opportunity and says it will follow three distinct courses.

The key is product and value for the money, according to Bingham, and the company intends to maintain that approach. It will also broaden its model range. Bingham notes that with over 52,000 sales in 1982 and looking at 56,000 in '83, BMW has reached the point of moving into its next stage with a broadened model lineup.

Bingham says candidly that one model in each segment — the 3-series, 5-series, 6-series and 7-series — was not enough. Consequently, there are now two models in the 5-series, and plans call for three models in the 3-series.

John A. Cook, president of BMW, said the intent also is to target marketing techniques and better serve the dealer body, although research shows "the type of person" who buys a BMW in the northeast is the same as the southwest.

Bingham says strategic planning for the '80s also focuses on customer satisfaction.

Introduction of a 36-month/36,000-mile warranty and six-year rust-perforation warranty, Bingham believes, is "a statement" to consumers. He says in this era it's not a question of consumer brand loyalty, but "the brand must be loyal to consumers."

Both Bingham and Cook stress the company has no intention of changing its "Ultimate Driving Machine" ad theme that has been successful over the years.

BMW has enjoyed domestic-car conquests. In 1981 42 percent of the 3-series buyers came from the luxury and other domestic categories. For the 5-series it was 41 percent, 6-series 36 percent and 7-series 49 percent. Cook contends BMW has become "a standard to be measured by" and competitive advertising by other manufacturers "increases the awareness" of BMW products.

Jaguar

Jaguar is coming off an extremely good year with sales up 120 percent over 1981 at 10,349.

Dealers offer 188 models

Greater variety among 26 makers

By John K. Teahen Jr.
Managing Editor

Dealers handling the leading makes of imported cars are currently offering 188 models to tempt buyers, the annual Automotive News survey finds.

The total is up slightly from the 180 selections in the showrooms at this time last year and the 181 on hand two years ago.

Going back a bit farther, there were 156 import models in the spring of 1980, 158 in 1979 and 150 in 1978.

This year's 188 choices are offered by 26 makes, and they account for all but a handful of the imported cars sold in the U. S.

There is one newcomer in the list of the 26 leading makes — Mitsubishi, which began selling cars under its own nameplate in this country last fall. The Japanese firm still supplies Chrysler Corp. with the Dodge Colt and Plymouth Colt.

Plymouth Colt, incidentally, is a new name. It replaced the Mitsubishi-made Plymouth Champ for the 1983 model year as Chrysler decided to put all its imported cars under the Colt banner.

One make has left the field. Lancia is no longer imported into the U. S. The DeLorean car is no longer in production, but it is included in this year's model count since dealers still have a supply of them on hand.

As befits the sales leaders, Toyota and Nissan/Datsun have the most models among the imports. Toyota has 28; Nissan/Datsun has 22.

Both are heavy on two-doors. Toyota has 17 of them and Nissan/Datsun has 15.

That's the case throughout the import field. The current total consists of 102 two-door (coupes, hardtops, sedans, hatchbacks), 61 four-door sedans, 20 four-door wagons and five convertibles.

A year ago, the breakout was 103 two-doors, 52 four-door sedans, 21 four-door wagons and four convertibles.

Some of the imports call their hatchback "three-door" or "five-door" models. Only the side doors are counted in this tabulation.

• Last year, the imports lost their exclusivity in convertibles. The domestics abandoned the ragtop in the early '70s, and they didn't revive it until 1982. Now, there are more domestic convertibles (six) than imports (five).

The imports added one soft-top this year with the introduction of the Porsche 911-SC Cabriolet. Convertibles also are listed by Volkswagen, Fiat, Alfa Romeo and Rolls-Royce among the leading imports.

There are a few coupe-roadster types (Fiat X 1/9, Porsche 911-SC Targa and Mercedes-Benz 380-SL), but they are

Imports hold the line on prices

Popular-priced models rise less than 1 pct.

By John K. Teahen Jr.
Managing Editor

In the last 12 months, the people who guide the fortunes of the best-selling imported cars have found an antidote to "sticker shock."

It's a three-part approach and, simply stated, it is: Cut prices, hold the line on prices or raise prices moderately.

The annual Automotive News analysis discloses that the best-selling — or "popular-priced" — imports have gone up an average of $57.39, or 0.91 percent, in the past year.

That mild increase followed two years of staggering hikes in the import field. The 1982 study found a boost of $488.09, and the 1981 check showed a rise of $812.60.

Going back a few more years, the popular-priced imports went up an average of $187.89 in the 1980 analysis, $690.02 in 1979 and $435.38 in 1978.

One must go back to the 1970 check to find an average hike that is lower than this year's. The 1970 report found a boost of $55.19.

This year's $57.39 is based on a comparison of 72 models offered by nine makes. Cutoff point was $8,000. Cars in that price range accounted for 60.40 percent of the imported autos sold in the U. S. last year.

• That market-share figure of 60.40 percent is something of a story all by itself. It means that two out of every five import buyers are willing to pay more than $8,000 for their foreign car.

Obviously, price is not the only consideration when a customer decides to go import instead of domestic.

The situation was considerably different in 1970, when

Import Price List on Pages E-44 & E-46

Automotive News began its import price analyses. That year, the cutoff point for the popular-priced class was $3,000 and 93.5 percent of import sales were in that price range.

Today, as noted, the popular-priced group goes up to $8,000, but it catches only 60.4 percent of sales. It was 69.8 percent a year ago.

The 72 models in this year's under-$8,000 comparison are offered by Toyota, Datsun (Nissan), Honda, Mazda, Subaru, Renault, Isuzu, Dodge Colt and Plymouth Colt.

Four of those makes are priced lower than they were at this time last year. Renault Le Car is down an average of $267, and there have been sticker reductions averaging $136 for Dodge Colt and Plymouth Colt and $5 for Isuzu.

Year-to-year increases were posted by the import field's five

The enlarged cab of the 1983½ Nissan compact pickup truck has nearly an inch more headroom and nearly two inches more legroom than were available in the '83 pickup. Seats also have been redesigned.

An enlarged engine is one of a number of improvements in the 1983½-model Nissan 4x4 compact pickups. The engine has been enlarged from the 2.2 liters used in 1983 models to 2.4 liters. Horsepower is up to 103 from 98, and foot/pounds of torque is up to 133 from 127, both at 2,800 RPM.

Spring models on the way from Japan

Honda, Nissan and Toyota lead the way

By Joseph Bohn
Marketing Editor

Honda's new Prelude, Nissan's full line of redesigned trucks and Toyota's new Camry form the nucleus of the three major importers' spring marketing drives.

"Fasten your seat belts" is the headline for new Honda ads, breaking around April 1, which talk about performance, styling and aerodynamics of the restyled Prelude.

Ads kick off in U.S.A. Today with a total of eight color-bleed spreads scheduled, along with double-page spreads in Life and a score of other magazines. There'll be 65 outdoor boards in 15 markets.

Honda is spending $30,700,000 for product advertising in the '83 model year, up slightly from last year, plus another $1,750,000 on a mostly completed corporate campaign. It is also spending $15 million on sales promotion, about $7 million of that earmarked for special dealer advertising allowance.

Dealers get the money in the form of a credit allowance against their parts purchases when they order a car and submit documentation of their advertising.

Prelude gets the lion's share of Honda's budget for about one month only. After that it runs as part of the regular ad mix which includes Civic and Accord. Honda will continue talking about quality and luxury on Accord and fuel efficiency and low cost on Civic.

The company is not doing any special advertising to draw attention to the new Accords being built at Marysville, O. "We're not trying to make a comparison between a Japanese car and an American car. An Accord is an Accord," noted a company official.

Most of Honda's big pitch on becoming an American auto manufacturer came last November in a big corporation campaign. The only things still running are airport car displays and outdoor boards and local ads in Ohio.

The company hasn't upped its '83 budget primarily because of import quotas. Although its new Marysville production gives it more cars to sell, the rate of assembly is still very slow. Honda expects to build only about 50,000 Accords the first year.

The company retains the "Honda. We make it simple" slogan. However, in Prelude ads the sign-off will be, "Honda. The New Prelude." Needham, Harper & Steers, Los Angeles, is the agency.

• Nissan kicked off introduction of its new truck line March 7, with its heaviest barrage yet. About 50 percent of its March/April budget supports the new trucks.

"One - heck - of - a - hunk - of - a - truck" is the new theme line designed to attract "young, upscale truck buyers who buy trucks as an extension of their personalities," noted Joseph Opre, ad manager. He called the campaign a "more macho" pitch.

Nissan reportedly had been unhappy with the high percentage of older buyers in its truck mix. Opre acknowledged that media buys are now being skewed toward younger 18-to-34-year-olds compared to a previous 18-to-49 age pitch. Younger buyers are "where the bulk of the market for compact trucks is," Opre added.

The truck arena has been the real import battleground the past two years as importers, hemmed in by car quota restrictions, tried to expand truck sales while new compact entries by Ford (Ranger) and Chevrolet (S-10) competed against them.

Datsun has been waging as fierce a truck battle as anyone. Its new line of trucks includes a King Cab, Longbed, two-wheel-drive, four-wheel-drive, sport truck, and cab and chassis models.

The new trucks carry a Nissan name (no more Datsun) displayed boldly on the tailgate. "We'll be playing up the Nissan name very heavily" in the introductory campaign, Opre said.

Aside from communicating the name, ads will focus on the all-new nature of the trucks. Every commercial will stress three major elements: Three-person seating and large roomy cab; the most powerful standard engine in its class (the 2.4-liter is the same as Toyota's, but delivers more horsepower and torque); double-wall bed construction.

S-10 and Ranger have double-wall construction; but other importers such as Toyota do not.

One commercial for Nissan's price leader will feature mileage and price ($5,995, 31 MPG); a 4x4 commercial features the model tearing through the Baja and talks about free-wheeling-hubs (no need to stop to change the hubs); a King Cab commercial features it towing a glider plane while talking about its powerful engine.

Typically, commercials begin with a group of singers spelling out the N-I-S-S-A-N name, then going into their "one heck of . . ." theme line which, Opre noted, tested well in cutting through the clutter of truck ads.

Print kicks off with four-page units in 31 magazines — one news weekly and a series of buff books, outdoor, mechanics, motorcycle, sporting. That will be followed by additional bimonthly insertions of smaller size.

A two-page, two-color newspaper is running in 119 markets, plus spot TV in 119 markets. Network TV will include all three networks with prime time shows, movies, lots of news and some sports series (Pro Bowlers, NCAA College).

"With all the truck competition out there, it takes a really heavy hit" to get the message across, Opre noted, citing dramatic increases in spending.

Nissan will mention some of its competitors in ads, such as pointing out that Toyota doesn't have double-wall construction, or that Nissan trucks have more hip room or leg room than domestic competitors.

"But we won't dwell on the competition or put them down," Opre said.

In April Nissan will introduce a new Stanza four-door notchback sedan which completes its line of two and four-door hatchbacks. But it "won't be a major introduction," Opre said, "because the volume isn't there."

Otherwise, the company is staying with current ad lines like "You need this car" for Sentra and "Bet you're gonna want one" for the Pulsar NX sport coupe. Other efforts, such as on the 280 ZX, will continue. William Esty Co. is the agency.

• Toyota's new Camry is being introduced under the headline, "The Family Camry" to draw attention to interior roominess and fuel efficiency in a family-passenger sedan.

The Camry fills the market niche left open by Corona, which hasn't sold for about a year. It is available in five-door liftback and four-door sedan.

"All our commercials for the car broke on TV March 1," noted Warren Christell, vice president of marketing. There is also a full run of magazine.

One magazine ad shows a cutaway of the car to dramatize its roominess, particularly rear seat leg and headroom.

The Camry's base price positions it in the middle of the high-volume compact segment of the market.

Camry will get heavy emphasis from March to June, but Toyota is maintaining emphasis on other lines as well. To make room for Camry sales under its car quota, Toyota had to scale back a little on Corolla, Celica, Supra and Cressida volumes, Christell said.

Toyota strategy is to continue to "keep representation in each of the major small-car segments. It's completely opposite of what many people impute that we're doing," Christell added.

Some importers, coping with quota restrictions, have emphasized high-line models or more heavily equipped cars to retain

Continued on Page E-38, Col. 3

Toyota continues its "Oh What A Feeling!" theme in ads introducing the new family-oriented Camry compact.

It was a simple ad with a simple headline: "Help Wanted." All Doyle Dane Bernbach did was collect 16 of its better-known Volkswagen, Porsche and Audi ads, and run them once in Detroit's daily newspapers, The Detroit News and Free Press. Yet the ad, created to recruit DDB staff for its new Detroit agency, received some 2,000 responses, the majority from employed ad people. DDB, whose office opens this month, was overwhelmed by the interest in its agency.

Evolution not revolution

Imports sport modest engineering advances

By Roger Rowand
Engineering Editor

Engineering news embodied in 1983 import cars is not of the thunderclap variety.

In some past years there's been a technical boom or two.

There have been, for example, the first years of such niceties as rack and pinion steering, electronic fuel injection, rotary engines, radial tires, disc brakes and more informative instrument displays.

This is not one of those years.

Nonetheless, there are some new — and nearly new — developments in 1983 cars.

The most powerful production car available in North America today, according to Jaguar Rover Triumph Inc., is the Jaguar XJ-S V12.

Under the XJ-S hood is Jaguar's single-overhead cam aluminum V-12 engine. The cylinder heads feature Fireball combustion chambers developed by Swiss engineer Michael May. Specially shaped to rapidly swirl the air/fuel mixture so that it burns rapidly and completely, the chambers make it possible to use very lean mixtures and high compression ratios for maximum energy efficiency and fuel-saving, the company says.

The V-12 compression ratio is 11.5 to one and it develops 262 horsepower at 5,000 RPM on regular unleaded fuel.

The 5.3-liter V-12 (326 cubic inches) has Lucas digital fuel injection, twin-coil electronic ignition and is capable of turning 7,000 RPM. In addition to powering the XJ-S on the street, the V-12 is in the British firm's new XJR-5 endurance racing car.

At the other end of the power spectrum is the car that earned the coveted No. One spot on the EPA's fuel economy charts: The 1983 Honda Civic 1300 FE Hatchback.

The little Japanese car squeezed out 46 miles per gallon on the city driving course and 59 MPG on the highway route.

The FE is powered by Honda's 1,335cc advanced stratified charge engine driving through the front wheels. A 5-speed overdrive manual is the only transmission offered. Suspension is 4-wheel independent and steering is rack and pinion.

New for 1983 is an economy driving indicator, which boosts fuel economy by lighting up whenever the driver should shift to the next higher gear.

Also making claims for a first is Peugeot with its 1983 505 Turbodiesel. The French-made car is powered by the American market's first four-cylinder turbocharged diesel engine.

Says the company: "This car brings together the performance of a gasoline car and the economy and durability of a diesel." The Peugeot-built XD2S engine is a true diesel, not a converted gasoline job.

From American Motors-Renault for 1983 there are cosmetic changes in the Renault Fuego, Renault 18i and Le Car.

Mercedes-Benz '83 offerings exhibit technical and detail improvements. The three gasoline models, the two-seat 380SL coupe/roadster, long-wheelbase 380SEL sedan and limited-edition 380SEC sport coupe, are all driven by the German firm's

Pickup outlook is bright

Imports still outsell domestic compact trucks

By Jack Walsh
Truck Editor

With the introduction of the domestic compact pickup trucks in volume in the 1982 model year, units imported from Japan suffered a drastic decline in share of market but did exceptionally well in spite of the drop in sales of the Chevrolet and Ford captive entries.

In 1981, the imports — both captive and non-captive — accounted for 88 percent of the compact-pickup market. They had 439,171 of the industry total of 498,677 sales.

Last year, the compact-pickup market almost doubled, but the imports' plunged to 53 percent. Still, they outsold the domestic entries, 407,450 units versus 359,-178.

The outlook is bright again in 1983 for continued gains in compact-pickup sales. Importers of the Japanese products expect deliveries to top the 1981 mark, but it's likely that their market share will continue to decline.

In 1983, sales of the compacts are expected to exceed 900,000 units, which would be an increase of more than 17 percent over the approximately 767,000 small pickups delivered in calendar 1982.

• Robert C. Stempel, Chevrolet general manager, said compact-truck sales in 1983 "will continue to be fiercely competitive, with a wider choice of models and equipment available to buyers."

While Stempel has said only that sales of the compacts will total "900,000 plus" this year, C. P. (Chuck) King, senior vice president-sales, Nissan Motor Corp. in U.S.A., is more explicit.

He said he expects deliveries of the small trucks in 1983 will reach 936,000 units, and that the imports' share will be about 455,000.

At the press introduction of a new 1983½ Nissan pickup last month, King said "we see Nissan sales of 135,000 trucks in 1983, compared with nearly 108,-000 in 1982.

"The new model," he added, "gives us a strong state-of-the-art vehicle to deal with the expanding competition from U. S. manufacturers."

The 1983½ truck line is being marketed under the Nissan name as part of the company's ongoing identification changeover from Datsun to Nissan, King added.

Toyota Motor Sales, U.S.A., Inc., the No. 1 imported compact-truck distributor, also is looking for 1983 industry sales to exceed 900,000 units. It anticipates an increase in deliveries this year for the eighth consecutive year, from a little more than 144,000 units in 1982 to more than 150,000.

• King said the 1983½ Nissan compact's cab, cargo bed, engine selection, interior and suspension systems also have undergone revision. The new truck "brings to the marketplace increased power and roominess and state-of-the-art engines and suspensions," he added.

The enlarged cab features nearly an inch more headroom and nearly two inches more legroom than available in the '83 Datsun pickup, plus redesigned seats with additional seatback rake to enhance driver and passenger comfort.

The cargo bed features double-wall construction on all trucks except the MPG models. Suspension changes include revised shock-absorber valving and steering linkage for improved ride and handling, ventilated front disc brakes and a front stabilizer bar.

Three new engines are offered: The NAPS-Z 2.4 liter (146 cubic inches) hemispherical-head, overhead-cam unit is the base engine. A 2-liter (120 cubic inches) gasoline MPG engine and a 2.5-liter (152 cubic inches) diesel are optional.

Available transmissions are a five-speed overdrive and a three-speed automatic with lockup torque converter.

The transfer case of the new Nissan 4x4 has been repositioned so that a longer drive shaft between it and the truck's transmission could be used, according to King.

• This allows for improved universal-joint angles and decreased noise and vibration, he added.

The '83½ Nissan trucks will be produced at the Japanese firm's new $600 million manufacturing facility in Smyrna, Tenn., starting in June instead of August, according to Marvin T. Runyon, president, Nissan Motor Mfg. Corp. U.S.A., which will operate the plant.

The first foreign-built compact 4x4 sports/utility vehicle to bow in the U. S. since the introduction of the new domestic entries is the Mitsubishi Montero, a four-passenger vehicle which is expected to have a city-driving rating of 19 MPG and 24 MPG on the highway.

Bob Morgan, marketing services vice president, Mitsubishi Motors Sales of America, Inc., called Montero a "highly refined part-time 4x4 vehicle suitable for both rugged off-pavement travel and everyday driving in city or suburb."

• The Montero, which will go on sale in April, is powered by a 2.6-liter, inline four-cylinder engine producing 105 HP and 139 foot pounds of torque. A five-speed overdrive manual transmission is standard equipment.

Other standard items include power steering and brakes, skid plates, full carpeting, two-tone paint, tinted glass, outside spare-tire mount, tachometer, trip odometer, digital clock, console.

One of the vehicle's most interesting standard features, Morgan said, is a shock-absorbing suspension seat for the driver.

"The seat's springing system," he explained, "is adjustable for the driver's weight and road conditions to increase comfort and reduce fatigue. If the suspension feature is not desired, the seat can be fixed at any one of three heights."

A Sport Option group includes automatic locking hubs, limited slip differential, headlamp washers, rear-window washer/wiper, belt-line accent stripe and a four-speaker AM/FM radio with cassette player.

• Morgan said the suggested retail price for the Montero will range from $9,500 to $11,000, depending on equipment.

Another new foreign entry in the U. S. light-truck market is the 1983½ Volkswagen Vanagon, a German-built vehicle featuring a new water-cooled engine which the company says is more powerful yet even more economical than the air-cooled engine it replaces.

At the Vanagon's recent press briefing, James R. Fuller, vice president, Volkswagen of America's Volkswagen Division, noted that the vehicle is the only one in the U. S. "to successfully bridge the gap between van and wagon."

The Vanagon's new power plant is a flat or "pancake" engine and is called the "Waterboxer" because it is liquid-cooled and the horizontally opposed pistons resemble boxers' fists sparring.

The new engine is standard on all three Vanagon models: Vanagon L, Vanagon GL and the Vanagon Camper.

Contributing to the Waterboxer's increased power output, according to Fuller, are cylinder heads with redesigned high-compression combustion chambers and larger ports and valves, and a new VW-patented "Digi-Jet" fuel injection which digitally programs the fuel/air mixture.

Fuller said the more compact engine—which is mounted over the rear drive wheels for maximum traction and interior room—has 22 percent more horsepower than its air-cooled predecessor.

He added that according to EPA estimates, the Waterboxer is 19 percent more economical in city driving and 23 percent more efficient on the highway.

Toyota Motor Sales, U.S.A., Inc., is offering a limited-volume luxury model to its compact-truck line.

The 1983½ Mojave, which the company said combines "pizzazz and power," is based on the two-wheel drive SR5 long-bed Sport model, and includes luxury standard equipment unavailable on any other Toyota truck.

Production will be limited to 3,500 units, the firm said, and the suggested retail price will be $8,308.

The Mojave features chrome front and rear bumpers, with chrome also complementing the headlamp door, tail-lamp housing, grille and outside mirrors. Other exterior highlights are bronze-tinted glass, color-keyed pinstriping, and special alloy wheels.

• Tie-down hooks and the Toyota logo on the tailgate and front fenders have been eliminated for a sleek appearance, and a locking fuel door has been added.

The Mojave is available in two custom metallic colors: Beige and gold. It also features torsion-bar front suspension.

A four-cylinder, 2.4-liter engine produces 100 HP and 130 foot pounds of torque and there is a five-speed manual transmission. The truck has an EPA mileage rating of 24 MPG in the city and 32 MPG on the highway.

Nissan plant ahead of schedule

Trucks will start rolling off line in June

SMYRNA, Tenn. — The first trucks for American consumers from Nissan Motor Manufacturing Corp. U.S.A.'s new manufacturing facility will be rolling off the assembly lines here in June instead of August, as originally scheduled.

The early startup is attributed to the progress of the construction work and equipment installation and to the "excellent results of the extensive training program for the work force which has been underway since October, 1980," says company President Marvin T. Runyon.

"Daniel Construction Company, the general contractor for the project, and the subcontractors are completing the construction of the facility ahead of schedule," says Runyon. "We also have found that our work force is mastering the skills necessary to build the Nissan trucks much sooner than we had projected through the cooperative venture in training Nissan has with the state of Tennessee."

Launched in February 1981 under an accelerated construction schedule, the $660 million plant located 15 miles southeast of Nashville will build 156,000 light trucks annually. The 3.2 million square-foot facility, one of the most technologically advanced automotive manufacturing operations in the world, will employ over 2,000 people.

According to Runyon, Nissan has already been in the first in a series of start-up phases designed to ensure that the first trucks off the line in June are equal in performance and quality to the counterparts currently being built by Nissan in Japan.

In the first phase, a coordinated equipment trial, Nissan is building test trucks. Plant technicians are being trained as they test out metal stamping apparatus and painting and assembly equipment. They check to ensure, for instance, that door moldings installed in the trim area fit the metal prepared in the body plant and that the approximately 2,500 parts necessary to construct a truck move easily and freely along the 10 miles of overhead conveyors, eight miles of floor conveyors and the multitude of assembly lines.

The second phase of the start-up process, which begins this month, will be a more detailed plant tryout. "Once we complete the equipment trial, we move to the vehicle trial in which we take the newly stamped or assembled parts and make sure they fit together properly. In this second phase, plant technicians receive further training under more stringent conditions," said Runyon. "In both of the first two phases some of the test trucks are sent to Japan for a quality check and to Texas for durability testing. The majority will remain in Smyrna to be dissected so that necessary adjustments can be made in both the assembly and training systems."

In May technicians will begin stamping and assembling vehicles which will be coming off the line in June for distribution to over 1,100 Nissan dealers throughout the U. S.

SUPPLIERS TO NISSAN IN U. S.

As of December, Nissan Motor Manufacturing Corp. U.S.A., which starts to build small trucks this year at a new plant in Smyrna, Tenn., had 24 U. S. suppliers, whose total value of annual contracts were $108,486,000.

According to Nissan, the supplier companies, their locations, products, and the value of their contracts are:

Component	Per Year Worth	Supplier	Location
Seats	$20 million	Hoover Universal Inc.	Murfreesboro, Tenn.
Glass	7.3 million	Ford Motor Co.	Nashville, Tenn.
Windshield wipers	291,000	Tridon Inc.	Smyrna, Tenn.
Air conditioners, heaters	24.8 million	Calsonic Inc.	Shelbyville, Tenn.*
Headlamps	1.5 million	GTE Products Corp., Sylvania	Seymour, Ind.
Steering wheels	1.5 million	Izumi Corp.	New York
Radios	1.8 million	Clarion Corp. of America	Irvin, Calif.
Shock absorbers	2 million	Maremont Corp.	Pulaski, Tenn.
Seatbelts	3 million	American Safety Equipment Corp.	Palmyra, Mo.
Wheels	7.5 million	Kelsey-Hayes Co.	Sedalia, Mo.
Batteries	3.7 million	Globe Battery Div.	Louisville, Ky.
Carpet	3.2 million	J. P. Stevens	Greenville, S. C.
Pressure-sensitive labels	1,500	Crown Label Inc.	Lavergne, Tenn.
Pressure-sensitive labels	35,000	York Tape and Label Corp.	York, Pa.
Certification labels	18,000	Dennison Industrial Systems	Framingham, Mass.
Sound control products	500,000	Globe Industries Inc.	Chicago
Thermoplastic components	375,000	Kusan Mfg. Co.	Nashville
Body side moldings	1.1 million	Custom Trim Products	Atlanta
Vehicle identification plates	5,500	Northern Engraving	Sparta, Wis.
Wheel weights	45,000	Perfect Equipment Co.	Philadelphia
Tire valves	115,000	Schrader Automotive Products	Dickson, Tenn.
Body side graphics	1.7 million	White Advertising	Wichita, Kan.
Tires	11 million	Goodyear Tire & Rubber Co.	Union City, Tenn.
Tires	17 million	General Tire & Rubber Co.	(site unannounced)

Import pickups holding their own

J. D. Power predicts a larger market

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. — Success of General Motors and Ford Motor Co. compact pickups is viewed as a sign that U. S. manufacturers can compete in an area dominated by the Japanese.

Yet a recent study by J. D. Power & Associates concludes that the new domestic small trucks are not making the inroads among traditional import truck buyers as some believe.

The Westlake Village, Calif., market research firm reports that the new Chevrolet S-10 and Ford Ranger trucks, for the most part, owe their market strength to conquest sales in the captive import and full-size pickup segments rather than from the independent Japanese makes.

"What the new compacts have done is keep domestic-oriented buyers in the fold," the Power company said in a recent newsletter. "And the study bears this out — buyers of the new models more closely resemble the lower scale demographics of the traditional full-size truck buyer."

J. D. Power & Associates is predicting an overall increase in the truck market as the economy recovers, with much of the increase attributed to the personal-use segment.

According to the data gathered in the study, import truck buyers are younger, with a higher educational level and income than buyers of full-size domestic and compact-domestic trucks.

Although more upscale, the median purchase price among import truck buyers is more than $2,000 less than the price paid by a full-size pickup buyer. The study reports mini-import median purchase price as $7,820 compared to a median of $8,075 for domestic compact trucks and $10,580 for full-size models.

That lower purchase price may be the reason why both independent and captive import mini-trucks attract more first time truck buyers. Nearly four out of every 10 independent import truck buyers are doing so for the first time. Among captive imports, 35 percent indicated it was their first truck purchase, while 28 percent of domestic compact pickups said they never owned a pickup before. Only 16 percent of full-size pickup buyers said it was their first purchase of such a vehicle.

Among these first time buyers, Toyota, Mazda and Volkswagen reported higher numbers of first-time pickup buyers.

• An interesting note among domestic compact buyers is that the S-10 logged 27 percent of its buyers as first timers, while Ranger attracted only 19 percent. The Ranger is more "truck" looking than the S-10.

Drivetrain choices among import truck buyers are limited by product availability. Consequently, all import trucks have four-cylinder engines. One out of four of those engines is a diesel, however, and 70 percent of the powerplants are mated to five-speed manual transmissions. Another 26 percent are four-speed manuals, while three percent are automatics.

DEMOGRAPHIC PROFILE OF PICKUP TRUCK OWNERS

	Full Size	Domestic Compact	Mini-Imports
Male	90%	89%	86%
Median Age/ Years	41.0	39.8	34.5
Married	78%	74%	70%
College Graduates	17%	21%	33%
Median Income	$31,500	$28,610	$31,180

Source: J. D. Power & Associates.

The new generation of domestic compact pickups offer both four- and six-cylinder engines, with buyers split almost 50-50 on their choice. Five-speed manuals are not readily available on all compact trucks and, as a result, only four percent report using that gearbox. Two-thirds of the respondents said they have four-speed manuals, while 30 percent went with the automatic.

The personal-use aspect of both imports and domestic small trucks is apparent when compared to full-size models. Fifty-six percent of full-size pickups report using their vehicles as a principal means of personal transportation. That number rises to 65 percent among domestic compacts and 68 percent among mini-imports.

Despite moderate fuel prices, 91 percent of all import truck buyers list fuel economy as an important consideration in their purchase decision. Eighty-three percent also cited quality of workmanship and 82 percent, trouble-free operation as important considerations. Purchase price is also among import buyers, with 71 percent listing it as a major consideration.

Among domestic compact truck buyers, the same three considerations — fuel economy, quality and trouble-free operation—come out on top. Fuel economy is rated extremely important by 86 percent of these buyers, while 82 percent are also looking for quality and 77 percent for trouble-free operation. Purchase price is less of a factor, although two-thirds report it as an important consideration.

Overall size of the truck is a more important factor among domestic compact buyers than mini-import purchasers. More than half of the domestic buyers call it important, while only 39 percent of the import buyers rate it as a major consideration.

The Power study reports that 1982 full-size truck sales were down slightly over '81 dropping from 989,000 to 940,000 and import trucks were also down from 444,000 in '81 to 388,000 in '82. Domestic compact pickups for '82 were listed at 348,000, where there were none the year before.

Power attributes the decline of imports and full-size models to the compact trucks, but stresses that the bulk of the decline in imports are the result of phasing out captive imports such as the Japanese-built Chevrolet LUV and Ford Courier.

Although purchasers of the compact pickups are, for the most part, customers of domestic dealerships, the study also revealed that a significant number of import buyers shopped or considered domestic models before making their purchase.

"Mazda buyers, noted for being particularly heavy shoppers, are the most likely group of mini import buyers to consider the new domestic compact models for purchase, followed by

Continued from Page E-26

segment could be a hotbed of competition.

Reports are beginning to surface that Toyota, Honda and Nissan all have vehicles of this type under development and that they could be introduced as early as the 1985 model year and carry a price tag under $10,000.

Subaru

Subaru of America probably will sell the same number of cars in 1983 as it did last year, between 147,000 and 150,000, according to Thomas R. Gibson, senior vice president for sales and marketing.

Import restrictions have contributed strongly to this posture, although Gibson said restrictions have not had the intended purpose: Increasing domestic car sales. He views the era of restrictions as time for the company, after years of rapid expansion, to concentrate on other areas including upgrading dealers.

He said customer satisfaction is the number one priority and the company, through its independent distributors, has embarked on an extensive dealer upgrading program. He stressed SoA is not expanding but upgrading, since the strongest advertising the company has is word of mouth. He said the company depends on customer satisfaction and is stressing that to dealers.

The image the company is developing is high technology and quality. It has been stressing over the past several years the tag lines "Inexpensive and built to stay that way" and the "Subaru difference" in advertising and promotional campaigns, which have played a large role in increased sales for the company, he says.

Subaru carved out a special niche in the 4WD market, but now has competition. At one time the only "on demand" 4WD sedans were offered by Subaru. Now American Motors and Toyota are in the market. Gibson said the company met competition this year with addition of automatic transmission to its 4WD cars.

This was not so much in response to the AMC Eagle, which Gibson said "does not look like a standard sedan," as much as it was to the Toyota Tercel.

But it was also a marketing move. Research shows women have a greater interest in SoA 4WD than men. "Our automatic gives us an edge," Gibson said, adding that the Toyota entry is helping SoA. "They're doing well and we're doing well," he said, because of the added exposure Toyota provides to 4WD.

Subaru increased '83 model prices 1.9 percent but included previous options as standard equipment in some models. The company is also continuing to shift its model mix to more luxury models.

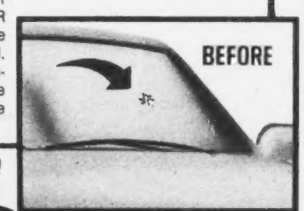
Gibson said the company expects Subaru Financial Services, its financing and insurance arm, to become stronger over the next few years, along with the wholly owned distributor operations it has acquired.

GREAT NEW WAY TO REPAIR DAMAGED WINDSHIELDS...
increase the re-sale value of used cars!

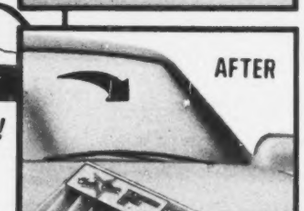
THE Clear Star® SYSTEM OF WINDSHIELD REPAIR

It's easy! It's permanent! It's profitable! Now you can repair damaged windshields like a professional without sending your cars to high-priced specialists and technicians. Now you don't have to depend on outside sources, haphazard delivery because those sources are out of repair resins. The CLEAR★STAR SYSTEM OF WINDSHIELD REPAIR does not require special skills. The system is foolproof; repairs are practically automatic when CLEAR★STAR directions are followed. CLEAR★STAR repairs a wide range of windshield damages to virtually new, full range unimpaired vision. CLEAR★STAR comes in three popular-size kits. Order the kit that fits your operation best. Use the handy Order Form below; we'll ship postpaid.

The CLEAR★STAR SYSTEM OF WINDSHIELD REPAIR, when used as directed, hardens and bonds the chip crevices, prevents radial cracks from "traveling" as shown. This is caused by excessive heat, cold and road vibration making it necessary to replace the entire windshield.



Don't let this happen!



Clear Star®

Nobody can beat our system!

ECONOPAK $15.95 each Repairs one windshield

TWO FOR $29.95

FIVEPAK $59.75 each Repairs five windshields

FLEETPAK $99.00 each | Repairs ten windshields at less than $10.00 each!

All kits come in clear plastic containers suitable for re-use such as small parts. Full instructions in each kit, of course! Successfully used by hundreds of car dealers everywhere!

CLEAR★STAR IS THE REGISTERED TRADE MARK OF CLEAR STAR PRODUCTS, INC.

SAVE MONEY! COMPLETE THIS ORDER FORM AND MAIL WITH YOUR CHECK! We ship immediately.

Top market? Los Angeles

40 leading areas are listed

For importers of all makes of cars there can only be one top market: Los Angeles. Of the 40 major metro markets in the U.S., that California city garnered 131,500 sales in the first 11 months of 1982. The next closest metro market, Anaheim, Calif., totaled 50,200.

Through various industry sources AUTOMOTIVE NEWS developed the import sales figures for the top 40 markets in the U. S. Although they cover only 11 months of 1982, the pattern indicates the relative import-market strengths last year.

The top 10 import markets, according to the estimates, sold 425,700 cars; the next 30 markets accounted for 425,800.

The figures indicate the top 40 markets represented nearly 40 percent of the nation's new-car import sales last year, with the 10 top markets taking nearly 20 percent.

Most importers agree there are sections of the country where they want to increase their sales action. But unless an importer does well in the top 10 markets, it hardly stands a chance to climb far in the sales charts.

Top 40 Import New-Car Markets

VAM may merge with Renault to make small car

MEXICO CITY. — After six months of inactivity, Vehiculos Automotores de Mexico (VAM), in which the government is a majority stockholder through the Somex complex, is readying a merger with Renault.

Renault is allied with Diesel Nacional (Dina), which has been struck since Feb. 7. Dina workers are seeking substantially higher wages and protesting a management decision to lay off 2,500 workers to keep afloat.

VAM has been in trouble since the beginning of 1982, and earlier projections of turning out 36,000 cars were initially reduced to 28,000 units after the first peso devaluation in February of last year. The firm finally turned out only 20,000 units, chiefly Jeep and Wagoneer models.

If the merger is completed, according to the Mexican Assn. of Car Dealers, concentration will be on production of a new four-cylinder car similar to the American Motors/Renault Alliance.

While Somex and Renault managements have refused to comment, there have been reports by industry observers that this model will probably not be launched in Mexico until the inauguration of 1984 models.

Dealers offer 188 models

Greater variety among 26 makers

Continued from Page E-2

counted as coupes in this rundown.

Chrysler Corp. has four of the six domestic choices, and Buick Riviera and Ford Mustang have the others. Chevrolet Cavalier and Pontiac 2000 will add convertibles in May.

By country of origin, the Japanese have an overwhelming advantage in model totals, just as they have in imported-car sales.

The 11 Japanese makes account for 114 of the 188 import models, more than three times as many as the 34 offered by the five West German entries. Other totals are Sweden, 13; France, 12; United Kingdom, 8, and Italy, 7.

As noted, Toyota (28) and Nissan/Datsun (22) have the most models among the imports. Next in line are Mazda, 16; Subaru, 14, and Volkswagen, 10.

Totals for other leading import makes are: Honda, 9; Volvo, 9; Mercedes-Benz, 8; Mitsubishi, 8; Audi, 6; Peugeot, 6; Renault, 6; BMW, 5; Dodge Colt, 5; Plymouth Colt, 5; Isuzu, 5; Porsche, 5; Rolls-Royce, 4; Saab, 4; Ferrari, 3; Jaguar, 3; Alfa Romeo, 2; Fiat, 2; Challenger, 1; Sapporo, 1, and DeLorean, 1.

The figures for Volkswagen and Renault include only imported cars. The U. S.-built VW Rabbit and the U. S.-built Renault Alliance are in the domestic rundown.

• In counting import models, AUTOMOTIVE NEWS uses the same criteria as in tabulating U. S. cars. A choice of transmissions (4-speed, 5-speed or automatic) or a choice of engines (gasoline or diesel, turbocharged gas or turbodiesel) does not necessarily constitute a separate model.

The import total of 188 models compares with 278 for the domestic makes. Here's the present breakout:

	Imports	Domestics
Four-door models	61	105
Two-door models	102	131
Convertibles	5	6
Four-door wagons	20	36
TOTALS	188	278

Both figures will grow. Still to come in the '83 model year are such imports as the Isuzu Impulse, the Honda Prelude and the Nissan Stanza notchback.

Waiting in the wings on the domestic side are Ford Tempo, Mercury Topaz, Chevrolet Corvette, the Chrysler Executive Sedan and Limousine and the aforementioned Chevrolet Cavalier and Pontiac 2000 convertibles.

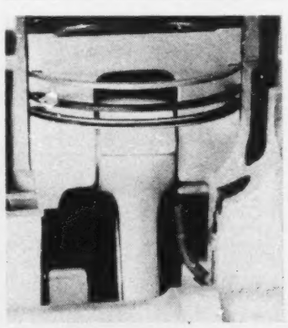
Mitsubishi

Continued from Page E-2

creases the impact of our advertising."

His words are echoed by Mark Miller of Van Nuys Mitsubishi, who says, "With any other line, it's tough to relate the store you see in advertising with the real store. We have a common theme, a recognizable look throughout the country. And our decor is universal in appeal — there's nothing negative to it. In fact, it's a little bit futuristic. It says that Mitsubishi Motors is innovative, high tech, ahead of its time."



The turbo diesel engine, available as optional power for 1983 Volkswagen Quantum and Jetta models, has oil jets which spray cooling oil on the wrist-pin and underside of the piston.

Thumbnail report on Japanese

Production, registrations and exports

Japan's exports of passenger cars, trucks, and buses fell 7.6 percent in 1982 to 5,590,473 units, according to the Japan Automobile Manufacturers Assn. (JAMA). It was the first year-to-year decline since Japanese auto companies began exporting in the early 1950s.

Overall vehicle exports to the U. S. fell 8.6 percent in 1982 to 2,105,519 units. Passenger car shipments to the U. S. were down 4 percent, from 1,761,403 units in 1981 to 1,691,806 in 1982, while truck exports were down a sharp 23.9 percent from the previous year. The decline in exports results from recession in world markets and trade restrictions on Japanese automobiles.

Production of motor vehicles fell 4 percent in 1982 to 10,737,034 units. This was the first year in which production declined since the 1974 oil crisis.

Sales of motor vehicles in Japan's domestic market registered a 2.6 percent increase over 1981. Domestic passenger car sales increased by 6 percent in 1982.

Marketing

Continued from Page E-6

the dollar profit they lose through restricted volume.

Toyota is still selling lots of lower-priced vehicles, Christell claimed, adding, "A lot of our emphasis has been on Tercel, which is in the low end of the spectrum."

Toyota apparently wants to keep its different car names in the public consciousness so that when restrictions are lifted it can return to steadily increasing volumes. There will be a new Tercel commercial, but it hadn't been finalized at presstime.

On the truck side, Toyota sales have been running ahead of a year ago. It is looking for about 150,000 truck sales in calendar 1983, up from 144,000 last year. "We see the market gradually improving for trucks; we will have a lot of emphasis on them," Christell said.

Toyota will feature, among other trucks, a Mojave special limited-edition model, described by Christell as a "two-seat sports car with a seven-foot bed." It will have styled wheels, special Mojave lettering, clear-coat paint, custom seats and various dress-up sport items.

Toyota hasn't been as aggressive with low-interest financing, rebates and other special merchandising efforts as some truck competitors. Christell expressed confidence in the product selling itself. It offers a 2.4-liter standard engine in a $5,998 model which basically outpowers Nissan's competing price leader.

"Our research indicates the truck buyer wants above all else a fully acceptable level of performance in loads and applications," Christell said.

Dancer - Fitzgerald - Sample, Inc., Torrance, Calif., is its agency.

Isuzu for Barberino

WALLINGFORD, Conn.—Barberino Pontiac-Datsun has added the area Isuzu franchise.

TV AD EXPENDITURES (in millions of dollars)

PLAYBOY INDUSTRY VIEW: MARVIN GRUBER

comments on advertising strategy, from the manager of porsche+audi advertising

PHOTOGRAPHY BY JOOK LEUNG

"Our Porsche target customer appreciates quality, is very well educated. Which is why our ad copy is technically oriented—it requires a smart, educated audience."

"We match psychographics—look for the person who fits the personality of Porsche. Alive, aware, able to support a lifestyle that correlates closely with our products."

"The kind of advertising we do requires an attentive, reactive audience—doers who will follow up and respond to our 800 number."

PLAYBOY: For an attentive audience, it's smart to advertise in PLAYBOY. Each month, you'll reach nearly 13 million men—including 20 percent of all the college-educated men in America. Men with learning power and earning power. Men so aware, so motivated — so keen on enriching their lifestyles—that when they see what they like, they're likely to buy it.

And buy they do. PLAYBOY reaches more men who own cars than Newsweek or Sports Illustrated. And PLAYBOY men own more sports cars than the men who read any other magazine edited primarily for men—including the newsweeklies.

Put PLAYBOY power behind your ad campaign. And drive your message home in style.

Playboy means business.

Europeans

Continued from Page E-32

can be increased to 2,000 a month in '83.

The 18i is an area where Van Peursem says AMC is not going to take on European importers directly. He expects sales of 6,000 to 8,000 this year.

Volvo

Volvo, which broke the 70,000 sales mark in '82, is moving to bolster its competitive position. William Hoover, vice president of marketing, notes Volvo entered the sport sedan category in recent years with a Turbo GT and last year launched its luxury entry 760.

"We have to find ways to convince people they're not just buying a car but a total car experience," Hoover says. Fifty percent of Volvo business is taken from domestic manufacturers, Hoover says, primarily Buick, Oldsmobile and Pontiac.

Hoover says with more entries moving into this market segment, "the real battle will be in execution." Volvo has stressed dealer service and introduced an owner magazine to "retain its owner base."

With '83 sales projected at 75,000 to 78,000, customer satisfaction and the transportation package are market keys, Hoover maintains. He notes the company, reacting to signals in the market place, started to expand its image and flexibility with the turbocharged cars and wagons, and the 760.

With 400 dealers in the U. S. and 90 in Canada, Hoover notes it was easier for Volvo to make adjustments, get its dealers behind programs and react quicker to change than if there were several thousand dealers.

"We're hammering away at the total owning experience," Hoover says. This includes warranties, service, parts and communications with the owner and dealer body. He says focusing on the customer will be the key to success in the face of heated competition.

Saab

Saab Scania of America views domestic entries into the upscale-market price category as a positive sign since it focuses more attention on the entire category. Saab sales have been increasing and for '83 the company projects 22,000 units compared to 18,000 in '82.

But the company is shifting its product approach, according to Sten Helling, vice president for sales and marketing. In '82 company sales were 53 percent turbocharged units. Helling would like to drop that in '83 to 46 or 47 percent.

While turbocharged cars brought attention to Saab, the company does not want to be known exclusively as a turbo company. Advertising slant has been changed somewhat to include more generic messages stressing the overall lineup.

Peter Berla, manager for advertising and sales promotion, says it is important for consumers to be aware of the entire range Saab offers.

Helling says the company will continue to emphasize dealer development, service and parts, as well as "how the customer is treated." Consequently, more service training has been added, as well as a program called "Dedicated Delivery" which focuses on how the car is delivered to the customer.

The program has been well received by the dealers, according to Helling.

Saab's new push will come in the Sunbelt, where it hopes to develop more business, and California. These areas are virgin territory for Saab, but Helling says the company will not force the markets, but build them.

Pickups

Continued from Page E-10

Isuzu and Nissan purchasers," the study reported.

Of those buying the Mazda, 55 percent considered Chevy S-10, 29 percent looked at the Ford Ranger, 22 percent at GMC's S-15 and seven percent at Chrysler's Rampage. Nearly half the Isuzu buyers considered S-10; 18 percent, the S-15 and 14-percent, the Ranger. Forty-four percent of the Nissan buyers looked at S-10; 19 percent, the Ranger and 17 percent the S-15.

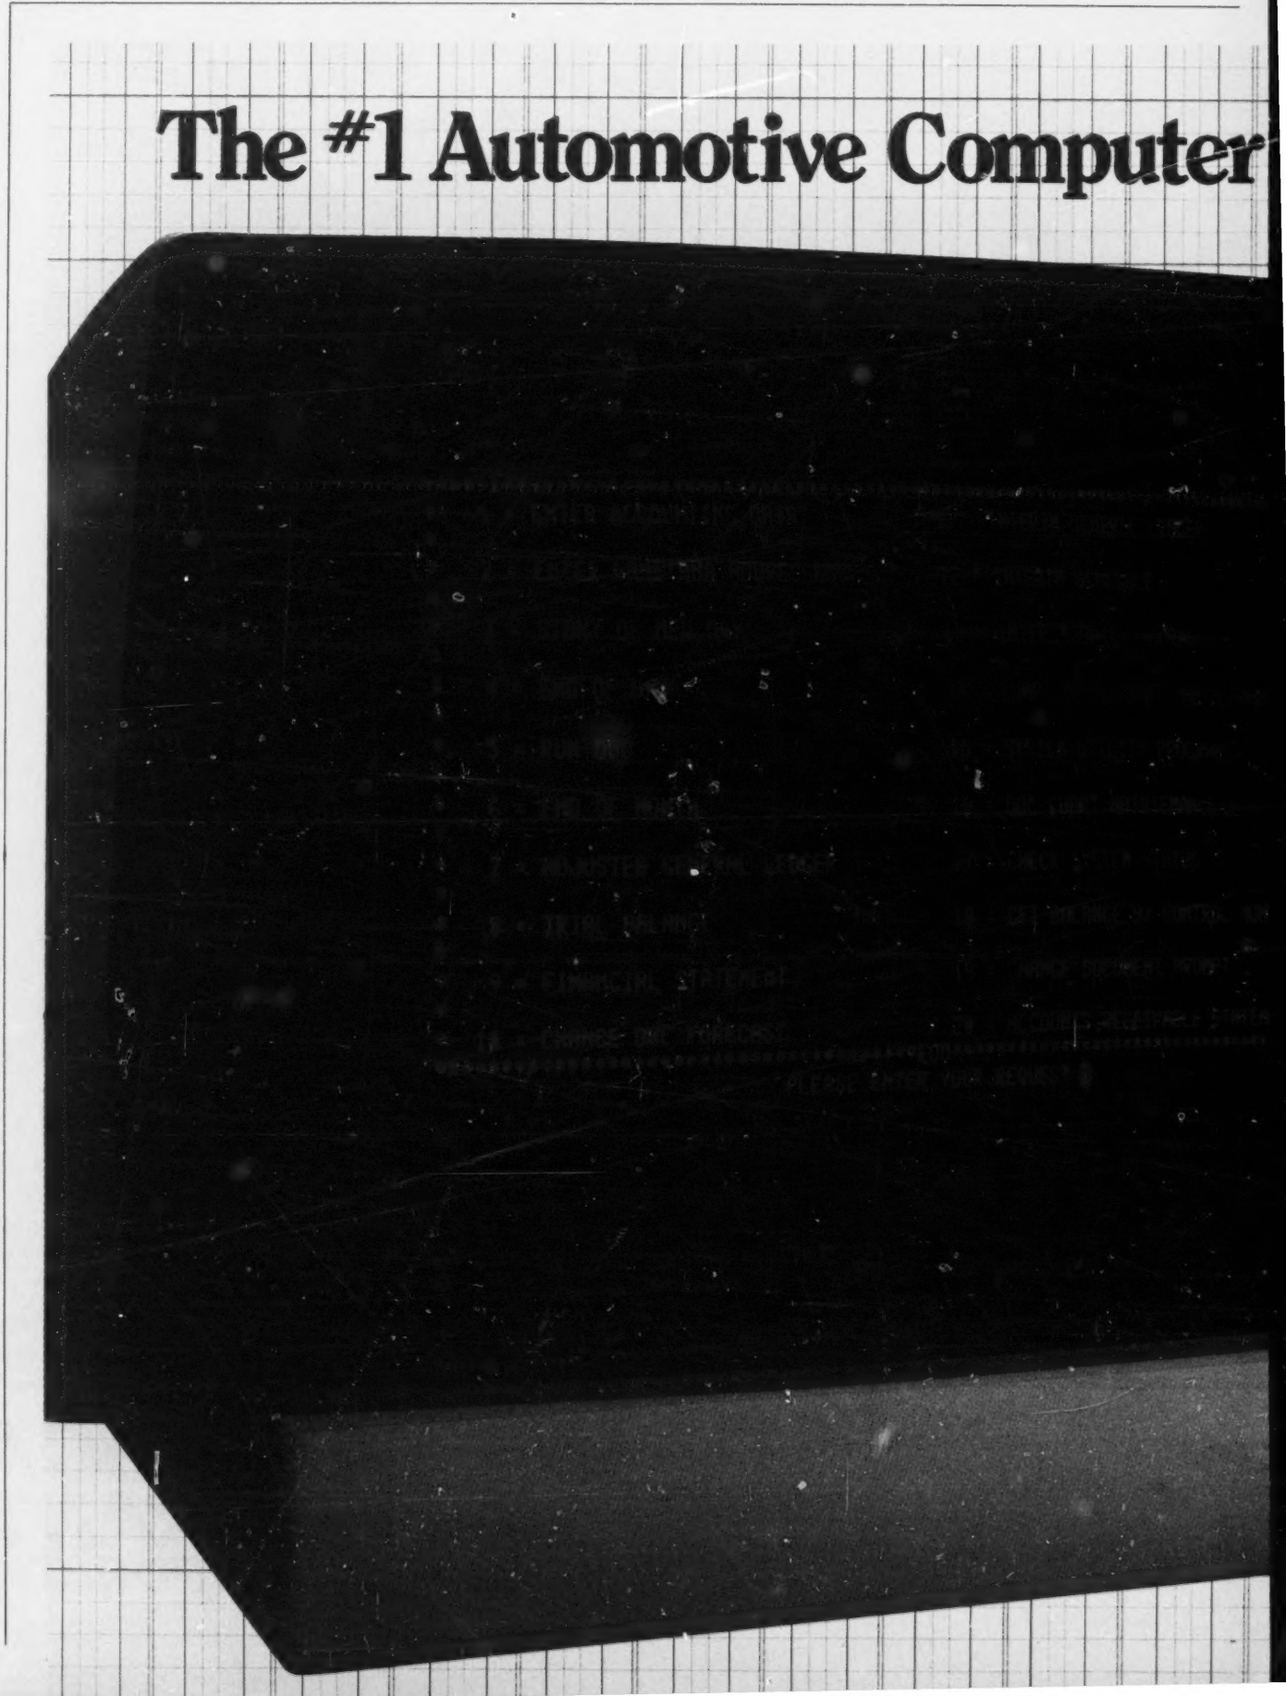
More than four out of every 10 captive import buyers looked at the S-10, while 19 percent of these consumers shopped the Ranger and 13 percent, the S-15. Toyota buyers were the least likely to look at any of the domestic makes, with only 35 percent of those buyers considering the S-10; 16 percent, the Ranger and only 12 percent, the S-15.

Domestic manufacturers also have been citing the virtues of small-truck quality. However, the Power study reports that buyers of imports experience significantly fewer problems with their new trucks than buyers of domestic compact or full-size trucks. Only 26 percent of the import buyers experienced problems with their vehicles, while 40 percent of compact and 45 percent of full-size truck buyers experienced one or more problems with their purchases.

"The opportunities, however, seem particularly ripe for the domestic compacts," the Power organization said in its newsletter. "The new offerings have garnered considerable attention, but have yet to capture significant numbers of those first-time high-demographic buyers who normally gravitate toward the imports. More competitive pricing, better quality, a strong emphasis on performance and a larger selection of options should do much to sell those who are in doubt."

Jaguar expansion

CORAL GABLES, Fla. — The Jaguar Collection, a Jaguar dealership, has opened a new expanded facility here. Joe DeMaria is owner.



Prices

Continued from Page E-2

big guys: Toyota, $112; Datsun, $147; Honda, $114; Mazda, $117, and Subaru, $102. Taking those five Japanese lines separately, the boost was $117.

The Volkswagen Rabbit is not included in this study of imports since it is a U. S.-built car. For the record, however, prices of the Rabbit L and LS models (which appear in both the '82 and '83 lineups) are down an average of $250.

• In the medium-priced field, the increase also was considerably lower than those of the two preceding years.

The current study found an average boost of $374.16, or 3.53 percent. It was $898.79 in the 1982 check and $1,067.34 in 1981.

This class consists of imports priced between $8,001 and $15,000. It accounted for 30.12 percent of the imported cars sold in the U. S. last year, up from 24.7 percent in 1981.

The study compared 49 models offered by 13 makes. In many cases, they are the higher-priced models of nameplates that also appear in the popular-priced category. In other instances, they are the lower-priced models of marques that also compete in luxury class.

All the imported Volkswagens are in the medium-priced class, and so are Dodge Challenger and Plymouth Sapporo.

The group also includes the BMW 320i; the Audi 4000, 5000 and Coupe; the Datsun 200-SX and Maxima; the Honda Accord four-door and LX; the Mazda 626 Luxury and all RX-7 models. Most Toyota Celicas are listed here along with the Cressida and one Celica Supra.

Still others are the Renault 18i and Fuego; the Peugeot 504 and most 505s; the Saab 900 and 900-S, and the Volvo DL and GL.

Fiat was omitted from the study because it does not have any 1983 models at this time. Fiat's '82 X 1/9 coupe/roadster and Spider convertible continue at their year-ago prices.

Five makers have boosted their medium-priced models more than the average of $374.16. Toyota's hike of $780 was the highest. It was fueled by raises of $1,030 and $1,320 on the Cressida wagon and sedan.

Also above the average were Audi, up $591; Volvo, $583; Peugeot, $465, and Renault, $398.

The BMW 320i is priced the same as it was last year at this time.

Posting increases below the average for the medium-price class were Honda, up $100; Mazda, $125; Datsun, $140; Volkswagen, $277; Challenger, $280; Sapporo, $280, and Saab, $350.

• In the luxury class — over $15,000 — the average increase was $959.10, or 3.57 percent. By itself, that's rather a fancy figure, but it's much less than the bumps of $1,778.25 last year and $2,235.96 two years ago.

The luxury segment accounted for 9.48 percent of imported-car sales in the U. S. last year, a big jump from 5.5 percent in 1981.

This year's analysis included 30 models offered by 11 makes. All Mercedes-Benz, Alfa Romeo, Jaguar and Porsche selections are in this class as are the highest-priced cars marketed by Audi, BMW, Datsun, Peugeot, Saab, Toyota and Volvo.

The luxury cars of five makers went up more than the $959.10 average, while six nameplates rose less than the class average.

Volvo was closest to the norm with a hike of $978. Also above the average were Mercedes-Benz, up $1,095; BMW, $1,287; Jaguar, $1,467, and Porsche, $1,867.

The Audi Quattro remains at its $35,000 introductory price of last year.

Increases below the class average were posted by Saab, up $180; Peugeot, $205; Datsun, $300; Alfa Romeo, $523, and Toyota, $800.

In each of the three classes — popular-priced, medium-priced and luxury — the AUTOMOTIVE NEWS analysis was based on comparable models, those that appear in the current and year-ago lineups of a particular make. In a few cases, models that occupy the same relative position in a maker's lineup were used.

Prices considered were Manufacturer's Suggested Retail Prices. Where prices differ by geographical areas, East Coast prices were used in most instances.

Data on changes was based on an arithmetical comparison of prices in effect on March 1 of this year with those in effect a year ago. There was no sales-weighting, and no adjustment was made for year-to-year equipment changes.

Little growth in tire imports

Bridgestone-Firestone deal stirs interest

Purchase early this year by Bridgestone Tire Co. of a tire plant in Tennessee from Firestone Tire & Rubber Co. focused a great deal of attention on the world of foreign tire producers and the importing of tires.

Because the name Bridgestone is becoming increasingly familiar in U.S. automotive circles, many in the auto trade seem to consider tire imports a growing threat to Akron and its rolling rubber products.

Somewhat surprisingly, however, a look at the import figures shows little indication of fast or massive growth in that segment of the world's economy.

The Rubber Manufacturers Assn. reports there are some isolated examples of important growth in imports—in particular sizes, for example — but the numbers overall are not big.

Here is a look at how tire imports have shaped up over the past few years.

Imports of Passenger Car Tires

Year	Tires	Pct. of Market
1982	16,900,000	10.4
1981	17,500,000	10.9
1980	13,700,000	8.7
1979	15,200,000	8.2

Source: Rubber Mfgs. Assn.

A similar growth pattern is reflected in the figures covering incoming shipments of tires for trucks and buses.

Imports of Truck and Bus Tires

Year	Tires	Pct. of Market
1982	3,700,000	11.7
1981	3,900,000	11.8
1980	4,300,000	13.0
1979	4,800,000	11.4

Source: Rubber Mfgs. Assn.

Another surprising element in the import tire picture is the size of Canada's contribution to the total. Historically, Canada has accounted for some 32 percent of total tire imports, the Rubber Manufacturers Assn. says.

Rubber industry people seem to agree that one thing of growing concern in their industry today is suspected dumping. They contend Korean tire makers are beginning to dump tires in the U. S. as they have been dumping inner tubes, they say.

Dumping, of course, means sale of a product in a foreign country at prices below those at which the same product is sold at home. It is considered a tactic of unfair competition.

Others agree that while the passenger car tire import situation is not critical, the status of truck and off-highway tires from foreign plants is growing increasingly so.

In that field tires are coming from Japan, Europe, Korea and Israel, they say.

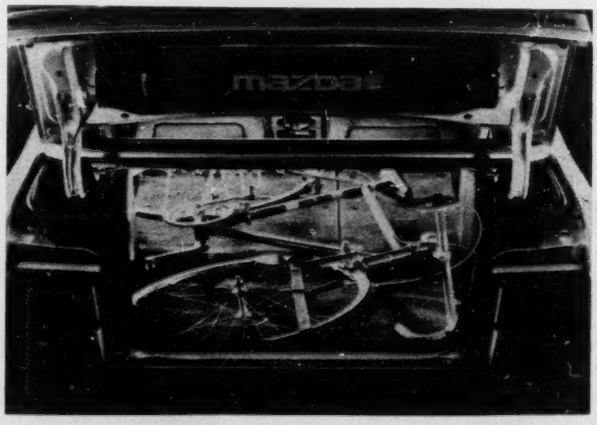
Tire men point favorably to Michelin, the French tire firm, because it manufactures in the U. S. large numbers of the tires it sells here.

Also, in January, news of Bridgestone's purchase of the Firestone facility near Nashville was similarly received.

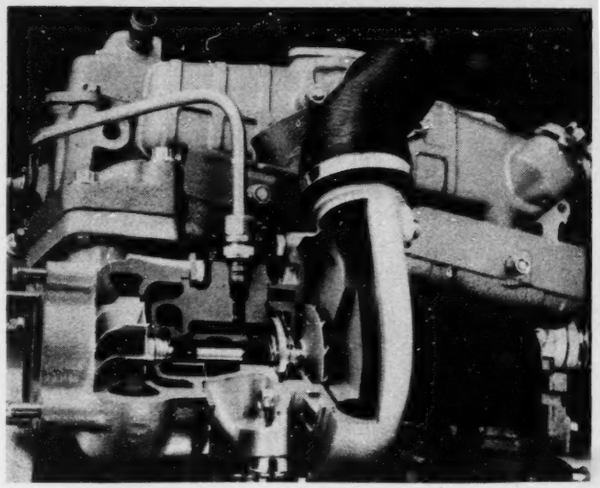
In that transaction, Bridgestone is paying Firestone $52 million for the plant and will spend an additional $30 million for inventory and layout changes.

Bridgestone will continue making steel belted radial-ply truck tires in the facility which is about 20 miles from the brand-new Nissan pickup plant in Smyrna, Tenn.

Bridgestone is not listed as a supplier to that Nissan assembly plant which will receive tires made in the U.S. by Goodyear Tire & Rubber Co. and General Tire & Rubber Co.



Slick design went into the Mazdas this model year. Not only does a 26-inch bike fit neatly into the trunk, but the trunk opening on the 626 sedan and coupe was lowered to the top of the bumper to make loading and unloading easier.



Volkswagen's 1.6-liter, four-cylinder turbo diesel is available on the 1983 Quantum sedan and wagon and Jetta.

(Prices include dealer prep fee.)

TOYOTA PICKUP TRUCKS—Pickup Trucks (2-wheel drive)—Standard short bed (4-speed), $5,996; Standard long bed (4-speed), $6,198; Standard long bed (5-speed), $6,618; Deluxe long bed (5-speed), $6,788; Deluxe long bed (automatic), $7,198; SR-5 short bed (5-speed), $7,458; SR-5 long bed (5-speed), $7,608; SR-5 long bed (automatic), $8,018; Standard cab-chassis (4-speed), $6,478; Deluxe cab-chassis (4-speed), $6,998. **Diesel Pickups (2-wheel drive)**—Deluxe long bed (5-speed), $7,278; SR-5 long bed (5-speed), $8,098. **Pickup Trucks (4-wheel drive)**—Deluxe short bed (5-speed), $8,548; SR-5 short bed (5-speed), $9,248; Deluxe long bed (5-speed), $8,698; SR-5 long bed (5-speed), $9,398. **(Power disk brakes** standard on all models. **Radio** standard on SR-5 models.) (Prices include dealer prep fee.)

VOLKSWAGEN—Rabbit L—2-door hatchback, $6,290; 4-door hatchback, $6,500. **Rabbit LS**—2-door hatchback (4-speed), $6,890; 2-door hatchback (5-speed), $7,100; 4-door hatchback (4-speed), $7,100; 4-door hatchback (5-speed), $7,310. **Rabbit GL**—2-door hatchback (5-speed), $7,490; 4-door hatchback (5-speed), $7,700. **Rabbit GTI**—2-door hatchback (5-speed), $7,990. **Rabbit Convertible**—Convertible (5-speed), $10,595; convertible (automatic), $11,020. (All Rabbit models except convertible are built in the U.S.) **Jetta (5-speed)**—2-door sedan, $7,990; 4-door sedan, $8,210. **Scirocco**—Coupe (5-speed), $10,150; coupe (automatic), $10,575. **Quantum (5-speed)**—Coupe, $10,770; 4-door sedan, $11,280; 4-door wagon, $11,680; GL coupe, $11,595; GL 4-door sedan, $12,160; GL 4-door wagon, $12,890. **Vanagon**—L 7-seater (4-speed), $10,950; L 9-seater (4-speed), $11,005; GL 7-seater (4-speed), $11,450. **(Power disk brakes** standard on all models. **Power steering** standard on Rabbit GL and all Quantum models. **Radio** standard on Rabbit convertible, Scirocco and all Quantum models **Automatic transmission** is $410 on Rabbit LS and Rabbit GL, not available on Rabbit L and Rabbit GTI; it is $425 on Jetta, Quantum and Vanagon. **Diesel engine** is $750 on Rabbit L, $525 on Rabbit LS, $645 on Jetta and $735 on Vanagon. Vanagon diesel includes 5-speed transmission. **Turbo Diesel** is $1,550 on 5-speed models of Rabbit LS 2-door, Rabbit GL 2-door and 4-door, Quantum 4-door sedan and wagon and Quantum GL 4-door sedan and wagon.) (Prices do not include dealer prep fee.)

VOLKSWAGEN PICKUP TRUCKS—Base pickup (4-speed), $6,890; base pickup (5-speed), $7,100; LX pickup (5-speed), $7,475; Sportruck (5-speed), $7,630. **(Power disk brakes** standard on all models. **Diesel engine** is $645 on base pickup and LX pickup.) (Prices do not include dealer prep fee.) (Volkswagen pickup trucks are built in the U.S.)

VOLVO—DL Series—2-door sedan (overdrive), $10,650; 2-door sedan (automatic), $11,040; 4-door sedan (overdrive), $11,085; 4-door sedan (automatic), $11,475; 5-door wagon (overdrive), $11,585; 5-door wagon (automatic), $11,975. **GL Series**—4-door sedan (overdrive), $14,495; 4-door sedan (automatic), $14,885; 5-door wagon (overdrive), $14,995; 5-door wagon (automatic), $15,385. **GLT Series**—2-door sedan (overdrive), $16,050; 2-door sedan (automatic), $16,440; 4-door sedan (overdrive), $16,360; 4-door sedan (automatic), $16,750; 5-door wagon (overdrive), $16,860; 5-door wagon (automatic), $17,250. **GL Diesel**—4-door sedan (overdrive), $14,980; 4-door sedan (automatic), $15,240; 5-door wagon (overdrive), $15,480; 5-door wagon (automatic), $15,740. **760-GLE**—4-door sedan (V-6, gasoline engine, automatic), $18,785; 4-door sedan (Turbo Diesel, manual), $19,595. **(Power disk brakes, power steering** standard on all models.) (Prices include dealer prep fee.)

Engineering

Continued from Page E-42

given microcomputer controls and platinum-tipped plugs for '83. The microcomputer adds 5HP.

For the sporty Toyota Celica GT models an electronically fuel injected version of the 2.4-liter engine delivers 10 percent more horses than last year's.

For Corolla, there's a 1.6-liter single overhead cam four replacing last year's 1.8-liter engine. The new mill helps boost fuel economy by 12 percent while maintaining the 70HP of the bigger 1982 engine.

Microcomputer control has been added as well to the Toyota Starlet for improved fuel economy and performance.

Pitcairn gets Volvo

LANGHORNE, Pa. — Pitcairn Enterprises, has been appointed a Volvo dealership here. Garthowen Pitcairn is president.

Sales gains projected for 1983 and 1984

Vehicle outlook brightens

By Kathleen Hamilton
Financial Editor

The U. S. auto and light-truck sales outlook for 1983 and 1984 has improved dramatically because of the promise of declining oil prices.

New-car sales in the U. S. are now forecast to reach 9.01 million units in 1983 and 10.34 million units in 1984, according to the most recent AUTOMOTIVE NEWS World Outlook (ANWO).

These figures represent major gains over 1982's sales of 7.98 million new cars, as well as over the levels which had been forecast just three months ago. The U. S. hasn't seen a 10 - million car year since 1979.

Even better news for Detroit: It looks as though domestics will be taking a bigger share of that expanding market in both years.

ANWO expects the U. S. car makers to capture 75.36 percent of their home market in 1983 and 77.19 percent in 1984. By contrast, they had just 72.18 percent of the market in 1982.

This is the first time in five quarters that the ANWO U. S. sales forecast has been upgraded. ANWO, a joint venture of AUTOMOTIVE NEWS and Data Resources, Inc., previously had been trimming projections as the economic news worsened.

The oil price decline was the catalyst the economy was waiting for, according to John Hammond, director of automotive services for Data Resources.

"Until mid-February, there was no catalyst in sight," Hammond said. Income-tax returns and the July 1 tax decrease held a little promise, but nothing like an oil-price decline.

It promises to reduce inflation and interest rates, increase economic activity and get people back to work more quickly, Hammond said.

The same effect is not expected in Europe, where nations have reacted to declining fuel prices with plans to increase fuel taxes.

The rosy forecast for the U. S. assumes similar taxes will not be instituted here. But even if they are, the outlook still would be better than had been expected just three months ago.

The reason is that the revenue from such taxes would lower the federal deficit, and that would lower interest rates, Hammond explained.

A 9.01-million-car 1983 would represent a growth rate of 12.9 percent, or an extra 1.03 million units over 1982. It is 400,000 units more than forecast in December.

The entire 1.03 million increase is expected to be gained by the domestic makers, who are benefitting from their capacity to build large and intermediate-sized cars — just the cars that buyers want now that gasoline prices are falling.

With the Japanese locked in to 1.68 million cars a year until at least mid-1984, imports are expected to hold steady at 2.22 million sales this year. The Accords that Honda is building in Ohio are considered domestics.

Because demand is shifting to larger cars, makers will have to

Chariot chases the Prairie

Mitsubishi is pitting its Chariot against Nissan Prairie. The Chariot is 169 inches long, 60 inches high and has a wheelbase of 103 inches. The six-seater is built on a lengthened version of the Tredia underbody and is being assembled at Okazaki. Story on Page 6.

VWs bought, imported, federalized and tagged at $6,995

Mexican Beetles find home in U. S.

By Matt De Lorenzo
Los Angeles Reporter

LOS ANGELES.—The Beetle is back and Volkswagen of America is not too happy about it.

The venerable Bug, a fixture on the American automotive landscape for three decades, was discontinued in the U. S. by VW in 1977, although convertibles were sold until 1979.

In recent months, however, the Beetle has been scuttling across the border from Mexico, due to the precipitous drop in that country's currency and the desire of persons to profit both legally and illegally from the situation. The Beetle is still produced in Mexico.

"We don't encourage anyone to import the Mexican Beetle," a VW spokesman said. "The car is not designed to meet federal and state safety and emission standards."

Lenny Macchiarella thinks differently. He and his partner, Danny Najor, have established a firm ironically called The People's Car Co. in Solana Beach, Calif., to import, federalize and distribute Mexican-built VW Beetles in this country.

Macchiarella, whose operation is legitimate in the eyes of U. S. Customs, and others, who aren't, are beneficiaries of the economic turmoil in Mexico fostered by declining oil prices.

According to John Lipscomb, who works in the foreign exchange department of Bank of America, the peso was trading at 28 to the dollar a little more than a year ago. By spring, that rate had declined to 48 to the dollar and last summer, when the government stopped supporting the peso, it dropped to 115.

In September, the Mexican government suspended buying and selling the peso and the external market price fluctuated between 100 and 145 pesos to the dollar. On Dec. 20 of last year, the government resumed buying and selling the peso and its value declined even further hitting a low of 162 to the dollar.

• This sudden and dramatic drop in the peso meant that commodities in Mexico have become cheap—dirt cheap.

"Prices never adjusted as fast as the peso's decline," Lipscomb said, adding that a car which had sold for $4,500 to $4,700 when the peso was trading at 70 to 1 suddenly cost $2,500 when the peso fell to 130.

It was about that time last November that Macchiarella, an auto wholesaler and dealer in classic cars for the past 15 years, noticed that there were new VW Beetles running around Tijuana.

When he found how cheaply he could purchase the cars as a result of the peso's devaluation —he wouldn't say how cheaply —he and his partner decided they could make a buck by bringing the cars up to U. S. standards and selling them.

Working through Mexican intermediaries, since the government there takes a dim view of U. S. residents purchasing cars, Macchiarella obtained his first car and brought it across the border where he was promptly stopped by U. S. Customs.

"Customs at first said we couldn't bring it in because it didn't comply," Macchiarella said. "We posted a bond and federalized the car." The People's Car Co. was in business.

The conversion isn't cheap. Macchiarella said it costs about $2,500 per vehicle and extensive work is done.

"We resupport the bumpers, change all the windows to DOT-

New-car supply falls to 41 days

Lean import stocks hamper sales

By Richard A. Wright
Assistant Managing Editor

The inventory of new imported cars in the U. S. dropped sharply during February and by March 1 was so lean that it was holding a lid on sales of some makes.

While total sales of imported cars were up during February compared with January, those hot-selling nameplates with short inventories were down. The gains were notched by lines with sufficient stock to meet the increased demand during February.

The inventory of new imported cars March 1 totaled 316,745, a lean 41-day supply, compared with 355,603 new cars, a 49-day stockpile, a month earlier.

The inventory of new imported pickup trucks increased during the month, however, to 93,593 March 1, an 83-day supply, compared with 92,705 a month earlier, a 73-day stock.

The combined imported car and truck inventory March 1 totaled 410,338, a 46-day supply, compared with 448,308 a month earlier, a 52-day stockpile.

In shortest supply was Toyota, with a 19-day stock of new cars March 1. With such a lean supply, Toyota was outsold during February by Nissan, which had a much healthier 42-day stock.

Other nameplates with inventories lean enough to result in lower sales during February than in the preceding month included Honda, 21 days; Mercedes-Benz, 25 days; Jaguar, 26 days; Porsche, 26 days, and BMW, 33 days.

Most of the inventory cut was accounted for by the Japanese-built nameplates. The supply of new Japanese-built cars dipped to 216,199 units March 1, a 34-day supply, compared with 258,936 a month earlier, a 43-day stockpile.

Japanese cars and their March 1 days-supply figures were: Toyota, 19; Honda, 21; Subaru, 30; Nissan, 42; Mazda, 46; Mitsubishi, 84, and Isuzu, 108. In addition, Chrysler Corp. had a 78-day supply of Mitsubishi-built cars, including Dodge Colt, 70; Plymouth Colt, 71; Sapporo, 85, and Challenger, 100.

The stockpile of West German-built new cars March 1 totaled 51,805, a 60-day supply, compared with 52,915 a month earlier, a 75½-day stock.

The German cars and their March 1 days-supply figures were: Mercedes-Benz, 25; Porsche, 26; BMW, 33; Volkswagen (imports only), 84, and Audi, 119. VW also had a 93-day supply of U. S.-built Rabbits.

Days-supply figures for other European lines March 1 included: Jaguar, 26; Volvo, 41; Saab, 50; Alfa Romeo, 129; Peugeot, 133; Fiat/Lancia, 246, and Renault, 285. (The Renault stock figure did not include a 53-day supply of its U. S.-built Alliance.)

breaking news

Court finds jurisdiction in Toyota-IRS tax case

LOS ANGELES.—U. S. District Judge Cynthia Hall has ruled that her court has jurisdiction in the dispute between the IRS and Toyota Motor Corp., of Japan, over access to Toyota's price and cost data on cars built and sold in Japan. As a result, Toyota must appear in court April 11 to explain why it will not release the information requested by the IRS in its investigation of the 1975-78 income tax liability for TMC's U. S. subsidiary.

Subaru recalls 324,605 cars

PENNSAUKEN, N. J.—Subaru of America is voluntarily recalling 230,041 of its 1980 and 1981 cars for correction of a possibly defective fuse block that could lead to headlight failure. It also is recalling 94,564 of its 1981s and 1982s with manual transmissions and maintenance-free batteries. Chafing may cause a short, it said. A total of 45 complaints on both matters have been received by the company. No injuries or fatalities have been reported, Subaru said.

New products generate interest

Optimistic mood prevails at Geneva

By Richard Feast
European Editor

GENEVA. — It would take a couple of months to talk to all the leading executives from the European auto industry. They are scattered around the continent, they are away from the office, they are busy, they are shielded by secretaries' secretaries.

In Geneva for the international auto show it would take a couple of days. The concentration of decision-makers is daunting, but it is fertile ground for information gatherers.

Of course, auto shows in Europe are all like that. Some are just more equal than others.

The Geneva show is an annual event. Others are held every other year. The Geneva show is held in the early spring, before the hordes of holiday-makers in coaches arrive.

Geneva is a cosmopolitan and sophisticated city, elegant and expensive. It is clean, it is multi-lingual, everything seems to work. It is just a very pleasant place to be.

Some of which may explain a result from a survey carried out at last year's exhibition. There was a big increase in the number of visitors—due entirely to industry professionals, who accounted for a fifth of the total.

• This year's show was essentially serious in tone. But there was definitely not as much gloom as in recent years over continuing low sales.

The belief is widespread that the U. S. economy is about to pick up steam and drag Europe along in its train.

Industry generally welcomed the results from the West German elections a few days before. In the words of Dr. Wolfgang Habbel, chairman of Audi, it had two positive effects.

One was that the election was over. A clear-cut result would remove much of the doubt and uncertainty over the direction of the German economy — still the powerhouse of Europe.

The second was that the result was how it was. Most executives believe that the result of the election will stimulate demand.

Already, in the past few months demand for passenger cars in the Federal Republic—the largest market in Europe—had begun to pick up. The trend is upwards, accelerating as the year progresses.

• The Geneva show was a good example of the way in which new products are being used to attract buyers. The newcomers were the Austin/MG Maestro (which will not be exported until September), Peugeot 205, Fiat Uno, Renault 11 hatchback, the angular Land Rover One-Ten and the elegant Audi 100 Avant.

One note of amusement for visitors concerned the Peugeot 205. Automobiles Peugeot insists it is a product of PSA's central styling department. But Pininfarina, who has styled so many Peugeots in the past, says it is his handiwork and had a model on the stand to underline it.

BMW showed the anticipated Cabriolet version of the new 3-series (to be made by Baur), while Citroen followed the trend with a similar format for its small Visa. The trend is becoming catching, what with convertible versions of the Talbot Samba, VW Golf and Fiat Ritmo

Europeans to unveil host of new models

GENEVA.—There might have been a lot of new product on display at the international auto show here, but there are a lot more new cars to come from European auto makers before the year is out.

The major event of the year must be the introduction of the replacement for the best-selling Volkswagen Golf (Rabbit). That will debut at the Frankfurt show in September, production having begun after the summer break in new and flexible facilities at the Wolfsburg headquarters.

With production of Golf running down, and VW being pressed hard for market lead by usurper Opel, VW will be indulging in a good deal of promotional work to stay ahead in the meantime.

Another debutante at the Frankfurt show is expected to be by VW's sister company, Audi. A four-wheel-drive and turbocharged version of its dazzling 100 is scheduled.

Two other German auto makers will introduce new power units at the same time—Daimler-Benz the Cosworth-headed 220 for its recently introduced small sedan and Porsche a 911 with more power and economy.

Before then, in the spring, BMW will try to win European customers over to the Eta engine concept, fitted to the 5-series sedan.

Ford's program embraces the Orion (an Escort with a full trunk) in the summer and a face lifted Fiesta toward the end of the year.

In the UK, Jaguar will unveil its convertible XJ-S this summer, but of perhaps more significance will be its engine. It is an all-new slant-six known as AJ6. Eventually the unit will be available with standard and high performance May Fireball cylinder heads. The power version is expected to feature four valves per cylinder.

The system may not be new—competition engines have used it for years—but it is noticeable for the number of companies now adopting it: Saab, Mercedes-Benz and Volvo.

There will be plenty of activity from Italian makers, too. For Fiat the major launch will be the replacement for the dated-looking Mirafiori sedan and wagon.

This will debut in the fall, a derivative from the Ritmo (Strada) hatchback but with a trunk. The rumored name for the vehicle is Elba.

Another Fiat newcomer is be-

VW is ousted by Opel as Swiss sales leader

GENEVA.—Opel executives at the international auto show here were proudly wearing "No. 1" badges. Nothing vulgar, of course, just a discreet enamel lapel badge.

It was in celebration of the fact that last year Opel became the biggest selling nameplate in this, the most international of European auto markets.

Swiss buyers bought 37,600 Opels last year, an increase of nearly 19 percent on the previous year. It was by far the most significant advance of any manufacturer, and was typical of the progress made right across Europe in 1982 by the passenger-car arm of General Motors here.

Volkswagen was relegated to the runner-up position. It added a handful of sales to reach 31,900—though if the group's Audi results are taken into account the picture did not change.

The VW group sold 40,900 units in Switzerland last year, a rise of 0.7 percent—much in line with the overall pattern.

Fiat Auto dropped a few hundred sales but remained in third spot with 25,000. Ford (23,500) and Renault (20,100) made fractional gains, but Toyota — the leading Japanese retailer—added more than 2,000 to claim 19,900 sales.

Overall, though, Japan's share of the Swiss car market dropped from 27.2 percent in 1981 to 26.6 percent last year. Only Mitsubishi and Suzuki of the others made any progress. France, Italy and the UK saw reduced business as well.

West Germany's slice rose from 39 to 42 percent, almost entirely on account of the Opel performance.

Ferdinand P. Beickler, chairman and managing director of Opel, called Switzerland a "well informed and sensitive international test market." A further test is now taking place — the arrival in Northern Europe of the Spanish-built Corsa baby car.

With widespread availability of the Corsa, Opel Marketing Director John Grettenberger

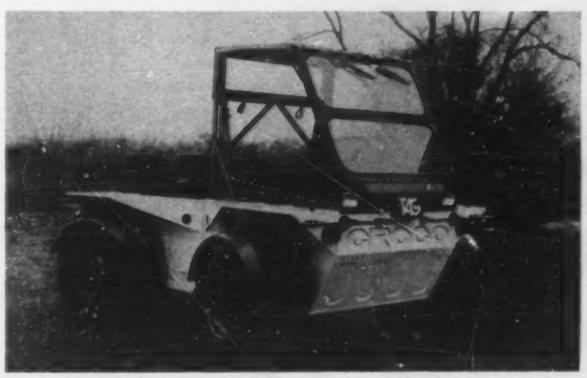
Italian entry at Geneva

This Ital Design Muette, shown at Geneva, is a prototype with no production plans so far. Based on the Renault 11, it features long gullwing doors and a hatchback.

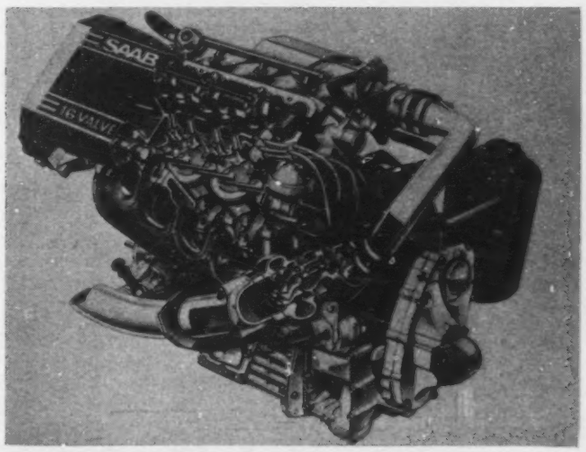
A stranger to Stuttgart

This Sbarro Gullwing, based on the Mercedes-Benz 500-SEC, was displayed at the Geneva Motor Show. The high-luxury coupe has a polyester body, gullwing doors, longer nose with covered headlamps and a shorter rear. It is available with the original 5-liter engine or the 6.8-liter OHC V-8.



Cross-country cutie

Developed in Switzerland and produced in Germany, the CROCO was exhibited at the Geneva Motor Show. The four-wheel-drive vehicle is powered by a single-rotor NSU-Wankel engine. The two-piece body twists at the center. It can be outfitted with a propeller for amphibious use. Wheelbase is 63.4 inches. The CROCO name comes from CROss COuntry and the vehicle has a CROCOdile as a symbol.



Sophistication from Saab

This Saab turbocharged 2-liter engine with four valves per cylinder and an intercooler was displayed at the Geneva Motor Show. The cross-flow cylinder head features twin overhead cams and hydraulic valve lifters.

Warns of possible deception in Washington area

FTC eyes dealers' financing ads

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—Some dealer advertising of low-rate car financing may be either deceptive, not in compliance with the Truth-in-Lending regulation, or both, according to the FTC's Bureau of Consumer Protection.

After a six-week investigation, that is what FTC told Better Business Bureaus in the Washington area in response to a BBB alert sounded on Jan. 28.

FTC is distributing a consumer information pamphlet listing questions buyers should ask dealers about low-rate loans and other incentives.

FTC sent letters to more than 70 dealers warning them that their ads may be illegal and asking them to start complying with both the credit disclosure law and the FTC law banning deceptive practices and warning that if they do not, FTC will start enforcing the law. Frank McCarthy, NADA executive vice president, said the dealer group already had a leg up on the FTC, having sent an information bulletin to its members spelling out just what is and what is not permissible under the Truth in Lending laws and Regulation Z.

"With the advent of interest buydowns and other creative financing possibilities, we saw the need for guidance," McCarthy said. "We want the dealers to do it the proper way."

McCarthy said that in a few cases, consumers may have been misled through advertising that does not explain add-on charges or limits that may exist on models where the low rate is available.

"NADA strongly opposes any such misleading or illegal practices," he said.

• FTC plans to get in touch officially with NADA and the National Independent Automobile Dealers Assn. (NIADA) — ordinarily the fastest way, other than tough and widely publicized dealer cases, to inform the auto dealer body.

This "bringing about compliance with these statutes through voluntary, corrective measures undertaken by dealers at our request"—in the language of the FTC's memo to the BBBs—is the new wave of the Reagan Administration's belief in the free market system now followed by the FTC.

While it does not preclude "formal action in this area . . . if our investigation indicates that this is appropriate"—again the FTC's words—it does give law enforcement second place after voluntary efforts.

To consumer advocates, this means there is a longer period when buyers can be deceived and honest dealers complying with the laws are at a competitive disadvantage.

Asked why FTC delays in starting legal action against violators, a public affairs spokesperson explained that the law, especially Truth-in-Lending and Regulation Z, is complicated

Howard named ATAM president

New president of the Automotive Trade Assn. Managers is Keith W. Howard, center, executive vice president of the Automotive Dealers Assn. of North Dakota. Secretary-treasurer is Richard K. Welte, left, vice president, Niagara Frontier Automobile Dealers Assn. Richard D. Meek, right, is immediate past president. Vice president is William F. Morie, not pictured, executive vice president, Georgia Automobile Dealers Assn.

Production post goes to Adams

Robert C. Adams has been named advertising production manager of AUTOMOTIVE NEWS, succeeding Carol LeVeque.

LeVeque, a 32-year veteran of AUTOMOTIVE NEWS, will retire March 31. At that time, she will have served as advertising production manager for 1,584 consecutive issues.

Adams comes to AUTOMOTIVE NEWS from the Royal Oak (Mich.) Tribune, where he was production director for 14 years. Prior to that, he was associated with the Detroit Free Press, the Detroit News and the Birmingham (Mich.) Eccentric.

AMC, Chrysler and Ford lead way upward

Car sales notch 2nd gain in row

By Jenny L. King
Staff Writer

Domestic new-car sales were back on a winning streak, with early-March totals up from year-ago levels and a prognosis for more of the same as lower interest-rate levels continue, at least through the end of the month.

It was the second consecutive period of improved sales and the 12th in the last 14 periods.

March 1-10 sales numbered 161,117, up 2.93 percent from 156,532 a year earlier. They were down 7.27 percent from 173,757 recorded the final period in February. The daily selling rate for early March was 17,902, compared with 17,392 the preceding year. There were nine selling days both years.

Based on the early-March performance, domestic new-car sales were moving at a rate of 6,008,000 units for 1983.

General Motors and Volkswagen of America were out of the winners' circle for the period, while the competition enjoyed increases of 8.79 percent to 87.50 percent. GM sales totaled 92,816, down 2.05 percent from 94,758 last year. Volkswagen of America reported sales of 1,495 new Rabbits, down 41.67 percent from 2,563.

American Motors released an estimated sales figure of 4,500 this year, up 87.50 percent from 2,400 in 1982. Alliance accounted for the gain since AMC's other lines were down. Chrysler Corp. was up 8.80 percent, to 21,150 from 19,440, and Ford Motor Co. was up 8.79 percent, to 40,656 from 37,371. It was Ford's best 10-day total this calendar year. Sales of U.S.-built Honda Accords were estimated at 500.

GM sales accounted for 57.61 percent of the market, down from 60.54 percent last year. Ford earned 25.23 percent, up from 23.87 percent. Chrysler cornered 13.13 percent, up from 12.42 percent. AMC had 2.79 percent, up from 1.53 percent. VWoA dropped to 0.93 percent from 1.64 percent, and Honda claimed the remaining 0.31 percent of the 1983 market, with no showing a year ago.

Oldsmobile not only reported a 28.20-percent sales increase for the period, its total of 20,805 was greater than any other U.S. make, including Chevrolet which finished with 24,315. Incentive programs within dealerships are reported to be a source of this dramatic tilt among GM Divisions.

Oldsmobile also lays claim to topping second-place Ford for the first two months of 1983.

U. S. makes reporting sales increases for the period included: Chrysler, up 56.12 percent; Dodge, up 8.16 percent; Ford, up 6.60 percent; Mercury, up 15.71 percent; Lincoln, up 4.83 percent; Buick, up 25.83 percent; Cadillac, up 27.29 percent, and Oldsmobile, up 28.20 percent.

Missing their '82 marks were: Plymouth, down 14.27 percent; Imperial, down 25.45 percent; Chevrolet, down 35.85 percent; Pontiac, down 1.01 percent, and VW, down 41.67 percent.

GM, Fanuc nearing decision on site of U.S. Robotics plant

By Marjorie Sorge

DETROIT. — General Motors and Fanuc, Ltd., of Japan, will decide on the location of their joint-venture robotics plant within the next two or three months, according to GM Chairman Roger B. Smith.

Smith said the jury is still out on the site but he hopes it will be located in Southeastern Michigan. The new company, GMF Robotics Corp., will build programmable industrial robots.

Speaking before the New Detroit City-Suburban Forum last week, Smith also criticized Michigan's poor showing in recent business-climate surveys because of its high cost for welfare, unemployment compensation and workers' compensation. He advocated working together with business, labor, government and academia to turn Michigan's status around.

"The really sad part of all this is that the poor business climate in Michigan is not only discouraging new business from moving to the state, it's hurting the businesses that are already here," he said.

According to Smith, some of GM's business costs in Michigan are double what they would be in another state. But he emphasized that the company has no intention of moving.

• Smith also told the forum that GM plans to be back at 1978-79 sales levels by mid-1985, with the proper economic climate. In 1978, GM sold about 5.39 million cars in the U.S., and in 1979 it sold about 4.91 million cars.

By mid-1985, he said, given a better economy, GM believes it can get "everybody who wants to work back to work" and that

Datsun ranks third in Charleston, S. C.

CHARLESTON, S. C.—The February registration report for Charleston County showed Datsun running a strong third.

Totals were: Ford, 99; Chevrolet, 96, and Datsun, 95.

March sweetener added to Toyota truck incentive

Toyota is conducting a March supplement to an earlier "Running Start" incentive program on trucks.

The March 7-31 program is called "Anchor Lap" to signify the last lap of "Running Start."

It runs in six of Toyota's 12 sales regions. In one phase, dealers receive a separate March objective on trucks. If they hit 100 percent, they receive an extra $200 per truck, retroactive to the first truck sold in March. That brings possible earnings (including Running Start) to $500 per truck in March.

There's also a dealer cash bonus of $200 on all diesel trucks sold during March with no qualifiers.

In the other program phase, salesmen get a pull on a pullboard, good toward winning a range of cash awards, with each truck they sell.

Strawberries and fish; carpets and ladies' slippers

'Countertrader' Hill circles the globe for GM

By Jim Plegue
Staff Writer

For David Hill, "every day is an education in geopolitics, goods, commodities, services and economics."

Hill, 45, is president of Motors Trading Corp., the wholly owned subsidiary of General Motors which, since its formation in September, 1979, has inked trading contracts in as many as 30 countries of the world.

More specifically, Hill logged 200,000 miles last year in pursuit of "countertrade," today's buzzword for what is both a crude and complex method of doing business in countries without convertible currency.

Countertrade, Hill said, can be broken into three distinct groups: Buy Back or Offset deals (where a company may, for example, be paid to build a plant in a country and, in return, agrees to purchase the product manufactured there), Counterpurchase deals and Barter arrangements.

"We do relatively little barter on an international scale," said Hill, who was born in London and first worked for GM at its AC-Sphinx Sparking Plug operation plant in Dunstable, England.

"Nearly all our activity is confined to counterpurchase. We buy from a country with the understanding they will buy from us."

Both transactions are conducted in cash with commercial terms applied, Hill said, "but the two transactions are linked and

Thanks to the promise of declining oil prices

Outlook improves for vehicle sales

Continued from Page 1

take some drastic steps soon to improve CAFE 2.5 MPG by 1984 in order to avoid stiff monetary penalties.

Hammond said he expects the very next round of price increases to begin the strategy that will see small-car prices holding the line as the prices of the bigger cars skyrocket.

Compacts and subcompacts took 50 percent of the market in 1982. ANWO projects they will get 46.95 percent of the market in 1983 and 45.94 percent of the market in 1984, despite significant decreases in the fuel-price index.

• The car sales forecast for 1984 calls for 14.8-percent growth, or an increase of 1.33 million cars to a total of 10.34 million units. This is 590,000 more than forecasted in the last ANWO.

Again, the domestics are expected to get the lions' share of that increase, selling 7.98 million units versus 2.36 million imports. That would represent a growth of 17.5 percent for the domestics and 6.3 percent for imports.

The projected import share for 1984 of 22.81 percent would be the lowest since 1979, when imports took 21.85 percent of the market.

Light-truck sales are expected to climb 13.4 percent in 1983 and another 18.5 percent in 1984, and both projections are increases over December's forecast.

Medium and heavy-truck sales are expected to increase less than previously forecast. ANWO projections now call for 1983 market growth of 16.7 percent and 1984 growth of 23.8 percent.

The 1984 truck sales projection of 3.46 million units would be the highest since 1979, when 3.47 million trucks were sold in the U. S.

• In auto production, the U. S. and Canada are expected to see an increase of 34.5 percent in 1983 and 14.6 percent in 1984. The growth rate is expected to drop rapidly in 1985 (2.2 percent), then turn negative in 1986 (−0.6 percent).

Similar production growth forecasts for the EEC: −2.2 percent in 1983, 2.6 percent in 1984, 2.3 percent in 1985 and 0.1 percent in 1986.

For Western Europe: 8.3 percent growth in 1983, 6.5 percent in 1984, 4.6 percent in 1985 and 3.2 percent in 1986.

For Japan: 11.6 percent in 1983, 2.2 percent in 1984, 5.9 percent in 1985 and 4.7 percent in 1986.

For the first time, ANWO is forecasting production and registration figures for 1987 and 1988. They show a flat growth rate throughout most of the world during those years.

North American car production is expected to increase 1.3 percent in 1987 and 6.7 percent in 1988. The increases in EEC countries are expected to be 0.3 percent and 0.9 percent.

In Western Europe, the increases are forecast at 7.6 in 1987 and 2.1 percent in 1988. In Japan, they are 2.5 and 1.9 percent.

(The Western European category includes Spain, Portugal and Sweden, which are not EEC members.)

• Although the European nations are expected to continue to use taxation to encourage fuel efficiency, consumers there are expected to benefit from some softening of oil prices in 1983 and especially in 1984, according to John Lawson, London-based economist for DRI Europe.

Not only will oil prices decline, but the dollar is expected to soften, too, during this period. Since oil is priced in dollars, a lower-valued dollar will be an added bonus for Europeans.

But all the rest of the economic outlook for Europe is rather gloomy. Business recovery and a consumer-spending upturn are expected to be slow in coming.

Another negative factor promises to be the pre-buying that was done in two major markets, France and Italy, during 1982. In the largest European car market, West Germany, real personal income in 1983 will fall for the third consecutive year, Lawson said.

On the brighter side, the vehicle population has continued to grow in Europe despite the recession. Even in Germany, the number of vehicles in use has increased at a rate of 1.5 percent a year, indicating strong—if latent—demand for motor vehicles.

Through 1988, Europe's number of cars and trucks on the road is expected to grow . to 2 percent a year, Lawson said.

St. Louis dealer spends $1 million on expansion

ST. LOUIS. — After less than two years in operation, Plaza Motor Co., a Mercedes-Benz, Porsche-Audi dealership in suburban Creve Coeur, is in the midst of a nearly $1 million expansion.

Tony Pandjiris, general manager, said the company is also doubling its parking lot and parts department as well as adding a 14-stall body and paint shop. The firm is the largest Porsche-Audi dealership in the state, according to Pandjiris.

"Because we have taken in many tradeins, we have quadrupled our used-car department," Pandjiris said.

Construction work is expected to be completed at the end of March.

Checking wheel alignment

A technician uses Firestone's newly developed Simplified Truck Alignment Reporting system to check wheel alignment. The firm said the system is simple and portable and can be used almost anywhere, including yards and parking lots.

Firestone introduces portable alignment kit

Crain News Service

AKRON. — Firestone Tire & Rubber Co. has introduced a lightweight, portable alignment system that could make alignment checkups part of a truck operator's routine maintenance schedule.

"Misaligned tractor and trailer suspensions are a common problem which can wear out tires in a short period of time," said Bill Hanlon, Firestone's heavy-duty truck-tire marketing manager.

"It's a problem we wanted to help our customers overcome, so we developed an inspection system we could administer quickly and easily to help protect their tires, thereby minimizing their tire costs," he added.

Hanlon said the simple makeup and portability of the system, called Simplified Truck Alignment Reporting (STAR), make it one of the most versatile systems existing today to check alignment on tractors and trailers.

"Unlike most other systems that are sophisticated and can only be used at a stationary location," he explained, "STAR can be transported and used just about anywhere, including yards and parking lots."

The system weighs about 66 pounds and consists of two three-point wheel-mounted brackets and a double-level camber gauge that compensates for the slope of the ground when checking front-wheel camber.

• Hanlon said misalignment problems have become more apparent in recent years with the increase in use of radial truck tires.

"Radials deliver longer wear and improved fuel economy so long as they are properly maintained," he said. "At the same time, they are much more sensitive to chassis misalignment than bias-ply tires, and tires on an out-of-alignment truck almost always wear prematurely."

The STAR system is particularly valuable in checking rear-wheel alignment, according to Lloyd Cooper, heavy-duty radial technical manager.

"Rear-wheel alignment," he

IH honors 30-year dealer

Bernard Uhl, left, owner of Uhl Truck Sales, Palmyra, Ind., and Louisville, was presented a 30-year IH Dealer Service Award by Donald D. Lennox, president, International Harvester. Uhl purchased the Palmyra dealership on March 1, 1953, and acquired the Louisville franchise in 1981.

truck industry news

Decline is the first monthly dip since last August

February truck sales off 7 percent

Retail sales of new trucks of all types in the U. S. declined almost 7 percent in February, the first monthly drop on a year-to-year basis since last August.

During the month, according to preliminary reports, franchised dealers and factory outlets retailed 193,782 vehicles, off 6.7 percent from last year's 207,743 units.

Surprisingly, the usually slow-moving medium market showed gains for the second consecutive month in February. It also was the only one of the three market segments with higher sales than those in the same month a year ago.

The two-month industry total, however, was down only slightly from last year, 387,374 units versus 387,537.

Sales of light trucks, which have been showing increasing strength since the fourth quarter of 1981, softened in February. But the compact vehicles, pickups and the new sports/utility units, were up over 1982.

In February, 182,013 lights were sold, off 6 percent from the year-earlier 193,717. The two-month total, however, was 1.2 percent higher than a year ago, 362,090 versus 357,539.

• Compact-truck sales during the month totaled 62,942, an increase of 7.2 percent over the 58,737 units retailed in the same month in 1982. Through February, the count was up 26 percent, from 103,868 in 1982 to 130,854.

Because of dwindling deliveries of the captive imports, sales of the Japanese products were down for both February and the first two months.

During the month, dealers sold 26,974 of the compacts, a decline of 16.9 percent from last year's 32,468. Through February, the total was down 4.3 percent to 58,818 units, compared with 61,490 a year ago.

On the other hand, however, sales of the non-captive imports — Toyota, Datsun, Mazda, Isuzu and Mitsubishi — were higher than last year in both February and the year to date.

February sales of these vehicles totaled 23,568, a gain off 9.8 percent over the year-ago 21,458. Through February, the count was 48,081, up 22.1 percent over last year's 39,368.

Only 3,406 non-captive imports — Chevrolet LUV, Ford Courier, Dodge Ram 50 and Plymouth Arrow—were retailed during the month, a decline of 69.1 percent from last year's 11,010. The two-month total was

Nov. 29-Dec. 3—21st annual show, Recreation Vehicle Industry Assn., Kentucky Fair & Exposition Center, Louisville.

Ford seeks '83 boost in farm-tractor share

DEARBORN. — With new products and new marketing programs, Ford Motor Co. expects to make 1983 sales gains in North America's highly competitive farm and industrial tractor markets, according to Mervyn H. Manning, Ford vice president and general manager of Ford Tractor Operations.

Speaking at a news conference at which two new tractor lines were introduced, Manning said Ford has revamped its entire tractor lineup in less than 16 months, "an unprecedented move in an industry where new model changes are few and far between."

He said major changes in Ford's 1983 North American tractor lineup include a new, expanded line of over-100-HP farm tractors; six new under-30-HP utility tractors; five new compact loaders for farm and industrial use; and four new models in the recently introduced mid-range line of Series 10 farm tractors.

"From our new top-of-the-line TW-35 — the largest farm tractor ever built by Ford Motor— to the smallest new utility model, our customers will see improvements in every major operating system," Manning said.

"Many of our new tractors are more fuel-efficient, more comfortable, and most importantly, more productive."

• He said Ford tractor dealers also will offer an industry-first "Tractor Care" program for the new over-100-HP tractors, in addition to a variety of leasing, rental and financing options to help farm and industrial equipment customers overcome current cash flow problems.

The new service plan provides purchasers of TW models with three years or 2,500 hours of tractor care with virtually no expense to the owner other than fuel.

'Our dealers are convinced that they have the products and the marketing support to maintain their sales momentum in 1983," he said.

According to Manning, a recent survey of Ford's North American tractor dealers showed that more than 62 percent expected to increase their sales and market share in 1983, even though 62 percent expected tractor-industry sales to drop or remain even with last year's performance.

"Our new models are designed to give Ford tractor dealers a competitive edge in what has to be one of the most competitive tractor markets we have ever faced," he said.

• "Our attention is focused, as it's never been focused before, on producing the finest quality tractors in the industry," he concluded. "We're especially proud of our record to date — our reputation for product quality has been one of our strongest selling points over the years, and we're not resting on our reputation."

Ford offers bigger tractors for '83

The four-model line of TW Series agricultural tractors—the most powerful two-wheel-drive tractors in Ford history—will be available this spring. This is the TW-15, an intermediate model rated at 140 HP. The top-of-the-line TW-35 is rated at 170 HP.

NIASE recognizes topflight schools

Training programs to be certified

Continued from Page 20

years, will be to evaluate the curriculum, faculty, equipment, and facilities of institutions offering automotive training, using the criteria developed by the Automobile Mechanic Training Evaluation Project (AMTEP), to determine if the schools' automotive programs are worthy of NIASE certification.

The AMTEP evaluation system was developed under the sponsorship of the Industry Planning Council of the American Vocational Assn.

The project was funded by the Motor Vehicle Manufacturers Assn., and the AMTEP studies have now been turned over to NIASE.

Schools would be required to have an advisory committee made up of local automotive business and professional experts, preferably those who hire mechanics and know what skills mechanics need to "make it" in the marketplace.

Dr. Byrl R. Shoemaker, former Ohio director of vocational education, has been retained by NATEF as educational consultant.

Shoemaker will train state evaluation team leaders who will be recruited from the ranks of qualified vocational educators who are NIASE certified. Together with other local automotive experts, the team evaluation leader will conduct investigations upon the request of institutions.

In addition to Pohanka, the NATEF board is made up of William F. Ferguson III, Ferguson Auto Service, Richmond, Va., treasurer; Mel H. Chesney, Ford Motor Co. (retired); Jerry B. McFarland, Orville Smith Auto Service, Tucson, and Joe D. Mills, Florida Vocational Education, Tallahassee.

Also, Mort Schwartz, Chanslor & Lyon Co., Inc., Walnut Creek, Calif.; Vodrey H. Shokes, East-West Lincoln Mercury, Inc., Landover, Md., and Gregory L. Sutliff, Sutliff Chevrolet Co., Harrisburg, Pa. Ron Weiner, NIASE President, will be chief administrator and secretary for the foundation.

Initial funding for NATEF was contributed by MVMA and was matched by NIASE. Additional contributions have been received from Toyota Motor Sales, U.S.A., Inc., and the National Tire Dealers and Retreaders Assn.

• "NIASE has done a fine job in fulfilling its original purpose to recognize excellence where it exists in mechanics' ranks and to encourage other mechanics to strive to become certified," Pohanka said.

"As a next logical step the institute, through the new foundation, will recognize excellence in automotive education programs through its new certification, and hopefully encourage institutions to seek this standard."

Pohanka said everyone is keenly aware of the need for skilled mechanics and "those of us in the industry must accept some of the responsibility for this problem and recognize that we have not done enough to make it easier for entry level candidates to become 'job ready.' "

"We all must do what we can to encourage gifted young people to make auto mechanics their career," Pohanka said. "But we can't stop there. We must make certain that they have a vehicle through which they can make that goal a reality.

"By certifying superior automotive programs, NIASE will be able to direct recruits to the institutions where they can most readily receive the training they need to accept career responsibilities," Pohanka said. "In doing so the institute will have created a stepping stone to automotive service excellence."

Saab program designed to recognize technicians

Continued from Page 20

els in the system. The first is Associate Technician, which requires the technician to have worked at the dealership for 12 months and take the five-day introductory course as well as the evaluation test.

The next step is Certified Technician which requires 24 months of employment at the dealership, four additional technical courses plus certification in two NIASE categories.

Requirements for the third category, Quality Technician, are 36 months at the dealership, four more Saab courses and certification in four NIASE categories.

The highest level is Master Technician which requires 60 months work on Saabs—36 months must be consecutive—as well as having completed all required Saab technical courses and being fully NIASE certified.

Lieuwma said the time factor has another benefit in that the company believes that a technician can become a master at his trade only with experience.

Lieuwma stressed that Saab is also striving to reduce the turnover in the service departments, and this is a method of promoting loyalty to both Saab and the dealership, promoting NIASE and developing corporate service training programs.

There will be various awards to the technicians as they complete each level, and there will be no cost to the dealer, Lieuwma said.

Another goal of the program is to improve the overall performance of the technicians in a way that the dealers can see positive results.

This program, as most Saab programs, has been "run by" a cross-section of dealers and they were "positive about it," Lieuwma said.

Lieuwma further noted that Saab is attempting to create links with various technical schools and colleges in an effort to bring training closer to the dealership.

The company has formed some links with schools where it can teach the school instructors about Saabs and in exchange for use of school facilities for its own training sessions with dealership personnel. This is becoming a "tie for the future" Lieuwma said.

TOYOTA "SPORT" CONVERTIBLES

"AMERICAN CUSTOM COACHWORKS, LTD."

Custom built convertibles with their "fully automatic convertible top" have already proven they sell very fast and are **very profitable** for Toyota dealers to sell. They are the very highest quality of craftsmanship, and are the finest showroom traffic builders, and with their superb engineering and style create additional business. Base units can be drop shipped to American Custom Coachworks, Ltd. plants, or there are open factory (pool cars) presently in build that are available.

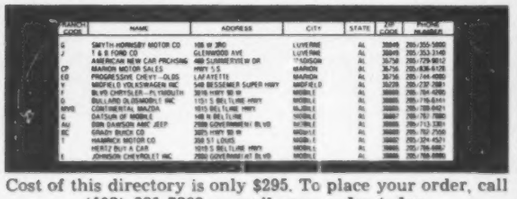
NEW CAR DEALER DIRECTORY
27,910 names - $295

The New Car Dealer Directory has been compiled from the Yellow Pages of approximately 4,800 telephone directories. It covers virtually every city and town all across the country; and includes name of dealership, address, zip-code, telephone number and the major brand sold by the dealer.

This directory can be a perfect tool for Market Planning, Sales Prospect identification, Direct mail list, Telephone sales or as a reference directory. Brand information lets you select Chevrolet dealers or Toyota dealers or any other major franchise in any sales territory. The potential use of this directory is limited only by your imagination.



Cost of this directory is only $295. To place your order, call (402) 331-7293 or mail your order today.

Automotive News

Decline is the first monthly dip since last August

February truck sales off 7 percent

Continued from Page 18

off 51.5 percent, from 22,122 in 1982 to 10,737.

Sales of the domestic compacts in February were up 36.9 percent to 35,968 units, compared with 26,269 a year ago. The two-month total was 72,036, an increase of 70 percent over last year's 42,378.

The domestic compacts accounted for 57.1 percent of total sales in February, and 55.1 percent of the two-month count. A year ago, the domestics' February share was 44.7 percent and the two-month penetration was 40.8 percent.

In February, 3,058 medium trucks were retailed, a gain of 3.4 percent over last year's 2,957. The two-month total was 6,482 units, up 8.3 percent over the 5,987 sold in the first two months of 1982.

Heavy-truck sales in February totaled 8,711 units, a decline of 21.3 percent from the year-earlier 11,069. Through February, the count was 18,802 units, off 21.4 percent from the 23,911 vehicles sold in the like period in 1982.

The Motor Vehicle Manufacturers Assn. estimated that retail outlets of domestic manufacturers sold 170,214 units, including imports, in February, a decline of 8.6 percent from last year's 186,285.

Through February, the total was 339,293 units, down 2.5 percent from last year's 348,169.

• At the end of February, the number of unsold new trucks in dealer hands totaled 541,284 units, according to MVMA, an increase of 4.2 percent over last year's 519,705.

Light-truck stocks were 8.3 percent higher than a year ago, 501,359 versus 462,752. There were 10,148 mediums on hand, a decline of 14.3 percent from the year-earlier 11,846. Heavies were down 34 percent, from 45,107 units in 1982 to 29,777 this year.

Big Three truck manufacturers reported their dealers sold 158,666 new vehicles in February, down 8.4 percent from last year's 173,293. The two-month total was 315,013, a drop of 2 percent from the previous year's 321,565.

During the month, Chevrolet dealers retailed 62,166 trucks, down 15.3 percent from the year earlier 73,415. Through February, the total of 127,366 sales was off 6.5 percent from last year's 136,186.

No. 2 Ford said its dealers sold 59,211 vehicles in February, a gain of 1.2 percent over the year-ago 58,517. The two-month total of 121,703 units was 10.8 percent higher than last year's 109,846.

Dodge and Plymouth dealers retailed 19,631 units during the month, down 12.6 percent from the year-earlier 22,470. The January-February count was 31,707, off 23.7 percent from last year's 41,554 units.

• GMC new-truck sales in February were down 6.5 percent, from 18,891 units in the same month a year ago to 17,658. Through February, the total was 34,237, up 0.8 percent from the previous year's 33,979.

Sales of Jeep four-wheel-drive vehicles in February totaled 4,823 units, an increase of 0.5 percent over last year's 4,797. The two-month count was 9,695, up 5.8 percent over the year-earlier 9,160.

Volkswagen sales for both the month and the January-February period were down drastically from 1982. In February, dealers sold only 533 units, down 50.5 percent from last year's 1,077. The two-month total was off 46.1 percent, from 2,421 units a year ago to 1,306.

Toyota pickup sales in the second month were off 5.1 percent, from 10,440 a year ago to 9,912. Through February, the total was 19,576 units, down 2.9 percent from last year's 20,160.

Datsun dealers retailed 7,046 trucks during the month, up 1.3 percent from the year-ago 6,995. The two-month count was 31 percent higher than the previous year, 15,980 versus 12,200.

Mazda's February sales were up 56.4 percent to 4,626 units, compared with 2,958 in the same month a year ago. Through February, the count was 8,496 units, an increase of 80.6 percent over the year-earlier 4,705.

In February, Isuzu dealers retailed 1,304 compact pickups, a gain of 18 percent over the year-ago 1,105. Through February, the total was 22.5 percent higher than last year, 2,822 versus 2,303.

Newcomer Mitsubishi said its dealers retailed 680 vehicles in February, bringing the two-month count to 1,207. Mitsubishi compacts made their U. S. debut last fall at the start of the 1983 model year.

Firestone offers portable kit for alignment

Continued from Page 18

said, "is becoming a critical part of preventive maintenance because if the rear end is out of line, the front wheels have to compensate and you'll get premature wear."

Cooper recommended a STAR check every 25,000 to 30,000 miles.

With STAR's wheel-mounted brackets, a tape measure and a chassis-mounted bracket, he explained, a tire dealer, truck operator or fleet maintenance personnel can check to see whether the drive wheels are not parallel to each other or whether the axles are not perpendicular to the chassis.

While STAR currently is available only through Firestone's trained field radial-tire specialists, Hanlon said he believes that once the system's simplicity and value become well-known, use of the system could expand greatly.

Domestic makers schedule 128,076 cars

Gain by Ford boosts week's output

By Patricia Hoffman
Staff Writer

Six days of assembly at three Ford Motor facilities and the return of the company's Dearborn and San Jose plants boosted last week's domestic car production 7.41 percent above the previous week's total.

The auto makers targeted last week's output at 128,076 units, up from the prior week's 119,236 and up 6.74 percent from 119,988 cars built in the comparable 1982 period.

Breakdown for the week by company was: General Motors, 56.77 percent; Ford, 24.39 percent; Chrysler Corp., 14.17 percent; American Motors, 2.47 percent; Volkswagen of America, 1.65 percent and Honda, 0.55 percent.

So far this year, the manufacturers have assembled 1,269,562 cars, a 38.36 percent gain from last year's 917,570.

Ford's Kansas City plant was down last week (March 14) due to overstocked inventory.

AMC discontinued production of Eagle models at its Kenosha facility last week, leaving the company's Brampton (Canada) point as the sole source for Eagle. Kenosha will continue to produce the AMC/Renault Alliance.

GM's Framingham plant, idle since Oct. 1, returned last week with assembly of the Chevrolet Celebrity and Oldsmobile Cutlass Ciera. Output was set at 45 units an hour on one shift. About 1,800 workers returned from indefinite layoff.

Ford's Dearborn and San Jose plants returned last week following one week of downtime for inventory control.

Saturday overtime was scheduled at Ford's Atlanta, St. Louis and Wixom points. The GM Detroit plant operated 1.6 hours of daily overtime on both shifts.

GM, Fanuc near decision on site of Robotics plant

Continued from Page 4

GM will lead the auto industry and other industries in recalling workers.

Current signs in the industry point to the 1985 improvement, Smith said. GM's order bank is at its highest level in three years and the company has added 22,000 jobs in the past two months.

In addition, GM sales should be higher than 1982 in both March and April, he said.

While dealer orders are high, the dealers' main concern is a shortage of cars, Smith said, but they are also concerned about what will happen when the 11.9 percent interest subsidy program ends March 31. While he would not comment on similar programs in the future, Smith did say current rumors about a 9 percent program had no credence and that that rate had "not been discussed at GM."

Meanwhile, Smith told forum attendees that the GM/UAW "Care and Share" food donation program raised $4,650,000 nationally and provided more than 13 million cans of food.

Canadian auto output rises as Ford, AMC plants return

The return of Ford Motor's St. Thomas facility and American Motor's Brampton plant helped boost last week's Canadian auto production 38.42 percent from the previous week's total. Output was about the same as in the comparable 1982 period.

The auto makers slated 22,326 units last week, up from the previous week's 16,129 and about equal to last year's 22,345.

Year-to-date, there have been 202,247 cars assembled, a 22.15 percent gain from 165,567 finished in the same 1982 period.

Truck output last week was estimated at 10,685 units, up 3.45 percent from the previous week's 10,329, but down 9.95 percent from the 11,866 built in the year-ago week.

So far this year the truck manufacturers have completed 102,284 units, a 3.52 percent gain from 98,804 built in the comparable 1982 period.

Ford's Oakville car assembly point remained idle last week (March 14) for conversion to the new Tempo and Topaz models. The plant, which went down Feb. 21, is slated to resume full production April 11. Oakville previously assembled the Crown Victoria.

Back at work last week was Ford's St. Thomas facility. Operations there were halted Feb. 28 for inventory control.

The AMC Brampton plant, source of Eagle, Concord and Spirit models, returned last week following a week of downtime to control overstocked inventory. Brampton now is the sole source of Eagle assembly, which has ended at AMC's Kenosha plant in Wisconsin.

According to an AMC spokesman, Spirit production will be phased out of Brampton this month, followed by Concord assembly which is to be discontinued in April. Beginning in June, Eagle output will be cut from two shifts to one shift at 120 units a day.

Chrysler Corp.'s Windsor car plant, source of the Gran Fury, Diplomat, Caravelle Salon, Imperial, Cordoba, Mirada and New Yorker Fifth Ave. models, increased output last week from 47 units an hour to 50 units an hour.

Operations resumed last week at International Harvester's Chatham plant following a five-week strike.

Chrysler expects operating profit

DETROIT. — Chrysler Corp. anticipates a pre-tax operating profit of at least $100 million in the first quarter of 1983, compared with a pre-tax operating loss of $89 million in the first quarter of 1982.

The forecast was made in a filing with the Securities and Exchange Commission for an offering of 8.7 million shares of common stock as part of Chrysler's recapitalization plan.

Chrysler said financial institutions holding 1981-series preferred stock have almost unanimously approved the plan to swap those shares for common stock as another part of the recapitalization plan.

Truck production steady for week; 47,291 assembled

The return of the CJ line at American Motors Toledo Jeep facility was offset by downtime at Ford Motor's Kentucky point, with the result that last week's domestic truck production was up just a fraction from the previous week's total.

Last week's truck output was estimated at 47,291 units, about even with the 47,012 units built the previous week, but up 8.10 percent from last year's 43,747.

So far this year, the makers have finished 435,746 trucks, a 10.89 percent gain over the 392,968 built in the comparable 1982 period.

Ford closed its Kentucky plant last week (March 14) due to overstocked inventory.

AMC's Toledo point, idled for inventory control March 7, returned last week with production of CJ models. Wagoneer and Cherokee assembly will resume today (March 21).

General Motors' Lordstown facility increased van output last week from 24 an hour on two shifts, to 29 an hour. About 300 workers returned from indefinite layoff.

The S-truck line at GM's Pontiac point operated six days last week.

Volkswagen of America has announced plans to halt production of pickups at its Westmoreland plant indefinitely, starting in April. The Westmoreland truck line, which was down from last June until Feb. 21, has assembled only 652 trucks since its return.

Chrysler unveils minivan

This Dodge Caravan version of the Chrysler T-115, a 1984 model, was displayed last week to VIPs in Southern California. The Caravan holds seven people, has a carrying capacity within 100 pounds of a standard van and is eight inches lower for easier garageability. Story, more pictures on Page 6.

Japanese top U.S. makes in 1982 sales per dealer

By Jenny L. King
Staff Writer

Toyota, Honda and Nissan retained the first three spots in new-car sales per dealer in the U. S. market for 1982, an AUTOMOTIVE NEWS analysis discloses.

Oldsmobile topped the domestic makes but was in fourth place in the overall standings.

Six of the top ten spots were taken by imports. In addition to the three leaders, Mazda was seventh, Subaru was ninth and Volvo was 10th.

Other domestic makes in the top ten were Buick, fifth; Chevrolet, sixth, and Ford, eighth. The biggest surprise among the domestics in 1982 was provided by Buick, which moved ahead of Chevrolet.

Average sales of domestic units per new-car dealer climbed to 277 in 1982 from 275 in 1981. Import dealers averaged 191 new cars per outlet in 1982, up from 166 the preceding year.

The combined import-domestic figure was 316 per outlet last year and 328 in 1981.

The AUTOMOTIVE NEWS sales-per-outlet analysis defines all Volkswagen and all Renault passenger cars as domestics in 1982. Renault is a newcomer in this classification, following introduction and high sales volume of its U. S.-built Alliance. VW was reclassified for 1981 as a domestic.

• General Motors dealers sold an average of 338 units per outlet in 1982, down from 349 in 1981 and 367 in 1980. GM's record is 464, set back in the more-prosperous year of 1978.

Ford Motor Co. dealers came up with 243 sales per outlet last year, up from 236 in 1981. In 1980 their average was 237.

Chrysler Corp. outlets averaged 189 retail sales apiece in 1982, down from 193 in 1981. Two years ago, its dealer population averaged 163 sales each.

Volkswagen of America finished 1982 with 164 sales per franchised outlet, down substantially from 241 a year earlier. In 1981, VW was second best among the domestics; in '82, it dropped to fourth.

American Motors dealers, buoyed by Renault, rose to 96 sales per outlet in 1982 from 85 in 1981 and 88 in 1980.

Considering the U. S. makes separately, Oldsmobile again captured first place with its 254 sales per dealer. It was down

breaking news

GM/Toyota begin labor talks

DETROIT.—General Motors and Toyota Motor Co. have begun preliminary talks on labor issues at GM's Fremont (Calif.) plant which is scheduled to build the joint venture's small cars. According to a UAW spokesperson, the union has been talking with GM, but "to my knowledge has not spoken to Toyota." GM Chairman Roger B. Smith said formal talks among all parties are expected to begin soon. But that cannot occur until the new joint venture company is formed, and that hinges on FTC approval. The two companies announced their joint venture on Feb. 14.

Ruckelshaus, auto nemesis, returns as EPA chief

WASHINGTON. — With William Ruckelshaus returning to head the EPA, auto makers will be dealing with the bureaucrat who held their feet to the fire on emission control when he headed the agency 10 years ago. Last week, EPA employes, mindful of those days, cheered wildly as he returned while Anne (Gorsuch) Burford holdovers like Kathleen Bennett, assistant administrator for air, noise and radiation, pondered their fate in the face of resignations they have been asked to submit.

Isuzu, GM join in Egyptian venture

CAIRO.—General Motors and its Japanese affiliate, Isuzu, will join with local interests to form a joint venture in Egypt to assemble Isuzu trucks and buses. Output is scheduled to begin in 1984, assembling knockdown kits at a rate of 1,400 a year, increasing to 18,000 units annually within five years, with 40 percent local content.

Microcar's 'no-door' ragtop for France

The Microcar, built by Jeanneau of France, will soon be available in that country in this no-door convertible model. A two-door hardtop has been built since 1981. The two-seat commuter rides on a 67-inch wheelbase, is available with 49-cc or 125-cc engines. It is not sold in the U. S. Jeanneau is a subsidiary of Bangor Punta, Greenwich, Conn. Story and another photo on Page 9.

The race to trace Swiss deposit may be near an end

The puzzle of DeLorean's missing $17.65 million

By Edward Lapham
Senior Editor
Copyright, 1983, Automotive News

Investigators from a number of camps are close to solving the greatest puzzle of the DeLorean sports car enterprise: What happened to the $17.65 million sent to Switzerland for R&D work but which never made it into the car project?

Potential puzzle-solvers, include the Creditors Committee of bankrupt DeLorean Motor Co.; the court-appointed examiner, Price Waterhouse & Co.; the Royal Ulster Constabulary, which has been investigating the DeLorean matter since December, and the joint receivers of the defunct Northern Ireland car-building subsidiary.

Also interested is the U. S. Internal Revenue Service, which has been investigating John DeLorean and his empire for possible tax fraud for several months. The center of that investigation involves his 1979 acquisition of a Utah company, which some investigators now believe was made with European funds originally paid to a Swiss bank account for R&D work on the sports car.

AUTOMOTIVE NEWS has uncovered new evidence which suggests the company which received the money, GPD Services, Inc., was created strictly for the purpose of being a conduit for those funds. In addition, one of the directors of GPD said there may be a link between John DeLorean and GPD.

DeLorean was unavailable for comment by press time.

The impending breakthrough in the solution of the GPD puzzle is in Geneva, where officials from the U. S. and the UK now believe a Swiss lawyer, Jacques Wittmer, has a complete record of the transactions of Swiss bank accounts into which the $17.65 million was paid.

The Creditors Committee of bankrupt DMC last week filed

Chrysler due to repay guaranteed loans early

By Kathleen Hamilton
Financial Editor

Chrysler Corp. is planning on repaying its government-guaranteed loans by the end of 1985 instead of 1990, when they are due, according to the company's stock prospectus.

Chrysler was clearly aiming at an early repayment schedule for the $1.2 billion worth of government-backed loans when it announced in January a major recapitalization effort.

But the prospectus for the stock involved in the recapitalization provided the first indication of just how early Chrysler plans to get out from under the restrictive demands of the loan guarantees.

The prospectus notes the payment schedule is subject to change. It also discloses some interesting insights into Chrysler's short-term plans.

For example: New-product, product improvement and plant modernization expenditures for the 1982 through 1986 period are expected to total $6.6 billion. The year-by-year breakdown is $823 million in 1982, $1.5 billion in 1983, $1.4 billion in 1984, $1.7 billion in 1985 and $1.2 billion in 1986. By 1986, Chrysler says it plans to produce only front-drive cars.

Chrysler says about $3.8 billion of the $6.6 billion will be for capital expenditures and the rest ($2.8 billion) for R&D, launch and preproduction expenses.

• Most of the money will have to come from internal sources, since virtually all of Chrysler's assets have been pledged as collateral for government-backed or state-issued loans for the company's bailout. The loan guarantees will also prohibit Chrysler from incurring new debts after Dec. 31, 1983, unless certain tests are met.

Chrysler said it anticipates it will need a waiver of the loan-guarantee demand that it maintain $300 million in working capital during 1984. That is the year in which the company has to pay $228 million worth of deferred pension obligations.

Chrysler forecasted that its share of the U. S. car market will average 10.3 percent in the 1983-1986 period, compared with a 10.0-percent share last year. It predicted its U. S. truck share at 10.1 percent in 1983 and 13.6 percent by 1986. Its share last year was 9.5 percent.

Chrysler is to introduce the first minivan/wagon to this market in 1984, and is known to be developing a compact pickup, codenamed N-truck, similar to the Ford Ranger and Chevrolet S-10 but with a bigger bed.

It forecasted U. S. car sales of 8.3 million in 1983 and 10.2 million in 1986, compared with 1982's total of 7.9 million. Truck sales were forecast at 2.6 million in 1983 (about the same as last year) and 3.3 million in 1986.

Chrysler said it intends to buy about 150,000 engines in 1983 from Mitsubishi Motors Corp.—the Japanese firm in which it has a 15-percent stake.

Chrysler's purchases for resale from Mitsubishi totaled $644.8 million in 1982, compared with $809.5 million in 1981.

Chrysler is allocated 82,500 of the 112,584 Mitsubishi cars imported each year under quotas. The rest are sold through Mitsubishi's own dealer network. Beginning in the 1985 model year, Chrysler will be allowed to distribute all Mitsubishi models sold in the U. S.

Chrysler also reported it is talking with its other partner, Peugeot, on cooperative commercial and industrial projects, even though they no longer plan to jointly produce a small car for the U. S.

Chrysler also will purchase constant velocity joints, 1.6-liter gasoline engines and 1.9-liter diesels from Peugeot.

• Chrysler paid $6.6 billion to suppliers in 1982, compared with $7.7 billion in 1981. It has more than 14,000 unaffiliated suppliers in the U. S. and Canada.

About 46 percent of Chrysler's manufacturing and assembly space in the U. S. is in the Detroit area — something that becomes more important as the Japanese just-in-time inventory system is implemented.

Chrysler reported its inventory level at the end of 1982 was $1.13 billion, compared with $1.60 billion at the end of 1981 and $1.87 billion at the end of 1979.

Meanwhile, its accounts receivable were reduced from $610 million at the end of 1979 to $248 million at the end of last year. Its breakeven point for profitability in the U. S. and Canada has been about halved since 1980, when it was 2.3 million vehicles. In 1982, the breakeven point was 1.1 million, where it is expected to stay.

Dealer profitability has also been increased substantially. Chrysler estimates 77 percent of its dealers were profitable in 1982, compared with 65 percent in 1981 and 52 percent in 1980.

Chrysler Realty Corp. owns more than 330 dealerships and has leases on 110 more. These dealerships accounted for 30 percent of Chrysler's car and truck sales in the U. S. in 1982. They had 46 percent of the sales in the top 200 U. S. markets.

They also turned in substantial losses (almost $11 million) during 1982. Still, those stores cut their losses by $13.9 million during 1982.

The prospectus also noted Prudential Insurance Co. of America would own 4.94 million shares of common stock, or 4.3 percent of Chrysler total, if the recapitalization plan is approved by all parties.

Annual fee for serving as a Chrysler outside director was increased last year from $5,000 to $15,000. Additional fees are paid per meeting and for serving on committees, but these have not changed.

• Cash remuneration in 1982 for Chairman Lee A. Iacocca was $365,676, up less than one percent from 1981. As of March 14, he owned 65,200 shares of Chrysler common stock and had an option to buy 500,000 more at prices ranging from $9.88 to $11.07 per share.

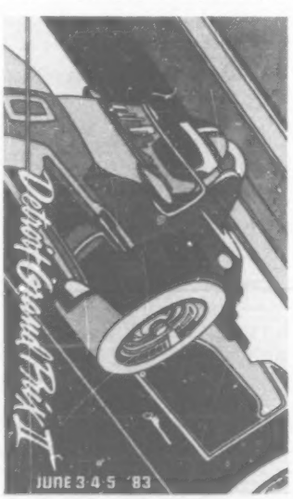
Vice Chairman Gerald Greenwald received $252,352 in salary and payments from Chrysler in 1982, an increase of 7.6 percent. He held 10,900 shares of common stock on March 14 and had an option to acquire 121,000 more at prices ranging from $6.25 to $9.88 per share.

Remuneration for H. K. Sperlich, president of North American Automotive Operations, rose 7.0 percent to $255,470. His common-stock holdings were 24,400 shares, and he had an option to buy 50,000 more at prices ranging from $9.07 to $18.63 per share.

Remuneration for Stephan Sharf, executive vice president-manufacturing, rose 19.4 percent to $229,180. He owned 28,150 shares of common stock and had an option on 5,000 more priced between $15.07 and $18.63.

Remuneration for John B. Naughton, executive vice president - sales and marketing, rose 2.8 percent to $200,725. He owned 6,207 common shares and had an option to purchase 47,000 more at prices ranging from $6.25 to $8.82 per share.

Taken together, the payments and salaries for all Chrysler directors fell fractionally to $5.14 million. UAW President Douglas Fraser was the only Chrysler director without any stock holdings in the company.



Grand Prix poster

The 1983 Detroit Grand Prix poster was designed by Joseph Grey II, senior art director at Campbell - Ewald, who used an 18 - color silk screen. The event will be held June 3-5.

General Dynamics appoints Truxell

DETROIT.—Robert W. Truxell has been appointed vice president and general manager of the Land Systems Division of General Dynamics Corp.

Land Systems, formerly Chrysler Defense, Inc., builds tanks for the U. S. Army.

Truxell recently resigned as vice president and general manager of the General Motors Truck & Bus Group's Manufacturing Division.

Straman's Silver Spirit

Richard Straman, a designer from Costa Mesa, Calif., unveils his latest creation—a Rolls-Royce Silver Spirit convertible. Straman offers this Silver Spirit for $220,000.

Car sales down 5 pct. from year-ago period

By Jenny L. King
Staff Writer

Domestic new-car sales in mid-March missed their year-ago mark by some 9,000 units but were up almost 8 percent from the first 10 days of the month. General Motors reported its best 10-day total so far this calendar year.

March 11-20 sales numbered 173,525, down 4.99 percent from 182,639 in 1982. The 1983 mid-month figure was up 7.70 percent from the early-March total of 161,117.

On a daily-rate basis, however, sales were up 6.89 percent to 21,691 this year compared with 20.293 per selling day in 1982. There were eight days in the period this year, nine a year ago.

This was the softest total for March 11-20 since 1961, when 134,605 new cars were retailed.

Year-to-date sales reached 1,191,261, up 2.32 percent from 1,164,253 last year.

General Motors had its best 10 days of 1983. Its sales numbered 108,442, down 3.78 percent from 112,700 last year (but up 8.25 percent daily rate). Ford Motor Co. sales dropped 16.31 percent, to 36,000 from 43,015 (down 5.84 percent daily rate).

Chrysler Corp. reported a 5.97-percent sales increase, climbing to 22,329 from 21,252 (up 18.22 percent daily rate).

American Motors, which now reports estimated 10-day sales, said its dealers sold about 4,750 new passenger cars, up 69.64 percent from the year-ago AUTOMOTIVE NEWS estimate of 2,800 (up 91.00 percent daily rate).

Volkswagen of America's Rabbit sales totaled 1,604, down 44.15 percent from 2,872 (down 37.30 percent daily rate), and estimated sales of U. S.-built Honda Accords reached 400.

• GM cornered 62.49 percent of the mid-month market, up from 61.71 percent a year earlier. Ford slipped to 20.75 percent from 23.55 percent. Chrysler earned 12.87 percent, up from 11.64 percent. AMC had 2.74 percent, compared with 1.53 percent; VWoA claimed just 0.92 percent, down from 1.57 percent, and Honda picked up the remaining 0.23 percent of this year's market.

Ford Escort was the number-one nameplate in mid-March, with sales of 8,041. It was followed by full-size Chevrolet at 7,401, Oldsmobile 88 at 6,024, Chevrolet Cavalier at 5,929 and Chevrolet Chevette at 5,675.

Annualized domestic sales for 1983 based on the March 11-20 performance moved at a rate to total 5,761,000.

Currency changes in Europe leave U.S. prices stable

DETROIT. — Last week's revaluation of European currencies is expected to have no effect on import-auto prices in the U. S. and little impact on importers' costs.

A survey of major German and French auto importers revealed unanimous agreement on the topic.

Even with the upward valuation of the German mark and the devaluation of the French franc, importers said the exchange rates with the dollar are expected to remain within the range previously forecast.

Jean-Marc Lepeu, American Motors finance vice president, noted that gains his company could have made because of the weakening franc have been offset by the higher French inflation rate.

As part of the currency realignment, the French government promised to institute policies expected to reduce that inflation rate.

Smaller Jeeps for '84 carry familiar names

SOUTHFIELD, Mich — After more than a year of deliberation, American Motors has decided to stick with Wagoneer and Cherokee as the names for its all-new downsized Jeep wagons to be introduced in the fall.

"Extensive research indicated we should continue these two nameplates because they have become synonymous with Jeep," said Joseph E. Cappy, marketing group vice president.

From an initial list of 1,000 possible names, 50 were selected for presentation at public clinics, he said.

"It became evident very quickly that we would have to have two names instead of one," Cappy explained. "People who lean toward the sporty models favored the name Cherokee, and those who liked the more formal four-door wagons favored the Wagoneer name.

"So we will offer Wagoneer as a four-door only and Cherokee in both two-door and four-door sport versions," he said.

Cappy said the new Jeep lines are 21 inches shorter, six inches narrower and four inches lower than the current wagons, yet interior roominess almost matches the 1983 models.

• "The larger 1983 Jeep Wagoneer will continue to be offered in its present configuration and will be renamed the Grand Wagoneer for 1984," Cappy said. "It offers unsurpassed four-wheel-drive comfort, cargo capacity and towing capability.

"The current 1983 Cherokee line, which debuted a decade ago, will be replaced in 1984 by the new Cherokee, which is about 1,000 pounds lighter and much more fuel efficient.

"The Jeep lineup for 1984 will include the Jeep CJ and Scrambler, the new Cherokee and Wagoneer, the Grand Wagoneer and J-series pickup trucks."

In addition to the larger Cherokee, AMC also will discontinue the CJ-5, CJ-7 Limited, and the J-10 Sportside pickup truck in order to reduce production complexity at Toledo, Cappy said.

"With the V-8 and optional Class 3 towing package, the 1984 Grand Wagoneer will be capable of towing boats, trailers

AMC puts XJ Jeep on ice

American Motors said it was offering a unique opportunity to photograph its new downsized XJ four-wheel-drive vehicle last week, but the company actually kept it on ice—literally. Joseph Cappy, AMC marketing group vice president, shows off the massive sculpture. Inside, and protruding at the roofline, is the 101-inch-wheelbase XJ, which will be available in two-door and four-door Cherokee and Wagoneer versions. Nobody stayed to watch the ice melt.

Surface Act confusion stalls equipment buys

By Ken MacDonald
Staff Correspondent

SAN FRANCISCO.—All Consolidated Freightways purchases of new equipment, as well as future route and service expansion, have been "placed on hold" pending definitive Transportation Department interpretation and implementation of the Surface Transportation Assistance Act adopted Jan. 6 by the Congress.

"Our planning for the future is definitely in a state of paralysis," Robert C. Stetson told a public hearing held here by the National Motor Carrier Advisory Committee.

Stetson is vice president and general counsel for Consolidated, based at Menlo Park, Calif. It is one of the nation's largest trucking firms.

Some 50 state and local highway and regulatory officials and top truck-company executives testified at the San Francisco session.

Stetson and the others directed their testimony to the initial Federal Highway Administration interpretation and policy stand on weight, length and width of trucks using the Interstate System and other qualifying federal-aid highways.

Changes mandated by the legislation include such uniform weight requirements as 20,000 pounds axle weight, 34,000 pounds tandem weight, 80,000 pounds gross weight, requirements that the various states allow semi-trailers of no less than 48-foot length in tractor-semi-trailer combination, trailing units of a minimum 28-foot length and tractors and trailers no later than April 6.

The new act also prohibits states from establishing overall length limitations on tractor-trailers or combinations.

• Uniform truck-width requirements are set at 102 inches. The new law also mandates identification of "qualifying highways" and definitions of "reasonable access" to and off such qualifying highways, as well as substantial fuel-tax increases and user charges imposed on the trucking industry.

Stetson told the Advisory Committee that Consolidated

Cherokee pilot model gets new engine

Employes at the Jeep plant in Toledo guide a new 2.5-liter, four-cylinder engine into mounting position in an all-new Jeep Cherokee pilot model. The engine will be standard in the compact 1984 Cherokee and Wagoneer sport wagons to be introduced in the fall.

Firm in India, Bendix to build brake systems

SOUTHFIELD, Mich. — Bendix Corp. has entered into a joint venture with Kalyani Steels, Ltd., of India, to manufacture air-brake-systems for medium and heavy trucks for the growing Indian market.

J. Mason Reynolds, president, Bendix Automotive Group, said the joint venture, called Kalyani Brakes Ltd. (KBL), will expand to a $10 million investment project over the next few years.

Ownership initially will be 40 percent Bendix, 40 percent Kalyani Steels and 20 percent public. The company will construct a 60,000-square-foot plant in Jalgaon, Maharashtra, a city in Western India, to manufacture and assemble compressors, valves, actuators, master cylinders and slack adjusters.

KBL also will market the parts in neighboring Bangladesh, Pakistan and Sri Lanka.

"This is Phase One for the joint venture in this very promising market," said Reynolds. Further production capacity will

truck industry news

January total tops Chevy by nearly 5,000 units

Lead in registrations is recaptured by Ford

Ford registrations of new trucks of all types in the U. S. in January topped Chevrolet's total by almost 5,000 units, marking the first time since December, 1981, that Ford has been the industry leader.

During the month, according to R. L. Polk & Co. statistics, there were 60,735 Ford registrations, an increase of 48 percent over the year-ago 41,016. Ford's share of the industry total was up 5.81 percentage points, 32.16 percent versus 26.36.

Chevrolet's tallies for the month totaled 55,975 units, a gain of 11.3 percent over last year's 50,295. But its share of the industry total dropped 2.67 points, from 32.32 percent in 1982 to 29.65 percent this year.

In January, Ford's light-truck tallies were up 51.2 percent to 57,610 units, compared with 38,099 in the first month of 1982.

Registrations by GVW—Page 49

The big-truck count this year was 3,125 units, 7.1 percent higher than the year-earlier 2,917.

Chevrolet also had gains in registrations of both light and big trucks during the month, but its strength this year was in big trucks.

Light-truck tallies for Chevrolet in January totaled 55,161 units, an increase of 10.1 percent over the year-earlier 50,123 vehicles. Its big-truck count, however, was up 373.6 percent, from only 172 units in 1982 to 814 this year.

Industrywide, January registrations totaled 188,796 units, a gain of 21.3 percent over the year-earlier 155,599. Tallies of light and medium trucks were significantly higher than a year ago, but the heavy trucks—Groups 7 and 8—continued to weaken.

During the month, there were 176,707 light-truck tallies, an increase of 23.8 percent over the year-earlier 142,779 units. The totals were higher in two of this market segment's three weight classifications.

The Group 1 count in Janu-

HD registrations in January sink to seven-year low

Registrations of new heavy trucks in the first month of 1983 were the lowest in almost seven years and they were down significantly from a year ago.

During the month, according to R. L. Polk & Co., 8,816 new Groups 7 and 8 trucks were registered in the U. S., off 13.8 percent from last year's 10,227 units.

The last time that the monthly count was that low was March, 1976, when the total hit 7,503. The January tally that year was only 6,739 units.

Hertz puts 20-city average at 47.2 cents a mile

Cost of operating compact rises

NEW YORK. — Average cost to own and run typical new compact-sized cars in 20 key cities in 1982 was 47.21 cents a mile, up 1.09 cents or 2.36 percent from 46.12 cents in 1981, Hertz Corp.'s annual major-city operating expense study showed.

Los Angeles led the nation in high-cost driving for the fourth year at 57.08 cents a mile; while, for the third consecutive year, Detroit was least expensive. Detroit's cost was 41.68 cents — a 15.4-cent variation.

The 1981 figure for driving compact cars five years at 10,000 miles a year was 46.12 cents a mile in the 20 cities studied, according to the Hertz analysis, while 1980 expenses were 38.56 cents for all normal driving costs, except garaging and tolls.

The firm's new geographic expense variation estimate again ranks New York City the second-most-expensive area in the nation to own and operate an auto at 56.05 cents a mile. San Francisco, at 54.33 cents, was third, and Miami, 50.04 cents, fourth.

Hertz said the study confirms a sharp slowdown in new-car ownership and operating cost increases from the yearly double-digit jumps which have prevailed for the past decade.

"If automobile purchase prices hold steady and if car loan interest rates and gasoline prices continue to fall, 1983 could bring American motorists their first decline in auto operating costs since 1971," the study said.

In 1971, the study said, federal price controls helped force driving outlays down to 11.9 cents a mile from 12.1 cents in 1970. Since 1972, though, auto expenses have increased far more than the nation's overall inflation rate for the same period, Hertz said.

The 1982 advance of 1.09 cents a mile contrasts with a 1980-81 rise of 7.56 cents a mile, or 19.6 percent, from 38.56 cents to 46.12 cents, and with a 1979-80 jump of 9.01 cents a mile, or 30.4 percent, from 29.55 cents a mile.

Average major-city compact-model purchase prices rose to $8,111 in 1982 from $7,694 in 1981 and $6,542 in 1980. Purchase prices ranged from an $8,374 average in New York to $7,714 in Detroit.

GM asks EPA for waiver on emission part adjustment

By Jake Kelderman
Washington Staff Writer

WASHINGTON.—Having the answer to a question and not being able to give it can be a frustrating experience, as every grade school student learns when the teacher does not call on him or her.

Consider the case of General Motors. Most of its late-model cars are equipped with the company's electronic emission control system that instantly measures and adjusts given engine operations to maximize emission control, engine performance and fuel economy.

GM sells many of these cars in high-altitude areas like Denver, but emission requirements in those areas are different than in low-altitude areas and adjustments must be made in GM's electronic control system so the cars comply with the requirements.

This fairly simple process involves only the substitution of one Programmable Read Only Memory (PROM) chip with another suitable for high-altitude operation.

But alas, the Clean Air Act prohibits such a substitution if it involves a name-brand part. And GM's substitute PROM is surely that, since no one else makes it.

The purpose behind this prohibition is to help prevent manufacturers from monopolizing emission control system repair work and freezing independent repair facilities out of the emission control system warranty work triggered when a vehicle fails an inspection and maintenance test.

Fortunately for GM, however, there is a provision for a waiver, and the company has asked the EPA to grant it one.

In an application filed earlier, GM said it is not aware of any other practical way to adjust or modify the cars to ensure emission control performance at high and low altitudes other than by the use of a different PROM.

Since GM knows of no other manufacturer of the specified PROM or any other programmed PROM for use in its electronic emission control system, it feels it has met the Clean Air Act criteria for granting it a waiver.

EPA said it will hold the record open until April 13 for comments on GM's waiver request.

Mazda parts facility opens in Kansas City

KANSAS CITY. — Mazda Motors of America (Central), has opened a 100,000-square foot parts depot here.

The Mazda Kansas City Parts Depot, the fifth such Mazda Central parts facility, will supply 90 Midwest Mazda dealers.

European parts industry faces shakeout

Aluminum, plastic will benefit from weight cutting

The automobile components industry in Europe faces a major shakeout over the next few years as it continues to be battered by a variety of forces.

A research study by Frost & Sullivan Inc. indicates sales of components in Western Europe, which fell in constant-dollar terms from $28.3 billion in 1976 to $25.7 billion in 1981, will barely exceed $28 billion in 1986 despite an anticipated 10 percent increase in demand for autos.

The only companies with strong chances of surviving will be larger, more diversified component manufacturers. "A dramatic reduction in the number of independent companies must and will occur, with most casualties among small and medium-sized companies," the study says.

The market upheaval will be caused by the recession and such far-reaching factors as the search for economies of scale, the drive for more fuel-efficient cars, more in-house manufacture of components by auto producers and the increasing use of simplified subassemblies rather than individual components, Frost & Sullivan says.

Ironically, the much feared Japanese auto industry is unlikely to play a major role in the process, the research study says, due to "overwhelming (European) nationalistic reasons and to the desire of domestic car manufacturers to maintain security of home supply."

The major factor in the near-term future of the components industry is overall cost, the study explains. Productivity must increase and will do so, often through computer and robot technology, it says.

Components also are being redesigned to reduce automobile fuel consumption—a trend that affects tires, aerodynamic styling, weight and the efficiency of engines and transmissions — and that requires major investment in research and retooling, the study says. "Clearly, only a few large component companies with sufficient liquidity will survive this new technological revolution," it adds.

At the same time manufacturers are leaning toward increasingly simple subassemblies which lower demand for individual component units, and also are cutting back on the number of types of passenger cars.

Independent companies' real hopes for profit, the study says, lie in the areas of proprietary technology like constant-velocity joints and fuel-injection equipment. The markets for individual components will closely reflect automobile production levels in each nation in Western Europe, adjusted slightly for average car size and weight.

The only sectors projected as showing dramatic sales increases overall are those needed in sophisticated automotive electronic engine and transmission management systems and in fuel-injection systems.

The study predicts above-average growth for plastic moldings and automatic gearboxes. Clutches, on the other hand, are expected to post sales declines as automatic transmissions gain in popularity.

In the automobile materials markets an overriding factor will be the campaign to reduce auto weight.

Steel, rubber, glass, textiles and wood will be relatively unaffected. But the amount of cast iron in an average auto is expected to fall from as much as 20 percent of a car's weight in 1981 to as little as 10 percent in 1986, the study says. Plastics and, at a slower pace, aluminum, will increasingly replace iron castings.

Consumption of major raw materials by the West European Automobile Industry, 1976-1986

Material	Usage (000 Tons) 1976	1981	1986
Steel	6,400	5,600	6,000
Cast Iron	2,190	1,550	1,060
Aluminum	550	560	660
Plastics	520	570	800
Rubber	520	460	480
Glass	370	325	340
Textiles and Wood	370	325	340
TOTAL	10,920	9,390	9,680

Source: Frost & Sullivan.

Past and future met at the recent Amsterdam Auto Show in The Netherlands. Timeless classics of bygone years are shown above, while concept cars of the "future-thinkers" are shown below. Companies showing concept vehicles included Mazda, Opel, Renault, Mitsubishi, Citroen, Audi, Ford U.S., Toyota, Volkswagen and Peugeot.

By Richard Feast
European Editor

Entering the U. S. market is an aim of Dutch auto maker Volvo Car BV. But company officials say the invasion will not be made with the current 300-series sedan. It will be launched with the next generation model, a front-wheel-drive scheduled for arrival within three years.

Volvo Car's present priority is Europe, where it has set a one percent target. Recent events suggest it is well on its way to meeting the objective.

The second target over the next few years will be what Volvo calls "overseas markets" —New Zealand, the Far East, Iceland and some African countries. Last year it sent only 1,300 units to those destinations, or less than 1.5 percent of company output.

The third priority is the U. S., a longer term aim because little groundwork has been done. It is expected that these exports would be handled by Volvo Car Corp. of Sweden, which has a quarter-share financial stake in the Dutch operation, with 75 percent held by various Dutch state interests.

Volvo Car makes one model, the 300-series, with origins at the old Daf auto company. Daf was acquired by Volvo, which broadened the narrow appeal of the inelegant original car.

The 300-series subsequently became available as a five-door as well as a three. The CVT automatic transmission was supplemented with an optional manual, and the 1.4-liter Renault engine with a 2-liter Volvo unit.

Luxurious, sporty and economy derivatives were introduced, but the lukewarm public response to the car was inevitable.

Gradually Volvo Car increased production and sales. Its original 1982 production target was 85,000, but that proved low as the actual year-end production totaled 90,830.

The original production target for 1983 (90,000) was increased last November to 97,500. And company officials now are confident 100,000 is within reach.

Peak production was in 1973 when 98,756 cars were made; they were the cheaper, less complex Daf 66, 46 and 33 models. Today's 300-series is more sophisticated and profitable.

Volvo is proud that its productivity has increased considerably the past couple years. A reorganization cut unit-production time from 43 to 32 hours, and the labor force was reduced more than 10 percent to 5,600.

Volvo's 1982 retail sales of 90,255 represented a 15 percent improvement over 1981's 78,491.

The main advance last year came in the domestic market, with a 70 percent improvement to 15,000 units. The 2-liter version is popular in Holland, accounting for a quarter of sales.

Recently the company introduced a low-cost model called Winner. At the equivalent of $6,400, it costs only 1.6 percent more than the original 343 at its introduction in 1976. It's the result of greater efficiencies, Volvo says.

The company's key market is the UK where sales rose 28 percent last year to 30,400. Sales in Sweden climbed 13 percent to 10,200.

Dutch dealings

The financial structure of van Doorne's Transmissie (VDT) company, based at Tilburg, Holland, is likely to be restructured following an approach by Volvo Car BV.

Volvo Car, owned 75 percent by Dutch state interests and 25 percent by Volvo Car Corp. of Sweden, wants to buy into van Doorne's Transmissie.

VDT is well along on a second generation of its stepless continuously variable automatic transmission (CVT) in which several European auto makers are interested.

Volvo Car made the approach in December and discussions are expected to take "several months" to complete. At present VDT is owned 39.5 percent by VADO (the van Doorne trust company), 24 percent each by Borg-Warner Corp. and Fiat Auto, and 12.5 percent by the Dutch state.

It's rumored in Holland that if Volvo Car takes a major share of the company it would allow VADO to redirect its resources to Daf Trucks.

Daf's structure is split by a 37.5 percent shareholding each by VADO and International Harvester and 25 percent by a Dutch state holding company.

But with Harvester's declared intention of clearing out of Europe in the wake of its domestic troubles, a gap will appear in Daf's structure. Both VADO and DSM (the Dutch agency) have declared they do not want to increase their commitment to Daf.

However, the effect of a Volvo Car (Dutch government) stake in VDT would allow VADO to increase its Daf Trucks equity.

Fedde Talsma, 29-year-old freelance designer, poses with the model he designed in a competition for a short-term replacement for the Volvo 340 series. The contest was organized by Dutch magazine *Autoselekt* in conjunction with Volvo Car of Holland. Talsma's model appeared at the Amsterdam auto show, and he will get an opportunity to work in Volvo's design studios at Helmond.

Japan's exports to U.S. decline in January '83

Japan's overall vehicle exports to the U. S. declined by 1.4 percent in January 1983 from a year earlier. Passenger car exports increased 1.6 percent, but truck exports dropped 11 percent.

Japan's worldwide motor vehicle exports increased 4.1 percent in January 1983 from the previous year. Commercial vehicle shipments to the world were down. (See table below.)

Japan's motor vehicle output in January remained approximately the same in 1983 as in 1982, showing a gain of less than 1 percent. Commercial vehicle production continued to drop; trucks were down 4.1 percent and buses 23.5 percent.

Sales in Japan's domestic automobile market improved for the third month, up 7.98 percent. Sales of passenger cars were up 10 percent.

Japanese shipments down

But exports to Middle East spurt

Japan's vehicle exports in 1982 dropped to their lowest level since 1979. At 5.59 million units they were 7.6 percent below record year 1981.

Shipments to the two most important areas—North America and Europe—fell 8.6 percent to 3.42 million. Because the two areas account for three out of every five Japanese exports, they greatly influence the overall trend.

The Middle East helped Japan's exporters last year. Shipments rose nearly 45 percent to 710,000, moving the region above Southeast Asia.

A major drop in exports to Africa and a small increase to Oceania — essentially Australia and New Zealand—resulted in the two areas change of place in ranking in 1982.

The U. S. remained by far the largest single export destination with more than 2.1 million units. Next came Saudi Arabia (second), Australia (third), West Germany (fourth), Canada (fifth), UK (sixth), Indonesia (seventh). Malaysia in eighth place was the only other country to receive more than 100,000 Japanese vehicles last year. (See table right.)

The 1982 setback in Japanese production—down by 7.2 percent to 10.37 million—was the first since 1975, and was the lowest since 1979 when the country's output had not yet reached 10 million annually.

On the positive side for Japan's auto makers was the fact that domestic demand last year reached a record 5.26 million vehicles of all types, an increase of 2.6 percent over 1981. Main impetus came from car demand. Although it improved 6 percent to 3.038 million, it fell short of record 1979 (3.067 million).

Commercial vehicle sales fell 1.6 percent to 2.223 million following the record year (2.26 million) 1981.

Minis with turbo

TOKYO. — The world's first turbocharged minicompacts were put on sale this month in Japan by Mitsubishi.

The new models are called Minica Ami L Turbo and Minica Econo Turbo. They are powered by 550-cc Mitsubishi Silent Shaft engines fitted with the Mitsubishi-manufactured TD02 turbine.

The turbine, which weighs less than 4½ pounds, is said to be capable of speeds up to 270,000 RPM.

Probe III, Ford of Europe's Sierra-based concept car, has found a home in the UK's National Motor Museum. Uwe Bahnsen, left, design vice president, Ford of Europe, presents the car for its long-term loan to Michael Ware, museum curator.

Growing popularity of four-wheel-drive Subaru and Toyota Tercel cars prompted Renault to introduce a 4x4 version of its 18 wagon. The car, sold initially in Switzerland and Austria, soon goes on sale across Europe. The drive system is Renault's, developed from components of its Sinpar subsidiary. The 4x4, built alongside regular models, comes with gasoline or diesel power.

Employe ideas aid production of T-bird, Cougar

LORAIN, O. — There are 135 employe-contributed quality improvement ideas in the 1983 Thunderbirds, Cougars and Thunderbird Turbo Coupes built at Ford Motor Co.'s assembly plant here.

The ideas came from workers participating in Ford's Employe Involvement program, which encourages workers to solve problems in their own work areas.

As part of that program, hourly workers at Lorain were encouraged to review early prototypes of the new models and contribute ideas to make them easier to build and more reliable. Employes offered 280 ideas, 135 of which have been implemented to date.

For example, electrical repairmen in the trim department assembled a fully functional electrical "breadboard" or mockup of the Thunderbird's wiring system to check such things as routing and ease of assembly. They contributed a dozen major design or manufacturing process improvements.

GWC appoints Waldrop regional sales director

MARINA DEL REY, Calif. — Ed Waldrop has been named Western regional sales director for General Warranty Corp.

For the last three years, Waldrop has been general agent for American Warranty Corp. in in Northern California.

and campers as heavy as 5,000 pounds," Cappy said.

"Wagoneer sales increased 24 percent in 1982 over 1981, and we expect them to continue strong for a long time to come," he added.

The new Wagoneer and Cherokee will have two new engines.

AMC's new I-4 engine will be the standard powerplant. Fuel-economy estimates, although not firm at this time, are projected at about 25 MPG in the city and 30 MPG on the highway, Cappy said.

An optional 2.8 liter V-6 engine, produced by Chevrolet, will be available on the 1984 Cherokee and Wagoneer sport wagons. Fuel-economy estimates are not available at this time, but should be 20 or more MPG in the city, Cappy said.

"The most advanced technology has been built into the manufacturing process, including 25 Cybotech robots which perform all of the major welding on the bodyside and bodyframing lines," he said.

"This modern assembly equipment is so precise that it will reject a body component which has even the slightest dimensional inconsistency."

Cappy said one-side galvanized sheet metal will be used on most exterior panels for maximum protection against rust and corrosion. Rocker panels will be made of two-side galvanized sheet metal.

Clear-coat paint will be offered with metallic finishes on Cherokee and Wagoneer, the first time it has been available on Jeep vehicles.

"Market studies indicate that more than half of the sales of four-wheel-drive vehicles by 1985 will be in the compact segment, compared with only 2 percent in 1978," Cappy noted.

Lead in truck registrations is recaptured by Ford

Continued from Page 20

ary showed a gain of 29.9 percent, rising from 77,818 units a year ago to 101,124. Group 2 was up 18.6 percent to 75,496 units, compared with 63,662 in the first month of 1982.

There was a sharp decline during the month in Group 3 registrations. Only 87 vehicles were tallied, off 93.3 percent from the year-ago 1,299 units.

Registrations of the medium trucks were 26.2 percent higher in January than a year ago, with increases in all three weight groups.

In Group 4, traditionally the weakest of the eight, there were seven tallies in the first month, compared with two a year ago. The Group 5 count was 19.2 percent higher than last year, 62 units versus 52.

Registrations of Group 5 trucks, which have been losing ground steadily to Group 7 since the early 1970s, totaled 3,204 in January, an increase of 26.2 percent over the 2,539 tallied in the first month of 1982.

January registrations of heavy trucks were the lowest in seven years, with declines in both weight classifications.

Only 8,816 units were tallied in the first month, a decline of 13.8 percent from last year's 10,227. The Group 7 total of 3,826 vehicles was off 1.5 percent from the year-ago 3,884.

The Group 6 count dropped 21.3 percent from last year to 4,990 units, compared with 6,343 registered in the first month of 1982.

Ford, White, Volvo and the miscellaneous group scored the only increases in market penetration in January. All also had higher unit counts this year.

GMC, Jeep and International also had increases in tallies in January, but the gains were not great enough to prevent small declines in market share.
